Forecasters say there is a 70 percent chance of having nine to 14 named storms, of which four to seven could become hurricanes, including one to three major hurricanes (Category 3, 4 or 5). Tropical systems acquire a name -- the first for 2009 will be Ana -- upon reaching tropical storm strength with sustained winds of at least 39 MPH. Tropical storms become hurricanes when winds reach 74 MPH and become major hurricanes when winds increase to 111 MPH. An average season has 11 named storms, including six hurricanes with two becoming major hurricanes.

"This outlook is a guide to the overall expected seasonal activity. However, the outlook is not just about the numbers, it's also about taking action," said Dr Gerry Bell, lead seasonal hurricane forecaster at the CPC. "Prepare for each and every season regardless of the seasonal outlook. Even a near- or below-normal season can produce landfalling hurricanes, and it only takes one landfalling storm to make it a bad season."

Rick Palm, K1CE, editor of the ARRL's ARES E-Letter <http://www.arrl.org/FandES/field/ares-el/>, warns that now is the time for ARES members to assess their portfolio of communications equipment and disaster response knowledge. Palm gives several tips for amateurs involved with hurricane operations:

Monitor major HF hurricane networks during events this season. The Hurricane Watch Net (HWN) on 14.325 MHz is one of several key players <http://www.hwn.org/>. It serves either the Atlantic or Pacific during a watch or warning period and coordinates with the National Hurricane Center (NHC) in Miami <http://www.nhc.noaa.gov/>. Frequent, detailed information is issued on nets when storms pose a threat to the US mainland. In addition to hurricane spotting, local communicators may announce that residents have evacuated from low-lying flood areas. Other amateurs across the country can help by relaying information, keeping the net frequency clear and by listening. See the HWN's Web site for more information. The net works closely with the hams at the NHC's Amateur Radio station WX4NHC <http://www.wx4nhc.com/>.

The SATERN Net (Salvation Army Team Emergency Radio Network) <http://www.satern.org/> provides emergency communication support to the Salvation Army and populations at large. They also handle health-and-welfare traffic. SATERN holds high profile nets on 20 meters (14.265 MHz) during major hurricanes and has a long history of excellence, discipline and service. Refer to the SATERN Web site for more information.

The Maritime Mobile Service Net (MMSN) <http://www.mmsn.org/> meets on 14.300 MHz and is composed of hams who serve and assist those in need of communications on the high seas. According to its Web site, the primary purpose of the net is for handling traffic from maritime mobile stations. The network is recognized by the United States Coast Guard and has an excellent working relationship with that agency. The MMSN has handled hundreds of incidents involving vessels in distress and medical emergencies in remote locations, as well as passing health and welfare traffic in and out of affected areas. They also work closely with the NWS and NHC by relaying weather reports from maritime stations.

The VoIP SKYWARN and Hurricane Net <http://www.voipwx.net/> operates by combining both the EchoLink and IRLP linked repeater networks, while handling critical wide area communications during major severe weather and tropical events. These operations have gained national stature in recent years, making the Net a critical partner with WX4NHC. Whenever tropical weather is posing a threat to the US mainland and certain other areas of interest, the VoIP WX net will be fully operational. See the VoIP SKYWARN and Hurricane Net Web site for more information.

Palm said that during hurricane events, there are usually two or three regional nets (usually on 40 or 20 meters) that spring to prominence as major key assets to the disaster response on an ad hoc basis. "Watch for these nets, as well as the nationally recognized networks described above, this season. Don't transmit on their frequencies unless you are absolutely sure you have something substantive to add, and then only under the direction of the net control station," Palm advised.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, added that when ARES activates in response to any tropical event, it is crucial that information flows up through the Section and is reported to Headquarters. "These reports allow us to develop the situational awareness and disaster intelligence that is required for us as an organization to support the Sections that are impacted" he explained. "In this way, we are able to respond to relevant requests from the media and finally to coordinate with the governmental and non-governmental organizations. This information also allows us to make the decision at Headquarters on whether to stand up our Incident Management Team to support and coordinate the operations."

If you are interested in Emergency Communications, please be sure to check out the monthly ARES E-Letter <http://www.arrl.org/FandES/field/ares-el/>. You can elect to receive this newsletter free of charge via e-mail by going to the Member Data Page on the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==> QEX: THE JULY/AUGUST 2009 ISSUE

The July/August issue of QEX is coming soon, and it is full of theoretical and practical technical articles and columns that you won't want to miss <http://www.arrl.org/qex>.

In this issue, Gary Steinbaugh, AF8L, presents Part 3 of "A Cybernetic Sinusoidal Synthesizer." This installment describes some limitations of proportional control systems and explains the advantages of adding integration and differentiation steps to proportional controllers. Steinbaugh also describes the construction of the RF power meter circuit used in the project

John Magliacane, KD2BD, and Bill Walker, W5GFE, describe "SPLAT!: An RF Signal Propagation and Terrain Analysis Tool." In addition to VHF/UHF line-of-sight paths, this program includes the Longley-Rice propagation model to predict path loss across irregular terrain. A Web interface provides a convenient way to use the extensive geographic terrain database in the calculations. Rudy Severns, N6LF, presents more of his research in "Experimental Determination of Ground System Performance for HF Verticals." Part 5 focuses on the effects of different numbers of radials on received signal strength for 160 meter vertical antennas.

Tom Warnagiris, K3GSY, introduces the Tapered Area Small Helix (TASH) antenna in "The Chicken Wire Wonder." Chances are, this unique broadband vertical antenna does not look like any antenna you have ever seen! An 80 meter version is 14 feet high and covers an area of about 4 ï¿½ 5 feet on the ground. Maynard Wright, W6PAP, provides information on several "Alternatives to

Octave" for various electronics calculations. ARRL Technical Advisor Robert J. Zavrel Jr, W7SX, presents the case for "Maximizing Radiation Resistance in Vertical Antennas" to increase the efficiency of our antennas.

John S. (Jack) Belrose, VE2CV, another ARRL Technical Advisor, presents a brief discussion "On Elevated Radials" after reading earlier installments of Rudy Severns' series about his experiments with HF vertical antenna radial systems. Ray Mack, W5IFS, continues his software defined radio column. In this installment of "SDR: Simplified," he builds an SDR that will tune a single AM broadcast band station.

Would you like to write for QEX? It pays $50/printed page. Get more information and an Author's Guide <http://www.arrl.org/qex/#aguide>. If you prefer postal mail, send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494. QEX is edited by Larry Wolfgang, WR1B <lwolfgang@arrl.org>, and is published bimonthly. The subscription rate (6 issues) for ARRL members in the US is $24. For First Class US delivery, it's $37; in Canada and internationally by airmail it's $31. Nonmembers add $12 to these rates. Subscribe to QEX today.

==>SOLAR UPDATE

Tad "Rejoicing in the Sun" Cook, K7RA, this week reports: Sunspot numbers from May 31-June 5 ranged from 13 to 23, then the Sun was blank for two days, followed by sunspot numbers of 12 for both June 8 and 9. This fleeting sunspot was number 1020, and like last week's spot, 1020 had the magnetic signature of a new Solar Cycle 24 spot. Alas, it was another of the frequent sunspots we've seen lately that appear briefly, and then vanish. The last Solar Cycle 23 spot was number 1016 that appeared April 29-30. Sunspot numbers for June 4-10 were 17, 13, 0, 0, 12, 12 and 0 with a mean of 7.7. The 10.7 cm flux was 71, 70.1, 69, 68.9, 69, 69.1 and 69.2 with a mean of 69.5. The estimated planetary A indices were 6, 6, 5, 6, 4, 3 and 5 with a mean of 5. The estimated mid-latitude A indices were 5, 5, 2, 3, 2, 2 and 2 with a mean of 3. For this week, geomagnetic conditions should remain very quiet. Solar flux is estimated to be about 68, rising above 70 June 24-July 1. For more informati
on concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Christina Rossetti's "A Summer Wish" <http://www.readbookonline.net/readOnLine/15719/>.

==>IN BRIEF:

* This Week on the Radio: This week is the ARRL June VHF QSO Party on June 13-15. The Asia-Pacific Sprint is June 13. The GACW WWSA CW DX Contest and the ANARTS WW RTTY Contest are June 13-14. Next week, look for the ARRL Kids Day Contest on June 20. The NCCC Sprint Ladder and the Digital Pentathlon are

June 19. The Feld Hell Sprint and the AGCW VHF/UHF Contest are June 20. One June 20-21, look for the West Virginia QSO Party and the All Asian DX Contest (CW). The Run for the Bacon QRP Contest is June 22 and the SKCC Sprint is June 24. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 28, 2009, for these online course sessions beginning on Friday, July 10, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing
helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Two New Co-sponsors Pledge Support for HR 2160: Earlier this week, HR 2160 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 -- gained two new Congressional co-sponsors: Republican Roscoe Bartlett (MD-6) and Democrat Bart Gordon (TN-6). Originally sponsored by Representative Sheila Jackson-Lee, a Democrat representing Texas' 18th District, HR 2160 is also sponsored by Madeleine Bordallo (Guam), Brett Guthrie (KY-02), Mary Jo Kilroy (OH-15), Zoe Lofgren (CA-16), Blaine Luetkemeyer, (MO-9) and Bennie Thompson (MS-02). Click here
<http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional representative to sponsor HR 2160 <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>.

* Don Tunstill, W4NO (SK): Don Tunstill, W4NO, founder of the Central America VEC, passed away at his home in Huntsville, Alabama on Monday, June 9. He was 69. Tunstill, an ARRL Life Member, was a charter member of Huntsville Amateur Radio Club and served as president of Huntsville Hamfest
<http://www.hamfest.org/> for more than 30 years. With the FCC, Tunstill assisted with the formulation and implementation of the Volunteer Examiner Coordinator program and the vanity call sign system. He founded the Central America VEC, one of the first VE programs in the state of Alabama. A memorial

service is planned for 10 AM on June 13 at Berryhill Funeral Home in Huntsville.

* Central States VHF Society Seeks Presentations for Annual Conference: The Central States VHF Society (CSVHFS) <http://www.csvhfs.org/> is soliciting presentations and poster displays for their 43rd Annual Conference this summer -- July 23-26 -- at the Holiday Inn in Elk Grove Village, Illinois <http://www.csvhfs.org/conference/index.html>. Possible presentation topics on all aspects of weak-signal VHF and above include, but are not limited to, antennas (modeling, design, arrays and control), equipment construction, propagation, test gear, regulatory issues, operating, digital signal processing and software-defined radio. The submission deadline for presentations and poster displays is June 29; bring posters for display with you to the conference. For more information, visit the CSVHFS 2009 conference Web page <http://www.csvhfs.org/conference/index.html> or contact Kermit Carlson, W9XA <w9xa@yahoo.com>.

* From the DXCC Desk: According to ARRL DXCC Manager Bill Moore, NC1L, questions have been coming into DXCC regarding the status of 5N/LZ1QK in Nigeria. "DXCC is currently working with his QSL manager to resolve the status of this operation," Moore said. "At this time, DXCC accreditation is on hold pending the outcome of the review."

Field Day starts two weeks from today.

Anybody (besides me) going to participate?

How about stories of past Field Days, while we're at it?

Our ARES group in Pahrump, NV will operate from the county's Emergency Operations Center, with an exchange of "nF Nevada" (where n depends how many transmitters we can scrounge up from members) using our club call W7NYE. We have an HF transceiver is permanently mounted in the radio room of the building and another transceiver permanently mounted in a trailer in the parking lot. Also members will bring some more transceivers from home.

Hello Bill,

Yes, a sad day, but, as has been pointed out, we appear to no longer be necessary.

When I was on Guam, my grandfather was dying. I placed a long distance person-to-person call to him in the hospital. In 1967, the charge was $3.00 per minute with a $12.00 minimum. I'm guessing that would translate to around $25.00 per minute nowadays.

At the time, I was serving 6 months TAD in preventive medicine whilst they processed my top-secret clearance. From there, I moved to NavComSta Guam - and we had a radio shack (KG6AAY).

Ah, the Collins gear :)

I have to sadly agree that there are aspects of the amateur radio hobby that are now obsolete. Along with the MARS systems I would include the National Traffic System. I realized this with Katrina when there was essentially no welfare traffic handled by NTS. When the rationale of the system is to prepare to handle traffic in an emergency, but the emergency occurs and there's no traffic, it's time to question whether the system needs to exist at all.

This leaves a training gap. NTS and the MARS provided the training in disciplined information handling for the hobby. Even when the task was tactical communications using VHF, the background provided by participation in MARS and NTS was invaluable in providing a reliable communications response when needed.

I suppose that the training burden now falls to ARES, as it's really the only structure left for this segment of the hobby. Some ARES groups do an excellent job of providing this skill set; some groups do nothing at all. That was the big advantage of the MARS and NTS systems -- they were nationwide, so even if you lived in an area with no ARES, you could still participate and get the training you needed.

73, Steve KB9X

I feel there is still a role for MARS, not only in voice communications
but also in more advanced digital modes. The military model encourages
standard equipment setups as well as training, so MARS can provide
digital networks that function as a cohesive structure, where all
stations have the same capability. That means that each member of a MARS
team has similar capabilities, and can thus be assigned to any needed area.

ARES has a place too, but it will always be limited by the "weakest
link" problem that prevents an incident manager from assigning _any_
operator to _any_ location, since hams who participate in ARES might not
have the equipment available to MARS ops.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

Please don't take this question as confrontational, but I really don't understand your statement. OK, so MARS can be used to create a digital network. What's the end goal?

Back in "the day", MARS existed to provide a communications service for troops in remote locations. MARS operators did lots of phone patches and relayed messages. Today that function is provided using different non-amateur-radio facilities.

I see a similar situation with NTS. There was a time when it made sense to put long-haul welfare traffic into the NTS network from a disaster. These days, if there's any disruption at all to normal telephone communications, the technique that makes sense is to relay the welfare traffic to the closest location where the infrastructure is operating normally and then pick up the telephone and use that for the long-haul segment.

The other thing that has happened that affects both services is that the source of day-to-day training traffic has dried up. Years ago there was enough routine traffic to keep people interested during the 364 days each year when there wasn't emergency traffic. There were the "Happy birthday Aunt Mary" messages and the "Arrived safely San Diego Naval Training Center" messages. But with the advent of cheap long-distance telephone service and with folks like the Navy no longer using amateur radio for their routine communications needs, these morphed into "Your ham license is about to expire."

For an activity such as NTS and MARS to remain viable long term, you need both -- the day-to-day routine traffic and the occasional "real thing". Today we have neither.

> have the equipment available to MARS ops.

From the ARES perspective, I am less concerned about the equipment aspect than the training aspect. In my experience, most of the current

need is for tactical communications, usually conducted using 2 meters and HTs, and most hams have equipment that fills the bill. But there are huge training gaps because some ARES units do a great job and some do nothing.

The end goal is to give Incident Managers a tested and effective communications option, and MARS could offer it. My point is that the military model requires uniform equipment and training, so someone using a MARS team could depend on _every_ station in the team having the _same_ capabilities.

Newer digital modes are still proprietary: if I have an Icom, it won't talk digitally to your Kenwood AFAIK. However, if I'm in a MARS network, I'll either have, or MARS might provide, equipment which _does_ talk to every other node. Ergo, uniform capability and maximum flexibility in assignments.

> Back in "the day", MARS existed to provide a communications service for

Which shows how important "health and welfare" traffic is to troop morale and unit readiness. It's a "left handed compliment" for MARS members who made the phone patches possible.

If all the staions in an emergency net can send and receive digital messages, then the traffic coming out of a disaster area can simply

transit the amateur network and join the Internet at the nearest
gateway, for delivery by the most efficient means available.

[snip]

Since hams who participate in MARS have to meet minimum standards for
readiness (number of hours on net, etc.), that's less of a problem. The
larger issue is that hams, MARS, and the FCC lack a consensus on how
best to provide emergency communications, and so Navy-Marine Corps MARS
is being closed for lack of a mission.

At the risk of being quarrelsome; with my own brother no less; I would be glad to see the MARS program out of civil EMCOMM work altogether. I believe that resources that will serve local government should be under control of local government rather than some portion of the national military.

Bill is right in saying that MARS brings a standard approach and a predictable capability but FEMA could do the same thing if the expectation of a need was there. In spite of our recent history of bungled disaster response there is no ongoing effort to develop a known level of competence and capability to local and state disaster response resources. At present EMCOMM is trying to fit itself to a rapidly changing set of perceived needs in served agencies. Because of these changing needs perceptions it is not possible for anyone in EMCOMM to develop a truly useful resource.

What is happening is that FEMA is serving as a conduit for truly dizzying amounts of federal funds that local governments are spending on routine government purchasing instead of what the congress said the money was for. For some large local governments purchasing entirely

proprietary radio systems that can be telephone patched to other radio systems was the right way to spend money provided to purchase inter operable radio equipment. The vender keeps that customer wedded to their brand and makes sure that they cannot turn to anyone else for anything to do with the system. As only one example of the effect of this kind of system it know costs fifteen thousand dollars ($15,000) to equip a three person engine company with their portable radios. Thats right! Five thousand dollars per portable radio. The one objective that the vender had going in was to see that the radios would not be P25 compliant. If the adjacent county's radios could be used in the system it might be from a different manufacturer so the original manufacturer would not be able to demand five thousand dollars per portable and get it.

How does this relate to Amateur Radio's role in EMCOMM? Simply put we don't spend enough money to be worth thinking about in advance. We are welcome at the party only so long as we will make others look good but as soon as the pressure of the moment is passed the people that would need to invest resources in training and even perhaps equipment standardization are no longer interested. The one bright spot in recent history was the reaction of the state of Oregon to the valiant efforts of Hams during the flooding there. The state came up with money to equip all of their county EOCs with radios for amateur use but some fast talking soul sold them on Dstar rather than P25 digital public safety radios modified for use on amateur frequencies. P25 contains all of the standards needed to get a broad range of communications through to the recipients. It's only drawback is that it is an open standard that requires no proprietary equipment to implement so it won't make any one manufacturer wealthy.

>NTS was invaluable in providing a reliable
>communications response when needed.

Even though I may be breaking some article of faith
here, I'll have to question whether or not the NTS
was ever any training ground for traffic handling
after about 70 years ago or so. Certainly so in
regards to MARS...which was considered to be a side
activity as part of Special Services for morale
purposes in the military after WWII. Considered,
that is, by the military communications community
itself from the 1950s and onward. Having been a
direct participant in military communications from
56 to 53 years ago and observing the evolution of
military communications in and out of direct ops
since then, I've got some insight into whether
MARS was ever effective for anything more than
morale purposes.

Today and at least since 5 years ago, Army MARS
(the branch that started it all in the 1920s) has
a major mission to help coordinate all the various
USA government HF radio users to link them all as
part of SHARES ("Shared resources"). The need for
morale purposes of MARS ended at least a dozen
years ago with the spread of the DSN and the
ability to get into the civilian communications
networks from the DSN (but not always the reverse).

>I suppose that the training burden now falls to ARES,
>as it's really the only structure left for this segment
>of the hobby.

It could. Consider the "pool" of USA amateur
licensees as of the morning of 15 Jun 09 had the
number of Technician class licensees as 47.3% of
all licensees, the "active" Technician licensees
represented 48.6% of all "active" USA licensees.
(source: Hamdata.com and ARRL, respectively)
That is an enormous pool of (largely) VHF-and-up

licensees who are mostly portable in operation. Technician class licensees have largely been kept out of periodical highlights (and 'importance') for decades.

Real emergency conditions of the past half century in the USA required multi-frequency local (within a line-of-sight radius)communications needs. VHF and UHF amateur radios can work well within L-O-S and need no experienced morse code operators. The majority of active amateur radio operators, on the basis of written communications on forums, is largely confined to HF. Local situations don't need HF to effect local emergency communications.

It is high time to toss some cherished articles of faith and overused paradigms into the dumpster and look at time NOW, what is here, what is available. We HAVE the technology and a huge pool of VHF-and-up communicators that would be of advantage in real emergencies NOW. It is my opinion that this pool and equipment has been ignored for far too long.

The Department of Defense directs the Military Affiliate Radio System,
not the FCC. Its been that way since the War Department preceded the
DoD, when the US Army started the predecessor to MARS before WWII. In
my opinion it should stay that way.

I believe the FCC is on top of a need for emergency communications and
one proof of that is the P25 among other radio services. See also
CALEA.

If the military is going to aid in emergencies, the National Guard units
in several states have already helped out over the last half century.
An NG must be activated by Presidential order while a MARS unit can be
called out (at least the military personnel) by any branch Chief of
Staff. I've seen such NG units in background shots over TV news, of
river flooding in the Dakotas being a good example.

The big urban catastrophe of the 1994 Northridge Earthquake was a good
demonstration that already-organized, trained, and practiced civilian
pros could handle their task, including a complete loss of primary
electrical power over about a 600 square mile populated area as a result
of the 'quake. All of the PDs and FDs, utilities, health professionals
were capable of handling communications during that electrical power
outage. The Emergency Communications Center has already been on two
different cable TV shows.

USN-USMC MARS is a late-comer to MARS activities. Army and Air Force
MARS already have their mission directives and seem to be doing okay
without any need for publicity or budget-cutting.

The implicit assumption that you're making is that there is equipment and trained manpower at the location where such welfare traffic originates. That won't happen without prior planning and ongoing training. In today's world we do well to get a few hams into the disaster area with 2-meter HTs.

Then there's the little issue of the controlling agency wanting us to be there. Most sheltering operations in actual disasters are run by the Red Cross, and they have their own ideas about how they are going to take care of the needs of their clients with regard to welfare traffic. With the ongoing feud between the ARRL and the Red Cross, those plans generally do not include amateur radio.

The only way that ham radio will have a role in disaster communications is if the personal contacts are made and the relationships built between ham radio leaders and emergency management leaders, at the local level, before the event. The ham radio spokesperson must have a trained cadre of reliable people to offer in these talks. It's happening in a few places, but by and large the local and national emergency management folks either have no clue about how they might use ham radio in a disaster, or they've had bad experiences in the past that have convinced them that using the resource is a Really Bad Idea.

$18.44 per minute, according to the Westegg Inflation Calculator. Which is still quite pricey!

Of course the reason the prices have come down so much since then is the development and deployment of fiber-optic cables.

What is not clear to me from the announcement is why the Navy is shutting down MARS. Do all USN ships and shore stations now have email, sat phones and other ways of getting morale traffic to back home? How much did they spend on MARS operations? (or, rather, how much will shutting it down save?)

Yes, a sad day. Perhaps the very first ham I ever met was Sam, K3RTR/N0UKP (SK for many years now).

Sam ran lots of Navy MARS traffic via RTTY from his rowhouse near the Upper Darby post office. I found his QTH by the vertical in the side yard, which had his MARS call on it. (End-of-row rowhouses were prized locations).

He directed me to the local amateur radio club and told me what I needed to do to get started in amateur radio.

The rest, as they say, is history.

Thanks, Sam.

With respect, I disagree. It's not the band that counts: it's the attitude. Hams who favor HF also practice emergency communications every year at field day, and stand ready to provide "over the rainbow" service when disaster response forces need supplies, support, and advice that's not available locally.

It is the job of ARES or MARS to provide the framework for training and the job of the individual operator to engage in that training. It is impossible to engage in "real-life emergencies" on a regular basis. But it is possible to train and even cross-train unless it is somehow disallowed. I agree that it is a shame that ham radio does not provide the same attractive convenience as Texting, Twittering or Cell Phones, but these services are likely to be inoperative or partially inoperative in emergencies that result in communications failures. The reality is that as systems are engineered for greater convenience and even hardened, complexity gives rise to vulnerabilities that can only be addressed by broad experience and simple hardware, scattered across the land as single resources.

I would suggest that interested people should look into the Introductory (and free) online FEMA courses in order to get up to speed.

My recollections of dealing with local entities, was that they were only interested in proving what poor dispatchers we were, and never utilized for record traffic.

IMNSHO, the resources that serve local _CITIZENS_ should be under
control of an authority which is competent to assure their safety. Local
authorities can not effectively serve or protect refugees, such as
those residents of New Orleans who sat out hurricane Katrina on top of a
bridge because the police department "serving" Gretna didn't like the
color of their skin(1). The National Guard is (as I understand it) under
the command of state governors, who (I hope) are able to put aside local
prejudices and act in the best interest of people on both sides of a bridge.

> develop a truly useful resource.

I think you're making my case for me. There is no ongoing effort to
develop competent emcomm capabilities because natural disasters are
"maybe" and "someday" problems, but lobbyists and their clients are both
ever-present and ubiquitous, so money flows to the squeaking wheel.

So long as "perceived needs" are shifting, there will be a vacuum which
must be filled: _someone_ must bring order to the process, and that real
need is best filled by state or federal authority, with an emergency
response model that is as proven and reliable as any on earth. The
military is not, and never will be, a hotbed of innovation, but it is

always available everywhere, and that means that MARS can be available everywhere as well.

> What is happening is that FEMA is serving as a conduit for truly
> dizzying amounts of federal funds that local governments are spending on
> routine government purchasing instead of what the congress said the
> money was for. [snip]

As I said - "maybe" and "someday" vs. organized and well-funded lobbies representing everything from teachers' unions to radio equipment contractors. 'Twas ever thus, will ever be.

> How does this relate to Amateur Radio's role in EMCOMM? Simply put we
> don't spend enough money to be worth thinking about in advance. We are
> welcome at the party only so long as we will make others look good but
> as soon as the pressure of the moment is (past), the people that would
> need to invest resources in training and even perhaps equipment
> standardization are no longer interested.

Again, you're making my case for me. Armies don't live in the moment: they _have_ to be available and ready _all_ the time. A MARS operator is constantly in training, and his equipment is standardized by definition: if he can't participate in training nets or emcomm drills, he can't be in MARS.

Bill, W1AC

1.) See http://tinyurl.com/mbn6by, or http://tinyurl.com/n9n8ay. A Google search for "hurricane katrina racism refugees blocked from bridge" turned up thousands of hits.

Having passed my only amateur radio license test a bit over 2 years ago, I object to the word "attitude." To those who wish to make a case in favor of EmComm as some moral or civic duty by radio amateurs are, in my opinion, confusing citizenship duty with an avocational pursuit. Amateur radio is a voluntary activity done for personal pleasure. It requires licensing as by regulatory law due to the nature of electromagnetic wave propagation and necessity for interference mitigation. It is a de facto hobby.

>Hams who favor HF also practice emergency communications every
>year at field day, and stand ready to provide "over the rainbow" service
>when disaster response forces need supplies, support, and advice that's

I am 76 years old. I've been familiar with amateur radio activities since 61 years ago, visiting a Field Day setup in my home town in 1947 (at request of the late Gene Hubbell, then W9ERU). I've helped slightly on two other Field Days in California well before I've been licensed as an amateur but long after licensed as a Commercial radio operator. Based on my long observation of Field Day practices, my judgement is that it is - de facto - an excuse for a radio operation contest held in the open on a summer weekend. More of a "nice day in the park among radio buddies" and an excuse to get away from regular weekend familiy duties.

By contrast, a very REAL emergency happened in Los Angeles on January 17, 1994, at approximately 4:30 AM...the dark morning hours, good for observing a total lack of primary electrical power. No warnings, no scheduling ahead of time for at least a half year before. At least it

was a warmer-than-usual morning in Los Angeles 15 years ago. There was no evidence that local amateur radio field setups were done until two days after the earthquake hit. In my opinion, REAL emergency training should be done to familiarize participants with the rigors of unexpected situations, or having to work with what is available then, not at some scheduled park-outing with or without barbeque in pleasant, comradely surroundings.

As to the contest activity which I consider the main aspect of Field Day, if it really has some EmComm training, then let thar be oriented towards real emergency conditions such as saving life (however simulated), ability to pass requests on any kind of supplies accurately (certainly medical supply nomenclature, including complex medicine names). There are no Field Day contest scores for that or similar REAL emergency communications needs...only scores for how many other field day stations are contacted and with what kind of mode or modulation. Every other radio service that does any kind of emergency plan training does not base its activity on how many other emergency stations are contacted. They are planned, organized, trained to work within their radio service grouping or in liason with other radio service groups. I will respectfully suggest finding out how the Los Angeles Emergency Communictions Center does its planning, organization and training. They were ready and equipped before 1994.

73, Len AF6AY

Well, I agree and disagree...

Emergency preparedness and training, at a basic level, are certainly an important part of Field Day. If nothing else, actually going out, setting up a Field Day station and operating it can be a great learning experience. Particularly for the person without a background in such things. I mean we have to start somewhere!

But there's a lot more to Field Day than that, IMHO. It's also a social event, a camping trip, a radiosport contest, a chance to experiment with rigs, power sources, antennas, modes, bands and locations, and much more.

I've gone out on every ARRL Field Day since about 1967 and every one has been a unique and fun new experience. Of course a lot of that is "the attitude" one brings to it.

Emergencies come in all sizes and forms, and there isn't a one-size-fits-all response. An emergency can be as small as a stranded motorist who gets help via ham radio to a major disaster such as a hurricane, flood, or blizzard. All of them have different characteristics and need different responses. The degree to which the authorities can handle them varies all over the place; just look at the Hurricane Katrina disaster, or what happens when a snowstorm hits a part of the country that's not used to snow.

Of course as the communication infrastructure has matured, many situations that used to commonly need our help are now usually handled by other means. It wasn't that long ago when 911 calls via autopatch were a near-daily occurrence here; now they are rare because almost everyone has a cell phone.

Amateur Radio Newsline(tm) Report 1662 - June 19 2009

The following is a closed circuit advisory. Ladies and gentlemen, here is amateur radio Newsline's Support Fund administrator, Andy Jarema, N6TCQ:

--

OK, you all know why I am here. Its spring and all the bills from last winter have been mounting up. And, as usual, there is really not very much left in the treasury to pay them. Eventually they have got to get paid or these news reports will cease. That time is now.

So we ask that you take a few moments to send a donation to the Amateur Radio Newsline support fund so that we can keep these newscasts coming your way. Making a contribution is only a mouse click away if you have Pay Pal. Just go to www.arnewsline.org and click on the button at the top of the page marked "Make Donation." Or you can send in a donation to the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio Newsline will be eternally grateful and these newscasts will be here for you..

Once again that's the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

For the Support Fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. That ends the closed circuit advisory. Now, Amateur Radio Newsline report number 1662 with a release date of Friday, June 19th, 2009 to follow in 5-4-3-2-1.

The following is a QST. A new record for International Space Station to schoolroom contacts, the noise goes away from 6 meters as digital television arrives, a World Administrative Radio preparatory conference takes place in Canada and ham radio is again growing in the United States. Find out the details on Amateur Radio Newsline(tm) report number 1662 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ARISS REACHES 443 SCHOOL CONTACTS

A major milestone for the Amateur Radio on the International Space Station or ARISS school project. This as the total number of ARISS contacts between the astronaut hams on board the orbiting outpost and schoolrooms here on Earth has now reached 443. Bruce Tennant, K6PZW, has the details:

--

An average of 20 students are able to ask questions of an on-orbit crew during a normal ARISS contact. That totals out to well over 8000 school kids world-wide who have gotten a chance to vicariously visit the International Space Station via ham radio since the classroom contact program began.

For those not aware, today's Amateur Radio on the International Space Station to schoolroom educational program is a direct outgrowth of the old SAREX or Shuttle Amateur Radio Experiment. It was begun in the mid-1980's under the aegis of the late Roy Neal, K6DUE, and operated under the joint sponsorship of AMSAT, the ARRL and the educational arm of NASA.

As space experimentation has progressed so has amateur radio's part in it. Today, the ARISS school contact program is an important part of this ongoing work by ham radio volunteers world-wide. Hams working with astronauts and cosmonauts to bring the science of spaceflight a little closer to kids here on Earth.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A complete listing of all scheduled school contacts, and questions, other I-S-S related websites, along with IRLP and Echolink websites related to this ongoing project can be found on-line. Its at http://www.amsat.org/amsat/ariss/news/arissnews.rtf (ANS)

**

RESTRUCTURING: 6 METER NOISE FLOOR DROPS AS DTV REPLACES ANALOG

A present to the United States VHF and UHF ham community. This from both the broadcasters and the FCC as many of the nations VHF television stations vacate many of the low VHF channels, go digital and lower the overall noise floor on 6 meters.

The big digital television change out began at 00:01 EST on Friday, June 12th. Stations across the nation chose their own time to turn off their analog transmitters and move their operations to their permanent digital channels. Many of the low-band stations opted to move to the UHF band. A lot of them operated on Channel 2 just above the 6 meter ham band. And when those analog channel 2 transmitters went QRT, the noise level on 6 meters dropped in many locations. Places like

Chicago, where Keith Morehouse, W9RM, reported over the VHF Reflector that this is a big plus in Chicago where the long known Channel 2 audio spur is gone. That spur used to trash the WSJT meteor scatter calling frequency 50.260 MHz.

In Milwaukee Ray Greiner, K9KHW, reports on the analog shutdown on VHF channels 4, 6 and 12. He reports that he found most of the VHF and UHF ham bands so quiet that he actually checked and see if his antennas were connected. He says that on 6 meters where the normal noise level was S-3 to S-4, its now zero.

But 6 meters is not the only band seeing a noise floor improvement. Steve Rutledge, N4JQQ, is in Memphis Tennessee/ He says that when VHF channel 3 went to UHF and channels 5 and 13 went digital on their current assignments, that the noise he heard on the 222 MHz ham band when pointing his beam East is now completely gone. He says that in the past, that the noise level was so high that it wiped out any signal from the east, even with a bandpass filter before his tower mounted preamp.

Even some of those living North of the United States and Canadian border are happy about the change. Jordan Arndt, VE6ZT, in Calgary, Ontario says that he can hear the difference up in Grid Square DO-21. This is especially true when the band is open.

Its going to take a few weeks to really assess the impact that the digital television conversion will have on most of the VHF and UHF ham bands, but so far the results seem very good indeed. (ARNewsline, VHF Reflector)

**

RESTRUCTURING: WRC PREP MEETING HELD IN CANADA

Over 100 delegates from countries in the Americas gathered for a meeting June 2nd to the 5th in Ottawa, Canada. This in preparation for the next World Radio Conference that is to be held in Geneva late in 2011. Bill Pasternak, WA6ITF, has more:

--

Almost every item on the WRC Agenda was discussed . The goal was to find common ground that would be supported by the CITEL countries. Some subjects of interest to amateur radio discussed including the future of Broadband Over Powerline standards for adoption at the next meeting in November at Washington, D.C..

A common paper was produced and adopted by the plenary that most probably will be the basis of a joint Region 2 proposal at an upcoming meeting. Also, the delegates agreed to keep an eye on several agenda items that, although not of direct interest to Amateur Radio, could affect us depending on the positions adopted.

For the Amateur Radio Newsline I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

Amateur radio for IARU Region 2 was represented by Daniel Lamoureux, VE2KA, and Dario Jurado, HP1DJ. Jon Siverling, WB3ERA was on the USA delegation and Ken Pulfer, VE3PU, was part of the Canadian contingent. (RAC, Southgate)

**

RESTRUCTURING: SOUTH AFRICA GIVES NEW PRIVILEGES ON 40 AND 20

South African radio amateurs will now have full access to the spectrum 7.000 to 7.200 MHz. In a government notice issued on Wednesday, June 10th, changes to both 40 and 20 meters were made final. In addition to the modification on 40, ZR licensees will now also have access from 14.225 to 14.350 MHz. The expanded privileges for South African hams is a direct result of negotiations begun in February of 2008 between the South African Radio League and that nations telecommunications regulation authority. (SARL)

**

SPECTRUM PLANNING: VK HAMS HOLD REPEATER PLANNING MEETING FOR FUTURE TECHNOLOGIES

Hams in the United States seem to be going in many different directions in planning the future of repeater communications and frequency coordination as it enters a new age. Meantime their counterparts down-under are taking the proverbial bull by the horns. They gathered together on Sunday June 7th to make sure repeaters in Australia are ready for the future and the future is ready for what ham radio repeaters will offer. Robert Broomhead, VK3DN, has the details.

--

Not surprisingly, just like the commercial radio-communications industry, Australian amateur spectrum in the 2 meter VHF band and to a lesser degree in the 70cm UHF band is very congested or not available for new technologies.

The forum was kicked off with a presentation from the two Peters on the issues and how other IARU Regions have tackled similar problems, which stimulated further discussion of the issues. The outcome lead to some positive steps forward for the need to explore better use of CTCSS tone code to protect FM repeaters from unwanted incidental interference, a tentative way forward to address adjacent FM channel interference issues from D-Star mobiles and the development of 12.5 kHz plans for repeaters and simplex channels for wider discussion in the amateur community.

The forum was organized by the WIA to formulate options for addressing identified interference issues between repeaters along the New South

Wales coastal areas and the need to explore future spectrum options for new digital technologies.

For the Amateur Radio Newsline, I'm Robert Broomhead, VK3DN, in Australia.

--

The last Australian meeting to discussion these sorts or issues was held in the early 1970's. That's where the foundations of today's existing V-K band plans for repeaters were made. Here in the United States its been over a decade since the ARRL hosted the famed Big Old Meeting of repeater coordinators and the FCC. (WIA News)

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Repeater Association systems serving Los Angeles and Orange County, California.

(5 sec pause here)

**

RADIO GROWTH: THE NUMBERS ARE UP

The overall number of United States amateur radio operators appears to have increased by 12,877 from June 15 2008 to June 15th, 2009. This according to George Mc Couch, K3UD, who notes that the Technician class had the largest large increase. It showed an overall gain of 9,092 with the General adding 4,427 to its license rolls.

On the downside was the Novice that declined by 1,703 and Advanced by 2,029. This is due to attrition and upgrading away from both of these classes which are no longer offered by the FCC.

Looking at license class popularity, K3UD's numbers indicate that the Technician license is still the most sought after by newcomers and it has continued to make good gains over the last 12 months. But there is still a trend of Technicians upgrading to General begun some years ago that is ongoing. Also being seen is significant movement to Extra. It has shown an increases of 3,090 hams earning the top of the line ticket.

As to actual numbers, on May 16th of this year there were only 17,497 Novice class while Technician growth makes that class the largest with 327,793 holders. Generals number 147,644, Advanced sit at 61,204 and Extra rounds out the service with 117,387. That adds up to 671,525 licensed by the United States F-C-C.

K3UD points out that his figures are a comparison of two snapshots of the numbers taken at two different times and are a snapshot comparison

of two dates a year apart. As such, the numbers do not show the changes taking place every day which sometimes are up and other times downward. (K3UD via QRZ.con)

RESCUE RADIO: GAO SAYS FEMA NOT READY

A report issued by the Government Accountability Office says FEMA does not have a plan to coordinate all the national disaster exercises. Also, that it cannot track whether other federal agencies and communities across the country are prepared to respond to disasters. In its response to the report, FEMA said it relies on cooperation from other agencies to complete some of its plans. (Published reports)

RADIO LAW: CONGRESS TO HEAR LOUD VOLUME BILL

A measure that would require the FCC to set a standard for commercial volume for broadcast, cable and satellite programming is making its way through Congress. The House Subcommittee on Communications, Technology and the Internet has scheduled a hearing on H.R.1084, better known as the Commercial Advertisement Loudness Mitigation Act. The bill would require the FCC to set a standard for commercial volume for broadcast, cable and satellite programming. The idea is to insure that the volume of ads isn't too loud and isn't louder than the surrounding programming. If enacted into law, the measure would prevent commercials from being excessively noisy or strident; having modulation levels substantially higher than the accompanying program or having an average maximum loudness substantially higher than that of the accompanying program. HR 1804 was introduced last February 13th by Democrat Anna Eshoo of California. It already has 28 co-sponsors. (RW) ** COMMUNICATIONS LAW: A BIG WIN FOR BLOGGERS AND COMMENTERS IN MD A big win for those who like to blog and post comments on the Internet. This as a court in Maryland says posters are protected under that states law. Jim Davis, W2JKD, has the details: -- COMMUNICATIONS LAW: MARYLAND SIDES WITH BLOGGERS IN DEFAMATION VS FREE SPEECH CASE

** Maryland's highest court has ruled that operators of newspaper Web sites, blogs and chat rooms that allow readers to post anonymous comments using pseudonyms do not have to readily reveal the posters' identities in defamation suits. This as the Maryland Court of Appeals reversed a lower court ruling and ordered that NewsZap.com, an online forum run by Independent Newspapers, does not have to disclose the identities of forum participants who engaged in an online exchange about the cleanliness of a Dunkin' Donuts shop in 2006.

The late February finding involves the case of an Eastern Shore businessman, had contended that the anonymous posters using screen name pseudonyms had defamed him in comments about his Centreville restaurant. The Appeals Court ruled that the plaintiff had not correctly identified the forum participants and, therefore, was not

entitled to learn of their identities. More broadly, however, the court used the case to recommend a strict, five-step process for judges to follow to balance the First Amendment right to anonymous speech on the Internet with the opportunity on the part of the object of that speech to seek judicial redress for alleged defamation.

The process, which closely matches one set out by a New Jersey court in 2002, requires a plaintiff claiming defamation from an online comment to try to notify the anonymous poster that the person is the subject of a subpoena including by posting a message on the relevant online message board. The plaintiff must then identify in court filings the exact statements purportedly made by each anonymous poster, as well as show how those comments have caused damage.

Maryland's court also went further than New Jersey's, adding that the plaintiff might have to provide specific evidence supporting each element of the defamation claim. Finally, it indicated that judges also have to balance the anonymous poster's right of free speech against the need to disclose a defendant's identity.

I'm Jim Davis, W2JKD -- This is one of the farthest reaching court decisions aimed at protecting the anonymity of comment posters and bloggers along with their right to express their personal views as they see fit. Its not known if the plaintiff will seek to overturn the Maryland state judicial decision in the federal courts. (ComNews) **
NAMES IN THE NEWS: CQ PROP EDITOR CHALLENGES PROP EXPERTS

Some names in the news. First up is the Propagation Editor CQ magazine who is challenging the accuracy of the newest predictions on Solar Cycle 24.

In an online commentary posted on the CQ magazine website, Tomas Hood, NW7US, notes that this same group of what he term as so-called "experts" has issued multiple predictions for this cycle already. He notes that so far all of which they now say are wrong and he asks why we should believe they're right this time.

Hood points out that, while the Sun itself is millions of years old, scientists have been tracking solar activity for just a few hundred years. He says that in his view it is pretty arrogant to postulate that mankind has any real understanding and handle on what the Sun might do next.

The complete text of Hood's commentary is on the CQ website and may be accessed by clicking the "online commentary" link at www.cq-amateur-radio.com on the left hand side of the home page. (CQ)

**

NAMES IN THE NEWS: K4ZDH JOINS QRZ.COM VOLUNTEER STAFF

The giant QRZ dot com website has announced that former FCC ham radio rules enforcer Riley Hollingsworth, K4ZDH, has become the latest member

of the websites volunteer staff. He will serve as a guest columnist and advisor to the QRZ staff.

Hollingsworth retired from the FCC last year where he had a distinguished career as a Special Counsel in the Enforcement Bureau. He was responsible for the FCC's Amateur Radio Enforcement Program and as a ham himself, has proven himself as great asset to our hobby. (QRZ.com)

**

THE SOCIAL SCENE: NEW UK NATIONAL HAMFEST

On the social scene, a new National Hamfest has been announced in the United Kingdom. According to the Radio Society of Great Britain, the show which is being produced in association with the Lincoln Shortwave Club, has the full support of the major amateur radio vendors and manufacturers and will take place on 2nd and 3rd of October is the George Stephenson Hall at the Newark and Nottingham show-ground. Full details of this event can be found online at www.nationalhamfest.org.uk. (GB2RS)

**

SPECIAL EVENT: THE TECHNICAL MUSEUM OF VIENNA AT 100

And It's a happy 100th birthday to the Technical Museum Vienna Austria. And to celebrate the occasion, members of the ICOM Radio Club of Vienna and the Austrian International Amateur Radio Union will be activating the special callsign O-E-100-T-M-W between June 17th and the 21st.

According to event planners, this will be a 100 hour continuous operation with stations on many of the High Frequency bands as well as VHF. All licensed amateurs are invited to come to the museum and operate the special station or make contact with it on the air. More information is on the event pages on the World Wide Web. They are in cyberspace at http://www.hamradio.at/index.php?id=73 and http://www.tmw.at/default.asp?al=Englisch&am=home (Southgate)

OPERATING EVENTS: FIELD DAY 2009 - JUNE 27 - 28

The 2009 ARRL Field Day will be held June 26th and 27th at location near you. According to the League, its Field Day is the most popular on- the-air operating event in amateur radio. Its truly a time in that brings amateur radio to Main Street USA. This, as hams set up stations in parking lots, malls, parks and Emergency Operations Centers to demonstrate the skills that will allow them to better serve their communities.

Demonstrating the hobby in these public venues gives added public relations value. It gives all in a community a chance to see and experience both the fun and public service capability that their ham

radio neighbors bring to the community.

Amateur radio is about knowledge and growth. It is a hobby and service that truly offers "something for everyone. That's why every year, on the fourth full weekend in June, tens of thousands of amateur radio operators gather for a public demonstration of our service. 2009 is expected to be bigger and better than ever before.

More information about Field Day can be found on the American Radio Relay League's website. Its in cyberspace at www.arrl.org/fieldday. (ARRL) **

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

CHANGING OF THE GUARD: DON TUNSTILL, W4NO - S.K.

A ham who helped to create the nations all volunteer testing and vanity call sign systems has become a silent key. David Black, KB4KCH, takes a look at the life and contributions of Don Tunstill, W4NO:

--

If you have a vanity callsign, you might have Don Tunstill to thank for it. Tunstill will be remembered as a pioneer of sorts. He helped set in motion the process for radio amateurs across the country to become licensed. Tunstill worked closely with the FCC in creating the Volunteer Examiner Coordinator and vanity callsign programs.

--

W4OZK: "He was just a great person and he was a great mentor, a great example for amateur radio and just a great person overall."

--

That's Greg Sarratt, W4OZK, the ARRL's Southeastern Division Director. Tunstill's work extended well beyond helping hams get their licenses. He was a familiar face at the Huntsville Hamfest--he helped start the Hamfest and served as its President for 30 years. In Alabama, Tunstill founded CAVEC, the Central Alabama Volunteer Examiner Coordinator. Under Tunstill's direction, CAVEC license exams eventually extended throughout Alabama and into seven other states. Again, Greg Sarratt:

--

"W4OZK: "Don has done a lot for amateur radio over the years. A lot of what he's done has been behind the scenes, although he has been in the forefront of the Huntsville Hamfest Association, the Huntsville Amateur Radio Club and CAVEC. We've lost a great person."

--

Don Tunstill died June 9th at his home in Huntsville. He was 69. Though suffering from emphysema, Tunstill, who was a life member of the ARRL, remained an active supporter of the Huntsville Hamfest and amateur radio.

>From Birmingham, Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline

--

A memorial service was held for Don Tunstill, W4NO, on Saturday on June 13th in Huntsville, Alabama. (ARNewsline)

**

ON THE AIR: ALTUS OK. TO THE WORLD

Hams in Altus, Oklahoma, are starting a local net with a worldwide outreach. This, thanks to a local repeater tied to the world by Voice over Internet Protocol or VoIP technology.

Dale Town, AF5AF, is the president of the Altus Area Amateur Radio Association. He says hat the new local net will be tied to the world using 444.650 MHz repeater that will also accept stations check-ins from Echolink operators who connect to WX5EM-R node number 361238.

The net will be held on Wednesdays at 01:00 UTC which is 2000 hours Central Daylight Savings Time. All amateur radio operators are encouraged to participate. (KC5FM)

**

WORLDBEAT: ETHIOPIA ON THE JAM

If you regularly listen into the 7.100 to 7.200m kHz range on 40 meters, then you may have noticed some interference that has not yet gone away. Starting at 16.30 GMT and lasting about one hour, you will find on a powerful wideband rushing noise which is some 15kHz wide on 7.165 or sometimes on 7.175 kHz,. Also very faintly you can hear the carrier of a program below the jammer.

The culprit is Radio Ethiopia and it is jamming Voice of the Broad Masses from Eritrea. And this is nothing new because Ethiopia also regularly jams other transmissions in Amharic from radio Deutsche Welle, on 15 and 11MHz.

Back in 2008 Ethiopia commissioned three or four new transmitters, some of which are regularly used for jamming unwanted programs. The jamming uses a rectangular white noise signal that is some 10 to 16 kHz wide.

(Southgate)

WORLDBEAT: UK MAN CHARGED IN HIGHWAY ACCIDENT THAT KILLED UK HAM

A follow-up t our story a few weeks ago we brought you the story of a tragic accident that claimed the life of Peter Rushton G7PMZ. He and Ian Firby, G7VCG, were involved in a highway collision on the United Kingdom's M 61 Motorway am May 24th. Rushton died at the scene while Firby was transported to a nearby hospital for emergency treatment.

Now the London Daily Mail reports that the brother of former England cricket captain Mike Atherton has been arrested on suspicion of causing death by dangerous driving. Chris Atherton is alleged to have changed lanes on a motorway, causing another car to swerve and overturn

Atherton, who runs a building firm, was arrested and questioned by officers before being released on bail while an investigation into the crash is carried out. You can read the Daily Mail article at www.dailymail.co.uk/news/article-1190901/Mike-Athertons-brother-arrested-fatal-motorway-crash.html (Southgate)

**

WORLDBEAT: GPS TO BE JAMMED IN SCOTTISH TEST

If you are driving in the very north of Scotland or the Orkneys between July 11th through the 16th, your G-P-S system may go brain dead. Its being jammed ad its perfectly legal.

The U-K Ministry of Defense will be conducting another Global Positioning System jamming exercise. The July tests will be for limited periods between 11.00 and 15.00 UTC. The location for the exercise is to sea westwards from 58 degrees 57.4 minutes North and 3 degrees 13.9 minutes West. This is about 60 nautical miles west of Kirkwall.

The Ministry of Defense conducts occasional tests on military systems that may result in some loss of service to civilian users of the Global Positioning System. This includes such equipment as in-car navigation devices and other networks which rely on GPS signals. (RSGB)

**

WORLDBEAT: SOUTH AFRICAN RADIO AMATEUR EXAMINATION CANDIDATES JUBILANT

The wait is over in South Africa for 98 candidates of the 125 who entered and passed the nations Radio Amateur Examination. The oldest candidate was Mr. E. Smook, ZR2ES, from Port Elizabeth who is 74. The youngest was R. Preston, ZU4RP from who is only 9 years old. (SARL)

**

THE CONTESTING CORNER: CQ ANNOUNCES NEW XTREME CATEGORY FOR CQWW DX CONTEST

CQ Magazine says that it has added a new Xtreme category to the CQ World Wide DX Contest. This, to encourage the development of new technologies in amateur radio communications in general and contesting in particular.

According to CQ World Wide Contest Director Bob Cox, K3EST, this new category has been established to allow amateurs to participate in the contest while experimenting creatively with Internet-linked stations and other new technologies. The highest-scoring entries in the single-operator and multi-operator categories will win the John Kanzius, K3TUP, Memorial plaques, sponsored by Tim Duffy, K3LR. Kanzius, a prominent contester, was also an experimenter who developed a potentially ground-breaking approach to cancer treatment in the course of his own, ultimately unsuccessful, battle with the disease.

The new Xtreme category will take effect with the 2009 CQ World Wide DX Contest this fall. Complete details of the are in the June issue of CQ and are on the CQWW page of the CQ magazine website. Its at www.cq-amateur-radio.com. (CQ)

**

WORLDBEAT: VK HAMS GET SECONDARY STATUS FROM 135.7 - 137.8 KHZ

Meantime, the Australian Communications and Media Authority has advised the Wireless Institute of Australia that any V-K amateur holding an Advanced license may now apply for a variation of their license to allow operation on a secondary basis in the low frequency band from 135.7 to 137.8 kHz. Australian hams are limited to a maximum radiated power of 1 Watt Effective Radiated Power in the new low frequency band. (WIA News)

**

DX

In D-X, word that SU1SK, and several other Egyptian operators will be active as SU8LH. This as the first Egyptian Lighthouse DXpedition on Ras El-Bar Island from August 1st to the 9th.

KP2YL and KP2HC will be back on St. Croix until 30th June. Listen for them using CW and SSB on 160 to 6m. Please note that June is the 6 meter DX season in the Caribbean. QSL direct only via the addresses on QRZ.com.

PF4T will be active as 8Q7TB from Embudu in the Maldives until 24th of June. He will operate SSB on 40 and 20m. QSL direct via his home call or via PA0LEY for the bureau

W5YDX will be active holiday style portable VP9 from Bermuda until the 24th of June. He expects to operate mainly on 20 and 17m SSB. QSL via home call, direct only.

Lastly in DX that's on-orbit, word that HB9OAB will activate from Morocco as CN2AB on the VO-52 ham radio satellite. This, between June

27 through July 20, 2009. More information is on-line at www dot qrz dot com slash CN2AB

(Above from various DX news sources)

**

THAT FINAL ITEM: THE SAGA OF THE FISHY CELLPHONE

And finally this week, the story of United Kingdom resident Andrew Cheatle and his cellphone which the June issue of Popular Communications Magazine may own the most reliable phone in the world.

In a recent interview with a United Kingdom newspaper, Cheatle explained that he was messing playing with his dog near the seashore when his cellphone phone must have fallen and got swept away. Cheatle said that he kept calling it in hope someone may have found it. Nobody answered so he gave up after a couple of days.

Fast forward a week. Cheatle is out with his girlfriend shopping for a new cellphone when her phone rang. She told him that his mobile number was calling hers. The person on the other end identified himself as Glen Kerley. Kerley, a fisherman by trade told Cheatle that he was gutting a large codfish that morning and found Cheatle' s Nokia 1600 phone inside.

Kerley tried using the phone, but it didn't work. So he removed its SIM card, put it in his own handset, and started calling numbers from the SIM' s phonebook to find the owner.

At first Cheatle didn't believe the story but went to meet him. What he found was his phone that was a bit smelly and battered. Now heres the best part. By the time he got to Kerley's place the phone had dried out and incredibly it came back to life.

Kerley says that Cod are greedy fish-they'll eat anything. He's found plastic cups, stones, teaspoons, batteries, and everything else under the sun in them. He says that he's even heard of someone finding false teeth in one.

You can read more fun communications stories like this one on page 6 of the June issue of Popular Communications magazine.

And one last word on this story: Its rumored that Cheatle, who runs an online retail company, apparently still uses the fishy phone. Word is that there's a long line of hungry looking cats following him wherever he goes.

Well not really, but it's sure a fun sentence with which to end this weeks newscast. (PopComm)

> things. I mean we have to start somewhere!

I think that the key words in what you said are "can be". There are people who come to Field Day just for the social aspects or the contest aspects. And that's fine; the hobby is plenty broad enough to encompass many different interests and far be it from me to force my preferences on anyone else.

> But there's a lot more to Field Day than that, IMHO. It's also a social
> event, a camping trip, a radiosport contest, a chance to experiment
> with rigs, power sources, antennas, modes, bands and locations, and
> much more.

The part that I find somewhat amusing is the idea that you can judge the state of training for emergency communications by visiting one Field Day operation. They're all different, depending on the interests of the participants. There are operations that are primarily social in which there is little learning taking place, and there are others that are very serious attempts to experiment and learn to prepare for emergencies. There's nothing wrong with this; FD provides an opportunity to do what the group wants to do.

> I've gone out on every ARRL Field Day since about 1967 and every one
> has been a unique and fun new experience. Of course a lot of that is
> "the attitude" one brings to it.

Yes, unique. Every FD operation is different and has a different mix of social, contest, and emergency communications training. Even operations conducted by the same club will be different year to year, depending on the goals of the people who turn out that year.

But as you point out, you've got to start somewhere, and even the most social-oriented operation still provides exposure to different aspects of the hobby for people who may not have seen it before. FD is one of the Good Parts of the hobby.

73, Steve KB9X

When I mentioned "attitude", I was referring to Mr. Haynes' statement,
inferring that hams who use HF are "largely uninterested" in EmComm. The
point I made is that it's the attitude of the participants that
determines how effective they are at EmComm, not which mode or band they
use to get the job done.

I respectfully disagree that hams don't have a civic duty to help with
EmComm where possible: I won't presume to dictate morality, but I feel
that a ham operator who are in a position to do so should help to
prepare for and recover from natural disasters, in the same way that
ordinary citizens fill sandbags, carry food, or give rides to others who
need to relocate.

> weekend family duties.

Yes, of course it is. Some who attend Field Day discover that they like
the challenge, and go on to further their EmComm training and to upgrade
their own and their station's capabilities. Some don't. That doesn't
mean that hams should stop Field Day, or any other event that introduces
new hams to the EmComm part of our hobby.

> not at some scheduled park-outing with or without barbeque in pleasant,
> comradely surroundings.

Well, let's be frank: recruiting sergeants don't show up at a High
School or college with combat fatigues covered in mud and blood, and
Olympic athletes don't start their ski training on the "Double Diamond"
slopes, either. The rigors of unexpected situations can be met by the
rigors of thorough training, careful indoctrination, frequent drills,
and teamwork: Field Day may be an excuse to get away from mowing the
lawn for most hams, but some will discover a new and demanding path to
further achievement, and everyone has to start somewhere.

"REAL" emergency training can only occur during real emergencies, but
those best able to make the grade in that arena will be those who were
willing and able to plod through the steps in between a Field Day outing
and a "Jump Team" assignment. Field Day is a _starting_ point, not an
end in itself: some choose to go further, and some don't, and either
choice is valid.

> As to the contest activity which I consider the main aspect of Field

> will respectfully suggest finding out how the Los Angeles Emergency
> Communictions Center does its planning, organization and training.
> They were ready and equipped before 1994.

I agree. The original scoring plan for Field Day was obviously dictated by the limits of manual labor: the League had to receive, correlate, and total results by hand; ergo, a simple scoring system was in order. With personal computers available, the effort of entering, checking, and reporting on Field Day logs can be largely automated, so your idea to make the exchanges more challenging is a good step in the right direction.

This is a place where the experience of the past may best be used to train for the future: operators could be rated on various optional "real world" tests such as copying messages from a central point (like the ARRL broadcasts), or on their ability to pass complicated traffic accurately in timed tests, or on their performance in tearing down, packing, moving, and reestablishing a station, all of which are routine tasks in actual emergencies.

73,

Bill, W1AC

============================================================

==> PACIFIC DIVISION VICE DIRECTOR STEPS DOWN; APPOINTMENT FILLS VACANCY

Citing family and business reasons, ARRL Pacific Division Vice Director
Andy Oppel, N6AJO, has submitted his resignation. President Joel
Harrison, W5ZN, has appointed Jim Tiemstra, K6JAT, of Oakland,
California, to serve the remainder of the current term through the end
```

of 2010.

Oppel had served as Vice Director since being appointed in 2003 to complete the term of Bob Vallio, W6RGG, who became Director upon the death of Jim Maxwell, W6CF. In a message posted to the East Bay Section Web page, he commented: "I regret to inform you that family and work issues have forced me to resign as your ARRL Pacific Division Vice Director. I have enjoyed being able to serve you in that capacity for the past 6+ years and as East Bay Section Manager for 3 years prior to that. I very much appreciate the support and friendship offered by many of you and I hope I still get a chance to see many of you from time to time."

First licensed in 1970 as WN9ELU, Tiemstra, an attorney, is an Amateur Extra class licensee. He has also held the call signs WB9ELU and N6OIK. "I'm thrilled at the opportunity to serve an organization that I have been a member of for my entire Amateur Radio career," Tiemstra said. "I have known of and supported Pacific Division Director Bob Vallio's efforts at the League for many years, and look forward to the opportunity of working with him in those endeavors. I am deeply honored to be chosen to fill the vacancy left by Andy's resignation. Because Amateur Radio certainly has enriched and added value to many aspects of my life, I am elated to have the opportunity to contribute something back to the hobby. The future of Amateur Radio is at a critical crossroads that will involve our appeal to youth."

Tiemstra told the ARRL that his favorite Amateur Radio activities are "contesting -- I seem to have more wallpaper than wall -- DXing with 300 confirmed entities and DXpeditions, a poor but adequate excuse for a vacation. I have operated as 3D2TJ, PJ2/K6JAT and KH6/K6JAT and from V26DX, but I have long been involved in the public service aspects of Amateur Radio."

As a member of the Oakland ARES group, Tiemstra responded to the 1989 Loma Prieta earthquake and the 1991 Oakland Hills firestorm. He worked with Oakland area hams and city officials to gain RACES recognition and was instrumental in forging a formal Letter of Understanding <http://www.ww6or.com/LOU_Oakland_RACES.pdf>. In addition, he assisted Oakland ARES/RACES in successfully championing a proposal to use post-firestorm, bond Measure I funds to acquire and install Amateur Radio equipment in the Oakland's Emergency Operations Center and each of its 30 fire stations. This has been dubbed the Emergency Communication Ham Operation (ECHO) system. Tiemstra also served as Oakland's RACES Radio Officer for more than 14 years.

In 1998, Tiemstra acted as the incorporator of the Oakland Radio Communication Association (ORCA) <http://www.ww6or.com/>, an ARRL affiliated club; he was a founding director and became its first president. He is a member of ORCA's board of directors and trustee of the club's call sign WW6OR. Tiemstra is a member of the Northern California Contest Club (NCCC) <http://www.nccc.cc/>, the Quarter Century Wireless Association (QCWA) <http://www.qcwa.org/> and 10-10

International <http://www.ten-ten.org/>. Tiemstra and his wife, Lilah, KE6EHD, have twin boys, Robert and Matthew, KI6IHP.

==> FCC CHAIRMAN NOMINEE GENACHOWSKI, CURRENT COMMISSIONER MCDOWELL FACE CONFIRMATION HEARINGS

On June 16, Julius Genachowski -- the man President Barack Obama picked to head the Federal Communications Commission -- and current FCC Commissioner Robert McDowell appeared before the Senate's Commerce, Science and Transportation Committee for their confirmation hearing. The Committee voted 24-1 to approve Genachowski's nomination and unanimously approved McDowell for his first full term as a Commissioner, sending their names to the full Senate to be confirmed.

President Obama nominated Genachowski to lead the Commission on March 3, 2009 <http://www.arrl.org/news/stories/2009/03/03/10684/?nc=1>; the president renominated McDowell to his post on June 2 <http://www.arrl.org/news/stories/2009/06/03/10859/>. Genachowski is a Democratic nominee, while McDowell is a Republican. Only three Commissioners may be members of the same political party.

At his confirmation hearing, the Chairman of the Commerce, Science and Transportation Committee Senator John D. Rockefeller IV (D-WV) told Genachowski that he wants "an FCC that is transparent, that inspires confidence and that makes our digital infrastructure a model for the world. Tragically, this has not been the case for some time. Let me be very clear about the challenge before you. Fix this agency or we will fix it for you."

Senator Byron Dorgan (D-ND) praised Genachowski for having the "perfect background" to run the FCC. He then added, "It seems to me that you will lead a rather unhealthy agency. We've been through a period of substantial secrecy."

Senator Rockefeller noted that during former Chairman Kevin J. Martin's tenure, the FCC was under congressional investigation for mismanagement <http://www.arrl.org/news/stories/2008/12/12/10505> and the focus of criticism by the Government Accountability Office (GAO) for its lack of transparency and potential misuse of data. Late last year, the House Committee on Energy and Commerce -- the congressional committee that oversees the FCC -- released its majority staff report "on the bipartisan investigation of the FCC's regulatory processes and management practices." The report -- "Deception and Distrust: The Federal Communications Commission under Chairman Kevin J. Martin" -- stated that the investigation was prompted "by allegations to the effect that [FCC] Chairman Kevin J. Martin has abused FCC procedures by manipulating or suppressing reports, data and information" <http://www.arrl.org/news/files/FCC_Report120908.pdf>.

Genachowski assured the Committee that his career "inside and outside government has convinced [him] that the FCC can be a model for excellence in government, fighting for consumers and families, fostering

investment and innovation, through open, fair, and data-driven processes -- a 21st century agency for the information age. The FCC should consult closely with Congress, and work effectively and efficiently for the American people."

In his testimony, McDowell said the Commission should focus on attracting capital investment to the communications sector, adding that the wireless sector is becoming increasingly important. "I will work to support policies that will promote vigorous growth in the broadband markets to ensure that all Americans have access to the promise of high-speed Internet services and that the Internet remains robust, open and safe," he told the Committee.

Sources on Capitol Hill have said that Genachowski should be confirmed by the time the Senate recesses for the July 4 holiday.

For a video stream of the confirmation hearings, please visit the Web site of the Senate's Commerce, Science and Transportation Committee <http://commerce.senate.gov/public/index.cfm?FuseAction=Hearings.LiveStream&Hearing_id=bca080f3-15a0-4d05-8abd-77f5327a2cb7>.

==> W1AW, WA6ZTY TO CONDUCT DUAL-TONE FREQUENCY MEASURING TEST IN JULY

The Hiram Percy Maxim Memorial Station, W1AW, and WA6ZTY on the West Coast will conduct a summer Frequency Measuring Test (FMT) on July 1 at 9:45 PM EDT (0145 UTC on July 2) <http://www.arrl.org/w1aw/fmt>. According to FMT Coordinator H. Ward Silver, N0AX, the format will be a "do-over" of the dual-tone test conducted in November 2008: "The timing glitches that occurred during the November test have been ironed out, so the format will be repeated to give everyone another opportunity to make measurements."

Silver said that both stations will transmit on a carrier frequency of 3597.5 and 7095 kHz; these are the W1AW digital bulletin frequencies. Two audio tones between 2000 and 2500 Hz will be transmitted in an alternating sequence, with a shift between 100 and 500 Hz. This is similar to what is used for RTTY communication. Beginning on 80 meters, Tone 1 will be transmitted for 10 seconds, followed by Tone 2 for 10 seconds. The tones will then alternate until each tone has been transmitted six times, for a total transmission of 120 seconds. The transmitting station will then change to 40 meters -- after identifying in Morse code -- and repeat the two-tone sequence.

All transmissions for announcing the test, identification and band changes will be in CW at 15 WPM (18 WPM character speed). CW transmissions will be on the carrier frequency, with each lasting more than one minute.

Time Sequence for W1AW (begins at 9:45 PM EDT [0145 UTC July 2, 2009]):
* QST and test announcement on 80 meters.
* Repeat six times: 10 seconds of T1 followed by 10 seconds of T2. This is a total of 120 seconds of transmission.
* ID and notice of QSY to 40 meters.

* QST and test announcement on 40 meters.
* Repeat six times: 10 seconds of T1 followed by 10 seconds of T2. This is a total of 120 seconds of transmission.
* Announce conclusion of W1AW transmission and ID.

Time Sequence for WA6ZTY (begins at 10 PM EDT [0200 UTC July 2, 2009])
* QST and test announcement on 80 meters.
* Repeat six times: 10 seconds of T1 followed by 10 seconds of T2. This is a total of 120 seconds of transmission.
* ID and notice of QSY to 40 meters.
* There will be a pause of five minutes while WA6ZTY reconfigures for 40 meters.
* QST and test announcement on 40 meters.
* Repeat six times: 10 seconds of T1 followed by 10 seconds of T2. This is a total of 120 seconds of transmission.
* Announce conclusion of WA6ZTY transmission and CW ID.

According to Silver, the FMT has been run in the past where a modulated carrier or audio tones are held steady for a very long time. "This 'classic' carrier frequency FMT format will return in November," he said. "The new format addresses the growing importance of digital modes. The challenge of this format is to make quick, accurate measurements of the characteristics of a digital signal where the tones do not stay steady for a long period of time. It's not expected that the level of accuracy demonstrated for a long-tone test will be achieved for these short tone transmissions -- that's not the point."

Silver said that he predicts there will be a future FMT that will conduct a true-FSK test. "In this future test, there would be four variables: Carrier frequency, Audio Tone 1, Audio Tone 2 and Shift," he said. "Given the value of any one of the variables in advance, two of the remaining variables would be measured and the final variable calculated or measured. The symbol rate (the number of transitions per second) would be representative of actual digital signals. For example, a 60 WPM RTTY signal."

Silver said that this can present some challenges to FMT participants: "One of the reasons we conduct the FMTs goes back to FCC Part 97.1(c): '...advancing skills in both the communication and technical phases of the [radio] art.' We look forward to seeing the creativity and innovation of the measurement community applied to this new format" <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr97.1.pdf>.

Participants should send their FMT reports -- indicating their values of Tone 1, Tone 2 and Shift (the difference between the tones) -- via the Web data collection form <http://www.b4h.net/fmt/fmtentry.php> by July 8. The published results will evaluate error in Tone 1, Tone 2 and Shift. "Be sure to include the details of how you made the measurements, obstacles you faced and how you overcame them," Silver said. "It will make great reading and sharing in the best traditions of Amateur Radio. If you have pictures or diagrams, please send them <fmt@arrl.org> so that they can be posted on the FMT Web page"

<http://www.arrl.org/w1aw/fmt/>.

==> CHECK OUT THE JULY/AUGUST NCJ

The July/August issue of NCJ, The National Contest Journal, is filled with the latest news from the contesting world. Whether you are new to contesting or are a seasoned pro -- or somewhere in the middle -- you will find something in NCJ just for you <http://www.arrl.org/ncj/>.

If you're in the market for a new rig, you will want to check out "Choosing an HF Radio for Serious Contesting and DXing" by R. Scott Wright, K0MD. In the first of a multi-part article, John Barcroft, K6AM, takes a look at "A 3 Element Reversible Wire Yagi for 80 Meters." One year after the introduction of CW Skimmer, Pete Smith, N4ZR, gives his perspective in "CW Skimmer One Year Later."

This issue also features "NCJ Profiles" and "NCJ Club Spotlight": Tom Menas, K3WT, introduces us to Dave Mueller, N2NL, of Key West, Florida, while Bob Nash, VE3KZ, takes us inside the Contest Club Ontario.

If you've been waiting to see how you did in the January and February contests, you definitely don't want to miss this issue! Shelby Summerville, K4WW, give readers the rundown on the February 2009 NAQP RTTY Contest. Bruce Horn, WA7BNM, looks at the results of the January 2009 NAQP CW and SSB Contests. Jim Stevens, K4MA, gives his take on the February 2009 North American Phone Sprint and members of the Boring Amateur Radio Club ponder the February 2009 North American CW Sprint.

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "VHF-UHF Contesting," by Jon Jones, N0JK; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU, and "Contesting 101," by Kirk Pickering, K4RO.

All this and more in the July/August issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. NCJ is what every contester needs in their shack -- subscribe today <http://www.arrl.org/ncj/>.

==> ARRL TEACHERS INSTITUTES CONTINUE THROUGH SUMMER

The second and third sessions of the ARRL's Teachers Institute on Wireless Technology of 2009 have wrapped up in Rocklin, California and Tucson, Arizona <http://www.arrl.org/FandES/tbp/ti.html>. These two TIs mark the first time that the ARRL has offered simultaneous sessions of the popular summer program for teachers. According to Education and Technology Program Coordinator Mark Spencer, WA8SME, the addition of two new TI instructors made it possible to hold two sessions at the same time. "With Miguel Enriquez, KD7RPP, and Nathan McCray, K9CPO, on board," Spencer said, "we are able to hold more sessions, and in turn, involve more teachers into learning how to bring wireless technology into their classrooms."

In Tucson, Enriquez led a group of local teachers through the four day curriculum that includes basic electronics, the science of radio, space in the classroom, microcontroller programming and basic robotics. "The Tucson Teachers Institute went wonderfully," he told the ARRL. "I saw lots of smiles, heads nodding in understanding and teachers espousing intended commitment to provide a return on investment."

Spencer led the other session group at the Parallax facility in Northern California. "This group was more geographically diverse," he said, "with teachers from nine states from coast to coast." McCray will lead a session in Michigan that begins on June 29.

Each Teachers Institute session includes 12 teachers. According to Spencer, the curriculum is information packed and intensive. "This year," Spencer said, "we tried to connect the teachers in the Tucson session with the teachers in the California session via an AO-27 contact; satellites are part of the space in the classroom unit. Unfortunately, this was not successful due to unforeseen complications with accessing the satellite; however, a later attempt to demonstrate ham radio space technology was successful."

The final day of the Teachers Institute is dedicated to basic robotics; this unit ties together all of the other content areas taught during the Teachers Institute. There are five more Teachers Institutes scheduled over the next two months. Spencer said that "the aggressive schedule and increased number of teachers participating this year -- 84 -- is testament to the success of this ARRL Educational and Technology program that is supported by the generous League donors who share a passion for education"
<https://www.arrl.org/forms/development/donations/education/2008/>.

==> WX4NHC ANNOUNCES ON-THE-AIR STATION TEST RESULTS

WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio station at the National Hurricane Center <http://www.nhc.noaa.gov/>, conducted its annual On-The-Air Station Test on Saturday, May 30, 2009 <http://www.arrl.org/news/stories/2009/05/15/10821/>. According to Assistant WX4NHC Coordinator Julio Ripoll, WD4R, the station conducted the test to promote awareness of the 2009 hurricane season <http://www.arrl.org/news/stories/2009/06/06/10862/?nc=1> and to verify station equipment performance on the many frequencies and modes that are used to communicate with other stations in affected areas during hurricanes. WX4NHC has been at the NHC for 29 years.

Ripoll said that WX4NHC station was on the air for nine hours, making 154 contacts with stations in the US, the Caribbean, Central America, Canada, Australia, Europe and Africa. "Most contacts made on HF were done using phone (SSB) and on the Hurricane Watch Net <http://www.hwn.org/> frequency of 14.325 MHz, as well as 7.268 MHz in cooperation with the Waterway Net <http://www.waterwayradio.net/>," he said. "We also made contacts using HF and VHF APRS <http://www.arrl.org/tis/info/HTML/aprs/>, and local VHF and UHF repeaters in Miami-Dade and Broward Counties."

Ripoll said that the VoIP Hurricane Net <http://www.voipwx.net/> conducted a two hour simulated Hurricane Net on EchoLink (WX_TALK conference) and IRLP (node 9219) using the same methods of collecting and forwarding data to WX4NHC during hurricanes with great success: "We extend special thanks to Rob Macedo, KD1CY, and the VoIP Hurricane Net Controls for their dedication and continued support of WX4NHC."

On behalf of the WX4NHC Coordinators and operators, Ripoll thanked all the Amateur Radio operators who participated in the WX4NHC Annual Station Test: "We look forward to your continued support during the hurricane season." For a QSL card from the test, please send a self-addressed, stamped envelope to Julio Ripoll, WD4R, 14855 SW 67 Ln, Miami, FL 33193-2027.

==>SOLAR UPDATE

Tad "Spread their wild hues to the sultry Sun" Cook, K7RA, this week reports: I bet you have this memorized: "Solar activity was very low throughout the reporting period, and geomagnetic field activity was at quiet levels during most of the reporting period." Enough said? The first sunspot region of Solar Cycle 24 occurred on January 4, 2008. Since then, though, Solar Cycle 24 spots have been few and far between. A good summary of this solar minimum can be made in two statements. The first statement is that the duration of this solar minimum is unusual compared to the other solar minimums in our lifetime. That's because from the minimum between Solar Cycle 17 and 18 onward, solar minimums have been roughly two years. Thus we've only been exposed to "short" solar minimum periods. A look at all history shows a different story and brings us to the second statement. This solar minimum, which is going on three years now, is pretty much average in duration compared to all history. What this all says is the Sun has been highly variable throughout recorded history. Sunspot numbers for June 11-17 were 0, 12, 0, 0, 0 and 11 with a mean of 3.3. The 10.7 cm flux was 69.3, 69, 68.2, 68.1, 67.4, 68.3 and 67.8 with a mean of 68.3. The estimated planetary A indices were 3, 2, 4, 6, 4, 3 and 3 with a mean of 3.6. The estimated mid-latitude A indices were 2, 1, 3, 4, 4, 4 and 1 with a mean of 2.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Clare's "June" <http://johnclare.blogspot.com/2006/03/from-june-in-anticipation.html>.

==>IN BRIEF:

* This Week on the Radio: This week, look for the ARRL Kids Day Contest on June 20. The NCCC Sprint Ladder and the Digital Pentathlon are June 19. The Feld Hell Sprint and the AGCW VHF/UHF Contest are June 20. On June 20-21, look for the West Virginia QSO Party and the All Asian DX Contest (CW). The Run for the Bacon QRP Contest is June 22 and the SKCC

Sprint is June 24. Next week ARRL Field Day is on June 27-28 -- look for a Field Day site near you <http://www.arrl.org/contests/announcements/fd/locator.php>. The NCCC Sprint and the Digital Pentathlon are on June 26. On June 27-28, check out the His Majesty King of Spain Contest (SSB), the Ukrainian DX DIGI Contest, the Marconi Memorial HF Contest and the ARCI Milliwatt Field Day. The SARL Digital Contest is June 28 and the RAC Canada Day Contest is July 1. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 28, 2009, for these online course sessions beginning on Friday, July 10, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 3. There will be no ARRL Audio News, W1AW bulletin or code practice transmissions that day. The ARRL Letter will be posted a day early on Thursday, July 2. League Headquarters will reopen Monday, July 6 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* ARRL Contest Update Offers Valuable Information for All: Every two weeks, H. Ward Silver, N0AX, produces the ARRL Contest Update. Each issue is jam-packed with information for all operators -- be they involved in radiosport or not -- operating and technical tips, propagation information and a focus on a technical Web site each issue. Of course, everything you need to know about upcoming contests is right there at your fingertips. Since the ARRL Contest Update is available in HTML, there is a link to the rules for each individual contest listed, as well as pictures. ARRL members can subscribe the ARRL Contest Update

on the ARRL Web site
<http://www.arrl.org/contests/update/about.html#get>.

* Jim Tabor, KU5S (SK): Jim Tabor, KU5S, passed away at his home in Greenwood, Arkansas on May 27; he was 54. A longtime ARRL member, Tabor was head of Kangaroo Tabor Software <http://www.taborsoft.com/>, which published various programs for radio amateurs, such as the WinCAP propagation prediction software, GeoAlert-Extreme Wizard, Beacon-Time Wizard and ID Wizard. Dean Straw, N6BV, who edited several recent editions of The ARRL Antenna Book <http://www.arrl.org/catalog/?item=9876>, remembered Tabor fondly: "Over the course of about a dozen years, Jim provided ARRL with some of his most innovative propagation programs, and allowed us to include them on the CD-ROM accompanying The ARRL Antenna Book. I worked closely with Jim on several such projects, and he was always thorough and analytic in his approach to such collaborations. But more than that, Jim was simply a great guy to work with. I shall miss his unfailingly polite and down-home, gentle demeanor. Jim will remain in my memory a soft-spoken, gentle and talented man, a true gentleman."

* Longtime ARRL Staffer Robert L. Lincoln Passes Away: Robert Lincoln, 94, of Westbrook, Connecticut, passed away at his home on June 13. After his retirement at age 65 from Addressograph Multigraph, Lincoln came to work at ARRL to run the League's in-house printing press. He retired from the ARRL in January 2007 at age 92 after 27 years of service <http://www.arrl.org/?artid=7140>. Around the ARRL HQ building, he was affectionately known as "Mr Lincoln," carrying out his various printing tasks largely out of the public spotlight. A memorial service is planned for June 18 at Swan Funeral Home in Old Saybrook, Connecticut.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

282. Re: NAVY-USMC MARS LIKELY TO GO QRT

Newsgroup: rec.radio.amateur.moderated
Date: 2009-06-19 21:45:29 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <OFT_I.3387$n01.1530@newsfe15.iad>
Source record: 1992

Hello Jim,

There are so many aspects of emergency communications that it would seem even a basic training would be imperative.

Field Day might encourage folks to make as many contacts as possible under difficult conditions (not to mention how to string that dipole), but one might be under pressure to establish communications with a *specific* station, or group of stations, and some practice certainly can't hurt.

I remember when my employer sent me for 'radio training'. It was a blast. Most interesting, however, once we finished passing 'encrypted' messages using voice on VHF (it helps to know both phonetic alphabets), we tried HF running low (5 watts) power. We were located perhaps 10 miles from the plant where another HF radio was set up. A dipole was strung (5 feet off of the ground?) and - nothing. Finally I piped up and mentioned that the plant happened to be located roughly in the direction the dipole lay in! A quick rotation of 90 degrees and the trainer hit the button to seek out the best frequency. A couple more button presses and one of the guy's cell phone went off. He answered it and it was the instructor's voice that came out of it. HF to the commercial telephone lines. It did help to stop and think in what direction you wanted your signal to go LOL. This might also apply to VHF/UHF in that the terrain can make a big difference. Where does one place a temporary 'repeater'?

Certainly the basic training is necessary, but I believe there will have to be further *standardized* training as well.

73 from Rochester, NY
Jim AA2QA

Well, I agree and disagree...

Emergency preparedness and training, at a basic level, are certainly an important part of Field Day. If nothing else, actually going out, setting up a Field Day station and operating it can be a great learning experience. Particularly for the person without a background in such things. I mean we have to start somewhere!

But there's a lot more to Field Day than that, IMHO. It's also a social event, a camping trip, a radiosport contest, a chance to experiment with rigs, power sources, antennas, modes, bands and locations, and much more.

I've gone out on every ARRL Field Day since about 1967 and every one has been a unique and fun new experience. Of course a lot of that is "the attitude" one brings to it.

Emergencies come in all sizes and forms, and there isn't a one-size-fits-all response. An emergency can be as small as a stranded motorist who gets help via ham radio to a major disaster such as a hurricane, flood, or blizzard. All of them have different characteristics and need different responses. The degree to which the authorities can handle them varies all over the place; just look at the Hurricane Katrina disaster, or what happens when a snowstorm hits a part of the country that's not used to snow.

Of course as the communication infrastructure has matured, many situations that used to commonly need our help are now usually handled by other means. It wasn't that long ago when 911 calls via autopatch were a near-daily occurrence here; now they are rare because almost everyone has a cell phone.

Exactly. In fact, a single Amateur Radio activity such as Field Day is broad enough to encompass many different interests. As long as one follows the rules and good amateur practice, there's an enormously wide range of things that are Field Day.

For example, over the years I've had the opportunity to operate a wide variety of rigs, modes and bands on Field Day, rather than being limited to my own setup at home. And by "operate", I mean "make hundreds of contacts over several hours under all sorts of conditions". Product reviews and lab reports are nice but actually using a rig under contest conditions will tell you a lot more about what it can or can't do.

> The part that I find somewhat amusing is the idea that you can judge the

Some people make all sorts of judgements based on limited information.

>They're all different, depending on the interests of the

> opportunity to do what the group wants to do.

I would say that there are operations which are primarily social in which all sorts of learning takes place. All sorts of variations; every FD operation has a different theme.

> But as you point out, you've got to start somewhere, and even the most
> social-oriented operation still provides exposure to different aspects
> of the hobby for people who may not have seen it before.

Exactly! But it all depends on the attitude. If a person who wants a serious emergency-preparedness exercise goes to a socially-oriented FD operation, s/he is likely to be disappointed. Same as if a casual operator goes to a contest-oriented setup. I heard of one club that purposely set up two different operations under two calls on a large site; one was "serious" and the other was "casual".

As for exposure to different aspects on FD, here are a couple of stories....

- Some years back, I converted a BC-453 "Q5er" and built an 80/40 meter converter for it, complete with dynamotor power supply. All this setup needs is 12 volts DC and a piece of wire tossed over a tree branch in order to receive.

I put the whole works into a cardboard box and brought it along to FD without telling the others. This group usually missed out on the bonus points for copying the W1AW bulletin.

Around 10 AM everyone was busy setting up, but I stopped work, set up the BC-453 on the hood of my car, donned the cans and proceeded to copy the W1AW bulletin - on CW, of course. In a few minutes I'd earned the first 100 points, even before the FD period started.

The BC-453/converter/dynamotor setup became a focal point of discussion. Old-timers remembered when they'd used WW2 surplus, while newcomers were intrigued by the dynamotor and the homebrew setup. More than one had never seen such operations before.

- There was one FD where a relatively-new ham came into the CW tent. He had his Extra, could do 20+ wpm but wasn't really a contest op, and was a bit shy to ask to operate.

So I invited him to watch and listen, which he did for a while. Then I asked him to keep the dupe sheet, which he did quite well once shown how.

Once he had the hang of that, I gave him the log sheet too. We were rolling along and making Sunday-morning S&P QSOs at a decent clip, and he was getting the idea.

Then I had him do the sending while I found the new ones and told him which to call and when. Little by little I did less and let him do more. Eventually all I was doing was keeping the dupe sheet while he ran the show.

No, he didn't turn into a hotshot CW contest op in the hour or two this all took, but he sure learned a lot, earned a lot of points and had a lot of fun.

Did I mention this ham was 12 years old?

Got a lot more stories....

>&#65533;FD is one of

I have a 2-meter yagi antenna on my roof that cannot be rotated. Iï¿½d like to re-mount it with horizontal polarization for SSB, but have to permanently aim it in one direction. I live near Washington, DC, so which direction would you VHF enthusiasts recommend? North towards New England or south towards the Carolinas? The objective is to maximize the number of stations I can contact.

K0CKB and I will operate from our RV, class 1B, at Lake Vermilion next to the BWCA. This is a very laid-back operation, non-competitive, likely to be interrupted by boat trips out to Stove Top reef or Wakemup Bay if someone reports a walleye bite in progress. The only "emergency communications" component of our operation would be if we run out of charcoal, bait, or ice, and need to call for a resupply.

I love this story, Jim. That 12-year-old could have been me, back when dirt was new.

And I want to comment on how important this kind of mentoring (or as we tend to call it in ham radio, "elmering") is to the hobby. I subscribe to a discussion group populated by ham radio instructors. These guys have endless discussions about what teaching technique works the best, arcane aspects of individual questions in the pool, and all the minutiae of teaching ham radio classes, and that's fine; that's what the group is for. Some of them realize that the classroom experience is just the start of someone's ham radio career, but a lot of them are so focused on their teaching that they have lost the importance of elmering.

Yes, getting that ticket is important. You'll not be a ham without passing the FCC exam. But my experience is that vanishingly few people who pass the exam will end up as active hams without local support. They need real people to encourage them and to impart real-world information, just like the example in your story.

Field Day is one way to provide that. It better not be the _only_ way, but it sure is a great opportunity to expose people to aspects of the

hobby that they might not otherwise see.

Just one of the items mentioned in Communications Leader (COM-L)
training. :)

>
> Certainly the basic training is necessary, but I believe there will have
to
> be further *standardized* training as well.
>

Yes sir!

This is what the National Incident Management System is all about.
Standardized training is about knowing what Logistics does and where
Communications fits within it.

The Communications Leader training class I attended had a number of
hams there. There were also non-hams there. From a public
information officer perspective, if we are going to fight like we
train, then perhaps there would be a reason for training with the
people with which we will fight.

>From the COM-L web page, "This COML training will qualify emergency
responders as lead radio communications coordinators if they possess
the necessary prerequisites, including knowledge of local
communications; communications systems; and local, regional, and state
communications plans. COML responsibilities include developing plans
for the effective use of incident communications equipment and
facilities, managing the distribution of communications equipment to
incident personnel, and coordinating the installation and testing of
communications equipment."

http://www.safecomprogram.gov/SAFECOM/currentprojects/comltraining/ is
the COM-L page. The Training is free. One would get more information
from the local emergency management office, the training officer at
the State Emergency Management or Homeland Security office, or contact
the the SAFECOM Program at 1-866-969-SAFE.

Many of the prerequisites are found at <http://training.fema.gov/IS/
NIMS.asp> where, again, the training is free. College hours can also

be obtained after successful completion, but this is NOT free.

This is also the premise behind the American Radio Relay League's
Emergency Communications courses. While these courses are not free,
there have been grants available to pay for them. You might contact
the League after you review http://www.arrl.org/news/stories/2009/04/07/107
56/.
Again, you may contact your local emergency management office to
volunteer. IF there's training dollars available to take this class,
I don't know of any grant in place to pay for it, apart from the local
training budget.

There's your answer to Standardized Training.

I agree. FD at least shows the gumption of people to show up and be able to get on the air away from home. Neat Elmer story. It shows the willingness, but there is much more to serious Emcom. Nims training at least puts forth the idea that in the absence of real emergencies, the best way to learn is from the lessons learned from those who went through it. Current state of the art recognizes local jurisdiction and responsibility while offering a system easily able to expand and contract as needed for efficient use of available resources.

I do have a problem with volunteer resources being exploited to fill a gap that should be properly funded. By that, I am referring to damage to local businesses that lead to a vacuum of professionals. I've gotten a lot of poopoo out of people who shouldn't be providing a free service when it should be performed on a regular basis by other means. Forcing the "other means" out of business is not a good answer. This happens when regular business masquerades as a training opportunity.

As the great Durante used to say: "I got a million of em!"

It was about 8-10 years ago IIRC. Great fun and a little payback. Or should it be "pay-forward"?

Some more FD stories:

Way back in 1970, when I was 16, I went out with a local club that did a multiple-TX operation at W3FDY's place. (google the call, some neat old pics of Harry's setup0.

They let me run the 40 CW rig on the overnight shift. It was a Drake 4-line, which was quite a change from my homebrew, surplus and inexpensive-1950s-leftovers rigs. The setup had a bug, and I learned to use it pretty quick. It was set up in a garage, and fed a full-size 40 meter vertical.

Also in that garage was the 80 meter CW setup. It consisted of a Drake 2B and a Johnson Viking 500 with the cover off. Quite a light show! That setup had a high dipole.

The 80 CW position was staffed by two hams, one of whom operated and the other kept the log. The logger was blind and kept the log in Braille.

Whenever the blind amateur needed a break, one of us would guide him to whatever he needed. By the time it was fully dark, we discovered we didn't have flashlights. The blind ham had learned the routes so well that *he* would guide *us* sighted ops..

We made hundreds of contacts that night from those two setups. My code speed probably jumped 10 wpm in as many hours, and I didn't sleep a

wink for over 40 hours.

Meanwhile, up the hill, the 40 SSB station was doing quite a business too. They had a 5 element fixed wire Yagi at 70 feet pointed west, plus a high dipole. The Galaxy fed a pair of 450TLs in pushpull - there was some serious RF up there. They probably worked everything on 40 SSB including Radio Moscow. When a mobile in Hawaii gives you a 5-9 on 40 meters you know you're getting out.

Later that summer I passed the Extra. I suspect that what I learned on FD that year helped a little...

In the 1990s I did FD solo a couple of times. The best effort was 1995.

I had access to a farm meadow in NNJ for that effort. My car at the time was a VW Rabbit Diesel, and my rig was a homebrew 100-watt-output CW-only 80/40/20 meter transceiver known as the Southgate Type 7. I had developed a 41 foot wooden mast that could be put up by one person, had a generator, tent, table, and various other goodies. It was exactly 73 miles from home to the FD site.

So on the Friday before FD I packed everything up and set off to NNJ. At precisely 2 PM I began setup, and by about 6 PM it was all set to go. 80/40 trap inverted V, 20 meter vertical, homebrew rig, generator, tent, etc. 2 meter rig in the car was connected to a homebrew GP for simplex contacts on that band, because there was a bonus for them. No computer, no memory keyer, just paper log/dupe and the bug.

I went the whole period from 2 PM Saturday to 2 PM Sunday, stopping only to fuel the generator when it ran out of gas. While it cooled, I'd try 2 meters and make a contact or two. A soft drink and a sandwich from the cooler on the way back from the generator shelter kept me going.

The Type 7 is all-hollow-state, even to the rectifiers and regulators. Yes, you have to tune it up, too.

I wonder if any other 1995 FD station had 866As giving a light show at 3 AM.

Final tally was 629 CW and 11 FM QSOs. Not a winning score (I think I placed fourth in 1B-1 non-battery) but pretty good for the setup.

It was quite a challenge to do it single-handed; everything had to fit inside or on top of the Rabbit and not exceed its weight limit. Plus since it was a diesel I couldn't get gasoline from its tank if I miscalculated the generator's needs. I started with 7-1/2 gallons of gasoline in two containers; the last of it went into the generator tank about noon Sunday and the generator ran out of gas the last time 15 minutes after the 2 PM shutdown.

btw, it rained the entire time. No lightning, thankfully, and no downpour, just a gentle drizzle the whole time. Made it more of a sporting course, really.

If you have QST for June, 1994, check out page 55 for yet another story.

> That 12-year-old could have been me, back when
> dirt was new.

Or me.

I recall one FD (1968?) when I was still a very new ham. I wandered past the trailer where a crusty OT was running CW (80 or 40, I'm not sure) and filling up the log sheet faster than I'd ever seen it done.

There were several loud and fast CW signals crammed into the 500 Hz passband of the receiver, and I asked which one the OT was copying.

"All three, kid" was the reply. "Now go get me another beer"

I got him two, and watched/learned for quite a while. He never wasted a second or a motion; he knew precisely when to call, who to call, and what to send. It was a skillset that I knew must exist, but which I'd never seen up-close until then.

I promised myself then that one day I'd be the op in that chair.

I think Elmering takes all sorts of forms, as the above stories show.
That op who said "all three, kid" sure had an effect on me, even though
I never knew his name or call.

Books can be great Elmers; much of what got me started and kept me
going were the practical articles in QST, the Handbook and other
publications. Theory is great and is needed, but it needs to be matched
by real- life examples.
>
> Field Day is one way to provide that.

Agreed!

One reason I stopped the solo-FD effort and went out with local clubs
some years back was the whole Elmering/demonstration part of it. It's
one thing to talk about, say, fast CW operation, homebrewing antennas,
networked computer logging or whatever, and another thing to show it to
folks who haven't really seen it before. I have found that often what
appears to be "socializing" can actually be an elmering session.

>From Jeff Beiermann, WB0M, Nebraska Section PIC

Nebraska Celebrates Amateur Radio Week

(Lincoln, NE) Nebraska will celebrate amateur radio week from June 22-28, 2009, thanks to a proclamation by Nebraska Gov. Dave Heineman. This coincides with the annual Amateur Radio Relay League's (ARRL) Field Day exercise on June 27. Amateur radio operators are usually know has "hams."

"I'm happy to declare "amateur radio week" to thank all of the Nebraska ham radio operators," said Gov. Heineman. "These radio operations can be very helpful in our state, particularly in disaster preparation. I wish Nebraska hams success on their exercise."

The proclamation was presented to Jeff Bennet and Bob Mitchell of Lincoln representing the ARRL's Nebraska Section as part of a proclamation signing ceremony at the State Capitol Building in June 10.

Field Day is a 24-hour emergency communication exercise by amateur radio operators across the nation. The operators are usually from amateur radio clubs deploying to temporary locations, but any ham radio operator can participate.

It is a day of fellowship and fun with an underlying current of preparing for emergency communications. While many people think that the Internet and cell phone coverage are always at their finger tips, these ways of communicating can be silenced in a disaster.

Which is Field Day is an important exercise. Many hams operate using emergency power - and even green power - so that they are prepared in case of a disaster that disrupts the normal channels of communications.

Clubs and hams throughout Nebraska from Chadron to Falls City, Omaha to Scottsbluff, Norfolk to Hastings and in between will out on Field Day sharing not only camaraderie with each other, but also fine tuning their skills in emergency communications.

every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Bill

I ran the mars station on base in Sacramento in 1970-71-some of 72.....my dad had just returned from Vietnam, and I had just gotten my ticket which was WN6AKF at the time...patched many a call from Saigon to the states, we may have QSO'd.

One from the USS Kincade, I believe was the name.. a destroyer in the sea off Nam...from one really lonely guy to his folks in Nebraska....

We also had Collins gear, huge towers and beams, and a linear with 8-11a's in it....I also ran the local fm net on base also...was about 16 at the time....boy do I miss the warehouse full of surplus gear!

I'll be joining the Amateur Radio Association of the Tonawandas (ARATS), callsign W2SEX, in WNY, probably as a 3F but the number may go up. We will operate from the City of North Tonawanda Emergency Management Department EOC. We will operate phone, CW, and digital on HF with at least three transmitters, as well as on VHF/UHF simplex as conditions permit, and will have stations set up both inside and outside the building.

As for past stories from Field Day...the two most memorable ones for me were the year I served as Field Day chairman (2004) and the one a few years prior to that where we were hit by torrential rainfall on Friday night which left our location (a county park) flooded with 6" to a foot of water for the remainder of the weekend (We had operators running stations with their feet up on wooden pallets to keep them out of the water, the pallets were literally floating).

The best Field Day story for the club over the years, however, has been told to me by some of the old-timers in the club that were around one year back in the 1970's when this club had Field Day turn into a real disaster operation.

It seems that a tornado hit a town in an adjacent county just as the caravan of ARATS operators and equipment was on its way to the Field Day site (which back then was in a farmer's field well outside of town). Upon hearing of the disaster, they changed plans and headed for New York State's southern tier where the tornado had occurred. They drove for an hour and a half, eventually arriving in force at what passed for this rural town's command post.

All electrical power, telephone service, and radio communications in the town were out. They had ZERO communications - until the cavalry rode in over the hill, towing several trailers loaded with ham gear, generators, tents, food, fuel, batteries, and various other supplies and equipment that had been intended for a completely self-supporting, well-planned, weekend-long Field Day operation involving more than a hundred ham operators.

I've been told that it took them about six seconds to go, "Well, yes, we certainly could use your help." Needless to say, the folks in that town got a demonstration of the value of ham radio during emergencies that I don't imagine they'll ever forget, and were highly appreciative of what they saw. Nevertheless, I hope nobody has this happen to them this weekend. Good luck to everyone at Field Day this year!

299. HR 2160 - restrictive covenants webinar Thursday

Newsgroup: rec.radio.amateur.moderated
Date: 2009-06-24 12:36:08 UTC
From: ARRL MW Division <memberlist@www.arrl.org>
Message-ID: <20090624122405.22AC2301B8@www.arrl.org>
Source record: 1909
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.antenna,rec.radio.info

Midwest Division members,

Hams have been happy to have the tools available in PRB-1 to combat restrictive municipal government ordinances against antennas and towers. We have wished for these protections to be extended to private covenants, which PRB-1 did not speak to. In many urban areas it's virtually impossible to find a home not subject to private restrictive covenants.

Now HR 2160 has been introduced into the US House of Representatives. In a two-step process this bill might well give us PRB-1 type ammunition to use when trying to erect amateur antennas in covenant communities.

Thanks to the division members who have already written their congressional representative in support of this bill. For more background check out
http://www.arrl.org/news/stories/2009/05/12/10818

Atlantic Division Director Bill Edgar has sent the following invitation. If you have interest in facilitating protection from restrictive covenants this webinar will be of interest. Please consider attending. And have a rewarding Field Day. -:- k0bj -:-

The Atlantic Division is sponsoring a webinar about HR 2160 for our members on Thursday, June 25th at 8:00pm EDT. We have space for 1,000 people to listen and view this presentation.

Dave Sumner was gracious enough to offer his help in doing this presentation.

You are welcome to invite your division members to join in with us. There is no cost for attendees to listen/view this presentation. You are also invited to register as well to attend.

Participants must register in order to listen/view the presentation and all they need to do to register is to click on the URL:
https://www1.gotomeeting.com/register/596535705

> http://gov.oregonlive.com/bill/HB2377/

It appears that the exemption for hams was an amendment introduced in
the Senate.
http://www.leg.state.or.us/09reg/measures/hb2300.dir/hb2377.a1sa.html says,

(i) To a person who holds a valid amateur radio operator
license issued or any other license issued by the Federal
Communications Commission and is operating an amateur radio;
(j) To a person who operates a two-way radio device that
transmits radio communication transmitted by a station operating
on an authorized frequency within the citizens' or family radio
service bands in accordance with rules of the Federal
Communications Commission;

I'm curious if anyone knows how this got added to the bill at the last
minute. Do we have a ham who is an Oregon senator?

73, Steve KB9X

Amateur Radio Newsline(tm) Report 1663 - June 26 2009

Amateur Radio Newsline report number 1663 with a release date of
Friday, June 26th, 2009 to follow in 5-4-3-2-1.

The following is a QST. The FCC says no to a petition to regulate the
accuracy of signal reports; some new Cycle 24 spots appear on the sun
and a new Mode B record on the aging AO7 ham radio satellite. Find out
the details on Amateur Radio Newsline(tm) report number 1663 coming
your way right now.

(Billboard Cart Here)

**

RADIO LAW: THE FCC SAYS ANY SIGNAL REPORT IS A GOOD SIGNAL REPORT

Hams can continue to give any signal reports that they please. This as
the FCC denies a petition filed by a Texas ham that sought to regulate
the way signal reports are given in the Amateur service, especially
during contests. Bruce Tennant, K6PZW, has the details:

--

The FCC has acted very quickly on a petition filed this past May 6, by
Jack Najork, W5FG, of Hubbard, Texas, concerning signal reports
transmitted by amateur stations that are participating in contests.
Specifically, Najork had request that the Commission sanction the
American Radio Relay League for not taking any action to prohibit or
discourage what he termed as "false 5-9 blanket reporting."

In the petition, Najork stated that contest signal reports have become
-- and we quote "wholesale liar's exchanges." He also expressed the
concern that the ARRL has -- and again we quote -- "targeted newly
licensed radio amateurs with articles in QST to insure they learned and
followed this sham reporting system."

But in its almost record-setting dismissal of the Najork petition, the
FCC flatly stated that the way in which hams exchange signal reports is
of no interest or concern to the regulatory agency. In regard to the
message exchanged between stations in contests, the FCC said that these
are specified by the various contest sponsors and generally consists of
a call sign and a signal report. As to hams giving other hams
inaccurate signal reports, here the FCC notes that there is no rule in
Part 97 that requires a station to transmit a report of the signal
received. Nor is there one that specifies the standard for reporting

signal quality.

In the end the Commission said that it does not regulate amateur contests. Rather, they are self-administered by the amateur community. Based on this, the FCC has dismissed Najork petition and has told him that his concerns should be directed to the various contest sponsors.

Just how Najork might accomplish this is a good question. This is because the majority of ham radio contests are sponsored by individuals or groups in other nations. As such, they are not subject to the same rules as those radio amateurs whose licenses have been issued by the United states FCC.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

And before you ask, this is not some sort of belated April Fool's joke. The petition had been assigned as Docket number DA No. 09-1378 by the FCC. You can read the entire dismissal order for yourself at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-1378A1.doc (FCC)

**

SOLAR CYCLE 24: NEW SUNSPOT GROUP EMERGES

Some possible good news on the propagation and maybe the D-X front as well. Thomas Giella, NZ4O, reports that on Monday, June 22nd, a new solar cycle 24 sunspot group emerged in the South-West quadrant of the Sun. Also that NOAA was expected to assign it the designation 11023 with a beta magnetic signature.

Tom, who lives in Lakeland, Florida, notes that sun watchers have seen four solar cycle 24 sunspot groups this month and six in the past 30 days. He adds that it appears as if solar cycle 24 has finally come alive.

And in what may be related news, word on the VHF Reflector that the 6 meter band has been open in various parts of the world with skip contacts of several hundred to more than a thousand miles. These reports seem to coincide with the emergence of the new sunspot group being reported by NZ4O, but whether or not there is any direct connection between the two events is unknown. (Various Sources)

**

HAM RADIO IN SPACE: AO-7 MODE B 7000 KM QSO RECORD SET

A 7,000 km contact via the aging AO-7 satellite in Mode B has taken place. This as PS8RF in Brazil and makes contact with ON7EQ in Belgium.

The actual distance between the two stations 7622 kilometers which translates into 4736 miles. According to ON7EQ, both stations knew that a theoretical window between their locations only lasts about 1 minute, 30 seconds. Because of this, some careful preparation was required for selection of the optimal window and calculation of Doppler shifts both ways.

In the vend the effective contact was only possible during about 20 seconds. That was just enough time to exchange reports. It was also enough to put PS8RF and ON7EQ into the ham radio satellite record books. (Southgate)

**

RESCUE RADIO: UK RAYNET HAM RADIO NOT INCLUDED IN EMERGENCY PLAN

Ham radio was definitely not on the mind of United Kingdom emergency planners. This, when that nations recent emergency preparedness report was recently made public. Jeramy Boot, G4NJH, is in Nottingham in the U-K, with more:

--

The Government's recent Digital Britain report speaks of the importance of resilient communications networks and the need for regular tests of emergency communications systems.

Mention is made of a planned major test in late 2009 to manage and recover from a major loss of network capability.

The RSGB regrets that Government communications planners seem to have completely overlooked the valuable resource that RAYNET can offer in such emergency situations. Unfortunately RAYNET does not seem to be completely integrated into the nation's emergency communications planning.

For the Amateur Radio Newsline, I'm Jeramy Boot, G4NJH, in Nottingham.

--

RAYNET can best described as the U-K equivalent of the United States ARES and RACES combined. (GB2RS)

**

HAM TECHNOLOGY: W1AW, WA6ZTY TO CONDUCT DUAL-TONE FREQUENCY MEASURING TEST IN JULY

The ARRL's Hiram Percy Maxim Memorial Station, W1AW is joining forces with WA6ZTY on the West Coast to conduct a summer Frequency Measuring Test. The event will take place at 0145 UTC on July 2nd. That's 9:45 p.m. Eastern and 6:45 p.m. Pacific time.

According to Frequency Measuring Test Coordinator Ward Silver, N0AX, the format will be a repeat of the dual-tone test conducted in November 2008. Silver says that the timing glitches that occurred during the

November test have been ironed out, so the format will be repeated to give everyone another opportunity to make measurements.

More about the Frequency Measuring Test can be found on line at www.arrl.org/w1aw /fmt. (ARRL)

**

RESCUE RADIO: VK BROADCASTER TO ASSIST IN EMCOMM ALERTS

A broadcaster down-under says its going to equip itself to assist in rescue radio operations. This by making itself ready to do local updates when and where they are needed during an emergency. Jim Damron, N8TMW, reports: -- New technology will help the Australian Broadcasting Corporation bring local emergency news coverage directly to communities affected by natural disasters like floods and cyclones. Three fly-in transmitters have been purchased by the company to allow local ABC affiliated stations to set up shop anywhere in Australia.

The units were originally designed for the United States military to use in the Iraq war. They are designed to be set up within an hour and can be powered by a small generator or AC mains power.

Mark Spuurway is the head of transmission services with the ABC. He says that these transmitters will insure that affected communities will be kept informed. -- At airtime its not known how soon these new Australian Broadcasting Company fly-in radio service will be available. (ABC release)

**

ENFORCEMENT: FCC REFUSES TO RENEW TEXAS FM BROADCAST LICENSE

A broadcast station has lost its license In a June 22nd Memorandum Opinion and Order, the FCC has dismissed an Application for Renewal of licensee for station KBKH FM in Shamrock, Texas. This after finding that station owner Terry Keith Hammond lacks the basic requisite character qualifications to be and remain a Commission licensee. Bill Pasternak, WA6ITF, has the rest of the story: -- Back on September 15, 2006, the Commission began a hearing proceeding to determine whether Terry Keith Hammond was qualified to be and remain a licensee. Also, whether his license for Station KBKH FM should be revoked, and whether Hammond's application for renewal of the station's license should be granted.

The case centered around a Hearing Designation order to determine if Terry Keith Hammond made false certifications, misrepresentations, or otherwise demonstrated a lack of candor in applications that he filed with the Commission. Also, whether he willfully and/or repeatedly violated Commission rules governing the operation, location and equipment for Station KBKH FM. Lastly, whether Hammond willfully or repeatedly failed to comply with a Commission rule requiring licensees to provide information concerning matters within the Commission's jurisdiction

The Presiding Judge eventually determined that Hammond received a copy of the Hearing Designation Order but failed to file a written notice of appearance seeking to avail himself of the right to a hearing. Because of this the Judge concluded that Hammond had waived his right to a hearing. He then terminated the hearing proceeding and certified to the Commission the issues in the matter. The Judge also dismissed, with prejudice, the station's renewal application.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles. -- The FCC says that its actions were taken pursuant to authority delegated to the Enforcement Bureau under Section 0.111(a)(17) of the Commission's rules. At airtime, its not known if Hammond plans to file an appeal. (FCC)

** HAM HAPPENINGS: PAPERS BEING SOLICITED FOR MUD 2009

Technical papers are currently being solicited for publication in the ARRL's Microwave Update 2009 Conference Proceedings. The conference is slated for on Friday, October 23 through Saturday, October 24 in Dallas, Texas, but you do not need to attend the conference nor present your paper to have it published.

Strong preference will be given to original work and to those papers that are written and formatted specifically for publication rather than as a visual presentation aid. The deadline for papers is Monday, August 31, 2008. More information is available on-line at www.microwaveupdate.org (ARRL and MUD)

**

HAM RADIO AND THE NET: AMSAT NOW TWEETING ON TWITTER

Get ready for some interesting ham radio in space related tweets. This with the announcement that the Amateur Satellite organization AMSAT is now posting on the Twitter social networking website.

According to Drew Glasbrenner, KO4MA, writing on the AMSAT Bulletin Board, the ham radio space agency new Twitter account is twitter.com/AMSAT. He says that the initial tweets will deal mostly with AO-51 and AO-7, but those with interest in other ham radio satellites are welcome to follow.

Glasbrenner, who is AMSAT North America's Vice President for Operations says that the short postings or tweets will deal with items that are

deemed as small for publication by the AMSAT News Service or to be sent by e-mail, but of interest to the general ham radio space community. (AMSAT-NA)

**

NEW PRODUCT: JETSTREAM INTRODUCES JT220M FOR THE 220 BAND

Its been a long time since a new mobile transceiver for the amateur 222 to 225 MHz band has been announced. Now Jetstream, the company best known for its power supplies and ham station peripherals has introduced the new JT 220 M transceiver.

The JT 220 M is an FM only transceiver that runs 50 Watts out in its high power mode from any of its 99 memory channels or its one programmable call channel. It features a large black on blue LCD display, a backlit DTMF microphone, a time out timer plus both CTCSS and DTS encode and decode built in. There's even an internal tone burst encoder for those rare spots in the world that still use it.

The JT 220 M's newly designed double conversion receiver uses intermediate frequencies of 21.7MHz and 450 kHz to maximize image rejection of unwanted signals. The overall receiver design yields a squelch sensitivity of point one microvolt. In other words, this radio can hear as well as talk. And less we forget, the JT 220 M is computer programmable using an optional cable.

If you have been thinking about getting a radio for 220 but have been looking for something new, the JT 220 M may be the transceiver for you. Judge for yourself on-line at www.jetstream-usa.com/jt220m.shtml (ARNewsline(tm))

**

NEW PRODUCTS: NEW CCRADIO 2 COVERS 2 METERS

The recently announced C. Crane CCRadio-2 is not a transceiver but it can receive anything in the 2-meter band Amateur service band. The California based C. Crane Company says it's the first commercial AM/FM radio that provides this type of ham-band monitoring capability, noting that listeners could find emergency information there that could save somebody's life. More about the CCRadio-2 at the C. Crane website. Its at www.ccrane.com (C. Crane)

**

NET NEWS: THE NET COMES FIRST

The results of a survey released on June 18th says that twice as many Americans would rather give up their cell phone or cable TV than their broadband Internet connection. This, even though they're paying more for the high-speed service this year.

The latest findings by the Pew Internet and American Life Project shows broadband adoption jumped to 63 percent of American adults using a high-speed connection at home compared to 57 percent a year ago. The results appear to indicate that the current economic recession has not kept people from subscribing to a home high-speed connection.

Home broadband users paid more for their service this year over last year. The average monthly bill is $39 this year. This is up by over $4 in 2008 when the average monthly fee was $34.50. (Todays Technology)

**

NAMES IN THE NEWS: C-NET INTERVIEWS KEVIN MITNICK, N6NHG

Some names in the news. First up is former hacker turned Internet security expert Kevin David Mitnick, N6NHG. In an on-line interview with C-Net News Ellinor Mills, Mitnick explains how ham radio lead him to an interest in the nations telephone system and from there to computer hacking and social engineering. This, so he could get all sorts of information that he personally craved to know and to try to understand.

Mitnick also talks openly about other hackers, about his getting caught, his time spent behind bars and how it all lead him to become one of the good guy hackers. Someone working to keep the nations data systems secure from people like his former self.

It all makes an interesting read, especially for those who might have known, or actually knew N6NHG back in the 1980's and 1990's. The article is on-line at http://news.cnet.com/8301-1009_3-10269348-83.html?part=rss&subj=news&tag=2547-1_3-0-20 (C-Net)

**

NAMES IN THE NEWS: K6JAT APPOINTED AS PACIFIC DIVISION VICE DIRECTOR

Jim Tiemstra, K6JAT, of Oakland, California, tis the new ARRL Pacific Division Vice Director. This, after being appointed by League Joel Harrison, W5ZN to serve the remainder of the current term of Andy Oppel, N6AJO, who resigned from the post citing family and business reasons.

Tiemstra is a member of the Northern California Contest Club, the Quarter Century Wireless Association and 10-10 International. He will serve as Pacific Division Vice Director through the end of 2010. (ARRL)

**

NAMES IN THE NEWS: SAN FRANCISCO'S FIRST ATV STATION

And the story of the late Clarence Wolfe, Jr., W6JDI, and his foray into amateur fast scan television in the late 1940's is one of the

features in the July issue of Popular Communications magazine.

According to the article by writer Shannon Huniwell, Wolfe signed on with a home built 525 line Iconoscope camera and transmitter about a year and a half before the first San Francisco commercial station began to light up the airwaves. His programming consisted only of a picture of a girl that other pioneering ham television operators dubbed as Gwendolyn.

How W6JDI pulled it all together and got it on the air for less than $500 is an amazing story. It starts on page 73 of the July Popular Communications on newsstands right now. (PopComm)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: JOE PHILLIPS, K8QOE - S.K.

It is with the deepest of sorrow that we report the passing of our longtime friend Joe Phillips, K8QOE, who died suddenly at his home on Saturday, June 20th. Joe, who since 1998 had been serving as ARRL Ohio Section Manager was not only a devoted ham radio operator and family man, but also a driving force in publicizing the hobby to the world.

First licensed in 1959 as KN9SYL, Phillips first joined the ARRL Field Organization as an Official Emergency Station in 1986. He became a Public Information Officer in 1989 and has served as an Official Observer since 1997. He was elected Ohio Section Manager in 1998.

But titles are only a tiny part of the Joe Phillips story. Rather for many of his 68 years on Earth, Joe was a ham literally out in the trenches of amateur radio. A career as a journalist and a teacher, over the years K8QOE edited six separate ham radio newsletters in Cincinnati before becoming Newsletter Editor for the Ohio Area Repeater Council in 1984. That's a position he held for five years.

In 1986, Phillips organized the first Ohio Repeater Directory and in 1992 he created the Ohio Section Ham Radio Newsletter Contest. He also authored a weekly ham radio newspaper column in the Sunday edition of the Cincinnati Enquirer called "Ham Call" and hosted a similarly named program for cable television also in the Cincinnati area. And for many years he was a fixture at forums he conducted or took part in at the Dayton Hamvention.

In 1994, Joe Phillips was elected to the Greater Cincinnati Amateur Radio Hall of Fame. A year later he was the recipient of the ARRL's McGan Silver Antenna Award. This latter honor is bestowed annually to an ARRL member who demonstrates outstanding public relations success on behalf amateur radio at the local, state or national level. In Joe case, it was all three.

Joe Phillips, K8QOE, is survived by his wife Donna and their three children. A funeral Mass was scheduled for Saturday, June 27th at the Sacred Heart Catholic Church, in Fairfield, Ohio with burial in Youngstown, Ohio.

Needless to say, Joe Phillips, K8QOE, was a very special member of the nations ham radio community. A true contributor to its well being in every sense of the word. He will be missed. (K8JE, N8BV, ARRL, ARNewsline(tm))

**

HAM TECHNOLOGY: WA1ZMS TRANS-ATLANTIC BEACON GETS MORE POWER

The WA1ZMS Trans-Atlantic spotting beacon on 144.285 MHz has just had an increase in power. This CW beacon is also GPS locked and the antenna is beaming at 60 degrees from IARU grid locator F M 07 f m. While it has yet to be heard in the British Isles, its owner Brian Justin, WA1ZMS says that given the right conditions, the signal may make it across the pond. More about this experiment is on-line at www.directivesystems.com/WA1ZMS (WA1ZMS)

**

HAM RADIO IN SPACE: RS-15 10 METER BEACON STILL OPERATIONAL

The 10 meter beacon on the RS-15 Amateur Radio satellite is still going strong. This, over 14 and a half years since the ham radio satellite was launched.

RS-15 was rode into orbit on December 26th 1994. Its 145 to 29 MHz linear transponder has long since ceased operation, however the 10 meter beacon can still be heard. At least when there is enough power generated to bring it on the air.

It should be noted that most commercial low earth orbit satellites cease operating after a few years. The fact that RS-15 can be heard at all is a reflection on the very high standard of design and construction that is put into every amateur satellite. (AMSAT)

**

HAM RADIO IN SPACE: CELEBRATING THE APOLLO 11 MOON LANDING

A group of radio amateurs are reportedly planning a commemorative event to mark this year's 40th anniversary of the Apollo 11 moon landing. Called 'Echoes of Apollo', the Southgate news says that various activities are planned around the end of June and into July to

commemorate this historic event.

As we go to air the organizers are reportedly negotiating with some of the world's largest and most capable amateur radio moon-bounce stations, and some deep space radio facilities. The idea is to network people from various locations using moon-bounce.

Also planned is an HF radio weekend. This, with stations set up near sites that took part in the original support for the Apollo 11 mission. More on this project as details become available. (Southgate)

**

ON THE AIR: MUSCATINE IOWA RADIO CLUB TURNS 60

On the air, the Iowa-based Muscatine Amateur Radio Club will be operating Special Event Station W0M from June 15 through June 30. This is in celebration of the 60th Anniversary of the club. Operations will be on 80, 40 and 10 meters on H-F and locally on 146.910 F-M. QSL with a #10 Self Addressed Stamped Envelope via KC0AQS 1092 Ripley Rd., Muscatine, Iowa. The zipcode is 52761. Logs may be uploaded to Logbook of the World and eQSL sometime after June 30th, but you can only get the certificate through the postal service. (N0LOH)

**

ON THE AIR: THE ANTARCTIC IN 2010

And a lot further South, ON7ZM and F5PFP say that they are planning an expedition to Antarctica. One that will probably take place during the Arctic summer of 2011 to 2012.

According to F5PFP, it could be a 6 to 7 week expedition to reach some old bases and refuges which are situated below the Antarctic polar circle. Possible stops include the Loubet coast, the Fallieres coast, Marguerite Bay, and hopefully one accessible island in the Alexander group. Questions go to f5pfp (at) aliceadsl (dot) fr or keep an ear open here on Newsline for more details. (OPDX)

**

DX

In DX, listen out for DL5YL, and DL5YM who are currently operating portable HB0 from Liechtenstein. The pair are on from the city of Masescha working in CW on all of the high frequency bands. QSL as directed by the operators. This operation ends on July 2nd.

SQ8X and SV2KBS will activate Easter Island from October 31st through November 15th. A few more operators are being sought for this DXpedition. If you are interested to join please contact stan (dot) sq8x (at) gmail (dot) com

IV3EPO will be active from Malta as 9H3EP through June 29th. Listen for him on 40 through 10 meters mainly using CW. QSL direct or via the

bureau to IV3EPO.

F2JD will be operational from the Philippines for the next five months and is hoping to get his DU1 slash G0SHN license extended. He also plans to activate some Islands On The Air locations during his stay. QSL direct or via the bureau to F6AJA.

Lastly, keep an ear open for Madagascar. This as Texas DX Society member W5KDJ comes on the air as 5R8KD from Antananarivo between July 4-17th. His operation will be on 160 through 6 meters using CW and RTTY. Logs will be uploaded to LoTW and eQSL. And an on-line log search will be available. Paper QSL's go via his home callsign.

(Above from various DX news sources)

**

THAT FINAL ITEM: A HOOSIER FIELD DAY IN NEW MEXICO

And finally this week, group of Hoosier hams are trekking to New Mexico for a very special Field Day event. Jack Parker, W8ISH, is in Indianapolis, with more:

--

Their goal is making contact with as many North American human Life Forms as possible during the two day event. Five Indy hams and a sixth from the Rocky Mountains are launching their Field Day from a remote mountain top in New Mexico.

Veteran DX'er Mike Koss W9SU and the newly formed Purveyors of Doom will operate from the 86 hundred foot Gallinas Peak in New Mexico. This is near Corona where a UFO reportedly crashed in 1947.

This part of the world isn't alien to Mike Koss. In fact, he has gone where no man, with a ham radio, has never gone before. In July 1997 Mike was traveling through New Mexico on business and was fascinated by the history of Roswell and the 50 year commemoration of the mysterious UFO crash.

Two years later Mike and his brother Bob W9ETA returned to Roswell to operate Field Day from an alleged UFO crash site west of the city. In 2002, the UFO Field Day adventure took off. Three more Hoosiers, including a retired Indianapolis police officer living in Colorado, joined Mike at the crash site.

Their quest for amateur radio contacts and a possible Close Encounter has kept the tradition alive. In 2004 a forest fire in the area forced the trekkers to find a new location for Field Day. They settled for a mountain top near Corona, New Mexico, an area known for UFO activity.

Following a couple of side trips to two epicenters of UFO lore-Roswell, New Mexico and a Nevada site, near area 51, Mike hatched the idea of combining an interest in UFO's and Amateur radio into a new Field

Day group.

This year, using their new call sign of W9UFO, Mike and the Purveyors of Doom radio club, will be operating 2Alpha, along with a VHF station from the remote grid square of DM74. Any contacts made during Field Day 2009 with these alien Hoosiers, will earn you a novel QSL card that satirizes the governments official denial of UFO's.

Reporting from Indianapolis, this is Jack Parker W8ISH.

--

For those who'd like to tune them in, the group be on 14.337 MHz an hour before the start of Field Day at 1700 UTC on Saturday, June 27, renewing its tradition of talking to fellow club members in Indianapolis who couldn't make the trip. But anyone else is welcome to give them a signal report as well. (ARNewsline(tm), W8ISH)

** NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). ==> PRESIDENT OBAMA MAKES HIS MARK ON FCC WITH FOUR NOMINEES

Just barely five months into his first term as President of the United States, Barack Obama has put his personal stamp on the Federal Communications Commission: On June 25, the US Senate confirmed Julius Genachowski as FCC Chairman and reconfirmed current FCC Commissioner Robert McDowell for his first full term as Commissioner. Earlier the same day, he nominated South Carolina Democrat Mignon Clyburn and Republican Meredith Attwell Baker for the two vacant Commissioner seats. If confirmed by the Senate, Clyburn and Baker would bring the FCC to its

full complement of five Commissioners.

At around 7:25 PM (EDT), Senate Majority Leader Harry Reid (D-NV) read out only the numbers of the nominations corresponding to their numbers on the day's calendar. Genachowski was calendar number 251, McDowell was 252. The process took only seconds and followers would have had to know their calendar number on the day's agenda to know they had been confirmed. Reid said that it was "too bad" that he could not give individual recognition to the nominees beyond simply reading their names, saying they were people who would "change lives." Click <http://www.c-spanarchives.org/library/vidLink.php?b=1245972129&e=1245972729&n=2> to watch a video clip f the confirmation.

According to Senate insiders, there were senators who reportedly had some remaining issues over answers the nominees had provided to written questions submitted after their confirmation hearing; a single senator can put a hold on a nominee and prevent a vote. Reid had been working since last week to get those holds lifted and the President's FCC nominees in place as quickly as possible, said a Reid spokesperson: "As with all of the President's nominees, it is important that we confirm [Genachowski's] nomination as soon as possible so that he has a full team to address the many issues confronting the nation."

President Obama nominated Genachowski to lead the Commission on March 3, 2009 <http://www.arrl.org/news/stories/2009/03/03/10684/?nc=1> and renominated McDowell on June 2 <http://www.arrl.org/news/stories/2009/06/03/10859/>. Both nominees received bipartisan support from the Senate's Commerce, Science and Transportation Committee before their names were moved to the full Senate for confirmation: Genachowski received a 24-1 vote from the committee, while McDowell received unanimous support. Genachowski is a Democratic nominee, while McDowell is a Republican. Only three Commissioners at a time may be members of the same political party.

Julius Genachowski

Genachowski, 46, is a technology executive and a former classmate of the President's from Harvard Law School. Genachowski will take the seat of Commissioner Jonathan Adelstein. Earlier this year, Adelstein was nominated by President Obama to be the Administrator for the United States Department of Agriculture's Rural Utilities Service <http://www.arrl.org/news/stories/2009/03/23/10716/?nc=1>.

Genachowski has been widely praised by industry executives and consumer-activist groups -- two groups often at odds -- for his wide-ranging experience and intimate knowledge of technology issues. "I can think of no one better than Julius Genachowski to serve as chairman of the Federal Communications Commission," said President Obama. "He will bring to the job diverse and unparalleled experience in communications and technology, with two decades of accomplishment in the private sector and public service. I know him as the son of immigrants who carries a deep appreciation for this country and the American dream;

and as the proud father of three children working with his wife Rachel to be responsible parents in this digital age."

Acting Chairman Copps congratulated Genachowski on his Senate confirmation: "I believe Julius brings just the right blend of talent, experience and dedication to lead the FCC toward the more active role it must play if all our citizens are to enjoy the blessings and bounties of 21st century communications. I look forward to welcoming both Julius and his family into our FCC family. And I look forward to working with Julius and all my colleagues at the Commission in tenacious pursuit of a communications policy that truly puts the public interest first."

After graduating from law school, Genachowski clerked for federal judge Abner Mikva; he also clerked for Supreme Court Justice David Souter. Genachowski later served as chief counsel to Reed Hundt, chairman of the FCC from 1993-1997. After leaving the FCC, Genachowski was a senior executive at IAC/InterActiveCorp, Barry Diller's e-commerce and media company. He went on to found an investment and advisory firm for digital media companies and co-founded the country's first commercial "green" bank. According to President Obama's campaign Web site, Genachowski raised at least $500,000 for Obama during the presidential election campaign.

Early in the Obama presidential campaign, Genachowski urged then-candidate Obama to capitalize on the organizing power of the Internet. The New York Times called Genachowski "a prolific fund-raiser and chairman of the campaign's group of technology-policy advisers, who produced a report advocating an open Internet, diversity in media ownership and a nationwide wireless system for emergency personnel." The Washington Post, which described Genachowski a "local venture capitalist," credited him with "spearheading Obama's online campaign strategy, which used social networking and other tools to spread Obama's campaign message and raise record campaign contributions."

Genachowski explained in his Obama campaign blog that he "was fortunate to chair the group that advised Senator Obama and the [Presidential] campaign on the tech & innovation plan, a large and hardworking group that generated terrific ideas, rooted in the great work that the Senator and his strong Senate staff have been doing in this area for quite some time."

The new FCC Chairman holds a BA in History from Columbia and a JD from Harvard. While in law school, he served as notes editor of "Harvard Law Review." Genachowski is married to lawyer and filmmaker Rachel Goslins. The couple has two children and Genachowski has a son from his first marriage.

Robert McDowell

McDowell, a Republican, was first nominated by President George W. Bush and sworn into office in June 2006, filling the unexpired term of Republican Kathleen Q. Abernathy.

According to the White House, McDowell has collaborated with his fellow Commissioners to develop and establish American communications policy covering the wireless, media and Internet industries, as well as international policy matters. He has worked to create rules governing wireless auctions, establish a framework for unlicensed use of TV "white spaces" spectrum, develop incentives to encourage the development of new broadband technologies, review public interest benefits as part of the approval process of proposed corporate mergers and adjudicate enforcement proceedings.

McDowell brings to the FCC 16 years of private sector experience in the communications industry. Immediately prior to joining the Commission, McDowell was a senior executive for a trade association representing competitive facilities-based telecommunications service providers. He has served on the North American Numbering Council (NANC) and on the Board of Directors of North American Numbering Plan Billing and Collection (NBANC).

McDowell was graduated cum laude from Duke University in 1985. After serving as chief legislative aide to a member of the Virginia House of Delegates, he attended the Marshall-Wythe School of Law at the College of William and Mary. Upon his graduation from law school, McDowell joined the Washington, DC office of Arter & Hadden, a national law firm, now closed, that was based in Cleveland. McDowell is admitted to practice law before the courts of the Commonwealth of Virginia, the US District Court for the Eastern District of Virginia and the US Courts of Appeals for the District of Columbia, First, Fourth and Fifth Circuits, as well as the US Supreme Court. He lives in Fairfax County, Virginia on his family's farm with his wife Jennifer and their three children.

Mignon Clyburn

Clyburn, the daughter of House Majority Whip Representative James Clyburn (D-SC), has served on the Public Service Commission of South Carolina since 1998 <http://www.psc.sc.gov/>. The Public Service Commission regulates South Carolina's investor owned public utilities, including providers of telecommunications services. Before her election to that body, she spent 14 years as the publisher and general manager of "The Coastal Times," a weekly newspaper in Charleston, South Carolina.

In 1998, Clyburn was elected by the South Carolina General Assembly as a Commissioner to represent the Sixth Congressional District; she has been re-elected three times, chairing the Commission from 2002-2004. She is a past chair of the Southeastern Association of Regulatory Utility Commissioners, and is presently the chair of the Washington Action Committee of the National Association of Regulatory Utility Commissioners (NARUC). Clyburn also serves on NARUC's Audit Committee and Utilities Market Access Partnership Board.

Clyburn graduated from the University of South Carolina with a Bachelor of Science degree in Banking, Finance & Economics in 1984.

Meredith Attwell Baker

Baker, the daughter-in-law of former Secretary of State James Baker, formerly served as the Acting Assistant Secretary for Communications and Information and the Acting Administrator of the National Telecommunications and Information Administration (NTIA) <http://www.ntia.doc.gov/> from 2007 to January 2009. Named as Deputy Assistant Secretary in February 2007, Baker first joined NTIA as a Senior Advisor in January 2004, and also served as Acting Associate Administrator for the Office of International Affairs and on detail to the White House, Office of Science and Technology Policy. Baker was replaced by Larry Strickling, who received the Senate's nod to head the NTIA on Thursday, June 25.

"We have serious concerns <http://www.arrl.org/news/files/ItSeemsToUs0408.pdf> regarding the nomination of Meredith Attwell Baker as an FCC Commissioner," said ARRL Chief Executive Officer David Sumner, K1ZZ. "While Ms. Baker was Acting Administrator of the National Telecommunications and Information Administration (NTIA), the NTIA released a deeply flawed report <http://www.arrl.org/news/stories/2008/02/01/101/?nc=1> entitled 'Networked Nation: Broadband in America 2007' <http://www.ntia.doc.gov/reports/2008/NetworkedNationBroadbandinAmerica2007.pdf>. The report seriously and inexcusably overstated the extent of deployment of Broadband over Power Lines (BPL) as a means of delivering broadband services to consumers. Documented FCC figures showed there to be about 5000 BPL customers nationwide, yet the NTIA dismissed this number out of hand and went on a fishing expedition for higher figures that it could quote in the range of 200,000 to 400,000 -- utterly specious numbers without a shred of factual foundation."

Sumner continued: "The ARRL proved that these figures were taken out of thin air <http://www.arrl.org/news/stories/2008/02/06/100/> and twice called upon Acting Administrator Baker to issue a correction. Not only has the NTIA failed to do so to this day, our well documented complaints were not even acknowledged. If her FCC nomination is to go forward, we believe that Ms. Baker first must acknowledge and correct this egregious error that occurred while she was in charge at NTIA."

Baker spearheaded the coupon program for digital-to-analog converter boxes to help facilitate the transition to digital television. She has served on delegations representing the United States at major international telecommunications conferences and engaged in bilateral discussions with senior level officials from countries around the world.

Before joining NTIA, Baker was Vice President at the firm of Williams Mullen Strategies where she focused on telecommunications, intellectual property and international trade issues. From 2000-2002, she held the position as Senior Counsel to Covad Communications. Before that, she was Director of Congressional Affairs at the Cellular Telecommunications Industry Association (CTIA) from 1998-2000. In the 1990s, Baker worked at the US Court of Appeals Fifth Circuit in Houston and later at the law firm of DeLange and Hudspeth. From 1990-1992, she worked in the Legislative Affairs Office of the US Department of State in Washington,

DC.

Baker earned a BA from Washington & Lee University in 1990 and a law degree from the University of Houston in 1994. A member of the Texas State Bar, she resides in McLean, Virginia with her family.

The President of the Senate will send notice of Genachowski's and McDowell's confirmations to the White House. It is up to the White House to decide on a date for their swearing-in. At press time, no word has been received as to when Baker and Clyburn will face their confirmation hearings.

==> ARRL SEEKS COURT ACTION TO COMPEL FCC TO COMPLY WITH RULING

On June 24, 2009, the ARRL filed a petition with the United States Court of Appeals for the District of Columbia Circuit asking the Court to order the Federal Communications Commission to comply with the Court's 2008 decision that remanded the FCC's ruling on Access BPL for further action <http://www.arrl.org/news/stories/2008/04/25/10064/ >.

In its Petition for a Writ of Mandamus, the ARRL asks that the Court "order the Commission to comply with the terms of the Court's mandate by (1) soliciting comment on the unredacted studies placed in the rulemaking record, and (2) providing a reasoned explanation of its choice of an extrapolation factor for Access BPL (or issue a further notice of proposed rulemaking proposing a different extrapolation factor), within sixty days" <http://www.arrl.org/news/files/BPLCourtMandamusPetition06242009.pdf >.

"What's at issue is the fact that after over a year the FCC has not complied with the Court's order," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "The FCC needs to ask the public to comment on the scientific studies conducted by the FCC and on which they relied in their BPL decision. It also must either offer a reasoned explanation, based on the scientific studies already in the FCC's record, for its determination of the rate at which radiation from medium voltage power lines carrying BPL decays with distance from the power line, or issue a new Notice of Proposed Rule Making and seek comment on an appropriate standard."

The Court of Appeals issued its decision April 25, 2008 and its mandate on June 13, 2008. ARRL's petition asserts: "By March 31, 2009, the Commission had taken no action with respect to the disclosure of the unredacted scientific studies and had not therefore solicited public comment on the unredacted studies. Petitioner, therefore, filed a Freedom of Information Act request with the Commission seeking the unredacted versions of the studies that the Court ordered be included in the rulemaking record, and about which an opportunity for comment was to be provided by the Agency."

ARRL Chief Executive Officer David Sumner, K1ZZ, said that "We have been waiting patiently for the FCC to fulfill its obligations under the Court of Appeals decision, but after more than a year, it's clearly past time

for the Commission to act. Thanks to the release of the unredacted staff studies in response to the ARRL's most recent FOIA request -- a request that should not have been necessary for us to make -- we finally know what the FCC withheld from public view back in 2004 <http://www.arrl.org/news/stories/2009/05/08/10811/?nc=1 > and what they now must deal with in order to resolve the regulatory uncertainty that continues to hang over BPL. We are hopeful that under its new leadership, the FCC will get back on track and will revise its rules governing BPL interference to be consistent with the technical record and sound science."

On May 1 of this year, the Commission released the unredacted studies without comment or notice. As the ARRL's petition continues, "To date, no public notice of that action has been given and no further action has been taken by the Commission with respect to the provision of an opportunity for the public to comment on the unredacted studies."

Henderson explained that "the release of the unredacted studies is only a partial fulfillment of the Circuit Court's decision. The ARRL's position is that further delay is not warranted by any reasonable, factual standard. There is precedent in law that 'a reasonable time for agency action is typically counted in weeks or months, not years.' It is 14 months since the Court's decision, and still the FCC has no timeline to meet its mandated obligations."

The ARRL is asking that the Court order the Commission to comply with the Court's order within 60 days. The petition states: "Given the simplicity of the Commission's compliance with the two components of the Court's Mandate on remand and the amount of time that the Commission has already taken following the issuance of the Mandate, the Court need not be concerned with the question of how much more time is needed for the Commission to complete its tasks. Sixty days is more than enough to solicit public comment on the unredacted studies and to justify, if it can, the extrapolation factor, or to reopen the rulemaking proceeding in order to determine a different, appropriate extrapolation factor."

==> GOVERNORS SHOW SUPPORT FOR AMATEUR RADIO AS ARRL FIELD DAY APPROACHES

Governors across the United States have shown their support for Amateur Radio, with many proclaiming Amateur Radio Week in their states. Coinciding with ARRL Field Day <http://www.arrl.org/fieldday>, these proclamations show citizens that these states value the contributions made by radio amateurs.

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said that ARRL Public Information Officers around the country were encouraged to begin work on obtaining proclamations many weeks ago: "Hundreds of local proclamations by city and county leaders -- as well as 25 state proclamations -- have been made, with more expected. Proclamations from the governors of Arizona, Arkansas, Colorado, Connecticut, Florida, Illinois, Indiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska,

New Hampshire, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, Tennessee, Texas, Washington and Wyoming as well as Delaware's State Senate, are not just recognitions of the past, but keys for future political actions such as PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1_program.html> and legislative issues."

These state proclamations range from Ohio declaring June 27 as Amateur Radio Day, to Florida, Delaware, Illinois, New Hampshire and Pennsylvania pronouncing June as Amateur Radio Month in those states, while other states have designated Amateur Radio Week in their states.

ARRL Field Day is many things to many people -- a competition to a picnic to an emergency drill and more. But according to Pitts, it is also a public relations event and groups can score more than 500 points for working the public relations angle before the weekend even begins.

"Your fellow hams and club members probably already know about Field Day," Pitts said, "but what about your local newspapers and radio and television stations? Local media outlets are always looking for fun and interesting things going on in their community." Having a media hit or link is good for 100 points.

Instead of manning only the radios, how about manning a public information table with brochures, signs and a smile? That's another 100 points. "The ARRL offers publicity materials <http://www.arrl.org/brochures/> at no charge except a small shipping fee," Pitts explained. "It's too late to receive ARRL brochures and handouts if you have not already requested them, but go ahead and order them -- you or your club will never know when the opportunity to tell the world about Amateur Radio will pop up next."

If an elected official visits your Field Day site, you can earn 100 points. "This is easier than many folks might expect. All you have to do is ask!" Pitts said.

If your state is one of the 23 states without a PRB-1 statute on the books, Pitts suggests inviting your elected officials to your Field Day site to see what Amateur Radio is all about. "Chances are, these folks will see the importance of what we do, giving you an inroad into discussing how they can help you get antennas in your community or even across the state. It's amazing to think that a simple invitation could lead to so much, but it's happened before -- why not make your Field Day the next success story."

Visit the ARRL Web site to view the proclamations <http://www.arrl.org/news/stories/2009/06/24/10905/?nc=1>. For a list of the many ways you or your club can earn bonus points this Field Day, please be sure to check out the ARRL Field Day packet <http://www.arrl.org/contests/forms/fd-2009-packet.pdf>.

==> TENNESSEE TEEN HAM RESPONDS TO EMERGENCY, PERFORMS CPR

It was just another day, helping out at another event. It was the third year in a row that 16 year old Cody Anderson, KI4FUV, of Harriman, Tennessee, had volunteered to help out the Roane County Amateur Radio Club (RARC) with the Run for the Child event. But it was the first time that he would help save a life.

May 30 dawned with fog in the sky. Not too hot, but the temperature would reach the mid-80s before the Sun went down. All in all, a good day for a race. Anderson made his way to the race site at the Roane State Community College, set up his equipment at Checkpoint #2 and waited for the runners to pass by. "This year started off just like the past two years," he told his local newspaper, the Roane County News. Twenty minutes later, that all changed.

Twenty minutes later as the runners started their second pass around the marked course, Anderson saw one of the runners fall down. Unlike other runners who fall down on a course, this man did not get up. After waiting about 20 seconds, Anderson left Checkpoint #2 and quickly made his way over to the downed racer. As he did so, he used his handheld transceiver to notify his fellow club members who were at the event, "Runner down."

Sheriff's deputies were also placed along the race route. One who was near Anderson and Checkpoint #2 saw what was going on and came to assist. As Anderson raced on foot, the deputy jumped in his patrol car and drove to the fallen runner. Both reached the fallen runner in about 20 seconds.

RARC Vice President Cliff Segar, KD4GT, said that they all heard Anderson racing toward the runner, "but we just assumed someone just simply tripped and fell." But after hearing Anderson say "Roll EMS" over the radio, he knew it was much more serious.

Another runner -- "I never got his name," Anderson said -- passed the area where the teen and the sheriff's deputy were kneeling next to the runner lying on the ground. The man stopped to help, checking out the man on the ground, who was still breathing. Anderson got back on the radio and told Bill Farnham, KI4FZT, at the command center that the first responders who were on site needed to get to where he was -- immediately. "The man who stopped, I just kind of let him take over," Anderson told the ARRL. "He seemed like he had a bit of medical training, and he started taking vital signs. I was talking to Bill on my radio, letting him know what was going on."

Then the fallen runner stopped breathing.

In February, Anderson took a CPR class that another RARC club member -- Phil Newman, KE4LSH -- had organized. It was the skills he learned at that class that came into play on May 30. He started giving the man mouth-to-mouth resuscitation; the other runner started chest compressions. "We did about three sets of CPR before the Roane County Rescue guys got to us, just a second or two later" Anderson told the ARRL.

"I'm just glad I was able to take the CPR training, else I don't know what I would have done or how I would have reacted," Anderson told the County Times. Anderson efforts, along with those of the unknown runner, kept the man alive long enough for EMS to arrive and use an electronic defibrillator to restart his heart. He was eventually transported to the University of Tennessee Medical Center via Lifestar helicopter. "Last I heard," Anderson said, "was that he was doing okay."

Anderson will begin his senior year at Rockwood High School this fall. When he was 11, he sat for his Technician exam and passed; he is now a General. He likes to help out with the Boy Scouts and give back to the community through his SKYWARN and ARES(r) activities: "I volunteer five weeks every summer to help out at Camp Buck Toms, a Boy Scout camp located in Rockwood, Tennessee. Along with a few other volunteers from the local area, I teach the radio and electronics merit badge courses. Through the Amateur Radio Emergency Service, I've personally helped out with several severe weather outbreaks, the TVA Kingston ash spill in December 2008 and the Kingston Smokin' the Water 4th of July festival a few times."

He is modest about the events of May 30. "I took my first training class for CPR and AED in February 2009, thinking I would never have to use it," he told the ARRL. "On May 30, 2009 -- I used it. I would highly recommend that everyone takes some type of medical training."

Segar calls Anderson a hero. "You never know when training will possibly be the difference between life and death," he said. -- Some information from the Roane County News

==> W1AW ANNOUNCES 2009 FIELD DAY BULLETIN SCHEDULE

Stations active during ARRL Field Day -- June 27-28 -- are eligible to receive 100 bonus points for copying the special Field Day bulletin transmitted by W1AW (or K6KPH on the West Coast) according to the schedule below. You must include an accurate copy of the message in your Field Day submission. The Field Day bulletin must be copied via Amateur Radio; it will not be included in Internet bulletins sent out from Headquarters and will not be posted to Internet BBS sites.

W1AW will operate on the regularly published frequencies. The special PSK31 bulletin will be transmitted on the regular W1AW teleprinter frequencies. CW frequencies: 1.8025, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675, 28.0675 and 147.555 MHz. Teleprinter frequencies (includes PSK31): 3597.5, 7.095, 14.095, 18.1025, 21.095, 28.095 and 147.555 MHz. Phone frequencies: 1.855, 3.990, 7.290, 14.290, 18.160, 21.390, 28.590 and 147.555 MHz.

Friday
CW: 5 PM PDT, 6 PM MDT, 7 PM CDT, 8 PM EDT
Teleprinter: 6 PM PDT, 7 PM MDT, 8 PM CDT, 9 PM EDT
Phone: 6:45 PM PDT, 7:45 PM MDT, 8:45 PM CDT, 9:45 PM EDT
CW: 8 PM PDT, 9 PM MDT, 10 PM CDT, 11 PM EDT

Saturday
CW: 7 AM PDT, 8 AM MDT, 9 AM CDT, 10 AM EDT
Phone: 8 AM PDT, 9 AM MDT, 10 AM CDT, 11 AM EDT
CW: 5 PM PDT, 6 PM MDT, 7 PM CDT, 8 PM EDT
Teleprinter: 6 PM PDT, 7 PM MDT, 8 PM CDT, 9 PM EDT
Phone: 6:45 PM PDT, 7:45 PM MDT, 8:45 PM CDT, 9:45 PM EDT

Sunday
CW: 7 AM PDT, 8 AM MDT, 9 AM CDT, 10 AM EDT
Phone: 8 AM PDT, 9 AM MDT, 10 AM CDT, 11 AM EDT
PSK31: 9 AM PDT, 10 AM MDT, 11 AM CDT, 12 PM EDT

The Maritime Radio Historical Society's K6KPH
<http://www.radiomarine.org/> will transmit the 2008 W1AW Field Day message for the benefit of West Coast stations on 3.5815, 7.0475, 14.0475, 18.0975 and 21.0675 MHz, CW only. The frequencies for K6KPH Teleprinter (RTTY and FEC AMTOR) will be 7.095 and 14.095 MHz. The K6KPH schedule is accurate as of June 17, 2009.

Saturday
CW: 7:30 AM PDT, 8:30 AM MDT, 9:30 AM CDT, 10:30 AM EDT
CW: 5:30 PM PDT, 6:30 PM MDT, 7:30 PM CDT, 8:30 PM EDT
Teleprinter: 6:30 PM PDT, 7:30 PM MDT, 8:30 PM CDT, 9:30 PM EDT

Sunday
CW: 7:30 AM PDT, 8:30 AM MDT, 9:30 AM CDT, 10:30 AM EDT
Teleprinter: 9:30 AM PDT, 10:30 AM MDT, 11:30 AM CDT, 12:30 PM EDT

More information on ARRL Field Day is available on the ARRL Field Day Web site <http://www.arrl.org/fieldday>.

==> OHIO SECTION MANAGER JOE PHILLIPS, K8QOE (SK)

Joe Phillips, K8QOE, who served as ARRL Ohio Section Manager since 1998, passed away suddenly at his home on June 20. He was 68. Licensed in 1959 as KN9SYL, Phillips first joined the ARRL Field Organization as an Official Emergency Station (OES) in 1986. He became a Public Information Officer in 1989 and has served as an Official Observer (OO) since 1997. He was elected Ohio Section Manager in 1998.

A graduate of Youngstown University, Phillips had a career as a journalist and a teacher. He edited six separate ham radio newsletters in Cincinnati before becoming Newsletter Editor for the Ohio Area Repeater Council in 1984, a position he held for five years. In 1986, Phillips organized the first Ohio Repeater Directory and in 1992, organized the Ohio Section Ham Radio Newsletter Contest. He authored a weekly ham radio newspaper column in the Sunday edition of the Cincinnati Enquirer called "Ham Call" and hosted a similarly named program for cable television in the Cincinnati area.

In 1994, Phillips was elected to the Greater Cincinnati Amateur Radio Hall of Fame, and in 1995, he was the recipient of the ARRL's McGan Silver Antenna Award. This award is given annually to a League member who demonstrates outstanding public relations success on behalf Amateur

Radio at the local, state or national level. Phillips was excited about having his photo on the cover of the May 2009 issue of QST featuring the annual Dayton Hamvention.

"Throughout a 40-year friendship, Joe and I worked closely together on many occasions," said ARRL Great Lakes Division Director Jim Weaver, K8JE. "From his early days of supporting the county ARES/RACES unit and the Ohio Repeater Council, Joe has always provided energetic and effective leadership with a friendly, personal touch. The magnetism of his style of leadership drew the best from others who soon became solid friends, not mere associates."

ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, remembered Phillips fondly: "If you have been to Dayton you have met and laughed with Joe. He was the master of the Wouff Hong ceremony. His red jacket is the stuff of legend in Ohio. Joe was more than a Section Manager -- he really gave all of himself to ARRL for 20-plus years. With him dies the last paper newsletter sent to section membership. When I answered his phone calls, he announced his call with 'Here's your Ohio Nightmare.' He loved baseball, maybe more than I did. He was a good man, and he is really going to be missed."

==>SOLAR UPDATE

Tad "Child of delight, with sunbright hair" Cook, K7RA, this week reports: Two new sunspots appeared last week, numbered 1022 and 1023, and both were Solar Cycle 24 spots, with 1022 lasting through June 23 and 1023 until June 24. On June 24, geomagnetic indices were unsettled. Sunspot numbers for June 18-24 were 0, 0, 0, 12, 24, 12 and 14 with a mean of 8.9. The 10.7 cm flux was 68, 67, 67, 67, 68, 68 and 67 with a mean of 67.4. The estimated planetary A indices were 4, 4, 6, 7, 3, 4 and 19 with a mean of 6.7. The estimated mid-latitude A indices were 2, 1, 5, 6, 2, 5 and 16 with a mean of 5.3. This weekend is ARRL Field Day, and conditions should be stable; Planetary A index is predicted to be around five, which is quiet.. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Emily Bronte <http://en.wikisource.org/wiki/Child_of_delight,_with_sun-bright_hair>.

==>IN BRIEF:

* This Week on the Radio: This week, ARRL Field Day is on June 27-28 -- look for a Field Day site near you <http://www.arrl.org/contests/announcements/fd/locator.php>. The NCCC Sprint and the Digital Pentathlon are on June 26. On June 27-28, check out the His Majesty King of Spain Contest (SSB), the Ukrainian DX DIGI Contest, the Marconi Memorial HF Contest and the ARCI Milliwatt Field

Day. The SARL Digital Contest is June 28 and the RAC Canada Day Contest is July 1. Next week is the Digital Pentathlon on July 3. Check out the Venezuelan Independence Day Contest, the WLOTA Contest, the DL-DX RTTY Contest, the Original QRP Contest, the PODXS 070 Club 40 Meter Firecracker Sprint (local time) Michigan QRP July 4th CW Sprint on July 4-5. The ARS Spartan Sprint is July 7. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 28, 2009, for these online course sessions beginning on Friday, July 10, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL Field Day in the National Spotlight: Each year, the ARRL's Media and Public Relations Department makes materials available to Public Affairs Officers (PIOs) for use in promoting Field Day events. Most of these are in forms that local groups can easily modify to include their own information, but there is also a national press release that is sent out direct from ARRL HQ over the news wire <http://www.arrl.org/pio/press_releases/2009/0622.html>. ARRL Media and Public Relations Manager Allen Pitts, W1AGP, said many hams have seen the press release -- either portions of it or in its entirety -- with the headline Field Day -- Over 35,000 radio 'hams' active June 27-28. "This press release has already been printed in hundreds of newspapers and on Web sites, with more to come over Field Day weekend," Pitts explained. "Wire news services, like other merchants, also run 'special deals.' This year, we were also able to have our Field Day logo and caption displayed in the news cycle on the PR Newswire-Reuters news billboards in Times Square in New York City and in Las Vegas June 15-17. For more information on ARRL Field Day -- June 27-28 -- please visit the

ARRL Field Day Web site <http://www.arrl.org/fieldday>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 3. There will be no ARRL Audio News, W1AW bulletin or code practice transmissions that day. The ARRL Letter will be posted a day early on Thursday, July 2. League Headquarters will reopen Monday, July 6 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* "ARRL Introduces Second Edition of "VoIP: Internet Linking for Radio Amateurs": Through a technique called Internet linking, ham radio operators are harnessing the immediacy and portability of radio communication to the global reach of the Internet. Today's radio amateurs are using the Internet as the relay between their radio base stations, handhelds and mobile transceivers for long-distance communication, spanning thousands of miles. The ARRL has released a second edition of "VoIP: Internet Linking for Radio Amateurs", the complete guide to several of the most widely used Voice over Internet Protocol (VoIP) systems used by today's radio amateurs, with particular attention to EchoLink and the Internet Radio Linking Project (IRLP). The book is designed for beginners as well as those hams who are long-time VoIP users. If you're new to VoIP, you'll discover information on how to get started, set up and use these systems. The more advanced ham will find plenty of technical "meat" to dig deeper into VoIP applications and discover how they actually work. Written by EchoLink creator Jonathan Taylor, K1RFD, "VoIP: Internet Linking for Radio Amateurs" is available for $21.95 from the ARRL Web site. Order your copy today <http://www.arrl.org/catalog/?item=1431>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

It is good to read about a teenager performing CPR. Dang the politics.
Just great to hear about people who act in a manner that makes you proud to
be of our genus and species.

>come out. That would be the equivalent of the US Congress person.
>Do we get extra points for a federally elected official? <smile>

Our MP came out and spent some low tension, low pressure time with
us.. Turns out he personally knew four of the five amateurs who were
present including me.

(Low pressure, low tension meant that we were hassling him or asking
for money but just doing a demo so he could learn about amateur
radio.)

I have to leave due to personal reasons but another amateur showed up
after doing some tower work. So 5 amateurs are running 3 stations in
a former football field and having a great time. 3A Alberta

We got one of the local newspapers out and four visitors besides the
MP. I'm disappointed that no town councillors or officials showed up.
I'll have to do better follow up next year.

And next year we'll invite the Premier of Alberta. Give him about 10
months notice. <smile> As a county councillor some ten years ago he
did attend some amateur radio meetings.

There was a segment about FD on the one local TV newscast I watched last night, and I just spotted this on the Google News home page:

Amateur radio field day
KTVO - 37 minutes ago - all 214 articles »

Clicking on "all 214 articles" displayed stories from Iowa, Kansas, Florida, and several other states, with links to many more.

Pretty cool!

It was good to work you again, Hans.

I was part of a multiclub group that ran 5A (plus VHF) under the call N3NZ. Over 1300 QSOs. We had 1 HF CW station, 3 HF phone stations, 1 digital/phone station, and a VHF station. The QSO mix was about 42% CW, 6% digital, 52% phone. All rigs low power or QRP, wire antennas, networked logging computers, set up in a small public park (with permission, of course). Bonuses for natural power, independence from mains, W1AW bulletin, public place, publicity, visit by official, online report submission, SM message. Great wx, great food, great people, great fun.

364 days till the next one!

POST ACTION REPORT

K0CKB and I ran a low key operation in class 1E from the RV.

Band conditions were better than expectations, with the higher bands 10, 15, and 20 open well past sunset. This was surprising, given our northerly latitude (my GPS put us at 47deg, 56.393N, 92deg 39.924W).

Made just over 500Q's in under 7 hours B-I-C time.

==> IT'S OFFICIAL: JULIUS GENACHOWSKI SWORN IN AS FCC CHAIRMAN

On Monday, June 29, US Supreme Court Justice David Souter -- in one his
last official duties on the high court -- swore in Julius Genachowski as
the new Chairman of the Federal Communications Commission. Genachowski,
who clerked for Souter after finishing law school, will complete the
four years remaining in the term of outgoing FCC Commissioner Jonathan
Adelstein. On June 25, the US Senate confirmed both Genachowski and
current FCC Commissioner Robert McDowell -- Genachowski for his initial
term and McDowell for his first full term
```

<http://www.arrl.org/news/stories/2009/06/25/10913/?nc=1>.

Adelstein has been nominated by President Obama to be the Administrator for the US Department of Agriculture's Rural Utilities Service (RUS) <http://www.arrl.org/news/stories/2009/03/23/10716/?nc=1>; a nomination hearing before the Senate Agriculture Committee is scheduled for July 7.

Genachowski praised Adelstein's record, thanking him for his more than six years of "outstanding public service" as an FCC Commissioner. "Throughout his tenure at the Commission," Genachowski said, "he has tirelessly championed the public interest. The FCC and the public have benefited greatly from his rich understanding of media and technology policy, and his devotion to the democratic process. While I regret that I won't have the pleasure of serving with Jonathan at the FCC, I look forward to forging a strong partnership with him in his future work."

Commissioner Michael Copps, who had served as Acting Chairman since the resignation of then-Chairman Kevin Martin this past January <http://www.arrl.org/news/stories/2009/01/15/10566/>, welcomed Genachowski to the Commission, saying Genachowski begins "what promises to be a public-spirited and distinguished tenure as Chairman. He knows the FCC well, brings impressive private sector and technology experience with him, and enjoys deserved renown for innovative thinking and new approaches. I look forward to working with him on the many issues awaiting his attention."

Copps also expressed his thanks for Adelstein's tenure on the Commission: "Jonathan and I have worked closely together on so many issues that it makes it hard for me to imagine a Commission without him. Our thoughts most often run in the same direction, whether the issue is media, broadband, rural America, the disabilities communities, reaching out to non-traditional stakeholders or upholding a shared vision of the public interest. His intelligence, good judgment, wide experience and invariably good humor combined to make him a highly productive Commissioner across a wide gamut of issues. I will miss him here but wish him all good things as he moves ahead in the confirmation process toward becoming Administrator of the Rural Utilities Service at the US Department of Agriculture. I look forward to our continuing work together and to our friendship through the years."

Commissioner McDowell is expected to be sworn in for his new term on July 2.

==> 2008 ARRL ANNUAL REPORT NOW AVAILABLE

The ARRL Annual Report for 2008, now available online and in print <http://www.arrl.org/announce/annualreport/>, reviews the major events of the year and documents the renewed growth of both the ARRL and the activities of the Amateur Radio Service. In 2008, the ARRL experienced a growth in membership, ending the year with 154,627 members, an increase of 0.7 percent from 2007. The growth was the greatest among International members and in the League's Northwestern, Rocky Mountain

and Delta Divisions.

"As ARRL began 2008, the main question facing us was whether the growth spurt that the Amateur Radio Service had enjoyed the previous year would continue," said ARRL Chief Executive Officer David Sumner, K1ZZ. "It did, with the number of new amateur licenses issued by the FCC rising to 28,066 -- a 5 percent increase over 2007. The ten-year license term makes the total number of licensees a poor indicator of current trends, but after a period of annual declines beginning in 2003 this figure also increased by 1.2 percent during the year. Thus it appears that the regulatory changes that took effect in February 2007 are having more than a short-term impact."

ARRL President Joel Harrison, W5ZN, said that through the ARRL's history, the League's strength has come from "the fact that its leaders have always had a clear understanding of our association's mission. Our mission has been expressed in different words by different generations but has remained fundamentally the same. Our current strategic plan states it in just six words: To advance and advocate Amateur Radio."

Harrison further defined this strength, recalling that in 2005, "we identified four 'pillars' of our association: Public Service, Advocacy, Education, and Membership. Technology supports virtually everything we do, and as time went on we realized that it deserved its own pillar. So, with a bit of fanfare we unveiled technology as the 'fifth pillar' at the ARRL EXPO area of the 2008 Dayton Hamvention."

Sumner said that 2008's "most gratifying development" was the April decision by the United States Court of Appeals for the District of Columbia Circuit in the ARRL's appeal of the FCC's Broadband over Power Line (BPL) rules. "The Court panel found that FCC prejudice had tainted the rulemaking process and that the Commission had violated the Administrative Procedure Act by not disclosing in full the staff studies on which the Commission relied," he said. "The judges also found that the Commission had failed to justify its decision to apply to BPL systems an extrapolation factor that was designed for entirely different technologies and had summarily dismissed empirical data -- submitted at the Commission's invitation -- that supported a different conclusion. The Court even awarded the ARRL some of our costs; this reimbursed only a small fraction of the total cost of the appeal, but it was a moral victory and underscored the fact that we had substantially prevailed in our appeal. Remarkably, at yearend the FCC still had done nothing to comply with the Court's decision. Perhaps the change in administration will cause the FCC finally to meet its obligations."

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, "The Annual Report is not only useful for showing members the strength of the organization, but it is also a valuable tool in presentations to major public officials. At times they may know little about Amateur Radio, but when they see the quality of the annual report, even before they open it up, they know this is an organization to be taken very seriously. We are indeed a national association and very active."

==> IARU HF WORLD CHAMPIONSHIPS: COMING TO A RADIO NEAR YOU

Radiosport fans are gearing up for the summer's biggest competition: The IARU HF World Championships <http://www.arrl.org/contests/rules/2009/iaru.html>. Calling the 24 hour long contest "an HF operator's delight," ARRL Contest Branch Manager Sean Kutzko, KX9X, explained that the contest will allow amateurs plenty of opportunity to work DX from all around the globe on CW and SSB, as well as make QSOs with many IARU Member-Society club stations and officials.
"The IARU HF Championship is one of Radiosport's distinctive events," said Kutzko. "It's the only major contest that uses International Telecommunication Union (ITU) zones as part of the exchange, and it's the only contest that gives special multiplier status for IARU Member-Society stations and their officials."

Kutzko said amateurs can get in on the fun in a variety of ways: "You may choose to enter as a single operator using SSB only, CW only or a mixture of both modes. Single operator stations can choose from three power levels: High Power (greater than 150 W), Low Power (between 5-150 W) or QRP (5 W or less). You can also get some friends together at one station and participate as a Multioperator station with a single transceiver."

One of the fun things to do is see how many of the IARU special stations you can work during the event. "While most stations give their ITU zone <http://www.iaru.org/ituzonesc.gif> as part of the contest exchange, IARU Member-Society stations give the abbreviation for their IARU Member-Society's name: W1AW -- as W1AW/KL7 -- will be giving 'ARRL' as part of their exchange," Kutzko said. In addition, IARU officials can give one of four unique exchanges: AC if they are on the IARU Administrative Council, or R1, R2 or R3 for the ITU Region that official serves. For example, since Tim Ellam, VE6SH, is IARU President, he would give "AC" as part of his exchange.

According to Kutzko, numerous IARU Member-Society stations will be on the air this year, including Germany's Deutscher Amateur Radio Club (DA0HQ), France's REF-Union (TM0HQ), the Kuwait Amateur Radio Society (9K9HQ), the Nigerian Amateur Radio Society (5N0OCH and others), the Japan Amateur Radio League (8N1HQ, 8N2HQ, 8N3HQ, 8N4HQ and 8N8HQ), the Radio Amateur Society of Thailand (HS0AC), the Namibian Amateur Radio League (V51NAM), the Radio Amateurs of Lebanon (OD5RAL), as well as dozens of other Member-Society stations from around the world. "It is always special to see so many nations represented on the air by their national organization," Kutzko said. "It reinforces the global nature of Amateur Radio and the common bonds that all amateurs have."

The IARU HF World Championship begins at 1200 UTC Saturday, July 11 and goes until 1200 UTC Sunday, July 12. Complete rules may be found on the ARRL Contest Web page <http://www.arrl.org/contests/rules/2009/iaru.html>. Logs may be submitted via e-mail <iaruhf@iaru.org>; paper logs should be mailed to IARU International Secretariat, Box 310905, Newington, CT 06111-0905

USA. All logs must be e-mailed or postmarked no later than 1200 UTC August 11, 2009.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment covers the month of June.

ARRL's legislative relations consultant Chwat & Co has received 786 letters to 278 different Members of Congress (267 House, 11 Senate) supporting HR 2160 <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>. The bill -- The Amateur Radio Emergency Communications Enhancement Act of 2009 -- gained two new Congressional co-sponsors in June <http://www.arrl.org/?artid=8989>.

The ARRL filed a petition with the US Court of Appeals for the District of Columbia Circuit asking the Court to order the Federal Communications Commission to comply with the Court's 2008 decision that remanded the FCC's ruling on Access BPL for further action <http://www.arrl.org/news/stories/2009/06/26/10915/?nc=1>.

ARRL President Joel Harrison, W5ZN, appointed Southern Florida Assistant Section Manager Jeff Beals, WA4AW, as Vice Director in the Southeastern Division, effective June 1 <http://www.arrl.org/news/stories/2009/06/04/10865/?nc=1>. He also appointed Jim Tiemstra, K6JAT, as Pacific Division Vice Director <http://www.arrl.org/news/stories/2009/06/16/10889/?nc=1>.

ARRL Technical Relations Specialist Jon Siverling, WB3ERA, was on the United States Delegation to the Inter-American Telecommunications Commission (CITEL) PCC.II meeting in Ottawa, Canada June 1-5. ARRL Technical Relations Manger Brennan Price, N4QX, attended Study Group 5 meetings in Geneva, where ARRL Chief Technology Officer Paul Rinaldo, W4RI, chaired his final meetings of Working Group 5A-1 that handles amateur and amateur-satellite issues.

ARRL Field Day was in the spotlight in both New York City's Times Square and Las Vegas <http://www.arrl.org/news/stories/2009/06/23/10904/?nc=1>. More than 1600 Field Day sites registered their locations this year with the ARRL Field Day Locator. W1AW was on the air with the help of League staffers <http://www.arrl.org/blog/2009%20Field%20Day>.

ARRL Education and Technology Program Coordinator Mark Spencer, WA8SME, and ARRL Teachers Institute Instructor Miguel Enriquez, KD7RPP, led the second and third 2009 sessions of the ARRL Teachers Institutes on Wireless Technology <http://www.arrl.org/news/stories/2009/06/18/10894/?nc=1>.

ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, forwarded reports to the FCC regarding a well-known 75 meter frequency and IARU Region 3 forwarded a number of monthly Intruder Watch monitoring reports

to Skolaut.

The ARRL Contest Branch announced that the ARRL Sweepstakes log submission deadline will be reduced from 30 days to 15 days, allowing for results from both the CW and Phone portions of the contest to be posted to the ARRL Web site within 60 days of the deadline <http://www.arrl.org/news/stories/2009/06/10/10873/>.

ARRL Laboratory Engineer Mike Gruber, W1MG, investigated a power line noise case in Northglenn, Colorado where he was able to locate two noise sources associated with the interference.

Section Manager Election ballots and candidate statements for the South Texas and Los Angeles elections were mailed to members of those sections ahead of schedule. ARRL members have until August 14 to return filled-in ballots.

ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, attended Ham Radio 2009 -- Europe's largest Amateur Radio convention -- in Friedrichshafen, Germany, where he provided DXCC card-checking services to ARRL's international members <http://www.hamradio-friedrichshafen.de/html/en/>.

Along with a group of volunteers, ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, promoted Amateur Radio to the 70,000 people who attended Maker Faire, the world's largest do-it-yourself (DIY) festival in San Mateo, California <http://www.arrl.org/news/stories/2009/05/26/10835/?nc=1>. Inderbitzen also represented ARRL in Germany at Ham Radio 2009.

The July issue of QST and the July/August issues of NCJ <http://www.arrl.org/news/stories/2009/06/18/10893/?nc=1> and QEX <http://www.arrl.org/news/stories/2009/06/09/10871/?nc=1> were mailed.

The ARRL released the second edition of VoIP: Internet Linking for Radio Amateurs. <http://www.arrl.org/catalog/?item=1431>.

Three new products -- a hat, a reflective jacket and a maroon polo shirt -- have been added to the ARES(r) apparel line and are available from Barker Specialty <http://www.barkerstores.com/arrl>.

ARRL DXCC Manager Bill Moore, NC1L, announced that the HZ1EA operation in Saudi Arabia has been approved for DXCC credit <http://www.arrl.org/?artid=8983>.

==> FRESH AIR, FRIENDS, FOOD AND FUN ABOUND FOR 2009 ARRL FIELD DAY

It's an event that some groups take very seriously, planning all year long for. Still, others just use the date to get together, make a few contacts and enjoy each other's company. No matter how you view it, ARRL Field Day <http://www.arrl.org/fieldday> is fun!
According to ARRL Field Day Manager Dan Henderson, N1ND, the Field Day Site Locator <http://www.arrl.org/contests/announcements/fd/locator.php> was a big hit this year. "We had 1602 groups listed -- 98 more sites

than were listed in 2008," he said. "We had all 50 states, Puerto Rico and nine Canadian provinces registered on the Locator this year."

Henderson said he was aware of at least one Field Day contact with the International Space Station <http://www.arrl.org/news/stories/2009/06/25/10910/?nc=1>, as well as several site visits by Members of Congress and local officials to various Field Day sites around the country.

ARRL Media and Public Relations Manager Allen Pitts, W1AGP, agreed that it was a great Field Day. "Despite some propagation issues in the atmosphere," he said, "the PR propagation in the media has been more than I have seen before in prior Field Days." Pitts said that the emphasis on Field Day promotions began long before June -- the ARRL released media kits, fill-in-the-blank proclamations, news releases and tip sheets. Along with the introduction of the PR-101 course <http://www.arrl.org/news/stories/2009/05/15/10817/?nc=1>, Field Day was also the presentation theme at the 2009 ARRL National Convention at the Dayton Hamvention.

"The preparation appears to have paid off well," Pitts said. "Hundreds of hits have been relayed in by Google's news monitoring, plus more from PR Newswire and spotting by ARRL Public Information Officers around the country. Both of the video Field Day PSAs <http://www.arrl.org/news/stories/2009/03/28/10728/?nc=1> have seen good play on TV and cable. Field Day even got some play in New York City's Times Square" <http://www.arrl.org/news/stories/2009/06/23/10904/?nc=1>.

Pitts said that many city and county officials -- as well as 28 states -- issued Field Day proclamations praising Amateur Radio: "Proclamations from the governors of Alabama, Arizona, Arkansas, Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Hampshire, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, Tennessee, Texas, Washington and Wyoming, as well as Delaware's State Senate, are not just recognitions of the past, but keys for future political actions such as PRB-1 and legislative issues." These state proclamations range from Ohio declaring June 27 as Amateur Radio Day, to Florida, Delaware, Illinois, New Hampshire and Pennsylvania pronouncing June as Amateur Radio Month in those states, while other states have designated Amateur Radio Week in their states <http://www.arrl.org/news/stories/2009/06/24/10905/?nc=1>.

Individuals and groups who participated in Field Day are invited to submit their pictures and stories to the Field Day Online Soapbox <http://www.arrl.org/contests/soapbox/?con_id=176>. "Just a few days after Field Day, we've had almost 70 entries on the Soapbox," Henderson said. "It really is a thrill to read these stories and see all the pictures showing what a good time people had this year."

Henderson encouraged Field Day participants to submit their entries via the Field Day Web Submission Applet

<http://www.b4h.net/cabforms/fielddayentry.php>. "You can also submit your entries via e-mail <fieldday@arrl.org> or by postal mail," he said. If submitting via postal mail, entries should be sent to Field Day Entries, ARRL, 225 Main St, Newington, CT 06111. Entries must be postmarked, e-mailed or submitted by July 28, 2009. Late entries cannot be accepted.

It's not too early to begin preparing for next year's Field Day -- go ahead and mark your calendars now for June 26-27, 2010.

==>WHAT'S NEW AT DAYTON 2009 -- THE UNABRIDGED VERSION

The July 2009 issue of QST had a one page overview of some of the major pieces of equipment introduced at the Dayton Hamvention. There is no way a single person can track down everything on display that's new in the time available, but QST Technical Editor Joel Hallas, W1ZR, did find quite a bit more -- much more than can be squeezed into the available QST page.

"We reported on many other categories of interest, including new VHF and antenna-related equipment, as well as many categories of accessories," he said. "When you click on the link, you'll find a description of the rest of the new items I tracked down during a very busy three days at Dayton."

Check it out on the ARRL Web site <http://www.arrl.org/files/qst-binaries/QS0709NewatDayton.pdf>.

==>SOLAR UPDATE

Tad "A summer's Sun is worth the having" Cook, K7RA, this week reports: It was a perfect Field Day weekend from where I stood. The weather was warm, skies clear, the space weather was calm and there was enough propagation to make a domestic contest interesting. I had no plans, so on Saturday I went to the ARRL Field Day Station Locator to find a Field Day site. The one I landed at -- W7AUX -- listed a contact number, a cell phone at the site. I inquired if they needed a CW op, was told, "We could use any operators," so I drove up to the site north of Seattle. I had a lot of fun on 20 meter CW. Sporadic-E even helped out, and the 6 meter station made a number of contacts with other Field Day stations in the Western US. You can get a taste of what happened at Field Day stations around the country via the Contest Soapbox <http://www.arrl.org/contests/soapbox/?con_id=176>. A shorter version with a photo is on page one of the 2009 Field Day Soapbox. Just search for KB6NU. Sunspot numbers for June 25-1 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68, 66.8, 67, 67, 68.5, 68.2 and 67.5 with a mean of 67.6. The estimated planetary A indices were 7, 3, 3, 11, 10, 5 and 4 with a mean of 6.1. The estimated mid-latitude A indices were 6, 2, 4, 8, 7, 5 and 3 with a mean of 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's

Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by an ancient French proverb <http://www.egreenway.com/months/summer.htm>.

==>IN BRIEF:

* This Week on the Radio: This week, the Digital Pentathlon is July 3. Check out the Venezuelan Independence Day Contest, the WLOTA Contest, the DL-DX RTTY Contest, the Original QRP Contest, the PODXS 070 Club 40 Meter Firecracker Sprint (local time) Michigan QRP July 4th CW Sprint on July 4-5. The ARS Spartan Sprint is July 7. Next week is the IARU HF World Championships on July 11-12. The NCCC Sprint Ladder is July 10. The FISTS Summer Sprint and the Feld Hell Sprint are July 11. The SKCC Weekend Sprint and the ARCI Summer Homebrew Sprint are both July 12. The NAQCC Straight Key/Bug Sprint is July 16. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, July 26, 2009, for these online course sessions beginning on Friday, August 7, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 3. There will be no ARRL Audio News, W1AW bulletin or code practice transmissions that day. The ARRL Letter will be posted a day early on Thursday, July 2. League Headquarters will reopen Monday, July 6 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* Michigan Ham Dies in Tower Accident: A tower accident during Field Day preparations around 11 AM EDT on Saturday, June 27 claimed the life of Larry Prelog, KE4PM, of Niles, Michigan. Prelog, a member of the Blossomland Amateur Radio Association (BARA) <http://www.blossomlandara.org/>, was airlifted from Watervliet to a Kalamazoo hospital where he passed away early Sunday morning. He was 57. BARA Public Information Officer Matt Severin, N8MS, told the ARRL that Prelog "...was very passionate about Amateur Radio and was very involved in club activities. He was the driving force behind the first high altitude balloon launch for our club. Larry was the kind of guy who would give you the shirt off his back even if he didn't have another one for himself. He will be dearly missed."

* Larry E. Price, W4RA, Honored at Ham Radio 2009 Convention in Germany: Larry E. Price, W4RA, was honored at an evening reception following the first full day of Ham Radio 2009 convention activities in Friedrichshafen, Germany <http://www.hamradio-friedrichshafen.de/html/de/> on Friday, June 26. The reception was hosted by the convention sponsor, the Deutscher Amateur Radio Club (DARC), and was attended by officials and guests from dozens of IARU Member-Societies. In a presentation made by IARU Vice President Ole Garpestad, LA2RR -- who had served as President of the Norwegian Radio Relay League (NRRL) from 2000-2002 -- Price was honored with the highest NRRL award, the Knight of the Order of the Golden Key. The award was given for Price's many years of service to the IARU, the ARRL and Amateur Radio in general. IARU President Tim Ellam, VE6SH, then conferred the title of IARU President Emeritus upon Price. Price served as ARRL President from 1984-1992 and as IARU President from 1999-May 2009. For more on the convention, see the Friedrichshafen blog on the ARRL Web site <http://www.arrl.org/blog/Friedrichshafen%202009>.

* John Miller, K6MM, Wins June QST Cover Plaque Award: The winner of the QST Cover Plaque Award for July is John Miller, K6MM, for his article "A No Excuses 160 Meter Vertical Antenna." Congratulations, John! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the July issue by Friday, July 31.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast"

compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1664 - July 3 2009

Amateur Radio Newsline report number 1664 with a release date of Friday, July 3rd, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC starts its long scheduled rules review and ham radios Part 97 is included. Also, hams in Poland go on flood watch alert, Europe may put emission standards on ham radio a very cold DXpedition on Amateur Radio Newsline(tm) report number 1664 coming your way right now.

(Billboard Cart Here)

**

REGULATORY: FCC SEEKS COMMENTS ON REVISING OR ELIMINATING CERTAIN RULES

The Part 97 Amateur Service rules are among those to be reviewed by the FCC or their relevance, modification and continuation for the next several years. Bruce Tennant, K6PZW, is here with the rest of the story:

--

Pursuant to the Regulatory Flexibility Act in section 610 of the United States Code, the FCC is publishing a plan for the review of rules adopted by the agency in calendar year 1998. Rules which have, or might have, a significant economic impact on a substantial number of small entities.

The actual purpose of the review is to determine whether such rules should be continued without change, or should be amended or rescinded. This, to minimize any significant economic impact of such rules on the previously mentioned substantial number of small entities.

In addition to Amateur Radio in Part 97 of the FCC regulations, other services to have their rules reviewed are the Part 20 Mobile Service, the Part 22 Cellular Telephone Service, Part 73 Broadcast Services, the Part 95 Citizens Radio Services to mention only a few.

The FCC rules review notice is designated as CB Docket No. 09-102. It was issued on June 24th and carries a 60 day commentary period.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles. -- You can download and read the entire document detailing this regulatory review at the U-R-L found at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-1307A1.doc)

(FCC, CGC)

**

RADIO POLITICS: NEW FCC CHAIRMAN SWORN IN

The FCC has a new Chairman. On Monday, June 29th, US Supreme Court Justice David Souter swore in Julius Genachowski as the new Chairman of the Federal Communications Commission.

President Obama had nominated Julius Genachowski to lead the Commission on March 3rd. The Senate confirmed him as the new Chairman of the FCC on June 25th. At the same time it also reconfirmed current FCC Commissioner Robert McDowell for his first full term.

President Obama has also nominated South Carolina Democrat Mignon Clyburn and Republican Meredith Attwell Baker for the last two vacant Commissioner seats. If confirmed by the Senate, Clyburn and Baker would bring the FCC to its full complement of five Commissioners. (ARRL and various published news reports)

**

RESCUE RADIO: POLISH HAMS ON FLOOD ALERT

Ham radio is on emergency stand-by in Poland. This, following flooding that has hit the South-Western part of that European nation.

Greg Mossop, G0DUB, is the IARU Region 1 Emergency Communications Coordinator. He relays word that following the recent flooding and a continuing flood threat to the region, the DASR Polish emergency group is saying that 3.760 MHz may be used for emergency communication.

If this activation takes place, Polish radio amateurs will be requesting that hams in other parts of the world to keep this frequency clear if you hear any ongoing emergency traffic. G0RUB adds that further updates will be posted as they are received. (Southgate)

**

TECHNOLOGY: EUROPE MAY REQUIRE HAM GEAR TO MEET EMMISSION STANDARDS

Future amateur radio gear may sold in Europe need to meet very specific emissions standards. The Radio Society of Great Britain reports that the European Telecommunications Standards Institute is moving towards requiring commercially produced, ready to use amateur radio equipment to conform to international standards for emissions. As of now, the proposals will not affect kits or homebrew equipment. If such rules were enacted it would likely lead to a price increase in commercially made gear sold in that market. (GB2RS News, others)

**

ON THE AIR: HAMS COMMEMORATE THE APOLLO 11 MOON LANDING

Ham radio operators around the world spent the weekend of June 27th and 28th bouncing radio conversations off the surface of the Moon. This to help commemorate Apollo 11 Moon landing 40 years ago.

Organized in Australia and the United States, the on-the-air event brought together hundreds of amateur radio operators from around the world, some armed with their own radio dishes. It was timed to coincide with the 40th anniversary next month of the Apollo 11 landing that took place on July 20, 1969.

The earlier date was chosen for two reasons. First is that the Moon does not orbit directly around the Earth's equator, this was the nearest weekend organizers could arrange for practical reasons. Secondly, the date chosen happened to coincide with the 2009 ARRL Field Day operating event. This meant that there would be lots of hams on the air on every mode including Moonbounce.

At airtime its not known how many Apollo anniversary contacts were made, but those hams trying had to be patient. It takes about 2.5 seconds for a radio signal to reach the Moon and bounce back to another part of the Earth. As such any two way contact meant waiting about 5 seconds to get a reply. (N6ZXJ, WB9QZB from published reports)

**

EMERGING TECHNOLOGY: MIT ANNOUNCES NEW COGNITIVE RADIO CHIP

Engineers at the Massachusetts Institute of Technology have built a fast, ultra-broadband, low-power radio integrated circuit chip. One modeled on the human inner ear that that could have applications in cognitive radios.

Researchers say that the new RF cochlea is embedded on a silicon chip measuring 1.5 mm by 3 mm and works as an analog spectrum analyzer by detecting the composition of any electromagnetic waves within its perception range. They say that the new chip could enable wireless devices capable of receiving cell phone, Internet, radio, television and other signals using a single device.

For those not aware, the term cognitive radio is a paradigm for wireless communication in which either a network or a wireless node that changes its transmission or reception parameters to communicate efficiently avoiding interference with other spectrum users. More about the new radio chip is on-line at www.sciencedaily.com/releases/2009/06/090603131441.htm (Science Daily, others)

ENFORCEMENT: CHINESE MADE HT'S MAY BE ILLEGAL TO IMPORT TO THE USA

Some deals are too good to be true or legal. That's the story with some rather inexpensive HT's being sold on-line. Bill Pasternak, WA6ITF, is in our newsroom with more:

--

Inexpensive VHF and UHF transceivers made in China that transmit and receive on the 2 meter and 70 centimeter bands appear to be illegal for hams to buy from overseas dealers and have shipped into the United States. This is because the radios have not passed the FCC certification procedure nor can they as they are designed to transmit on frequencies outside of the United States amateur radio allocations right out of the box.

The radios in question bear names like Puxing, FDC, Wouxon, and numerous others. They are being mainly sold on Bay and similar on-line auction sites world-wide at prices ranging from $30 to $80 plus shipping. Most of the ads originate from dealers in Taiwan or Hong Kong though some have come from other Pacific Rim nations as well.

According to postings on various chat websites, the radios themselves are not all that bad quality. Not great, but not to shabby. Almost all of them feature a back-lit LCD display, up to 100 memory channels, programmable repeater offsets, and even a built-in CTCSS tone encoder.

Output power on the VHF units approaches 5 watts while the UHF models average around 2 watts out. Hams using them report that the transmit audio quality ranges from a bit muffled to good depending on the model and manufacturer of the set.

With retail prices far below that of similar radios from Alinco, Icom, Kenwood and Yaesu, hams on this side of the Pacific might find these Chinese built transceivers hard to resist. But as pointed out in on-line postings, the biggest problem aside from it being illegal to import is where to get one fixed if its dropped or stops operating? Also, replacement battery packs might be very hard to find if the one that comes with the radio goes flat and cannot be revived.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

With all of this taken into account the radios may not be that great of a bargain, after all. Or in the words of the old sage: Caveat Emptor. Buyer beware. (ARNewsline(tm))

**

ENFORCEMENT: PA SKI RESORT FINED $5000 FOR UNLICENSED RADIO OPERATIONS

A ski resort in Pennsylvania has been ordered to auntie up $5000 by the FCC. This after the regulatory agency found that the Bear Creek Mountain Resort has been using a variety of 460 MHz land-mobile frequencies without a license.

The story goes back to 2008 when the FCC's Philadelphia Field Office received a complaint that the Bear Creek Mountain Resort in Macungie was operating radio communications equipment on several frequencies without a license. An agent was dispatched who observed and recorded several transmissions on 461.3500 MHz, 462.5000 MHz, 464.4250 MHz, and 467.7625 MHz.. On 462.500 MHz, the agent heard an individual request assistance bringing a girl with a broken wrist down the mountain.

On June 10th of 2008 the FCC issued the resort a $10,000 Notice of Apparent Liability for its unlicensed radio operation. The resort countered that the fine should be cancelled because it did not knowingly violate the Commission's Rules. But the FCC countered that it found the violations to be deliberate and that the resort must be penalized. However, it would take mitigating circumstances into account and reduce the fine to $5000.

The order affirming the $5000 fine was issued on June 24th. The Bear Creek Mountain Resort was given the customary 30 days to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: LIST OF POTENTIALLY STOLEN EQUIPMENT IN THE BONDY CASE PUBLISHED ON LINE

A follow-up to our report in the case of Kevin Bondy, who now faces a $24,000 fine for jamming the radio system in a Southern California shopping mall. A police search of his residence has turned up what's being described as an extraordinary amount of potentially stolen radio gear.

The Ventura County Sheriff's Department has prepared a list of what was found on the premises and is asking the public's help in identifying any rightful owners. The equipment can be viewed on-line. Items 120 to 123 involve FM broadcast equipment. The rest is land-mobile gear including repeaters with a few miscellaneous items such as computers, CB and amateur radio gear mixed in.

There are two URL's you need to know. The first takes you to the list of equipment. The second shows pictures of the FM broadcast equipment and gives contact information for the Ventura County Sheriff. The URL's with this information are:

Equipment list: http://earthsignals.com/add_CGC/Oaks_Mall_09-5771.pdf
Photographs of the FM broadcast equipment:
http://earthsignals.com/add_CGC/Letters/Stolen%20Equipment.htm
Background information on Kevin Bondy:
http://www.fcc.gov/eb/FieldNotices/2003/DOC-290813A1.html) (CGC)

**

ENFORCEMENT: FCC REFUSES TO ACT ON ELT MODIFICATION CASE

The FCC has turned away a strange complaint regarding an Emergency Beacon Locator device purchased from an unnamed vendor in the United Kingdom by a resident of France. Don Wilbanks, AE5DW, has the details:

--

In a letter dated October 24, 2008, Jean Pierre de Lutz of La Garde Freinet. France submitted a complaint regarding ACR Electronics, Inc. which is located in Great Britain. In his letter, Lutz stated that ACR duplicated the hexadecimal code for his 406 MHz Emergency Position Indicating Radiobeacon and that this duplication caused him and his crew to be placed in life-threatening storm conditions at sea unnecessarily.

According to Lutz complaint, he purchased the device in 2002 and immediately registered it with the United States National Oceanographic and Atmospheric Administration. In 2007 he activated the beacon when his vessel encountered storm conditions during an Atlantic crossing. But in the intervening years another beacon manufactured with the same code was also sold and when it was registered with NOAA it overwrote the entry for Lutz unit. As a result Lutz claims that the duplication of the code between his emergency beacon and that of another vessel resulted in a potentially disastrous delay in the dispatch of Coast Guard personnel to rescue him and his crew.

But the FCC disagrees. In its findings, the agency says that ACR is not at fault. It says that the two ACR beacons in question had unique hexadecimal codes until Lutz beacon was altered by the vendor. The FCC added that while it is concerned that this situation occurred, it finds no basis to conclude that ACR violated any rules.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, near New Orleans..

--

The FCC did advise Lutz that any complaint regarding the vendor's alteration of the hexadecimal code should be referred to United Kingdom authorities. In addition, comments regarding emergency beacon registration procedures in the United States should be addressed to NOAA. It says that NOAA has changed the registration procedures to ensure that similar duplications do not go undetected, and that the correct user registration information is retained. (FCC)

**

RADIO LAW: FCC TO INVESTIGATE CELLPHONE EXCLUSIVITY DEALS

Federal telecommunications regulators are going to investigate whether exclusive cell phone deals, such as the one that locks the Apple iPhone to AT&T, are good for consumers. Michael Copps, the then acting

chairman of the Federal Communications Commission announced on June 16th he had instructed the agency's staff to open a review of exclusivity arrangements. (FCC)

**

NEW BOOKS: THE NIFTY E-Z GUIDE TO D-STASR OPERATION

>From the bookshelf comes word of a new work especially for users of D-Star. Titled the Nifty E-Z Guide to D-Star Operation, it was authored by Bernie Lafreniere, N6FN, the book covers every aspect of D-Star operation from the most basic to the more advanced aspects of this emerging digital voice mode.

In his tome N6FN utilizes easy to understand explanations and lots of illustrations to explain such things as radio programming procedures needed to route calls, the operation using local and remote repeaters and reflectors and much more.

The Nifty E-Z Guide to S-Star operation is 104 pages long and is being published by Nifty Ham Accessories. Suggested list price is about $14 from wherever books of this nature are sold. (WB9QZB)

**

NAMES IN THE NEWS: W0YK APPOINTED AS NCDXF ADVISOR

Some names in the news. First up is Ed Muns, W0YK, who has been appointed as an Advisor to the Northern California DX Foundation Board of Directors.

Muns comes to the position with experience as a part of the 1994 YK0A team. He has also operated as 6Y0A and 6Y4A as well as holding the 7J1ACJ call sign. His primary duty will be working with the foundations website along with Doug Bender, WW6D. (NCDXF)

**

NAMES IN THE NEWS: SOUTH AFRICA'S HONOREES

South Africa's Garth Milne Technology Award has been jointly presented to Andrew Roos, ZS6AA, and Hannes Coetzee, ZS6BPZ. This, in recognition of their design and development of the Amateur Payload on SumbandilaSat. This is a ham radio which is due to be launched on 21 August on a Soyuz Rocket from Baikonur.

Also, that nations NSN Amateur Radio Community Service Award was presented to Francois Botha, ZS6BUU. He was honored for his dedication as National HAMNET Director, to the development of amateur radio as a support communication service during emergencies and disasters.

Lastly, the annual South African construction competition sponsored by Multisource was won by Carson McAfee. He is a second year university student who built the Quadra Helix Antenna. (SARL)

**

THE SOCIAL SCENE: THE TIDELANDS HAMFEST JULY 11th IN TEXAS

Turning to the ham radio social scene, the Tidelands Amateur Radio Society Hamfest will be held on July 11th at the Doyle Convention Center, in Texas City. The event will feature major radio and associated equipment vendors, hourly and unscheduled prizes, a hidden transmitter hunt and much more. More information on this fun event is on-line at www.tidelands.org. (Press Release)

**

THE SOCIAL SCENE

And the 14th IARU Region 3 Conference takes place Christchurch, New Zealand. This, from October 12th to the 16th. Lots of events are planned. More is on line at www.christchurch.org.nz (NZART)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WORLDBEAT: VK FOUNDATION CALLSIGN CONFUSION

There seems to be confusion in ham radio circles worldwide concerning the Australian 4-letter suffix callsigns. Calls such as VK4FABC or VK7FXYZ and such.

These 4-letter suffixes are issued by Australia to its entry level Foundation-class amateurs. All Foundation class suffixes begin with the letter 'F' followed by 3 more letters.

These are legitimate calls issued by the Australian government. If you contact someone with one, be aware that he or she is a relatively new ham and be sure to welcome them to the hobby. (OPDX)

**

EMERGING TECHNOLOGY: SOLAR POWERED AIRPLANE UNVEILED

Swiss adventurer Bertrand Piccard has unveiled a prototype of the solar-powered airplane. One that he hopes eventually to fly around the world.

The aircraft has a wing span of 61 meters and weighs in at only 1,500kg. It will have four small battery powered engines driving propellers. A large solar array atop the high wing structure will be

used as a solar collector to power the aircraft in daylight as well as to charge the batteries for nighttime flights.

Before any voyage is undertaken the craft will undergo trials to prove it can fly through the night. The final version of the plane will attempt its to cross the Atlantic on a test flight in 2012.

Dr. Piccard, who made history in 1999 by circling the globe non-stop in a balloon, says he wants to demonstrate the potential of renewable energies. (Southgate)

**

EMERGING TECHNOLOGY: 4 GHZ LED DEVELOPED

Researchers have constructed a light-emitting transistor that has set a new record with a signal-processing modulation speed of 4.3 Gigahertz. In a pair of papers published in the June 15th issue of Applied Physics Letters, researchers at the University of Illinois and Quantum Electro Opto Systems in Malaysia, report the development and successful testing of the new high-speed light-emitting transistor and new "tilted-charge" light-emitting diode.

The modulation speed of either a light-emitting diode or a light-emitting transistor is limited by the rate at which electrons and holes recombine. This recombination lifetime is important in determining device overall speed. These new devices break the previous record of 1.7 Gigahertz held by a light-emitting diode some time ago. (Science OnLine)

**

RADIO IN SPACE: HIUBBLE RADIOS BACK NEW PLANETS

Earth seems to have its first photos of planets outside our solar system. This, in images captured by two teams of astro researchers using the Hubble Space telescope which radioed the images back to Earth.

Astronomer Bruce Macintosh is with the Lawrence Livermore National Lab. He says that the photos show four likely planets that appear as specks of white that are all but invisible to all but the most eagle-eyed experts.

The tiny planets are trillions of miles away. Three of them are orbiting the same star, and the fourth circling a different star. None of the four giant gaseous planets are remotely but they do raise the possibility of others more hospitable planets do exist. (Space)

**

INTRUDER WATCH: NORTH KOREA EMBASSY ON 20 METERS

Another intruder into the ham bands. The IARU Region 1 monitoring service reports that the North Korean embassy in Tripoli is again using

14.328430MHz. This, for traffic with the Ministry of Foreign Affairs in Pyongyang. Monitors report hearing an ARQ burst system at 600 Baud and 600Hz shift, operating on two different frequencies at about 16:30UTC daily. One frequency is in the amateur radio band, the other one out of it. (Southgate)

**

INTRUDER WATCH: CODAR RADAR IN THE 24 MHz BAND

Slightly better news with word that the Codar HF Radar from Naples on the 24MHz band has disappeared. This, after a complaint from IK8OZZ.

Unfortunately, a few days later another Codar system was found on 24.850 to 24.950kHz. Bearings taken by the German PTT indicated the source was on Pag Island, Croatia. The German department of Post and Telecommunications has reportedly filed an official complaint to their Croatian counterpart. (Southgate)

**

ON THE AIR: CELEBRATING 100 YEARS OF FLIGHT IN THE NETHERLANDS

A reminder that members of a Netherlands based experimental radio group will be active as PH100EL through July 12th. This, to celebrate the 100th anniversary of aviation in Holland by pioneer Count Charles de Lambert. A special 100 Years of Aviation award with mode endorsements will be available. QSL via PD0PVQ. (Via e-mail)

**

THE CONTEST CORNER: ARRL UHF CONTEST CERTIFICATES ON THEIR WAY

Turning to contest news. Sean Kutzko, KX9X, the Contest Branch Manager for the ARRL says that certificates for the 2008 ARRL August UHF Contest and the 10 GHz and Up Cumulative Contest have been processed. Shipment began late last week. Kutzko says that winners should start to see them arrive in their mailbox any day. (ARRL)

**

DX

In DX, the long awaited 2009 Glorioso operation as FT5GA still seems to be on track. Its currently scheduled to begin on July 9th and be on the air through the 28th. More information on this one as soon as we hear that they are on the air.

word that I3LDP, will be active from Mauritius between through July 11th. His activity will be on the HF bands and 6 meters using CW and SSB. His equipment will be an IC-7000, a vertical for 40 through 10meters and a vertical dipole for 6. QSL via his home callsign.

DL7JAN and DL2IX will be active portable CT8 from Faial Island in the Azores from August 21st to the 31st. Their operation will be on 80

through 6 meters using CW, SSB and RTTY. QSL via their home call, either via the bureau or direct.

F2JD will be in the Philippines for the next five months and hopes to get his DU1G0SHN license extended. He plans to activate some I-O-T-A locations during his stay. QSL direct or via the REF Bureau to F6AJA.

I2MOV will depart for Sardinia on July 20th, and will be active for about two months portable I-S-Zero. His QTH will be Dolianova which is 2 0km north from Cagliari. QSL via his home callsign, either direct or via the bureau.

Lastly, GM0IIO, will be active portable SV5 from the Island of Rhodes through July 8th . Listen for him on 20 meters on CW and SSB running 100 watts into a 20 meter ends fed antenna.. QSL via GM0IIO.

(Above from various DX news sources)

**

THAT FINAL ITEM: A VICARIOUS WAY TO DX FROM DOWN UNDER

And finally this week, news of a very interesting low power DXpedition to a very rare spot down-under. Its in Australia and so is Graham Kemp, VK4BB

--

Several Victorian amateurs are preparing portable gear and cross-country ski kit in readiness for their annual back country trip into the Bogong High Plains.

The group will be lead once more by VK3GT, VK3SN and VK3HFI along with several others as they take ultra-light solar powered gear in to the snowy wonderland of the Australian Alps from 6 to 10 August this year.

And VK3SN is going from, well might say the sublime to the ridiculous, you see just prior to hitting the slopes, he'll be heading a DXpedition to the tropical wonderland called Tonga.

Listen out for the portable QRP station in the snow calling on bands from 160 through to 20 meters each afternoon and evening. Have a chat and hear about winter conditions on the roof of Australia.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, reporting from Brisbane.

--

In previous years this group of hearty DX'ers have operated from tents, snow caves, igloos and remote mountain huts. Nobody knows what they'll get to stay in this year. That said, they say that the southern hemisphere winter snow looks great and you can share in the fun by catching them on the air. (WIA News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, in Reno, Nevada, saying 73 and we thank you for listening.

315. Field Day 2009 Results & A Story

Newsgroup: rec.radio.amateur.moderated
Date: 2009-07-04 22:26:51 UTC
From: N2EY@AOL.COM
Message-ID: <7d51b550-d9dd-453c-b535-bde93b5e3a78@b14g2000yqd.googlegroups.com>
Source record: 1925

Went out with a local mullticlub group that ran 5A + VHF using the call N3NZ. HF rigs were all 100 watt-class transceivers, mostly with G5RVs for antennas (the CW station used an OCF dipole, aka "Carolina Windom".

We put the ropes for the antennas up on Friday afternoon and did the rest of setup Saturday morning. It was pretty easy; N3NZ built the pneumatic spud gun from QST that launched the ropes, really sweet. You have to see the thing in action to appreciate it; I even got to fire it once.

Takedown was even easier, it was less than an hour from the 2 PM shutdown to saying goodbye.

Power was from the genset in a member's RV, no refueling, no RFI and almost no acoustic noise. Weather was very good, not too hot during the day, not too cold at night, no significant rain, no shutdowns due to lightning.

Food was excellent. Two club members did all the cooking; when you have venison chili at dinner, made-to-order blueberry pancakes and omelets for breakfast plus snacks and drinks around the clock it's hard to complain.

N3FJP FD software did the logging job again; we had more computers than radios! (one computer at each station, plus a server, plus the computer with the digital modes)

We made 710 phone, 580 CW and 85 digital QSOs. One HF station was CW only, three HF stations were phone only, one HF station was both phone and digital. The VHF station was on 6 meters.

397 of those CW QSOs were mine, made in less than 10 hours. One of those was K0HB, whose great 20 CW signal was pounding into EPA.

Bonuses for W1AW bulletin, emergency power, public location, publicity (nice article in local paper), online submission, visit by official, natural power.

Total score well over 5000, a new all-time-high for the location and probably the group.

One particularly memorable moment was the natural power bonus, which requires at least 5 QSOs powered by a 'natural' source.

Our usual method is to use the solar-power setup in a member's RV, and have it run a QRP rig at the very beginning of FD for 6 QSOs or so.

Normally I use a bug to send, and the other CW ops use paddles and electronic keyers or keyboards. The QRP rig wasn't hooked into the computers and keyboards because it was just for a few QSOs.

It happened that I had brought along my old J-37 WW2 Army surplus straight key from my Novice days of 1967-1968. This key was the very first piece of true amateur radio gear I ever owned, and had cost me 25 cents back about 1966. For the first 7 years I was a ham it was the only key I had.

Years ago I gave it a "Navy knob" modification with a poker chip, and it was mounted to a piece of steel from the HV compartment of an old TV set. Real Low Rent radio!

Normally the J-37 gets used once a year on Straight Key Night, and then is retired to a place of honor for the rest of the year. Bringing it along on FD was a last-minute impulse, and more than one other ham asked why I brought it since we had so many other keying options.

We were all set up for the natural power operation as FD began, but the QRP rig's sidetone wouldn't work! How could we send without a sidetone?

I knew I could still send decent code with the J-37 even without a sidetone, so just as FD began I hooked it to the QRP rig and started tuning 40 meters. Made the required 5 natural-power QSOs with it, then one more for insurance. With the natural-power bonus earned, we switched to the regular CW rig and went on with FD - with sidetone.

An old friend had come to the rescue just in time.

51 weeks to next FD.

73 de Jim, N2EY

Amateur Radio Newsline(tm) Report 1665 - July 10 2009

Amateur Radio Newsline report number 1665 with a release date of
Friday, July 10th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. IARU Region 3 cancels its 2009 Amateur Radio
Direction Finding championship games, AMSAT says that SuitSat-2 has
lost its suit but will still fly, transportation problems cause another
delay for the Glorioso Island DXpedition, Germany's Ham Radio show
likely now matches Dayton in attendance and a contest for D-Star users
is announced. Yes, we said a contest for D-Star users and you can find
out the details on Amateur Radio Newsline(tm) report number 1665 coming
your way right now.

(Billboard Cart Here)

**

RADIOSPORTS: IARU REGION 3 ARDF GAMES CANCELLED DUE TO SAFETY CONCERNS

Political unrest in Thailand has lead to the cancellation of a ham
radio direction finding event. Joe Moell, K0OV, reports:

--

Things haven't gone well in IARU Region 3, which encompasses most of
Asia and the Pacific islands. Thailand, also known as the Land of
Smiles, was scheduled to host those regional championships from October
29 through November 3 near Bangkok.

Two of USA's best radio-orienteers were planning to attend. But now
there's no smiling among the organizers, who reluctantly decided to
cancel the event due to increasing political unrest there. In the
streets, the Yellow Shirts, supporters of the present government, are
taking on the Red Shirts, who are loyal to the former Prime Minister.

The Radio Amateur Society of Thailand was concerned about safety of
competitors and spectators, so the championships were cancelled. There
is no time to schedule the Region 3 championships in another country.
However, IARU Region 1, which includes Europe and Africa, is still
planning to hold its ARDF championships from September 16 through 21 on
the Black Sea coast of Bulgaria. That will be immediately after the
Eighth World High Speed Telegraphy Championship at the same location.

For Amateur Radio Newsline, this is Joe Moell K0OV.

--

This announcement of the cancellation was made on Friday, June 26th by JA1HQG. He is the chairman of the IARU Region 3 ARDF Committee. In his statement JA1HQG said that there was insufficient time to make alternate arrangements to hold the championships in another Region 3 country this year. (K0OV, Southgate)

**

RADIO POLITICS: SECURITY MANDATES OPERATIONS CUTBACK AT 4U1ITU

A famed ham radio station at the literal heart of telecommunications is cutting back its operations due in part to security issues. The DX Newsletter says that International Telecommunications headquarters station 4U1ITU will be on the air a lot less in coming days.

The restricted activities are the result of a decision of the general assembly of the International Amateur Radio Club's decision made in May. Spokesman Gerald Lander, HB9AJU, says that there were several reasons led to this decision. This includes the increased levels of security at the ITU headquarters and a changed recognition of amateur radio in international communication. Lander did not say what this changed recognition or security issues are but he did add that another reason for the cutback in operation was 4U1ITU is no longer among the most wanted countries anymore.

Lander's statement says that the International Amateur Radio Clubs has now decided to focus its activities on special modes or conference delegates. Also that it will limit all overnight and weekend activities as much as possible. More about 4U1ITU is on line at http://life.itu.int/radioclub/ (DXNL)

**

HAM RADIO IN SPACE: SUITSAT-2 LOOSES THE SUIT PART BUT WILL STILL FLY

The SuitSat-2 ham radio in space transponder will not be in a space suit but the package will likely still fly in space. Due to storage considerations on the International Space Station, the two surplus Russian space suits in storage were discarded via the Progress Cargo Vessel. One of these suits was to be used to house the electronics for the upcoming SuitSat-2 mission.

But all is not lost. ARISS International has been informed that there is still space available for shipment of the SuitSat-2 electronics on a cargo flight to the I-S-S in January 2010. Also, a space-walk scheduled for April 2010 still has a 'SuitSat-2' deployment scheduled to be a part of it. As a result the AMSAT team developing the SuitSat-2 electronics on is focusing on completing the project in anticipation that deployment will still take place in Spring 2010, but using a different structure to house the flight package.

The discarding of the surplus space suits from ISS also removes the 'Suit' component of this ham radio in space deployment. AMSAT says that at some point a new project name will be used to reflect the

change in flight hardware configuration. (AMSAT)

**

HAM RADIO IN SPACE: SUITSAT-2 TEAM TO MEET - BUILD - AND TWITTER

And speaking of SuitSat 2, or what was to be called SuitSat-2, many members of the integration team were scheduled to meet in Phoenix, Arizona during the weekend of July 10th to the 12th. In a press release the team says that it expects to put all of the hardware modules together that have been developed in many parts of the country.

The Project Manager is Gould WA4SXM. He says that it is great to be at the point that they can start testing system operations with the hardware and software. You can keep up with the integration activities next weekend using Twitter at twitter (dot) com (slash) ggolulssmith. (ANS)

**

RESTRUCTURING: BELARUS HAMS GET NEW 40 AND 160 METER SEGMENTS

The 40 meter expansion continues around the world. Jeramy Boot, G4NJH, is in Nottingham in the UK with more:

--

Amateurs in Belarus has gained access to the extended 40 meter band. In the 7.1 to 7.2 MHz frequency range. Hams in that nation will be permitted to use SSB and CW with 500 watts out under normal operating conditions and up to a full kilowatt in contests with special authorization from that nations telecommunications regulatory authority the Belarus State Commission for Radio Frequencies.

In the same decision of the 160m band has also been extended for Belarus amateurs. The frequencies accessible are now 1,810 to 2,000kHz.

For the Amateur Radio Newsline, I'm Jeramy Boot, G4NJG in Nottingham.

--

The effective date on these changes for Belarus hams was the middle of this past May but have only now been made public. (GB2RS)

**

RESTRUCTURING: FRANCE TO EXPAND 40 METER SEGMENT

The French telecommunications regulator ARCEP announced on Saturday, June 27th, that 7.1 to 7.2 MHz will soon be available to the amateur service in that nation. Its reported that only one more signature is needed before official publication and implementation. (GB2RS)

**

BREAKING DX NEWS: GLORIOSO DXPEDITION DELAYED AGAIN

Some breaking news in the world of DX. Word that the long awaited Glorioso Island 2009 DXpedition has once again been postponed. This time because of flight problems.

According to several DX news sources, the runway at the airport on Grande Glorieuse Island suffers from stability problems. These have to be solved to allow the safe landing of larger aircraft.

Organizers think that the DXpedition could begin at the end of August, but have not yet released a new date. We will have more DX related information near the end of this weeks newscast. (OPDX, others)

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Western Amateur Radio Association net serving Fullerton, California.

(5 sec pause here)

**

RESCUE RADIO: 3.760 NO LONGER BEING PROTECTED FOR POLISH FLOODING

A follow-up to the use of 3 point 760 MHz in Poland following massive flooding in that nation. You may recall that hams around the world were being asked to keep that frequency as clear as possible in case it was needed for disaster relief communications.

Now, Greg Mossop, G0DUB, the IARU Region 1 Emergency Communications Co-Ordinator says that there is no longer any need to protect 3 point 760 MHz. He says that while there is still a risk of flooding in the South West of Poland, the Public Communications systems are all now operating normally. That said, if you happen to hear any station passing emergency traffic, then please leave the frequency clear and avoid causing QRM.

By the way, while not widely known outside of Europe, Polish stations make use of a slash D suffix on their callsign to indicate that they are working an emergency. This says G0DUB should help in case of any language difficulties. (Southgate)

**

RADIO LAW: NEW OREGON MOBILE CELLPHONE LAW EXEMPTS HAMS ABD CB OPERATORS

Oregon drivers soon will have to hang up their cellphones and texting devices under a new law that will ban the use of hand-held communications devices while driving, but mobile ham radio operations will not be affected. Bruce Tennant, K6PZW, explains whose in Oregon is covered by it and who is not:

--

Oregon House Bill 2377 prohibits driving while talking or texting on a hand-held cell phone. Once in force, drivers who violate the law could be fined up to $90.

Like a similar law in California, the Oregon measure permits adult drivers the option of using a cellphone with a hands free system. Also like California the Oregon law will forbid anyone to receive or transmit a text message while in motion. It also forbids drivers under the age of 18 from using any form of cellphone or texting device from a car in motion.

Oregon radio amateurs were aware of the measure early on and began a political drive to insure an exemption for mobile ham radio operations. In the version of the measure passed by both houses of the Oregon legislature their work was rewarded.

In addition to hams, also exempt are those operating a motor vehicle while acting in the scope of employment as a public safety officer and people operating a motor vehicle while providing public safety services or emergency services as a volunteer. Also exempt are those using 11 meter Citizens Radio or UHF Family Radio Service two-way radio gear.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A spokeswoman for Governor Ted Kulongoski said he will sign House Bill 2377 into law. The effective date will be January 1st, 2010. (OregonLive, Oregon Legislative Website)

**

RADIO SAFETY: MICHIGAM HAM DIES IN FIELD DAY TOWER COLLAPSE

A Michigan ham has died following a tower collapse during antenna set-up on Field Day.

According to news reports, Larry Prelog, KE4PM, of Niles was helping to erect a thirty-foot high tower for the Blossomland Amateur Radio Association on Saturday, June 27th. He had climbed the tower when it collapsed under him and throwing him to the ground. He was airlifted to the Borgess Medical Center in Kalamazoo where he succumb to his injuries the following day.

A professional radio technician by trade, Larry Perlog was most recently employed as a telecommunications specialist for Lakeland Regional Health Care System. Throughout his career performed many tower climbs and was considered as being one of the most safety conscious climbers in the business. A family member described him as being very meticulous about being safe.

The Blossomland Amateur Radio Association is accepting donations to help the family. Its address is PO Box 175, St. Joe, Michigan 49085.

Larry Perlog, KE4PM, was age 57. (South Bend Tribune, others)

**

RADIO LAW: FCC AND LICENSEE AGREE ON LICENSE CLERICAL ERROR FIX

The FCC has modified the Amateur Radio Service license of Howard A. Schmidt by replacing Amateur Extra Class operator privileges with Technician Class operator privileges. This, after being notified of a clerical error by a VEC who had inadvertently filed an upgrade for him. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

Back this past April 28th, the W5YI Volunteer Examiner Coordinator sent an electronic data file to the Commission requesting that Howard Schmidt's operator license for amateur Station WB7NUV be modified to upgrade from Technician Class to Amateur Extra and requesting a new sequential call sign. Based on this application, the Commission granted an Amateur Extra Class amateur service operator license on April 28th and assigned him the call AD7ZS.

Then on June 16th, W5YI VEC notified the Commission that it had made an error in the April 28th data file and that Schmidt had not qualified for an Amateur Extra Class operator license. The W5YI VEC asked the FCC to modify Schmidt's license to correct the operator privileges authorized. As a result of this information the regulatory agency proposed to modify the license to show Technician Class operator privileges, and to replace call sign AD7ZS with call sign WB7NUV.

The Order Proposing Modification was released on June 25th. Schmidt was given time to comment and appeal. On June 30th Schmidt informed the Commission that he did not object to modifying his license to show Technician Class operator privileges, but wished to retain his subsequently assigned call sign W7HAS.

On July 7th the FCC did just that. It modified Schmidt's license for station W7HAS by replacing Amateur Extra Class operator privileges with Technician Class operator privileges but permitted the Issaquah, Washington ham to keep the W7HAS vanity call.

For the amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, for the amateur Radio Newsline.

--

And as they say in the nations capital, this matter is now closed. (FCC)

** RADIO PRODUCTS: K9EID RELEASES AFFORDABLE PR-20 UTILITY VERSION MIC

If you have always wanted to try Bob Heil's famed PR-20 microphone in your hamshack but its high price was beyond your means, well now you can afford to own one. This is because the PR-20 has now been made a lot more affordable thanks to K9EID and his company Heil Sound Limited.

What Bob has done is to keep the PR-20 as it is. Just the way he developed it several years ago to be one of the best sounding vocal, announce and music pick-up microphones ever. So this PR-20 called the U T or utility model is no different than any other PR-20 except for the accessories and packaging.

In this case you get the PR-20 mic with a stainless steel grille, a foam windscreen and a matching microphone clip all in a zippered vinyl pouch. Not included with the U T model are the interchangeable gold, silver and black screw-on grill screens, nor the plush padded carrying case.

By leaving these items out Bob was able to lower the price of the PR-20 into the very affordable under a hundred dollar range. That's far less than some vendors charge for the mics that supposedly match the look of certain radio gear bit leave a lot to be desired in the area of on the air sound quality.

You can read the specs as well as see and hear the Heil PR-20 UT on line. Just take your web browser to http://heilsound.com/pro/products/pr20ut/ (PAR, ARNewsline(tm))

NAMES IN THE NEWS: MISSOURI SKYWARN MEMBER HONORED

Some names in the news. First up is MoKan Skywarn member Dwayne Beaver, N0SZP, of Carthage, Missouri,. HE has been presented with the National Oceanic and Atmospheric Administration award in honor of his 15 years as a cooperative observer for the National Weather Service.

Beaver runs the Carthage weather station that happens to be located in his own home. The Carthage Missouri weather station was first established on March 1, 1940, by the Congressional Statutes enacted by Congress in 1890. For years was located out at the Carthage animal shelter. Only after Beaver began weather observer duties on May 25, 1994, did it move to his home QTH.

Beaver's weather data collecting gear includes an eight-inch rain gauge, a wind gauge, various thermometers and anemometers. Most of this is top of the line weather gathering instrumentation that was provided to him. Beaver also has television cameras installed on the roof of his house looking south for any sign of menacing storm clouds.

The N0SZP weather station in Carthage is one of 96 such stations in 37 counties in Missouri and Kansas. There are about 10,000 such stations nationwide. (Carthage Press)

NAMES IN THE NEWS: VO1DTM NEW RAC VP FOR FIELD SERVICES

Radio Amateurs of Canada has a new Vice President for Field Services. He is Doug Mercer, VO1DTM, who replaces Sue Cooke VE3SUH, who was appointed by the RAC Board of Directors. This, to temporarily fill the

position when former Vice President for Field Services Bob Cooke, VE3BDB. He resigned that post to accept appointment as president of Radio Amateurs of Canada on February 24th. Mercer's appointment became effective on July 1st and will continue until December 31st which is the end of the current executive term. He may be contacted by email at vo1dtm (at) hotmail (dot) com. (RAC)

**

NAMES IN THE NEWS: ALBERTA CANADA GETS NEW CSM

Also from up North word that the Alberta Section of Radio Amateurs of Canada has a new Section Manager. This, in the person of Garry Jacobs, VE6CIA.

Jacobs ran unopposed and therefore no balloted election was necessary. He began a two-year term on July 1st succeeding Tom Martens, VE6TRM. (RAC)

**

NAMES IN THE NEWS: ZL2AMJ AWARDED RUTHERFORD THRPHY

Fred Johnson, ZL2AMJ, has won The New Zealand Institute of Physics Rutherford Trophy for 2008. This, for his work in developing the radio wave demonstration kits for schools.

The Rutherford Trophy was established in 1973 by the Mathematics and Physics section of the Radio Society of New Zealand's Christchurch Branch. Its purpose is to stimulate the development and improvement of simple lecture and laboratory demonstrations.

As 2009 winner, Johnson will receive a check for $200 New Zealand dollars. Development of his educational kit was supported by The NZART Radioscience Education Trust. Fred's kits and documentation are shown at http://www.nzart.org.nz/waves/radiowaves.html (NZART)

WORLDBEAT: DAYTON OR FRIEDRICHSHAFEN - WHICH IS BIGGER

Is the Ham Radio convention in Friedrichshafen, Germany, about to match or even replace Dayton as the worlds most attended amateur radio show? According to several sources this years Ham Radio had an official gate

of 17,400 visitors. That's up by 300 from 2008. Also, some 195 exhibitors and radio associations from 30 nations represented at the show.

So far, Dayton has not made public its official attendance figure, but many who regularly attend the Hamvention have speculated that 2009 saw about the same number of attendees as 2008 or maybe a few more. If that's the case then it would likely put Dayton and Friedrichshafen at least neck to neck. We will have to await the folks in Dayton making public their attendance figures to know for sure.

Meantime, you can make a note of the dates of the 35th Ham Radio will be from June 25th to the 27th in 2010 in Friedrichshafen, Germany. Hamvention 2010 will take place May 14th to the 16th 2010 at its usual home at the Hara Arena in Dayton, Ohio. (KH6VP, DJ0QN, others)

**

WORLDBEAT: SCOTISH D-STAT REPEATER SET UP WITH LOTTERY GRANT FUNDS

Scotland's Dundee Amateur Radio Club was recently awarded a grant of nearly 3,000 Pounds by the National Lottery Awards for all Scheme. This monies have been used to purchase the equipment required to provide a D Star digital UHF repeater to serve the ham radio community from Dundee, Angus and North Fife. Full information and coverage of this new D-Star Repeater can be found at the D-Star Scotland website at www.dstarinfo.org. (Icom Japan, Southgate)

HAM RADIO IN SPACE: TERRESTRIAL TRAINING FOR SOON TO FLY ARISS HAMS

Four astronauts hams have taken part in simulated Amateur Radio on the International Space Station contacts. On Thursday, July 2nd Satoshi Furukawa, KE5DAW and Timothy J. Creamer, KC5WKI had contacts with Ottawa area students in Canada. Later, Doug Wheelock, KF5BOC, and Soichi Noguchi, KD5TVP, participated in contacts with students visiting the Challenger Learning Center in Indianapolis, Indiana. These training sessions are ground based amateur radio contacts using ARISS equivalent equipment to familiarize the soon to fly astronauts with the proper method of making schoolroom contacts from space. (AMSAT)

**

HAM RADIO IN SPACE: AMSAT DAYTON FORUM VIDEOS NOW ON LINE

Videos of the six presentations at the AMSAT 2009 Dayton Hamvention forum are now on the AMSAT website. The presentations include the Richard Garriott, W5WKQ, talk on his visit to the International Space Station and a presentation on the upcoming what was to be Suit-Sat 2 project by Gould Smith, WA4SXM. To watch these presentations and the others, simply go to www.amsat .org and click on the AMSAT Video News icon about halfway down the page in the left column. (ANS)

ON THE AIR: CELEBRATING THE J. ROBERTO LEVY RADIO CLUB

On the air, listen out for 4C50C which is an unusual Mexican callsign that will be showing up on the satellites between now and August 31st. Its part of the Work All Colima special event currently taking place in the central Mexican state of Colima.

This event also commemorates the 50th anniversary of the creation of the J. Roberto Levy radio club in that state. To help in the celebration, XE1AO, XE1ATZ, XE1AY, and XE1J have been authorized by the Mexican telecommunications regulator to use 4C50C for satellite QSO's as part of this event.

XE50C will be the call used for terrestrial contacts during the event. For hams outside Mexico, the QSL manager for the both special calls is XE1J. The Mexican QSL bureau will take care of QSL requests from XE hams. (AMSAT, XE1AO)

**

ON THE AIR: HONG KONG, SPECIAL EVENT STATION

The 5th East Asian Games will take place on Hong Kong from Dec 5th to the 13th. Starting on July 1st the special commemorative callsign VR2009EAG has been on the air using SSB, RTTY, PSK31 and SSTV on 40 through 6 meters until the end of the year. QSL only direct via VR2XMT. (Southgate)

**

THE CONTEST CORNER: FIRST EVER D-STAR WORLD CONTEST JULY 25 - 31

On the radiosports scene, Icom Japan has announced that it will be sponsoring the first ever worldwide D-Star Contest. The event will run from July 25th to the 31st and there are several categories of entries including repeater and simplex. Multiple entry into different categories will be allowed.

10 winners will be selected from those participating and will receive either an IC-E80D or IC-80AD D-Star handheld as a prize. The results being announced on the Icom booth at the Tokyo Ham Fair 2009.

For more details and a list of contest rules, please visit the Icom Japan website. Its on-line at http://www.icom.co.jp/world/d-contest. A copy of the contest flyer can be downloaded at http://www.icomuk.co.uk/getFile.asp?categoryID508&cCID377&fFID$ 4) (Icom Japan)

**

DX

In DX, word that T32TV is a new operator on the air from Kiritimati. He has been heard on 20 meter SSB after 06:00 UTC. Please be patient

with him so as he is not only new to ham radio but news to pile-ups as well. QSL as directed on the air.

CR57FAP is a special call now on the air to celebrate the 57 years that the Portuguese airforce has existed. This station will be active though months end using SSB and some digital modes on 80 through 10 meters. The QSL manager is CT1REP.

W5KDJ, will be active from Madagascar through July 17th He is using CW and RTTY on 160 through 6 meters signing 5R8KD from the shack of 5R8FU. QSL as the operator instructs.

The Friuli-Venezia Giulia Region Group as IV3YNB is active from Grado Island. The operation ends on July 22nd. QSL this one also as directed on the air.

The Venezuelan 4M5DX Group says that it is planning a DXpedition to Lesotho sometime in July. Their callsign will be 7P8YV and the QSLs will be handled by IT9DAA. An exact date or other information was not available as we go to air.

6 meter enthusiasts listen up. HB9QQ, is now active from the Maldives as 8Q7QQ. In addition to his transceiver he has a linear amplifier and is on 50.183 operating the digital JT65A mode. Listen out for him around his moonrise and moonset in search of Sporadic E and EME contacts. QSL via HB9QQ. He will be there through July 11th.

Lastly, 3B8FQ has received approval and will activate St. Brandon Island as 3B7FQ in August. He will be departing Mauritius on August 10th, and returning from St. Brandon on August 30th. Operation will be CW and SSB on 40 through 10 meters. QSL 3B7FQ and via K5XK per the information found on QRZ.com. And you might want to go out of your way to work him. 3B8FQ believes this may be the last trip to St. Brandon for the next five years.

(Above from various DX news sources)

THAT FINAL ITEM: FIELD DAY COMES TO TV IN KC

And finally this week, if its not the best TV news coverage of Field Day it comes real close. We are talking about the 10 minutes spread across the news on Kansas City's Fox 4 that looked at every aspect of the Field Day operation by the K0GQ group in Raytown, Missouri.:

--

Audio: Reporter introduces ham radio. Hear it in the audio version of this weeks newscast available for download at www.arnewsline.org.

--

That's reporter Kim Byrns who hosted the coverage in a live remote broadcast from the Field Day site. Her guide was Rayton Amateur Radio

Club president Barb Rich, KGï¿½UT who began by explaining the role of ham radio in community service:

--

Audio: KG0UT explains role of hams in emergencies. Hear it in the audio version of this weeks newscast available for download at www.arnewsline.org.

--

Also interviewed was club member John Zimmerman who brought out some of his vintage gear to show. It was quickly evident that for him Field Day is a passion:

--

Audio: Zimmerman tells of his love of Field Day. Hear it in the audio version of this weeks newscast available for download at www.arnewsline.org.

--

You can see and hear the whole report posted to YouTube dot com. That's where we got the audio you just heard. Heres a link to it at http://www.youtube.com/watch?v=y3gRWG-EUGU (NF9L, QRZ.com, YouTube, others)

==> ARRL BOARD OF DIRECTORS, STANDING COMMITTEES TO MEET IN CONNECTICUT
NEXT WEEK

The ARRL Board of Directors holds its second meeting of 2009 July 17-18
in Windsor, Connecticut, with Directors, Vice Directors and ARRL Board
officers in attendance. The meeting will be preceded on Thursday, July
16 with meetings of the Administration and Finance Committee and the
Programs and Services Committee.

The Administration and Finance Committee is chaired by Northwestern
Division Director Jim Fenstermaker, K9JF. This committee will review the
```

League's financial performance for the first half of the year and will receive the report of the outside auditors.

The Programs and Services Committee, headed by Midwest Division Director Bruce Frahm, K0BJ, studies, advises and makes recommendations for all programs and services provided by the League, including operating activities and the Field Organization. "All three Advisory Committees -- DX, Contest and VHF/UHF Contest -- have been busy since the last board meeting," Frahm said. "The PSC appreciates their deliberations on behalf of their stakeholders. Through a number of annual ARRL award programs, we have the pleasure of presenting motions to the board to recognize hams for their superior instruction, technical excellence, outstanding publicity and other achievements. The Emergency Preparedness and Response program, and EmComm issues in general, are taking more of the committee's time as we work to ensure maximum effectiveness of staff and volunteer efforts to work with served agencies. The PSC is excited about the upcoming release of the Advanced ARECC EmComm course (replacing Levels II and III) <http://www.arrl.org/cce/courses.html> with a new syllabus and some innovative presentation methods. We also look forward to the availability of a couple more awards via Logbook of the World (LoTW) <http://www.arrl.org/lotw/>. This online QSO confirmation tool is ever more popular. These are some of the interesting and challenging issues the committee will discuss."

The second day of the meeting will be devoted to a review and updating of the ARRL Strategic Plan. Per the Articles of Association <http://www.arrl.org/aabl.html>, the ARRL Board of Directors meets twice a year, in January and July.

==> ARRL TEACHERS INSTITUTE: "IT IS ELEMENTARY, IT IS ADVANCED, IT IS SOMETHING FOR EVERYONE"

Four sessions of the ARRL's Teachers Institute on Wireless Technology wrapped up in June <http://www.arrl.org/FandES/tbp/ti.html>. These sessions -- in Tucson, Arizona; Rocklin, California; Viera, Florida, and Berrien Springs, Michigan -- saw 52 educators complete the four day course. The California and Arizona sessions were held simultaneously, marking the first time that the ARRL has offered simultaneous sessions of the popular summer program for teachers. According to Education and Technology Program Coordinator Mark Spencer, WA8SME, the addition of two new TI instructors made it possible to hold two sessions at the same time. "With Miguel Enriquez, KD7RPP, and Nathan McCray, K9CPO, on board," Spencer said, "we are able to hold more sessions, and in turn, involve more teachers in the process of bringing wireless technology into their classrooms."

Tucson, Arizona -- June 15-18
At Pueblo Magnet High School in Tucson, Enriquez led a group of 16 local teachers through the four day curriculum that includes basic electronics, the science of radio, space in the classroom, microcontroller programming and basic robotics. The class included nine math teachers from Pueblo, three special education teachers from Pueblo,

one 4th grade teacher from a feeder elementary school to Pueblo, two graduate students/teaching assistants in fields involving electronics from University Medical Center (University of Arizona teaching hospital) and one University of Arizona employee commissioned to work with area schools and recruit high school students into space, science and mathematics programs at the University of Arizona.

"The majority of the participants had expressed an interest in learning electronics," Enriquez said. "In the coming year, I plan on following up the introduction they received at the TI by teaching electronics as part of a professional development program."

Enriquez said that each of the teachers will refer students whom they believe will be interested in ham radio to his "Radio, Space and Wireless Technologies" class he will begin teaching this fall: "Several teachers who have that period as their planning period also stated they would drop by to see the students in action and perhaps even help teach!"

Enriquez said that there are 16 "really excited teachers in Tucson right now. I intend to do everything I can to get them all involved in the application of the knowledge and procedures they learned this week. The only way we can really make the Teachers Institutes ultra successful is to coordinate a cadre of teachers who understand and apply the knowledge and tools the Teachers Institutes provides. Teacher collaboration is essential toward this endeavor."

Rocklin, California -- June 15-18
Spencer conducted the Teachers Institute held at the Parallax facility in Rocklin. "This group is more geographically diverse than the Tucson group," he said, "with teachers from nine states from coast to coast."

Since the Tucson and Rocklin sessions were held at the same time, Spencer said "we tried to connect the teachers in the Tucson session with the teachers in the California session via an AO-27 contact; satellites are part of the space in the classroom unit. Unfortunately, this was not successful due to unforeseen complications with accessing the satellite; however, a later attempt to demonstrate ham radio space technology was successful."

Viera, Florida -- June 23-26
Fourteen educators took part in the Teachers Institute in Florida, also led by Spencer. "This group was predominantly from the Southeastern US, but a few participants joined the group from Missouri and Virginia," he said. "The class was evenly split between male and female teachers. All grade levels were represented and six participants were either old-time hams or recently licensed in preparation for the Teachers Institute."

Spencer said to make the AO-27 satellite contact, they used call sign W1AW/4. "The weather even cooperated, and though hot and humid, the fox hunt outdoor activity went off without a hitch -- including a tornado warning that occurred the morning of the outdoor activities," he said.

"Thanks for everything. It was elementary it was advanced, it is something for everyone," one educator told Spencer. "I know I will be incorporating many of your topics into the classroom."

One of the participants summarized the experience simply: "This was the best in-service course that we have ever attended -- and we have attended a lot!"

Berrien Springs, Michigan -- June 29-July 2
McCray led 10 educators through the Teachers Institute at the Berrien Regional Education Service in Michigan. "I had a class that was half men and half women," he said. "Most were from the Midwest, but we did have two from New York State, one from California and one from South Carolina. We had representatives from all walks of the education world: Two elementary teachers, five junior high teachers, two high school teachers and one college professor. Only four were hams and two of them have expired licenses. The electronics knowledge level was low, but they were motivated and proved to be a joy to teach all week."

McCray said that the highlights of the week included a successful AO-27 contact and multiple contacts on 2 meters with local children who were attending a camp. "The work with the VOMs, protoboard and building the boe-bots were also big hits," he said. "We also went quite deep with the 'What's a Microcontroller?' unit."

One of the teachers told McCray that the Teachers Institute has changed the way she will present her curriculum. "I have been inspired to pursue my Technician license and to add more hands-on electronics activities into my 9th grade physical science class," the teacher said. "I would also like to set up a ham station in my school."

Another teacher called the Teachers Institute a "most rewarding experience. There is so much I learned about robotics, weather and ham radio operation. I have so much information to take back to the classroom and share with my students and fellow staff members. Thank you for this opportunity!"

A session of the ARRL Teachers Institute wrapped up Thursday, July 9 in Dayton, Ohio. The last session will take place at ARRL Headquarters on July 27-30.

==> AUGUST QST ON THE WAY TO YOUR MAILBOX

The August issue of QST is jam-packed with the news and information that today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone. This issue also features the 2008 DXCC Honor Roll.

Allen Baker, KG4JJH, doesn't let the lack of sunspot activity get in the way of chasing DX. Find out his solution in his article "A 10 Meter Moxon Beam." Larry Cicchinelli, K3PTO, shows a compact way to power your equipment in his article "Four Output Bench Supply." If you like to operate from your car, you won't want to miss "The Ignition Switch" by Wayne Mahnker, WA5LUY.

Is your Amateur Radio club looking to get for publicity for your events? Check out "Putting Ham Radio in the Cable Spotlight" by ARRL Chief Operating Officer Harold Kramer, WJ1B, for some tips. In August, QST goes to new heights with two articles featuring high altitudes: "QRP from the Top of the Maritimes" by Mark Volstad, AI4BJ, and "Ham Radio in the Air" by Eskil van Loosdrecht, AB6BC/SM5SRR.

In his monthly column "This Month in Contesting," ARRL Contest Branch Manager Sean Kutzko, KX9X, discusses club participation in contests: "There are several reasons to join a contesting club," he tells readers. "Making new friends, meeting people to operate contests with and maybe even finding a little extra muscle when it's time to put up your tower are just a few. Contest clubs also combine their members' individual scores and enter many events in the Club Competition, hoping to win a commemorative gavel for their efforts." The results of the 2009 ARRL International DX CW Contest are also in the August issue. Find out about upcoming contests in this month's Contest Corral.

QST Editor Steve Ford, WB8IMY, reviews the Alinco DJ-175T 2 meter FM handheld transceiver. Ford said that the "Alinco DJ-T175T is a compact handheld with more than enough power (and features) to satisfy the needs of most hams. At around $99, it's a standout among low-cost handhelds." QST Product Review Editor Mark Wilson, K1RO, reviews four switching power supplies, saying "all of these supplies effortlessly deliver high current for your transceiver and accessories and include voltage and current metering and protection circuits. Although all of them have low conducted emissions (which can cause interference to your receiver) in the amateur bands, there are some significant differences at low frequencies."

Of course, there are the columns you know and expect in the August QST: Hints & Kinks, The Doctor Is IN, Amateur Radio World, How's DX, Vintage Radio, Hamspeak and more. Look for your August issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> IARU MEMBER-SOCIETIES ON-THE-AIR FOR IARU HF WORLD CHAMPIONSHIP

In this weekend's IARU HF World Championship Contest <http://www.arrl.org/news/stories/2009/07/02/10934/?nc=1>, IARU Member-Societies from all around the globe will be active and operating with special call signs. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, many of these call signs end in HQ, designating a national headquarters station; these can be worked as special multipliers in the contest. Kutzko said that IARU Administrative Council members will also be on and can also be worked for special multiplier credit: "If you hear a station giving R1, R2, R3 or AC as their contest exchange, that station represents part of the IARU Administrative Council or regional Executive Committee."

The Daily DX <http://www.dailydx.com/> has compiled a chart listing all of the known IARU Member Society call signs that are scheduled to be on-the-air for the contest:

With HQ stations from each continent on-the-air for the contest, this would be a great time to get your Worked All Continents Award <http://www.arrl.org/news/stories/2008/09/20/10346/?nc=1>.

Some stations have provided QSL information <http://www.arrl.org/news/stories/2009/07/06/10947/?nc=1>. The IARU HF World Championship runs from 1200 UTC Saturday, July 11 to 1200 UTC Sunday, July 12. For complete rules and forms, you can visit the IARU Contest Web page <http://www.iaru.org/contest.html> or the ARRL Contest

Web page <http://www.arrl.org/contests>.

==> 500 KHZ EXPERIMENTERS IN NORTH AMERICA, EUROPE GET ACTIVE

In the 500 kHz Experiment <http://www.500kc.com/> quarterly report for the period ending May 2009, Experiment Coordinator Fritz Raab, W1FR, reported that 21 stations are currently active. The FCC's Office of Engineering and Technology granted the WD2XSH experimental license to the ARRL in September 2006. In this quarter, the FCC only issued one new experimental license for 500 kHz, WF2XAU to Roy Croston, AB4OM. The FCC renewed WD2XGI to Mike Reid, WE0H.

In the spring of 2009, hams in the WD2XSH experimental group made one contact, bringing the total number of contacts to 336. Almost 500 reports were made to the 500 kHz Experiment's Web site, documenting 1051 hours of activity. Raab said more than 34,000 hours of activity has been logged on the Web site since the experiment's inception. Stations do not have to be members of the experimental team to post reception reports.

Raab said that due to increasing noise levels, activity has slowed some on the band, but "propagation conditions have remained generally good with a number of long distance receptions." He said that most of the quarter's activity came from WD2XSH/6, run by Pat Hamel, W5THT, of Long Beach, Mississippi, and WD2XSH/12, run by Mike Mussler, AI8Z, of Nederland, Colorado.

Individuals in nine other countries hold licenses to experiment in the 500 kHz band: Sweden, Germany, Czech Republic, United Kingdom, Belgium, Canada, Norway, Romania and Denmark.

To celebrate International Marconi Day on April 25, a Marconi official station using Marconi equipment completed a radio contact that was similar to those Marconi himself achieved many years ago. GB4FPR was operated from the Fort Perch Rock Marine Radio Museum near Liverpool <http://www.gb4imd.org.uk/fortperch.htm>. The operators used Marconi marine equipment and CW, receiving a 539 report from VO1MRC in St John's, Newfoundland <http://www.ucs.mun.ca/%7Ejcraig/mrcn.html>. GB4FPR was transmitting 1 W ERP on 502 kHz and receiving the Canadian station on 3566 kHz in this transatlantic crossband QSO.

On June 18, Norwegian coastal station LGQ in Rogaland and LM500LGN in Bergen made a QSO on 500 kHz. LM500LGN is a special heritage license arranged by the NRRL, Norway's IARU Member-Society, and Norkram. According to Raab, this is the first issuance of a license specifically for heritage operations.

Find out more information on the ARRL's 500 kHz Experiment in the July/August 2007 issue of QEX <http://www.arrl.org/qex/2007/07/raab.pdf>.

==> NEW SECTION MANAGER APPOINTED IN OHIO

Frank Piper, KI8GW, of Pickerington, has been appointed Section Manager of the ARRL Ohio Section. He will serve the balance of the term of Joe Phillips, K8QOE; Phillips passed away on June 20 <http://www.arrl.org/news/stories/2009/06/22/10901/?nc=1>.

Piper has moved up the ranks in ARES leadership positions by first serving as Emergency Coordinator from 2002-2003 and then as District Emergency Coordinator from 2003-2006. He was promoted to Section Emergency Coordinator, serving in that position until 2008. Piper has also served as an Official Emergency Station in the ARRL Field Organization since 1997.

According to the Rules and Regulations of the Field Organization, when a vacancy in the office of Section Manager occurs between elections, the position is filled by appointment. Membership and Volunteer Programs Manager Dave Patton, NN1N, in consultation with Great Lakes Division Director Jim Weaver, K8JE, made the appointment effective July 7. His term of appointment continues through September 30, 2010.

==>SOLAR UPDATE

Tad "If it happens the Sun is shining bright" Cook, K7RA, this week reports: Finally, some sunspot activity to report -- and not one of those phantom spots that appear one day and vanish the next. Sunspot group 1024 first emerged a week ago on July 3 with a daily sunspot number of 17 and the magnetic signature of a new Solar Cycle 24 spot. Over the next few days, it grew more rapidly and became larger than any sunspot group in the past two years. Today, July 10, it should pass over the Sun's western limb and disappear. Sunspot numbers for July 2-8 were 0, 17, 24, 26, 23, 21 and 18 with a mean of 18.4. The 10.7 cm flux was 66.5, 67.3, 71, 71.6, 68.9, 71.3 and 70.8 with a mean of 69.6. The estimated planetary A indices were 3, 5, 3, 6, 4, 5 and 6 with a mean of 4.6. The estimated mid-latitude A indices were 2, 3, 2, 4, 3, 3 and 3 with a mean of 2.9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by T.S. Eliot's "The Song of the Jellicles" <http://poetry.poetryx.com/poems/789/>.

==>IN BRIEF:

* This Week on the Radio: This week, the IARU HF World Championship is July 11-12. The NCCC Sprint Ladder is July 10. The FISTS Summer Sprint and the Feld Hell Sprint are July 11. The SKCC Weekend Sprint and the ARCI Summer Homebrew Sprint are both July 12. The NAQCC Straight Key/Bug Sprint is July 16. Next week is another NCCC Sprint Ladder on July 17. The North American QSO Party (RTTY), the DMC RTTY Contest and the CQ Worldwide VHF Contest are July 18-19. The CQC Great Colorado Gold Rush is July 19. The Run for the Bacon QRP Contest is July 20 and the SKCC

Sprint is July 22. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, July 26, 2009, for these online course sessions beginning on Friday, August 7, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Six New Co-sponsors Pledge Support for HR 2160: Earlier this week, HR 2160 -- The Amateur Radio Emergency Communications Enhancement Act of 2009 -- gained six new Congressional co-sponsors, bringing the total number to 14: W. Todd Akin (MO-2), Michael Arcuri (NY-24), Michael Honda (CA-15), Thaddeus McCotter (MI-11), Charlie Melancon (LA-3) and Peter Welch (VT). Originally sponsored by Representative Sheila Jackson-Lee (TX-18), HR 2160 is also sponsored by Roscoe Bartlett (MD-6), Madeleine Bordallo (Guam), Bart Gordon (TN-6), Brett Guthrie (KY-2), Mary Jo Kilroy (OH-15), Zoe Lofgren (CA-16), Blaine Luetkemeyer (MO-9) and Bennie Thompson (MS-2). Check the ARRL Web site <http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional representative to sponsor HR 2160 <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>.

* Tenth Annual "Night of Nights" On the Air July 12: The Maritime Radio Historical Society's 10th annual CW-only Night of Nights <http://www.radiomarine.org/non10.html>, commemorating the history of maritime radio, is scheduled for Sunday, July 12 at 1701 PDT (Monday, July 13 at 0001 UTC). Years ago, the maritime mobile bands were populated edge-to-edge with powerful coast stations that operated from virtually every country on every continent. The ships of world trade and

the great passenger liners filled the air with their radiograms, as well as their calls for help when in danger on the sea. Now those bands are largely silent. But once a year, the MRHS returns stations KPH, KSM and KFS to the air. Other stations, including WLO, KLB, NMC, NOJ and NMN, often join in. Calls from ships at sea make the event seem like the golden age of maritime radio has returned. The MRHS's club station, K6KPH, will be on-the-air on several frequencies, receiving signal reports from other amateur stations. The K6KPH operators are seasoned commercial operators with years of experience "sitting the circuit" and will give amateur stations the experience of what it was like to work a real coast station. More information regarding the event, including suggested frequencies, is available on the Night of Nights Web page <http://www.radiomarine.org/index.html>.

* NTS Official Jim Leist, KB5W (SK): Jim Leist, KB5W, a longtime leader of the ARRL National Traffic System (NTS) <http://www.emergency-radio.org/what_nts.pdf>, passed away after a long illness on June 22. He was 74. Leist, who lived in Gautier, Mississippi, was Chair of the NTS Central Area Staff, as well as a longtime ARRL Net Manager; he also served as the Mississippi Section Traffic Manager (STM) from 1987 to 1998. "Jim was an elite CW op and Manager of Region Net 5, Cycle 4, for most of the last 20 years and probably longer," said Phil Sager, WB4FDT, Manager of the NTS Third Region Net, Cycle 4. "I worked him several times each week for the six years I lived in Louisiana, and have enjoyed working him again the past five or so years on my Alpha TCC sked." A US Marine, Leist served in the Korean and Vietnam Wars; he was awarded the Silver Star for gallantry in action during the Vietnam War. "He led reconnaissance missions during the Vietnam War, and he never lost a man," Sam Sitton, W5CU, told the ARRL. "Jim won the Star by single handedly taking out a machine gun nest while his patrol was occupied elsewhere. He was a true American hero." Leist was interred in the National Cemetery at the Quantico Marine Corps Base in Virginia with full military honors.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be

given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

Amateur Radio Newsline(tm) Report 1666 - July 17 2009

Amateur Radio Newsline report number 1666 with a release date of Friday, July 17th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia will launch all student made ham-sat, the United States Senate wants a complete inventory of the entire electromagnetic spectrum, 40 meter expansion is delayed in some nations and we announce this years Amateur Radio Newsline Young Ham of the Year. Find out who it is on Amateur Radio Newsline(tm) report number 1666 coming your way right now.

HAM RADIO IN SPACE: VK TO LAUNCH BLUESAT - A DIGITAL HAM SATELLITE

A new ham radio digital satellite is being designed and built down-under solely by students at Australia's University of New South Wales. Its called BLUEsat and Frank Lusa, VK2FJL has its story.

--

The satellite is a small cube measuring approximately 260mm on each side, excluding antennae, and weighs around 14kg.

Powered by fixed solar panels on each face, it will carry a flight computer, radio transmitters and receivers, a power-control system, battery packs for when its orbit places it in the Earth's shadow, magnets to passively stabilize the satellite and align it with the Earth's magnetic field, and will be controlled via a dedicated communications ground station at UNSW.

BLUEsat will be placed in an approximately circular orbit at an altitude of around 750km that will take it over the poles. At this altitude, the satellite will travel around the Earth at a rate of around once every 90 minutes.

What Will BLUEsat Do? Once in orbit BLUEsat will be a digital amateur radio satellite, which means that voice and data files can be uploaded to it by any amateur radio operator in the world over which the satellite passes. These same files can be retrieved by other operators in either real time, provided that the sender and receiver both have line-of-sight contact with the satellite, or at some other time when the satellite has travelled around to a different part of the world. This allows voice and data communication to and from remote areas

without internet access.

Success for BLUEsat is not measured solely by the payloads they aim to place in space. Overarching objectives are to show that a group of volunteer students can build satellite; to show that Australia can make a significant contribution to space hardware engineering; to provide students in Australia with hands-on space engineering and project management experience and to provide an extension to the worldwide digital amateur radio service.

--

As far as anyone is aware, BLUEsat is believed to be the only university satellite project in the world with an entirely volunteer student team. There are no full-time members and no direct academic supervision. (WIA News)

**

RADIO LAW: US SENATE WANTS TO KNOW WHAT SPECTRUM IS IN USE

The United States Senate Commerce Committee wants Congress to get an inventory of how the nation's spectrum is being used and managed. To accomplish this the committee has passed a measure backed by Communications Subcommittee Chairman to have the Federal Communications Commission and the National Telecommunications and Information Administration report to Congress how much spectrum is used in each band and how. This includes what portions require a license for use and what portions allow unlicensed use.

The measure has now been sent to the full Senate though it's unclear if or 166-law-spectrum-congress when it would get on the calendar for a vote. According to several news sources the administration supports the measure as officials consider the lack of available wireless airwaves a barrier to widespread mobile Internet access which is a priority for President Barack Obama. A companion bill was introduced in the House of Representatives two weeks ago as well. (Published news reports)

**

RADIO LAW: RSGB TELLS OFCOM TO STOP LISTING LICENSE DATA ON THE WWW

The Radio Society of Great Britain is not only saying no to publishing a government database of hams on the Internet, its telling telecommunications regulator Ofcom to stop. Jeramy Boot, G4NJH, is in Nottingham in the U-K with more:

--

The RSGB has written to Ofcom raising concern at the release, in full, of the detailed amateur radio database on their web site.

This, Ofcom says, follows a number of requests from radio amateurs for the details to be released under the Freedom of Information Act.

After consultation with the Information Commissioners office, the RSGB has learned that Ofcom could be in breach of the Data Protection Act in releasing these personal details, which include the name and address of each individual radio amateur in electronic form, on their website and hence to the wider community.

The RSGB's main concern is the security of the details, which can now be downloaded by any individual, radio amateur or not.

Im Jeramy Boot, G4NJH.

--

But it may be a little to late to put the proverbial genie back in its bottle. Ian Able, G3ZHI, says that has already received a license from Ofcom allowing him to publish the UK Amateur Radio Callbook data. He already has it on line for download at his website. Its in cyberspace at http://www.qsl.net/g3zhi/cb1.html (GB2RS, G3ZHI)

**

RESTRUCTURING: 40 METER EXPANSION DELAYED IN SOME AREAS

Dozens of countries in International Amateur Radio Union Regions 1 and 3 have yet to adopt the 40 meter extension of 7.1 to 7.2MHz in their domestic regulations. In IARU Region 3 only Australia, China, Japan, Korea and New Zealand report having finalised the band extension for their radio amateurs. A similar story of progress is evident in IARU Region 1, with Belarus, France and South Africa being the latest to gain the band extension.

Some are already question if the slow progress sending a wrong message to errant broadcasters? While the vast majority of shortwave broadcasting community have left the band, some have not. Among those persisting is the recently returned Laos National Radio with Cambodian, English, French, Thai and Vietnamese language broadcasts on 7.145 MHz. Its 10kW transmitter has been heard on the west coast of the USA and also into Europe. (Amateur Radio Victoria)

**

RADIO POLITICS: ARRL BOD MEETS IN CONNECTICUT

As we go to air, the ARRL Board of Directors is holding its second meeting of 2009. The location is Windsor, Connecticut, with ARRL divisional Directors, Vice Directors and Board officers in attendance. The meeting was preceded on Thursday, July 16 with meetings of the Administration and Finance Committee and the Programs and Services Committee. More on the outcome of these meetings on next weeks Amateur Radio Newsline report. (ARRL)

**

RESCUE RADIO: HAM RADIO HELPS AVOID FIREWORKS ACCIDENT

Swift action by some northern Indiana hams may have saved lives and prevented serious injuries during a public fire works display. Jack Parker W8ISH has the story.

--

A joint training exercise between LaPorte and Porter counties in northwest Indiana ended with a bang last week. According to Ken Osborne-N9ZIP, members of the two RACES groups set up a command post to help pass health and welfare information during the festival and fireworks display in Michigan City. The all day event went smoothly as RACES members relayed information about lost children and minor medical needs to the Incident Command Unit near the park..

That routine day blew up in their faces when the fireworks show started. Gun shots were fired in the large crowd, directly in front of one of the RACES information stations. RACES immediately called in a report of gun shots to the Incident Command post. Park police quickly responded to the area. .

Officials said the crowd of over 10-thousand people began panic as they ran from the gun shots. During the mass confusion, several fights broke out. RACES members immediately relayed the fight locations to Incident Command. As the stampede rushed from the area one pregnant woman fell and was trampled by the crowds. She went into labor. Again, one of the Amateur Radio operators rushed to her aid and called for medical assistance. At last report the expectant mother was doing OK.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

Local officials commended the Porter and LaPorte hams on their quick action and on the professional manner in handling multiple incidents. (W8ISH)

**

RESCUE RADIO: HAM RADIO HELPS AVOID RAILWAY ACCIDENT

Ham radio may have helped to avoid a railway accident. One involving a group of Illinois youngsters who decided to try to joy ride on a commuter train.

Paul Streeter, AB9PS, had been attending a meeting of the National Railway Historical Society in Downers Grove, on Friday night, July 10th. As his train home departed the station, his son David, N9JFE, and two other club members who had waited with him noticed that a couple kids had jumped onto the engine. Sensing the urgency in the situation, N9JFE used the emergency provision of the FCC's Amateur Service rules. He tuned his HT to the railroad's frequency to notify the engineer that he had some unwanted kids clinging to the locomotive.

The engineer brought the train to an emergency stop. As soon as the train came to a halt, the crew jumped out when it chased the kids away.

Now here's the kicker. Apparently the kids took refuge right in front of the Downers Grove Police Department after they jumped off the engine. In fact, they were seen sitting on the agency's steps. The engineer then asked the dispatcher to notify the police of what had transpired and of the youngsters where-abouts.

AB9PS says that in his opinion that the situation was definitely life-threatening. He says that the train could have reached 60 mph even though it was a local. At that speed the kids would not have been able to hang on. (KC9RP)

ARNEWSLINE ANNOUNCES 2009 YHOTY WINNER: ANDREW KOENIG, KE5GDB

A 15 year old from Houston, Texas, has been selected as the 2009 Amateur Radio Newsline Young Ham of the Year. This, based on his dedication to public service as well as working to bring kids, teens and adults into the hobby. Amateur Radio Newsline's Mark Abramovich, NT3V, happens to chair the committee that made the decision and has the story of Andrew Koenig, KE5GDB:

--

NT3V: "Andrew, you are the 2009 Young Ham of the Year."

KE5GDB: "You, you, you, you're serious?"

NT3V: "I'm very serious."

KE5GDB: "Wow! Oh, my God. All my friends here at Seabase are going to be really impressed. Oh, my God!"

And, that's how it sounded when we caught up with Andrew Koenig at the Boy Scouts of America Florida Seabase where he had just arrived with members of Troop 848 from Houston for a week of scuba diving adventures.

The Life Scout, who is just shy of his 16th birthday, is working to earn the Eagle rank and was ecstatic to learn he had been chosen for special recognition by Newsline.

Before telling him he had been selected as the Young Ham of the Year, I asked Andrew how he might feel if he were to receive such an award. He said it would be a nice honor to share with his mentors, including his chief Elmer and award nominator - Nick Lance, KC5KBO, who has helped several NASA astronauts earn their ham tickets.

"Young Ham of the Year would probably go in the book of things that I've done in ham radio that they are really impressed with," Andrew said. "It would just mean a lot to me.

"Nick Lance, he hasn't really been pushing me to do anything. A lot of the stuff I discover on my own. But, he's one of the big roles, one of the key aspects in ham radio and it would give him a really good feeling to know that one of his students went on to get youth ham of the year."

Andrew holds a General class license and passed the test for his first ticket back in 2005 while a sixth-grader at the Westbrook Intermediate School in Houston where Lance - who is retiring in August from the Johnson Space Center - teaches an amateur radio license class.

He is the son of Joe and Lauri Koenig of Houston. Joe is KE5JQA and got licensed as a result of Andrew's interest. Andrew also has a younger brother, Kyle.

Among the achievements Andrew has accomplished is helping with an Amateur Radio on the International Space Station contact at the Westbrook Intermediate School.

"I actually helped test a lot of the equipment for the contact, since it was a telebridge contact," Andrew recalled. "The station that was actually contacting the ISS was in California, I believe.

"And, we were in Clear Lake, Texas. So, for some reason the phone patch wasn't working properly. So, I had to actually go into one of the school phones and test that - I think about 15 minutes worth of testing before the contact started. And, finally right on time, we got it going again and everything was working just fine."

The contact with Astronaut Clay Anderson, KD5PLA, was a success - thanks to Andrew.

He also helped facilitate a terrestrial contact between Astronaut Chris Hadfield KC5RNJ/VA3OOG and students at two Canadian schools using an IRLP node he had built and placed in his bedroom closet.

Andrew, who enjoys VHF and UHF operations, tried and tried and was finally successful in making his own contact with the space station using his handheld radios and portable Yagi.

Here is an edited portion of his QSO with Astronaut Mike Fincke, KE5AIT aboard the space station:

KE5GDB: "Kilo Echo 5 Golf Delta Bravo."

NA1SS (KE5AIT): "Kilo Echo 5, this is NA1SS, go."

KE5GDB: "NA1SS, KE5GDB, I'm Echo Lima 29. I'm actually about three miles away from the Johnson Space Center. And, it's pretty cool to talk to you."

NA1SS (KE5AIT): "Wow, we know where the Johnson Space Center is. Yeah, Sandy and I work, live right nearby and then he's visited there often. He's waving right now. And, we hear the weather in Houston is pretty good, over."

KE5GDB: "It's about 60 degrees out right now and I'm outside in my back yard with two handheld radios and I'm having a good time."

Andrew also has participated in training astronauts at the Johnson Space Center on ARISS contacts with schools, conducting simulated QSOs with them playing the role of the school students.

Andrew also has been active with public service events through the Clear Lake Amateur Radio Club in suburban Houston where he is immediate past vice president.

Among his achievements, creating his own bicycle mobile setup.

"I had tried putting a handi-talkie on my bike and I wasn't impressed with the results because the rubber duck just didn't get out out as far as I wanted to," Andrew recalled. "A couple months before, I had ordered my first mobile rig the FT-7800.

"And, actually a couple weeks before I decided to put it altogether on the bike. I had bought a brand new gel cell battery. So, I thought, you know, hey I've got this remote that came free with the radio, I've got the battery, I've got an antenna, I got everything I need to make it happen. So, I just mounted it all on the bike with zip ties and I had 50 watts mobile on a bike for VHF and UHF."

That attracted some attention from CQ Magazine which was looking for photo ideas for its 2008 calendar. The magazine dispatched CQ photographer Larry Mulvehill WB2ZPI to Houston and Andrew's bicycle mobile became the calendar photo for September 2008.

Andrew is going into his sophomore year at Clear Lake High School where he is a member of the school's marching band. He is also a member of the Seabrook Citizen's Emergency Response Team. Andrew really is into computers and creating websites and he maintains his own website started when he was in middle school. Check out www.thathamkid.com.

It offers kid-friendly information about ham radio, along with a jokes page and a lot more about Andrew's activities in amateur radio - including his working satellites.

His Elmer and nominator for this award, Nick Lance, KC5KBO, summed it up best when he said: "Andrew has truly been an outstanding student of amateur radio.....He is an inspiration both to his fellow students and to hams of all ages."

We here at Amateur Radio Newsline agree and we're proud to have selected Andrew as our 2009 Young Ham of the Year.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Andrew Koenig, KE5GDB, will receive his award at the 2009 Huntsville Hamfest slated for the weekend of August 15th and 16th at the Von Braun Center in Huntsville, Alabama. We hope to see many of you there. (ARNewsline(tm))

**

NAMES IN THE NEWS: HAMVENTION 2010 ANNOUNCES LEADERSHIP

Lee Boeckerman, W8LFB, has been named General Chairman for the 2010 Dayton Hamvention with Mike Kalter, W8CI, to serve as assistant general chairman. Both have extensive Dayton Hamvention experience. Boeckerman served as assistant general chairman in 2009 and Kalter was on the administrative staff and handled spokesperson duties. Both also have a variety of experience with previous Hamvention's.

Boeckerman is reportedly now assembling his team of Chairmen for the various committees needed to plan and execute next years outing. Many experienced volunteers from 2009 are returning for another year. Hamvention 2010 scheduled for May 14th to the 16th at Hara Arena in the Dayton suburb of Trotwood, Ohio. (Dayton Hamvention¿½)

**

NAMES IN THE NEWS: NEW SECTION MANAGER APPOINTED IN OHIO

Frank Piper, KI8GW, has been appointed Section Manager of the ARRL Ohio Section. Before being selected as the new S-M, Piper held a number of ARES leadership positions including that of Emergency Coordinator from 2002 to 2003 and then as District Emergency Coordinator from 2003 to 2006. He was promoted to Section Emergency Coordinator, serving in that position until 2008. Piper has also served as an Official Emergency Station in the ARRL Field Organization since 1997. He will serve the balance of the term of the late Joe Phillips, K8QOE, who passed away on June 20th. (ARRL)

**

NAMES IN THE NEWS: VK HAM MAKES QUEENS BIRTHDAY HONORS LIST

Syd Griffith VK2AHF has been recognized in the Queen's Birthday honors list. Griffith was awarded the Public Service medal for his outstanding public service, particularly in innovative and sustained contribution to the enhancement and improvement of the technical capabilities of New South Wales Police. He will be presented with his medal by the Governor General later in the year. (WIA News)

**

NAMES IN THE NEWS: DX'ER K4UEE IN KENYA ON HUMANITERIAN MISSION

Bob Allphin, K4UEE, spent the past week in Kenya doing a short term mission work that included ham radio. Before his departure Alperin told the Ohio Penn DX Newsletter that he was traveling to a village located about 3 to 4 hours north of Nairobi where he would be involved in several different projects including production of a video and demonstrating amateur radio in the local high school.

By way of background, Bob Allphin, K4UEE, has visited ninety-five DXCC entities and operated from fifty-two. He has participated in twenty eight DXpeditions, including seven from "top 10" DXCC entities. Alperin is also an active contester and has participated in thirty-three contest DXpeditions. Six of these efforts resulted in new World Records.

While Bob had some gear with him on this trip, his main emphasis was the humanitarian service projects he traveled half way around the world to assist in. See: http://www.410bridge.org for more information. (OPDX)

THE CHANGING OF THE GUARD: HRK SAN DIEGO MANAGER TOM MCDUFFIE KM6K - S.K.

Tom McDuffie, KM6K, the manager of Ham Radio Outlet's San Diego store became a Silent Key on Monday, July 13th. This, according to Chip Margelli, K7JA, who also passed along a bulletin posted to the San Diego Amateur Repeater Association by Tom's wife Susan.

In her note she said that her husband took ill on Sunday the 12th while driving on State Route 52. He was able to pull to the side of the road before he lost consciousness. The California Highway Patrol found him in his locked vehicle a few hours later. They had to break a window to enter and get Tom out and transport him to Sharp Hospital in San Diego. He was diagnosed as having suffered a stroke and succumb the following morning.

At airtime memorial services for Tom McDuffie, KM6K, have not been announced. (K7JA)

**

EMERGING TECHNOLOGY: LAPTOPS AND NOTEBOOKS REPLACING DESK PC'S

The age of the desktop PC appears to be over. This as its more portable cousins, the laptop and notebook surge ahead with consumers clamoring for light-weight computers in funky designs for use at home, in cafes and on the heir to work.

Not a single desktop model figured on online shopping portal Amazon.com's top 10 selling PC and hardware list the weekend before Christmas 2008. However seven laptop models made the list.

Those who watch trends in the computer industry say that this is yet another sign that the former dominance of desktop PCs is fading. The reason being that advances in wireless technology and lower prices make laptops and notebooks the preferred option for millions of PC users around the world. (Science OnLine)

**

WORLDBEAT: CROSS EUROPE HAM TREK

MM0DFV has started out on a 7000km mobile journey from Scotland through France, Belgium, Germany, Poland, Belarus, Russian, Kazakhstan and back. He has his HF gear with him and operating as he goes. His main mode of operation will be PSK and he plans to have different QSL cards for each new stop. The trip should last until August 10th. QSL as directed by MM0DFV. (GB2RS)

**

HAM RADIO IN SPACE: SUITSAT-2 ENGINEERING CONFERENCE A SUCCESS

A follow up to last weekends meeting in Phoeniix, Arizona, to work on the engineering aspects of the SuitSat-2 or whatever the project will be renamed now that the space suit aspect of SuitSat-2 is gone.

According to System Engineer, Gould Smith, WA4SXM, progress was occurring on several fronts. Smitth says that the command receiver boards were assembled and ready for testing and were integrated for the first time. The team was able to report that the receiver is now providing good input to the transponder and as a result the transponder became operational and produced CW, FM and BPSK signals.

Also at the meeting issues regarding housing SuitSat-2 have began being addressed. This, to replace the spacesuit jettisoned into space from the International Space Station that was supposed to carry SuitSat-2. One that cab survive the deep cold of space. (ANS)

**

RADIO IN SPACE: TWITTEREING THE ISS VISIBLE PASSES

Two Dutch journalists have built a established a Twitter page to let people know when a visible ISS pass is coming. To use it, go to twitter.com/twisst. To which we will add that it appears that Twitter is becoming an all but indispensable tool to anyone involved in ham radio in space. (ANS)

**

HAM RADIO IN SPACE: COMMEMORATING THE FIRST MANNED LUNAR LANDING

AMSAT-North America will mark the 40th anniversary of the first manned lunar landing with a special event on the AO-51 ham satellite. On Monday, July 20th and into early July 21st UTC, AO-51 will transmit a special message commemorating the event during evening passes. The message will be transmitted on the 435.300 MHz FM downlink. A special AO-51 QSL will be available to ground stations who copy the message on the downlink.

Also, use of the call VE3MOON has approved by Industry Canada for use in celebration of the 40th anniversary of the first moon landing. It through the 27 of July. QSL requests go too VE3OIJ, direct, via the bureau or using eQSL. (ANS)

**

ON THE AIR: RAMSEY ISLAND WHERE THE BIRDS ARE

On the air, members of Great Britain's Strumblehead DX and Contest Group have now obtained permission from the Royal Society for the Protection of Birds to activate Ramsey Island. Its located off the West Wales coast and the group will be active from 1800 UTD on July 24th through 1400UTC on July 27th using the club callsign MC0SHL. Their activity will be on all bands from 80 to 10 meters operating only on SSB. (OPDX)

**

ON THE AIR: 13 COLONIES SE-HUGE SUCCESS!

And word that the recent 13 Original Colonies event has been deemed a major success. This, with over10,000 QSO's made and every continent contacted.

Ken Villone, KU2US is the 13 Original Colonies Awards Manager. He says that a large amount of interest in this event was generated in the United Kingdom. As a result the 2010 outing will include two U K stations representing the "Mother Country". This will open up all of the Europe to the on the air celebration.

More information about the 13 Original Colonies events is at the KU2US listing on QRZ.com (E-mail)

**

DX

In DX, JA7QVI needs your help to complete a rather ambitious ham radio project. Tak says that he will be calling CQ on the 50 MHz, 6 meter band for the rest of July from 2200 to 0000 UTC Monday through Friday and 2200 to 0200 UTC on Saturday and Sunday. This in the hope of becoming the first mainland Japan station to achieve the ARRL's Worked All States award. Tak adds he really needs to make contact with hams

in New Jersey and Louisiana to qualify. Please listen out for him and help him to achieve this long sought after goal.

F5LMJ, will be in Liechtenstein through July 24th operating portable HB0. His modes will be CW and digital during his evening and early morning hours. QSL via F5LMJ via the bureau or electronically via Logbook to the World.

VE3ZIK will once again be active portable as 9A from Bilice, Croatia through August 3rd. Listen for him on the HF bands using CW, SSB and some digital modes. QSL via DO7ZZ, direct or by the bureau. Logs will be uploaded to eQSL and Logbook to the World.

SV1EJD will be on the air portable SV8 from Lesvos in the North Aegean Islands through the 22nd of July. QSL via his home call, either direct or via the bureau.

YC0IEM, will be active from Bali through July 27th. QSL via IZ8CCW.

Lastly, MM0DFV has started out on a 7000km mobile journey from Scotland through France, Belgium, Germany, Poland, Belarus, Russian, Kazakhstan and back. He has his HF gear with him and operating as he goes. His main mode of operation will be PSK and he plans to have different QSL cards for each new stop. The trip should last until August 10th. QSL as directed by MM0DFV.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE BOSTON T-HUNT

And finally this week, an on-foot hidden transmitter hunt in Boston has drawn competitors from around the world. Newsline's Joe Moell, K0OV, has the outcome:

--

Every odd-numbered year, the three regions of the International Amateur Radio Union, the IARU, plan world-class on-foot hidden transmitter hunts and they invite the hams of the world to attend. Region 2, which encompasses all of North and South America, had its championships in Boston on the first weekend of June. It was combined with USA's annual national championships and was hosted by Vadim Afonkin KB1RLI. He is one of USA's best at the sport, which is also called radio-orienteering and ARDF.

With help from the New England Orienteering Club, Vadim set out two challenging courses in the 7000-acre Blue Hills Reservation south of Boston, one course on two-meters and the other on 80 meters. These transmitter hunts drew hams from all over the USA plus eight other nations. Some of those countries, such as Ukraine and Russia, have training programs that have developed the world's best radio-orienteers over the years, so it's no surprise that the best performances were

from those nations.

But the stateside competitors, 44 per cent of whom were first-timers, did very well themselves. For example, in the three categories for women, USA captured all but one of the gold medals. Dick Arnett WB4SUV and Bob Cooley KF6VSE took gold in the category for men over age 60. And former Newsline Young Ham of the Year Jay Thompson W6JAY was best in the USA on two meters in the category for men in their 20s and 30s.

For complete results and photos of the championships in Boston, point your Web browser to homingin.com. That's homingin -- as one word -- homingin.com. USA's best on-foot foxhunters not only received medals, but they are on track to be part of our country's team for the World Championships in Croatia next year.

For Amateur Radio Newsline, this is Joe Moell K0OV.

--

Needless to say, a good time was had by all. (K0OV)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. ==> NEW VICE DIRECTORS VISIT HQ IN ADVANCE OF BOARD MEETING

Just prior to the ARRL Board of Directors 2009 Second Meeting
<http://www.arrl.org/announce/board.html>, three newly appointed Vice
Directors made their way to Newington for a day of orientation. Pacific
Division Vice Director Jim Tiemstra, K6JAT, Southeastern Division Vice
Director Jeff Beals, WA4AW, and West Gulf Division Vice Director John
Thomason, WB5SYT, came to learn the "ins and outs" of the ARRL Board and ARRL
Headquarters operation. The 2009 Second Meeting is scheduled for July 17-18
in Windsor, Connecticut.
```

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, "The new Board members came to Newington to learn not only how the Board functions, but to see what each department does and how it interacts with and serves both Amateur Radio and ARRL members, through our five pillars: Public Service, Advocacy, Education, Technology and Membership. I am pleased they came to see how we support Amateur Radio each and every day here at ARRL HQ."

One of the highlights of the group's visit to Headquarters was a tour of the Membership and Volunteer Programs Department. Dave Patton, NN1N, explained the function of the department and its staff. "We showed them how we support Amateur Radio and our members through our Field Organization, Ham Aid Program, emergency communications support, operating events and awards," Patton said.

Beals, the former Southern Florida Assistant Section Manager, was appointed Vice Director upon the death of then-Vice Director Sandy Donahue, W4RU <http://www.arrl.org/news/stories/2009/06/04/10865/?nc=1>. "I haven't been to Headquarters in about 15 years -- I'm just amazed at how much things have changed," he said. "It never ceases to amaze me how much we give our members for their membership dollars. What's available to them, the services, the functions we perform for the members, it's just incredible. I think if more hams out there could see what we do here, we'd double our membership in about 5 minutes."

Thomason, the former Oklahoma Section Manager, was appointed Vice Director <http://www.arrl.org/news/stories/2009/01/24/10586/?nc=1> when then-Director Coy Day, N5OK, resigned and David Woolweaver, K5RAV, moved up to Director from Vice Director <http://www.arrl.org/news/stories/2009/01/20/10574/?nc=1>. "It's been quite a day -- it's been long, but it's been good," he said. "We have had the good fortune to see so many wonderful League staffers and to get together to help plan for the future. Departments here at Headquarters were able to share some of the things they have done on behalf of our members. It has definitely been a good day and it will only get better."

Tiemstra, the former Section Emergency Coordinator in the East Bay Section, was appointed to his position in June after then-Vice Director Andy Oppel, N6AJO, submitted his resignation <http://www.arrl.org/news/stories/2009/06/16/10889/?nc=1>. "When we got to Headquarters, we found that we had a full day planned," he said. "We saw all aspects of the Headquarters operation and it is quite an impressive operation -- much larger and much more complicated than I expected. I am really looking forward to the Board meeting on Friday. I am so fascinated by all the things that the League is doing these days. I think that it will be a tremendous learning experience and something I will probably never forget."

A report on the July meeting of the ARRL Board of Directors will be available on the ARRL Web site and in The ARRL Letter.

==> HR 2160 GAINS MORE SUPPORT IN CONGRESS

This week, four more Congressmen -- John Boozman (R-AR-3), Bob Filner (D-CA-51), Dennis Moore (D-KS-3) and David Wu (D-OR-1) -- pledged their support for HR 2160, The Amateur Radio Emergency Communications Enhancement

Act of 2009 <http://thomas.loc.gov/cgi-bin/query/z?c111:H.R.2160:>. This brings the total number of cosponsors to 18.

Introduced by Representative Sheila Jackson-Lee (D-TX-18) in April <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>, if passed, HR 2160 would "promote and encourage the valuable public service, disaster relief, and emergency communications provided on a volunteer basis by licensees of the Federal Communications Commission in the Amateur Radio Service, by undertaking a study of the uses of Amateur Radio for emergency and disaster relief communications, by identifying unnecessary or unreasonable impediments to the deployment of Amateur Radio emergency and disaster relief communications, and by making recommendations for relief of such unreasonable restrictions so as to expand the uses of Amateur Radio communications in Homeland Security planning and response." The bill has been referred to the House Committee on Energy and Commerce.

If enacted into law, HR 2160, would instruct the Secretary of Homeland Security to undertake a study and report its findings to Congress within 180 days. The study would spell out uses and capabilities of Amateur Radio communications in emergencies and disaster relief. The study shall:

* Include recommendations for enhancements in the voluntary deployment of Amateur Radio licensees in disaster and emergency communications and disaster relief efforts.
* Include recommendations for improved integration of Amateur Radio operators in planning and in furtherance of the Department of Homeland Security initiatives.
* Identify unreasonable or unnecessary impediments to enhanced Amateur Radio communications -- such as the effects of private land use regulations on residential antenna installations -- and make recommendations regarding such impediments.
* Include an evaluation of Section 207 of the Telecommunications Act of 1996 (Public Law 104-104, 110 Stat 56 [1996]).
* Recommend whether Section 207 should be modified to prevent unreasonable private land use restrictions that impair the ability of amateurs to conduct, or prepare to conduct, emergency communications by means of effective outdoor antennas and support structures at reasonable heights and dimensions for the purpose in residential areas.

The Secretary of Homeland Security shall utilize the expertise of the ARRL and shall seek information from private and public sectors for the study.

"HR 2160 presents the Amateur Radio Service with a unique opportunity -- but also carries with it the important responsibility of making your voice heard," said ARRL Regulatory Information Manager Dan Henderson, N1ND. "HR 2160 stands as the first step in trying to address the long standing problem of extending the protections afforded Amateur Radio operators under PRB-1 <http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf>to deed restrictions and covenants. To be clear, passing HR 2160 is not going to achieve that goal right away. But it will help lay the ground work by assessing the impact such restrictions have on our ability to train for and respond to disasters and other emergencies."

HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), Madeleine Bordallo (D-Guam), Bart Gordon (D-TN-6), Brett Guthrie (R-KY-2), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Zoe Lofgren (D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Charlie Melancon (D-LA-3), Bennie Thompson (D-MS-2) and Peter Welch (D-VT).

Check the ARRL Web site <http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional representative to sponsor HR 2160.

==> WRC-11 IS NOW WRC-12

The ITU Council, the 46-nation administrative oversight body of the International Telecommunication Union (ITU), has agreed to move the next World Radiocommunication Conference (WRC) to 2012. Originally scheduled for October 24-November 18, 2011 in Geneva, Switzerland, the Council has proposed January 23-February 17 as the new dates <http://www.itu.int/dms_pub/itu-r/oth/0C/04/R0C040000030001PDFE.pdf>.

According to ARRL Technical Relations Manager Brennan Price, N4QX, the full ITU membership is now being consulted on the dates; responses are due by August 3. "The ITU Council had previously proposed dates for fall 2011, but various scheduling conflicts and the lack of available facilities during some weeks made this schedule impractical," he said.

Held approximately every three years, these periodic conferences of the Member States of the ITU consider allocations to the various radio services -- including the Amateur Radio Service -- and evaluate what new technologies and applications should be addressed by future conferences.

The agenda for WRC-12, developed by the delegates at the last WRC in Geneva in 2007 (WRC-07), was formally adopted by the ITU Council in 2008. There are 25 agenda items addressing potential new or revised spectrum allocations to existing services. Of most interest to amateurs is agenda item 1.23, "to consider an allocation of about 15 kHz in parts of the band 415-526.5 kHz to the amateur service on a secondary basis, taking into account the need to protect existing services."

"This agenda item is the highest item on my long term priority list," said Price. "We are fortunate that this upcoming WRC presents an opportunity for a new secondary allocation in the medium waves. While the outcome is far from certain, our experience in other bands -- most notably 30 meters -- indicates Amateur Radio's compatibility with certain other services as a secondary user."

Price said that some WRCs have posed great challenges for Amateur Radio, with blocks of spectrum potentially at risk. "This was the case at WRC-03 and WRC-07, which posed a very real potential reallocation of portions of the 40 meter band in Region 2 to HF broadcasting," he said. "The agenda for WRC-12 does not pose any threats to Amateur Radio as clear or as overt as those faced in prior years." Price and ARRL Technical Relations Specialist Jon Siverling, WB3ERA, are monitoring developments on a number of other agenda items that could affect Amateur Radio if they take unanticipated turns,

including:

* Agenda item 1.14, considering requirements for and implementation of the radiolocation service (radar) between 30-300 MHz.
* Agenda item 1.15, considering possible allocations between 3-50 MHz for oceanographic radar applications.
* Agenda item 1.19, considering regulatory measures to enable software-defined and cognitive radio systems.
* Agenda item 1.22, examining the effect of emissions from short-range devices.

"Oceanographic radar is perhaps our biggest defensive issue," Price said. "Fortunately, its proponents have acknowledged that sharing with Amateur Radio would be problematic."

==> COMPANION BILL TO SENATE RADIO SPECTRUM INVENTORY ACT INTRODUCED IN HOUSE

In March, Senator John Kerry (D-MA) introduced the Radio Spectrum Inventory Act (S 649) <http://thomas.loc.gov/cgi-bin/query/z?c111:S.649:> in the Senate <http://www.arrl.org/news/stories/2009/03/25/10725/>. Earlier this month, that bill passed the Senate Commerce, Science and Transportation Committee. Last week, Representative Henry Waxman (CA-30) introduced a companion bill -- HR 3125 -- in the House of Representatives <http://thomas.loc.gov/cgi-bin/query/z?c111:H.R.3125.IH:>; the bill has been referred to the House Committee on Energy and Commerce. The bills, if passed, would mandate an inventory of radio spectrum bands managed by the National Telecommunications and Information Administration (NTIA) and the Federal Communications Commission. The Senate version calls for an inventory of frequencies between 300 MHz-3.5 GHz managed by the two agencies, while the House bill would mandate an inventory of 225 MHz-10 GHz.

S 649
Senate Bill 649 states that the NTIA and the FCC would be required to inventory the spectrum no later than 180 days after the bill becomes law; after the initial survey, follow-ups would be required every two years. Both agencies would need to prepare a report listing the licenses or government user assigned in the band, the total spectrum allocation, by band, of each licensee or government user (in percentage terms and in sum) and the number of intentional radiators and end-user intentional radiators that have been deployed in the band with each license or government user.

Additionally, if the information is applicable, the report would be required to show the type of intentional radiators operating in the band, the type of unlicensed intentional radiators authorized to operate in the band, contour maps that illustrate signal coverage and strength and the approximate geo-location of base stations or fixed transmitters. The report would then be sent to the Senate Committee on Commerce, Science and Transportation and to the House Committee on Energy and Commerce.

The bill also mandates that both agencies create a centralized portal or Web site that lists each agency's band inventories. This information would then be made available to the public via an Internet-accessible Web site. Both

agencies would also be required to make all necessary efforts to maintain and update the inventory information "in near real-time fashion and whenever there is a transfer or auction of licenses or change in allocation or assignment."

"Our public airwaves belong to the American people, and we need to make certain we are putting them to good use in the best interests of those citizens," Senator Kerry said when he introduced the bill in March. "Last year's 700 MHz auction resulted in $20 billion for the treasury and will create greater opportunity and choice for consumers and businesses that need broadband service. We also took a great step forward when the FCC established a way for unlicensed devices to operate in white spaces. These two initiatives are evidence of how valuable spectrum is and how it serves as fertile grounds for innovation. We need to make sure we're making as much of it available to innovators and consumers as possible."

HR 3125
Like S 649, HR 3125 calls for the NTIA and the FCC to issue a report on the inventory of spectrum no later than 180 days after the bill becomes law; after the initial survey, follow-ups would be required every two years. The House bill goes a bit further than S 634, however, calling for the two agencies to work with the Office of Science and Technology Policy (OSTP) <http://www.ostp.gov/>; this office advises the President on the effects of science and technology on domestic and international affairs.

The agency reports called for in HR 3125 would include the same information called for in the Senate version. Like the Senate bill, the House bill calls for the reports to be made available on the Internet and update the reports as needed. Both bills include an exemption for licensees or users if they can demonstrate that disclosure would be harmful to national security.

"The [bill] represents a significant step in making available more spectrum for commercial and wireless services. The more efficient use of our nation's airwaves will increase innovation for wireless products and services and improve the connectivity of the American people," said bill cosponsor Representative Rick Boucher (D-VA-9). "As more people use wireless devices and as advanced applications require higher data rates over time, additional spectrum will be needed to accommodate growth. Wireless technologies can also play a critical role in bringing broadband to more consumers, particularly in rural areas."

S 649 is co-sponsored by Kay Bailey Hutchison (R-TX), Amy Klobuchar (D-MN), Bill Nelson (D-FL), Mark Pryor (D-AR), Olympia Snowe (R-ME), John Thune (R-SD), Mark Warner (D-VA) and Roger Wicker (R-MS).

HR 3125 already has 17 cosponsors: Joe Barton (R-TX-6), Rick Boucher (D-VA-9), Steve Buyer (R-IN-4), Kathy Castor (D-FL-11), John Dingell (D-MI-15), Michael Doyle (D-PA-14), Anna Eshoo (D-CA-14), Bart Gordon (D-TN-6), Jay Inslee (D-WA-1), Edward Markey (D-MA-7), Doris Matsui (D-CA-5), Jerry McNerney (D-CA-11), Zachary Space (D-OH 18), Cliff Stearns (R-FL-6), Bart Stupak (D-MI-1), Fred Upton (R-MI-6) and Peter Welch (D-VT). Gordon and Welch are also cosponsors of HR 2160, The Amateur Radio Emergency

Communications Enhancement Act of 2009
<http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>.

==> SPACE SHUTTLE ENDEAVOUR ON ITS WAY TO ISS WITH HAMS ON BOARD

After lightning strikes and thunderstorms delayed the launch of the space shuttle Endeavour (STS 127) this past weekend, the spacecraft launched into space at 6:03 PM on Wednesday, July 15. Endeavour's 16 day mission to the International Space Station (ISS)
<http://www.nasa.gov/mission_pages/station/main/index.html> will feature five planned spacewalks and complete the construction of the Japan Aerospace Exploration Agency's Kibo laboratory. Astronauts will attach a platform to the outside of the Japanese module that will allow experiments to be exposed to space
<http://www.nasa.gov/pdf/362898main_STS127%20Mission%20Summary%20v4.pdf>.

Endeavour carries a crew of seven: Mark Polansky is commander and Douglas Hurley is the pilot. Mission specialists are Christopher Cassidy, Thomas Marshburn, KE5HOC, David Wolf, KC5VPF, and Julie Payette, a Canadian Space Agency astronaut. The mission will deliver Timothy Kopra, KE5UDN, to the ISS as a flight engineer and science officer and return Japanese astronaut Koichi Wakata, KC5ZTA, to Earth. Hurley, Cassidy, Marshburn and Kopra will be making their first trips to space.

When Kopra arrives, there will six astronauts on board the ISS -- all but one are licensed radio amateurs: Commander Gennady Padalka, RN3DT; Flight Engineer Michael Barratt, KD5MIJ; Flight Engineer Frank DeWinne, ON1DWN; Flight Engineer Robert Thirsk, VA3CSA, and Flight Engineer Roman Romanenko.

While on the ISS, Kopra will help conduct scientific experiments on human physiology. "We're going to look at all the different components that correspond to the human body and the effect that microgravity has on [astronauts]," he said in a NASA pre-flight interview
<http://www.nasa.gov/mission_pages/station/expeditions/expedition20/kopra_interview.html>. "It's very critical because, if we're going to spend time on the moon, which has less gravity than the Earth, or transporting to Mars, which could be a very long trip and then time on Mars, we need to understand with a lot of detail what those effects will be. So we'll be looking at the cardiovascular system, neurological system, vestibular system and we'll also be looking at some of the behavioral aspects of living in space. What happens to your sleep, for example: Can you sleep soundly, because over time you definitely need to have sound sleep to be an effective crew member? Those are some of the examples of the things we'
ll be looking at that correspond to the human physiology side."

Kopra said he expects to "have a lot of fun" while on board the ISS: "I just spoke with the [current ISS] crew members on board recently, and after they had only been there for a couple weeks, you could tell that they're just real excited about all the work that they do on board. It's just like you talk to a kid about what they would like to do on space station, they might tell you, 'Hey, I want to float around, I want to look out the window.' You know, I

intend to do a lot of both of those just as my crew members like to do."

Kopra, a 1985 graduate of West Point and a colonel in the US Army, was assigned to NASA at the Johnson Space Center in September 1998 as a vehicle integration test engineer. In this position, he primarily served as an engineering liaison for space shuttle launch operations and ISS hardware testing. He was actively involved in the contractor tests of the Extravehicular Activity (EVA) interfaces for each of the space station truss segments.

Selected as an astronaut in July 2000, Kopra began his initial training the following month. He completed two years of intensive space shuttle, space station and T-38 flight training. He then served in the Space Station Branch of the Astronaut Office where his primary focus involved the testing of crew interfaces for two ISS pressurized modules, as well as the implementation of support computers and operational Local Area Network on ISS. After completing a Russian language immersion course in Moscow, Kopra began training for a long duration space flight mission in July 2005. Since then, he has completed training at each of the international partner training sites and served as a backup crewmember to Expeditions 16 and 17.

Kopra will return to Earth on space shuttle Discovery (STS 128), due to launch this August. That mission will bring mission specialist Nicole Stott, KE5GJN, to the ISS. Discovery will carry the Leonardo Multi-Purpose Logistics Module containing life support racks and science racks, as well as the Lightweight Multi-Purpose Experiment Support Structure Carrier.ï¿½ -- Information provided by NASA

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News and the ARRL Instructor/Teacher E-Letter and the VE Newsletter.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Glorious with the Sun's returning march" Cook, K7RA, this week reports: We saw a nice run of eight days with a large sunspot, but none have emerged in the six days since. Unlike other recent spots, this one did not appear just for one or two days and then vanish. Sunspot numbers for July 9-15 were

15, 13, 0, 0, 0, 0 and 0 with a mean of 4. The 10.7 cm flux was 69.1, 67.8, 68.2, 68, 67.2, 66.6 and 66.5 with a mean of 67.6. The estimated planetary A indices were 6, 7, 4, 5, 10, 8 and 5 with a mean of 6.4. The estimated mid-latitude A indices were 6, 7, 2, 4, 5, 6 and 3 with a mean of 4.7. Geophysical Institute Prague predicts quiet conditions for July 17-20, unsettled July 21, quiet to unsettled July 22 and back to quiet on July 23. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation B ulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Henry Wadsworth Longfellow's "Sunrise on the Hills" <http://www.readbookonline.net/readOnLine/3237/>.

==>IN BRIEF:

* This Week on the Radio: This week, an NCCC Sprint Ladder is on July 17. The North American QSO Party (RTTY), theï¿½ DMC RTTY Contest and the CQ Worldwide VHF Contest are July 18-19. The CQC Great Colorado Gold Rush is July 19. The Run for the Bacon QRP Contest is July 20 and the SKCC Sprint is July 22. Next week, another NCCC Sprint Ladder is on July 245 and the RSGB IOTA Contest is July 25-26. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, July 26, 2009, for these online course sessions beginning on Friday, August 7, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feed
back. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* W1AW to Add New Digital Modes to Transmission Schedule: Effective August 17, W1AW, the Hiram Percy Maxim Memorial Station, will replace its AMTOR and

ASCII transmissions with PSK31 and MFSK16, respectively. RTTY (Baudot) will continue to be the first digital mode used in the transmission schedule. The frequencies used by W1AW for all its digital transmissions will remain the same. "All regular 6 PM and 9 PM (Eastern Time) digital transmissions will begin with RTTY," said W1AW Station Manager Joe Carcia, NJ1Q. "PSK31 and MFSK16 will be sent as time allows. The Tuesday and Friday Keplerian data bulletins will be sent using RTTY and PSK31." The W1AW operating schedule -- complete with times and frequencies -- can be found on the ARRL Web site <http://www.arrl.org/w1aw.html#w1awsked>.

* AMSAT to Mark First Lunar Landing: AMSAT-NA <http://www.amsat.org> will mark the 40th anniversary of the first manned lunar landing with a special event on AO-51 <http://www.amsat.org/amsat-new/echo/>. AO-51 will transmit a message commemorating the event Monday, July 20 during evening passes in the US and Europe. The message will be transmitted on the 435.300 MHz FM downlink and will contain a Robot 36 SSTV image as well as a voice message. A special AO-51 QSL will be available to those who copy the downlink. Send QSL requests marked "Apollo 11" with a self-addressed, stamped envelope to AMSAT, 850 Sligo Ave, Ste 600, Silver Spring, MD 20910.

* Jim Mullin, W8KKK (SK): Jim Mullin, W8KKK, of Concord Township, Ohio, fell to his death from atop his 100 foot tower on June 6, reports Frank "Fritz" Hemrich, K8WLF, also of Concord Township. According to a post Hemrich made on QRZ.com, Mullin, 69, was in the process of dismantling his tower and antennas when his safety belt "parted at one of the seams and just let go." Hemrich recounted that Mullin had already been up on the tower twice that day: "It appears as if he was on his third trip up to re-position his gin pole to start taking apart and down the tower sections. His ground assistant had just finished taking some pictures of the tower and was putting his camera back in his car. As he turned away from the car he heard Jim hit the ground." A service for Mullin was held June 11.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

AMATEUR RADIO NEWSLINE SPECIAL BULLETIN - WALTER CRONKITE, KB2GSD - S.K.

Shortly after our current newscast #1666 went to air we learned of the passing of broadcast and ham radio legend, Walter Cronkite, KB2GSD. We have prepared a special 14 minute audio only tribute to Walter Cronkite hosted by Mark Abramowicz, NT3V, that you can download and play from our website at www.arnewsline.org. Simply scroll down to "Special Reports" and click on the word "HERE" on the line that reads "Click HERE to download our 14 minute tribute to broadcast legend Walter Cronkite, KB2GSD." It is an MP3 file and will play in most media players.

Thank you, Amateur Radio Newsline

324. Welcome to rec.radio.info!

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.info

Amateur Radio Newsline(tm) Report 1667 - July 24 2009

Ladies and gentlemen, with some words of thank you to our listeners, heres our Support Fund Administrator Andy Jarema, N6TCQ:

--

In the month of August last year we heard from regular contributors Benton Bonney, W4PE of Orlando; Joseph Bartzi, Jr., KC8DKF of Columbus, OH; William Walters, WA2IBM in San Jose; Stephen Perluss and the South Orange Amateur Radio Association in Mission Viejo.

Also the Albemarle ARC in Earlysville, VA; the Seqouia Amateur Radio Group, N6KRV in Lake Isabella, CA; Leo Halog, KR6EG in San Francisco; The Calveras Amateur Radio Society, N6FRG in Angels Camp; John Rice, KE6YFV in San Pedro and our good friends David, W6AQ & Alice Bell W6QLT in LA.

Via PayPal there was Greg Danes of Alexandria, VA and the 147.590 Echolink Mills Computer & Electronics- W3YNI in Irwin, PA. Also, Warren Anderson- Plymouth, MN; Jim Sellars- Springfield, MO and the SW Missouri Regional Skywarn Spotters; Andrew Hansis- K7FED in Henderson, NV; Tom Stanley- KB7VOO in Bonney Lake, WA; Douglas Gilbert- WA6LXB of West Hills, CA.

It costs almost $1000 a month to gather the news and put these newscasts on the air. Please do what you can to keep these newscasts coming by logging onto our website and going to our PayPal secure contribution link, or contacting us at our Arcadia support fund address given at the end of this newscast. If you choose the easy PayPal route, be sure to include your callsign in the Notes section, so that we can say it on the air.

For now, I'm Andy Jarema, N6TCQ, and thank you.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1667 with a release date of Friday, July 24th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio says goodbye to a great American legend as Walter Cronkite, KB2GSD, passes from the scene. Also, the World Administrative Radio Conference is delayed until 2012, the ARRL meets in Connecticut, DX goes to Twitter and RF ID tags hit the London subway. Find out the details on Amateur Radio Newsline(tm) report number 1667 coming your way right now.

CHANGING OF THE GUARD: WALTER CRONKITE KB2GSD - SK

The man credited with setting the "gold standard" in broadcast journalism has passed away. CBS newsman Walter Cronkite, KB2GSD, who once held the title of ''Most Trusted Man in America,'' has passed away. Cronkite died with his family at his bedside on Friday, July 17 after at age 92.

Walter Cronkite became a ham for a slightly different reason than most of us. He was a sailor and loved to be on the water in the boat that he owned. He was also very safety conscious and when some of his colleagues at CBS suggested that he put ham radio gear on board his vessel, he thought it would be a good idea. Only he needed a ham ticket to go with it. Enter two then CBS hams, Rich Moseson, W2VU and Steve Mendelson, W2ML. Back then they were N2BFG and WA2DHF respectively. Rich Moseson tells us how he got drafted as one of the two volunteer examiners that would give Walter Cronkite for his Novice exam:

--

Rich Moseson, W2VU: "I remember my boss at the time, Joel Heller, WA2FFI, who was an Executive Producer at CBS News calling me into his office one day. Steve Mendelsohn and Walter Cronkite were sitting there and he (Heller) said that Mr. Cronkite has decided to get his ham license and wants to take his test. Steve's going to do (supervise) the written test for the Novice and would you be willing to give him the code test. And of coarse I said "yes."" --

Walter Cronkite was soon KB2GSD and while he was rarely on the air, he was keenly aware of the hobby and its importance. And on two occasion when approached by film maker Dave Bell, W6AQ, he gladly lent his voice and image to a pair of ham radio video's. The second of these was made in 2005 and was called "The ARRL Goes To Washington." It was inspired by then ARRL President Jim Haynie, W5JBP, who wanted something to rally ham radio to the danger of Broadband Over Powerline or BPL internet access and the devastating effect it would have on ham radio High Frequency operations. Haynie turned to Dave Bell and his ham radio production team for assistance. Bell once again approached KB2GSD to host the presentation. And with a script written by the late Alan Kaul, W6RCL, Walter Cronkite lent his voice and his image to the fight to restrain BPL

--

Walter Cronkite, KB2GSD, audio from The ARRL Goes To Washington: "The Federal Communications Commission is the agency that issues ham radio licenses and regulates amateur radio. Congress created the FCC an like a mindful parent it occasionally overrules the agency, a fact of which Jim Haynie is well aware. Thats important because at this exact moment

the FCC is pushing a controversial Internet access scheme caulked Broadband Over Powerline or BPL."

--

According to Dave Bell, having Walter Cronkite as host of the ARRL Goes To Washington is what made the video the effective anti BPL tool that it was:

--

Dave Bell, W6AQ: "Getting Walter to host a film about BPL gave it weight that no other person in the entire country could give it. When a Congressman or an executive in Washington of any kind gets a DVD and it says '&narrated by Walter Cronkite' that means its true. And I do not think that film would have been nearly as effective with anybody else narrating it."

--

There have been many accolades written and voiced with the passing of Walter Cronkite. One of the most poignant are the words of FCC Commissioner Michael Copps. He said and we quote:

"One of my fondest memories during my time at the FCC will always be the opportunity I had to get to know the legendary Walter Cronkite. I was privileged to visit with Walter on several occasions and to imbibe some of the unmatchable feel he had for journalism and its crucial role in sustaining a healthy and vibrant democratic dialogue.

On one occasion, in 2007, we shared a platform at a Columbia University forum on the future of the media. By then, Walter had been speaking out for a number of years about excessive media consolidation and the declining resources that were going into journalismparticularly investigative journalism. He ended his remarks this way:

""America is the most prosperous and powerful nation in perhaps the history of the world. We can certainly afford to sustain a media system of which we can be proud.""

I will miss this good and wise man. And the country will miss his sage counsel as we finally begin to grapple with the crisis in journalism that he saw coming long ago. We will best honor Walter Cronkite's memory by tackling this issue with the urgency it deserves.

To which we will add that we too will all miss the man the country came to know as Uncle Walter and ham radio operators came to know as KB2GSD. He was truly an American treasure and we in ham radio were lucky to have him as one of us.

As an aside, Amateur Radio Newsline has prepared a 14 minute audio tribute to Walter Cronkite hosted by Mark Abramowicz, NT3V. Its at our website under Special Reports. Simply scroll down the page and left click to download and save it to your computer. Its our small way of

saying farewell to the man America trusted the most and who hams knew by the call letters KB2GSD. (ARNewsaline")

**

THE BPL FIGHT: FCC ISSUES NEW NPRM ON BPL

Speaking about BPL, the Federal Communications Commission of the United States has finally issued new proposed regulation for Broadband over Powerline Internet access. In its Notice of Proposed Rulemaking the FCC is seeking comment on the power levels that should be permitted for BPL systems so they don't cause interference with other services.

The new proposal is the result of litigation won by the ARRL last year regarding new requirements and measurement guidelines for Access Broadband over Power Line Systems. So far the ARRL is yet to make known its response to the new proposal. (Southgate)

RADIO POLITICS: WRC 11 BECOMES WRC 12

WRC-11 Is Now WRC-12. This, as the 46-nation ITU Council which is the administrative oversight body of the International Telecommunication Union agrees to move the next World Radiocommunication Conference to 2012.

Originally scheduled for October 24th to November 18th, 2011 in Geneva, Switzerland, the Council has proposed January 23rd to February 17th as the new dates. According to ARRL Technical Relations Manager Brennan Price, N4QX, the full ITU membership is now being consulted on the change and responses are due by August 3.

According to Price, the ITU Council had previously proposed dates for fall 2011, but various scheduling conflicts and the lack of available facilities during some weeks made this schedule impractical. (ITU)

WITH THE ARRL: BOARD MEETING RESULTS IN BRIEF

The ARRL Board of Directors held its Second Meeting of 2009 in Windsor, Connecticut on July 17th and 18th. According to the League, most of Saturday was devoted to reviewing and revising the ARRL Strategic Plan that was adopted in October 2006.

During the two day gathering the Board considered and acted on a number of organizational, regulatory and operating issues, including the formation of an ad hoc committee to study and prepare guidelines to identify inappropriate use of Amateur Radio. Also looked at was updating of the terms of reference of the Volunteer Consulting Engineer Program; establishing of an Emergency Liaison Station appointment at the national level to link ARRL Headquarters to affected areas during disasters; the formation of a study committee to conduct research and consider developing a plan for narrow-band channel spacing in the VHF and UHF bands.

Several other items were also acted upon. These include the creation of the George Hart Distinguished Service Award to be given for exemplary service in the ARRL Field Organization, and updating the terms of reference for the Bill Leonard, W2SKE, Professional Media Award. The Board also conferred several awards on deserving nominees. (ARRL)

**

WITH THE ARRL: W1AW BULLETINS TO ADD DIGITAL

Still with news from the League, word that its W1AW bulletin station will add new digital modes to its transmitting schedule in mid-August. This following a survey of listeners who say that they want the digital transmissions.

On August 17th W1AW will replace its AMTOR and ASCII transmissions with PSK31 and MFSK16, respectively. RTTY will continue to be the first digital mode used in the transmission schedule. The frequencies used by W1AW for all its digital transmissions will remain the same.

The W1AW operating schedule complete with times and frequencies can be found on the ARRLWeb page . at http://www.arrl.org/w1aw.html#w1awsked. (ARRL)

RESCUE RADIO: THALES INTRODUCES SDR LMR PORTABLE

The US Department of Homeland Security has picked 14 groups from across the country to pilot an ambitious Multi-Band Radio project. This in an attempt to permit all responding units to talk with one another and with incident command no matter what frequency or mode of communication they use. Amateur Radio Newslines's Jeff Clark, K8JAC, tells us about the radio that they will be testing:

--

Currently radios only operate within a specific frequency band. As a result responders are often unable to communicate with other agencies and their support units that operate in different radio frequencies. Having a fully interoperable portable that is comparable to today's single band sets was the reason that the Department of Homeland Security Science and Technology Directorate in 2008 awarded a $6.2

million contract to Thales Communications. Its job was to develop and demonstrate the first-ever portable radio prototype that lets emergency responders-police, firefighters, emergency medical personnel and others-communicate with partner agencies, regardless of the radio band they operate on.

The result of that investment by the government is the Thales Liberty software defined multiband mobile radio which received FCC certification in April. The prototype is capable of operating in the primary public safety bands between 136-174 MHz, 380-520 MHz as well as in the 700 MHz and 800 MHz bands. And because it is software defined it can be reconfigured to operate in emerging spectrum that will be dedicated to emergency communications as well.

--

The Liberty radio is made in the U.S. and is the first multiband portable designed specifically for government agencies and first responders. And while it can be programmed to operate across the 2 meter ham band, don't look for very many of them to show up on your local repeater. They are priced at priced at a hefty $4,000 to $6,000, each. (Press release)

RADIO EDUCATION: HAMTESTS INTERNATIONAL TO LAUNCH IN THE USA

After successfully running the UK-only Hamtests.co.uk for just over 3 years, HamTests International is launching world-wide starting here in the US with the Technician, General and Amateur Extra license levels. Each randomly generated test will have the same question pools as real tests. 35 Questions in Technician and General practice tests. 50 in Amateur Extra practice tests.

HamTests International will also feature its 10 questions in 10 minutes technique. This is a quick practice designed for when you don't have the time to take a full practice test. It tests your ability to answer questions quickly and thoroughly so that you can ace the real exam on test day.

Yet another feature will allow the questions pools for US tests to be downloaded as a specially formatted PDF files for Sony eBook Readers, but can also be viewed in other ebook readers with PDF reading capability, or on a P C with any standard PDF reader.

To get an idea as to what to expect when the new HamTests Internation website is up and running you can visit Hamtests.co.uk and take a peek. (Southgate)

COMMUNICATIONS SAFETY: THE STORY OF THE TEXTING TEEN

Communications can be hazardous to your health. Especially when one is not watching where they are walking because they are text messaging and wind up falling down a manhole.

According to news reports that's exactly what happened as a New York City teenager while she was sending a text message on her cell phone. On June 12th Alexa Longueira was about to send a text to a friend when she fell down the open manhole on Staten Island. The girls suffered only mild cuts and bruises.

Longeueria mother said workers told her they left the manhole uncovered and unattended for only seconds while they went to get cones from their truck. The city's Department of Environmental Protection said it was investigating the incident.

The girl's family said they are planning to file a lawsuit against the city. (Published news reports)

**

HAM HAPPENINGS: INTERNATIONAL LIGHTHOUSE AND LIGHTSHIP WEEKEND

Turning to the ham radio social scene, entries in the 2009 International Lighthouse/Lightship Weekend, have reached 262. Organizers say that this is well on schedule to equal or better last year's total of 406.

Australia currently leads the list with 42 entries, followed by Germany with 40. Some of the more exotic places taking part include light houses or light ships in Egypt, Panama, Gibraltar, Isle of Man, Sardinia, Iceland and Namibia.

International Lighthouse/Lightship Weekend, which this year begins on August 15th is fast becoming the most popular international event on the ham radio calendar. More information is on-line at illw.net (VK2CE)

**

THE SOCIAL SCENE: NORTH QUEENSLAND AUSTRALIA IN SEPTEMBER

Australia's North Queensland Amateur Radio Convention will be taking place in the garrison city of Townsville from Friday September 18th to Sunday 20th. Daytime events will be happening at James Cook University Douglas Campus with night time events centered on one of the better bistros and convention rooms in the city. The registration deadline for Convention services is Friday August 28th. For an electronic copy of the Venue and Events notes and a Registration Form either surf to the TARC website at www dot tarc dot org dot au or by e-mail to vk4wit (at) wia (dot) org (dot) au (VK4ZZ)

NAMES IN THE NEWS: HAM RADIO HONORS TO W4RA

Some names in the news. First up is former ARRL and IARU president Larry Price, W4RA. He was honored at "Ham Radio 2009" in Germany. This in a presentation made by IARU Vice President Ole Garpestad, LA2RR. Price was honored with the highest Norwegian Radio Relay League award called the Knight of the Order of the Golden Key. The award was given for W4RA many years of service to the IARU, the ARRL and Amateur Radio in general. But that's not all. IARU President Tim Ellam, VE6SH, then conferred the title of IARU President Emeritus upon Price. Price served as ARRL President from 1984-1992 and as IARU President from 1999-May 2009. (Southgate)

**

NAMES IN THE NEWS: FRANK BOLDEN JR., EX-KE4IQB TO HEAD NASA

Charles Frank Bolden, Jr., the former KE4IQB, has been confirmed by the Senate as the twelfth administrator of the National Aeronautics and Space Administration. Bolden commanded Shuttle missions STS-45 and STS-60 and was an active participant in the Space Amateur Radio Experiment or SAREX program.

Bolden's confirmation marks the beginning of his second stint with NASA. His 34-year career with the Marine Corps included 14 years as a member of NASA's Astronaut Office. After joining the office in 1980, he traveled to orbit four times aboard the space shuttle between 1986 and 1994, commanding two of the missions. (NASA)

NAMES IN THE NEWS: K5LBU SAYS SWAZILAND DXPEDITION NEEDS YOU

Charles Frost, K5LBU, better known on the air as Frosty is looking to put together a team of operators to do the CQWW DX SSB Contest in October 2010 from Swaziland. According to Frosty, this would be a 10 or 15 day operation with the contest in the middle. He plans to use one callsign for the contest and the rest of the time you can operate with your own 3DA0 callsign. If you would be interested in going on this operation please contact K5LBU by e-mail to frosty1 (at) pdq (dot)net

EMERGING TECHNOLOGY: DX GOES TO TWITTER

DX is going to Twitter. Ast least one DX news source is. Bill Pasternak, WA6ITF, has the details:

--

GB7MBC, one of Europe's busiest DX Clusters, is now on the Twitter social networking system. Postings provide such things as DX news, contests news and solar information. To follow GB7MBC on Twitter, just go to twitter.com/GB7MBC and add it to your list of 'tweets' you follow.

With the growing popularity of ham radio on Twitter its very likely that lots of other activities like radio club bulletins and the like will be soon showing up there as tweets as well. Maybe even a synopses of important Newsline stories will show up sometime soon. We are already looking for a volunteer who is willing to do that.

I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

More information on Twitter is at www dot twitter dot com. (G0YLM)

STATISTICS: 1.5 MILLION NOT WATCHING TV

You might find this one hard to believe, but more than a month after the nationwide switch to all digital television, the AC Nielsen company says that some 1.5 million United States households with television receivers in them remain unready for DTV. The good news is thats down 200,000 households from the 1.7 million households that weren't ready two weeks before the June 12th changeover took place.

The A.C. Neilsen Company is a survey organization that specializes in television viewership statistics. It defines as unready any homes that rely on over-the-air TV and don't have a digital TV set or a DTV-to-analog set-top converter hooked up. It was Nielsen's statistic last January that 5 million homes not prepared for DTV that lead Congress to delay the DTV move to June. Put another way, about 1.5 million people who used to watch TV in the USA are not doing so right now. (MultiChammel OnLine)

RADIO FROM SPACEL LUNAR ORBITER PHOTOGRAPHS APOLLO LANDING DITES

NASA has released new photos recently taken by the Lunar Reconnaissance Orbiter showing the Apollo moon landing sites. The pictures, radioed back to Earth, show the Apollo missions lunar module descent stages sitting on the moon's surface This, as long shadows from a low sun angle make the modules descent locations very evident.

The Lunar Reconnaissance Orbiter reached lunar orbit June 23rd and captured the Apollo sites between July 11th and the 15th. Though it had been expected that orbiter would be able to resolve the remnants of the Apollo mission, these first images came even before the spacecraft reached its final mapping orbit.

The Lunar Reconnaissance Orbiter Camera was able to image five of the six Apollo sites, with the remaining Apollo 12 site expected to be photographed in the coming weeks. Future images from these sites are expected to have two to three times greater resolution. You can see the pictures at:
http://www.nasa.gov/mission_pages/LRO/multimedia/lroimages/apollosites.html (NASA)

**

RADIO IN SPACE: THE COLDEST OF THE COLD

Talk about the cold of space. On July 2nd the flight detectors of Planck' spacecraft's High Frequency Instrument reached the amazingly low operating temperature of -273ï¿½C and did it by radio.

The cool-down took place as the spacecraft has just entered its final orbit around the second LaGrange point of the Sun-Earth system. Planck is equipped with a passive cooling system that brings its temperature down to about -230ï¿½C by radiating heat into space. Three active coolers were ordered to take over from there to bring the temperature down further to an amazing low of -273.05ï¿½C. That's only 0.1ï¿½C above absolute zero which is the coldest temperature theoretically possible in our universe.

Such low temperatures are necessary for Planck's detectors to study the Cosmic Microwave Background of space. That's the so-called first light released by the universe only 380000 years after the Big Bang that many researchers gave birth to it. It does so by measuring its temperature across the solar sky. (Space)

ON THE AIR: CELEBRATING 90 YEARS OF BTHE LATVIAN AIRFORCE

The Latvian callsign YL90AIR stands for 90 years airforce in that nation. The commemorative operation will remain on the air through years end. QSL it via bureau or eQSL. (Southgate)

**

ON THE AIR: CELEBRATING SPAIN'S SAN MIGUEL DE PEDROSO HAM GATHERING

On the air, listen out for Spanish special event station EG1SMP to be on the air between July 24th and August 7th, especial during the ham radio gathering in San Miguel de Pedroso between July 25th to the 26th. QSL via the bureau to EA2BT. (Via e-mail)

**

DX

In DX, word that F6ICX, will be active as 5R8IC from Saint Marie Island between November 17th and December 15th. His operation will be on 80-10 meters. QSL via his home callsign.

EA5RM, is expected to be working in Bolivia during the month of August. He says that he expects to be on the air during his spare time as CP1XRM. QSL as directed on the air.

M0TDG and G3ZAY will be active portable FP from Miquelon from September 24th to the 27th. Their activity will be on the low bands using CW and SSB. QSL via their home callsigns.

I1FQH, will be active as 5V7PRF from Kpalime, Togo, through July 30th. This will be a very light DXpedition with activity on 80 through 10 meters using mostly CW and some SSB. He will use 100 watts into a Spiderbeam for 20, 17 and 15m as well as a vertical and wire dipoles for the other bands. QSL to I1FQH via LoTW, eQSL or bureau.

A group of international operators will be operating from Lesotho starting July 29th and continuing through August 13th. Activity will be on all bands with some emphasis on 16o and 80 meters with two stations on most of the time using CW and SSB. There is the possibility of a 3rd station for PSK and RTTY. Calls to listen out for include 7P8AO, 7P8YI, 7P8MM and several others. QSL as directed on the air.

Lastly, DJ7RJ, has received the callsign TO7RJ to be used from Mayotte September 22nd and October 21st. He will then use his call portable FH from October 23rd until he leaves the island on October 25th. Listen out for him on 160 through 10 meters and possibly 6 meters using CW and SSB. QSL via his Callbook address.

(Above from various DX news sources)

THAT FINAL ITEM: RFID TAGS BEING USED ON LONDON SUBWAY

And finally this week, R F Identification tags that some hams believe could become another serious souce of interference are now being used to assist in maintaining the London subway system. John Williams, VK5BUI, has the details:

--

Confidex, a company with expertise in RFID design, manufacturing and engineering, has supplied more than 10,000 of its Ironside UHF Gen2

hard tags to the London Underground.

The tags are being used to improve escalator maintenance.

The underground escalators carry more than three million passengers every day. Most commuters and tourists don't give the travelling metal staircases a second thought; a fact that is a testament to the reliability of the system and the care taken over the maintenance.

The steps that make up these escalators are subject to constant wear from the feet of passengers and from the mechanical movement on the escalator track.

To address the need for faster, more accurate and more cost-efficient maintenance, RFID technology was chosen. A decision was made to use RFID tags.

The 'step tracking system' uses a PDA with RFID reader mounted on a cradle beside the escalator and application software to read and write information on the tag.

--

So far there have been no reports from the London VHF and UHF ham community of any interference problems being caused by the adoption of the RFID tag system. (WIA News)

==> BOARD DISCUSSES INAPPROPRIATE USE OF AMATEUR RADIO, STRATEGIC PLANNING, OTHER ISSUES AT SECOND 2009 MEETING

The ARRL Board of Directors held its Second Meeting of 2009 July 17-18 in Windsor, Connecticut, under the chairmanship of President Joel Harrison, W5ZN. On Friday, the Board considered and acted on a number of recommendations from committees as well as motions by Directors. Saturday was devoted to reviewing and revising the ARRL Strategic Plan that was adopted in October 2006 <http://www.arrl.org/members-only/stratplan/ARRL_Strategic_Plan_October_2006.pdf>.

Inappropriate Use of Amateur Radio: The Board authorized the President to appoint an ad hoc committee to prepare guidelines for use by the

amateur community and others to identify inappropriate uses of Amateur Radio, while preserving our role of providing communications during times of disasters and for public service events. The Board asked the committee to present its findings to the Executive Committee within 30 days.

Emergency Communications Advisory Committee: The Board considered, but ultimately declined to adopt a motion to establish an Emergency Communications Advisory Committee.

Amateur Auxiliary/Official Observer Program: Programs and Services Committee Chairman Bruce Frahm, K0BJ, announced the creation of an ad hoc subcommittee to study the Amateur Auxiliary/Official Observer program and recommend any desirable changes to the Board.

Emergency Liaison Station: The Board established a national-level appointment of Emergency Liaison Station to tie ARRL Headquarters to affected areas during disasters via Voice over Internet Protocol (VoIP) to HF or VHF linking.

Narrowband Channel Spacing: The Board directed the President to appoint a study committee for the purpose of research and to consider developing a plan to move the US amateur community to narrowband channel spacing in the VHF/UHF bands.

Volunteer Consulting Engineer Program: The Board extended the Volunteer Consulting Engineer program to registered professional engineers in addition to structural, civil and mechanical engineers.

Annual Audit: Acting on the recommendation of the Administration and Finance Committee as presented by Chairman Jim Fenstermaker, K9JF, the Board formally accepted the financial statements, including the auditors' opinion letter, for the year ending December 31, 2008.

ARRLWeb Redesign: A group from Fathom, a contractor based in Hartford, presented an update of the redesign of the ARRL's Web site.

IARU: The Board voted to appoint Rod Stafford, W6ROD, as IARU Secretary effective October 1, 2009. Stafford is retiring from full-time employment as of that date and will be available to serve as a volunteer in this capacity. The Board also directed the ARRL Secretary to cast a vote in favor of IARU Proposal No 245, concerning the admission of Union des Radioamateurs du Congo (URAC) to IARU membership.

Strategic Planning
The Board devoted a full day to reviewing and updating the three year old ARRL Strategic Plan. Last year, the Board invited ARRL members to comment on the League's future direction <http://www.arrl.org/members-only/stratplan/>. These comments were read and considered by the Board. Before turning the comments over to the Executive Committee, they added some thoughts of their own. The Executive Committee started drafting ideas for the new Strategic Plan at its March 2009 meeting.

The review process at the 2009 Second Meeting included breakout sessions to develop possible strategies to address each of six goals that will guide the ARRL for the next three to five years; the results of the breakout sessions were then reported back to the full Board. The complete output of the planning session will be reported back to the participants for e-mail discussion and then considered by the Executive Committee at its next meeting in October. The Executive Committee will refine the document.

Awards
The Board established the George Hart Distinguished Service Award to be given to an ARRL member whose service to the League's Field Organization is of the most exemplary nature. Selection criteria for this award may include an operating record with the National Traffic System (NTS), participation in ARES or station appointments and/or leadership positions held in the Field Organization. Nominations may be made by anyone, and the nominees should have a minimum of 15 years of service. Nominations will be considered by the Board at its Annual Meetings in January.

The Board made some changes to the Bill Leonard, W2SKE, Professional Media Award, establishing separate categories for audio formats, visual formats and print/text formats and redirecting the cash awards from the winners to an IRS 501(c)(3) non-profit organization of the recipient's choice.

Hiram Percy Maxim Award: The Board selected Jason Hatfield, KD8FDD, of Grafton, West Virginia, as the recipient of the 2008 Hiram Percy Maxim Award.

Technical Excellence Award: For the second year in a row the Board chose John Stanley, K4ERO, Georgia, as the recipient of the 2008 Doug DeMaw, W1FB Technical Excellence Award.

Technical Service Award: The 2009 ARRL Technical Service Award went to Geoffrey Haines, N1GY, of Bradenton, Florida for his prolific and clear writing.

Technical Innovation Award: Dan Smith, KK7DS, of Hillsboro, Oregon received the 2009 ARRL Technical Innovation Award for his programming contributions to digital communications.

Instructor of the Year Award: The Board selected Brian Short, KC0BS, of Olathe, Kansas, as the recipient of the 2009 Herb S. Brier Instructor of the Year Award.

McGan Memorial Silver Antenna Award: The Board selected Nate Brightman, K6OSC, of Long Beach, California, as the winner of the 2009 Philip J. McGan Memorial Silver Antenna Award for excellence in public relations.

Joe Knight Distinguished Service Award: The Board conferred ARRL Joe Knight Distinguished Service Awards on two long-time volunteers this year: former Western New York Section Manager Bill Thompson, W2MTA, of Newark Valley, New York, and Georgia Section Manager Susan Swiderski,

AF4FO, of Norcross, Georgia.

Guests
International Amateur Radio Union (IARU) President Tim Ellam, VE6SH, and Radio Amateurs of Canada (RAC) Vice President International Affairs Daniel Lamoureux, VE2KA, were guests of the Board.

The complete Minutes of the 2009 Second Meeting of the ARRL Board of Directors will be available soon on the ARRLWeb.

The next meeting of the ARRL Board of Directors is scheduled for January 15-16, 2010.

==> FCC CONTINUES BPL DEBATE

On July 17, the FCC issued a "Request for Further Comment and Further Notice of Proposed Rulemaking" ("FNPRM") <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-09-60A1.pdf>, addressing the issues remanded to them by the US Court of Appeals. In October 2007, the ARRL took the Commission to court concerning the Commission's Orders adopting rules governing broadband over power line (BPL) systems <http://www.arrl.org/news/stories/2007/10/25/102/?nc=1>. In April 2008, the Court agreed with the ARRL on two major points and remanded the rules to the Commission <http://www.arrl.org/news/stories/2008/04/25/10064/?nc=1>. Writing for the three-judge panel of Circuit Judges Rogers, Tatel and Kavanaugh, Judge Rogers summarized: "The Commission failed to satisfy the notice and comment requirements of the Administrative Procedure Act ('APA') by redacting studies on which it relied in promulgating the rule and failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions."

* New Information?

The Court found, among other things, that the FCC not only withheld the internal studies until it was too late to comment, but had yet to release portions of studies that may not support its own conclusions regarding BPL. The FCC claimed that the studies were "internal communications" that it did not rely upon in reaching its decision to adopt the BPL rules. In its April 2008 ruling, the Court ordered the FCC to release the studies. In March 2009, when the FCC still had not released the redacted portions of the studies as ordered by the court, the ARRL filed a Freedom of Information Act request for the studies. Six weeks later, the FCC released the redacted portions of the studies <http://www.arrl.org/news/stories/2009/05/08/10811/?nc=1>.

To contend with the Court's ruling, the Commission is now requesting comment on the information in those studies as it pertains the FCC's BPL decisions. The Commission is "also placing into the record certain additional materials that contain preliminary staff research and educational information" that was not previously made available. It is these records that concern ARRL Laboratory Manager and BPL expert Ed Hare, W1RFI.

"At the same time the FCC released the new 'FNPRM,' it also released 800 MB of previously unseen FCC internal staff reports and video on BPL," Hare said <http://www.arrl.org/tis/info/HTML/plc/BPL_FOIA.html>. "Although the FCC tries to downplay the work of their own staff by saying that these reports are only the opinion of one FCC staffer, these conclusions about BPL from the FCC Lab were made by FCC technical people with strong experience in measurement techniques and interference assessment. This is generally good engineering, with a clear objective of providing the Commission with accurate technical information about BPL."

According to Hare's preliminary review of the "FNPRM," the FCC's own technical findings clearly spell out that BPL operating at the FCC limits has a very strong potential to cause interference to licensed radio users: "These reports show that BPL causes interference to a number of licensed services for significant distances from BPL noise sources and that the noise from BPL at antennas that are about 100 feet from wires carrying BPL operating at the FCC limits will represent an increase in noise of about 30 dB in most cases."

Hare said that other slides show that radiated noise from overhead power lines increases significantly above the noise at ground level. "Based on these internal FCC technical analyses, the present rules and test methods -- when coupled with inappropriate distance extrapolation -- simply do not protect licensed users from interference," he said. "The Commission was well aware of the content of these presentations when it issued a BPL "Report and Order" that discounted ARRL when the League made many of the same technical points in its filings."

* Extrapolation Factor: FCC Looking for Compromise?

One of the major points of difference between ARRL and the FCC has been the measurement extrapolation factor below 30 MHz that is applied to measurements made at distances from power lines or other radiating sources to determine what the value of that measurement would be at a distance of 30 meters. This is the distance in the FCC rules for which maximum permitted emission are specified. The FCC believes that this factor should be 40 dB/distance decade.

Hare explained why this is incorrect: "The FCC's test method measures BPL emissions at ground level, using a loop antenna located 1 meter off the ground. Amateurs know that a low horizontal antenna radiates more energy upward than it does toward the horizon, and that a measurement made of a radiating power line at 1 meter off the ground is not a good indicator of the noise levels that will be present at angles upward from that same power line, where HF antennas are most apt to be located. The 40 dB extrapolation factor and the lack of any correction for height result in a BPL system that will significantly exceed the FCC emission limits at the very point where most Amateur HF antennas are located."

In response to its remand of a portion of BPL measurement procedure, the FCC is "also providing an explanation of our reasons for selecting 40 dB per decade as the extrapolation factor for frequencies below 30 MHz. We

further explain why we believe the studies and technical proposal submitted earlier by the ARRL do not provide convincing information that we should use an extrapolation factor that is different from that which we adopted," noting the existence of "more recent studies" that prove their point.

In the "FNPRM," the FCC states that they are "re-examining the current extrapolation factor in light of the recently issued technical studies addressing the attenuation of BPL emissions with distance and efforts by the IEEE to develop BPL measurement standards." Using these studies and older ones, the FCC said that "there can be considerable variability in the attenuation of emissions from BPL systems across individual measurement sites that is not captured in the fixed 40 dB per decade standard."

Based upon this "considerable variability," the FCC has opened a 30 day comment period, asking if they should change their rules to "adjust the extrapolation factor downward to 30 dB or some other fixed value and, as an alternative, also allow use of a special procedure for determining site-specific BPL extrapolation values using in situ measurements."

Hare notes that the "FNRPM" is creating a complex way to look for a simple solution to a complex problem. "It's ironic that the FNPRM discusses the 'considerable variability' in attenuation at BPL sites, then proposes that a measurement of a mere four points within that variability can determine the supposedly actual extrapolation. The NTIA Phase II study that is the 'newer study' that the FCC is relying on for part of its justification for 40 dB/decade shows an environment extremely more complicated than that. Trying to apply any measurement of extrapolation to this complex environment is a recipe for failure -- and possible 'cherrypicking' of results that will allow those making measurements of BPL systems to provide any value of extrapolation they want, in either direction. I serve on the IEEE committee that developed the draft for this extrapolation-measurement method and I did not stand alone in not supporting the approach that the P1775 Working Group has sent to ballot. At this point, the working group is in the process of resolving and rebutting the numerous comments received in the still-unresolved IEEE ballot."

Even though the FCC is inviting comments, they state that they "do not believe that the studies and technical proposal submitted earlier by the ARRL provide convincing information that we should use an extrapolation factor that is different from (and, specifically, less than) 40 dB. We believe that [other] studies [we have relied on] further validate the use of 40 dB as the extrapolation factor. In addition, the sufficiency of our rules for ensuring compliance is further validated by the fact that we have not had any new complaints of interference for more than two years."

Hare has worked extensively with the BPL industry to help it address interference. "If the FCC thinks that the falling off in BPL complaints is due to the sufficiency of its rules, it is mistaken," he said. "In

response to ARRL's input and offers of help, the industry has essentially stopped using the amateur bands in US deployments. The FCC's own video documentation of interference from BPL that is operating under the rules the FCC put forward should be more than sufficient to show that the rules as written are not good ones. The industry has reduced the interference from BPL by doing more than the rules require. By not using the amateur bands and by improving the filtering of BPL systems well beyond the inadequate requirements of the present rules, the industry and ARRL have shown that it is possible to operate BPL systems without widespread interference problems to Amateur Radio."

Hare said that what is needed now "are good rules and industry standards that reflect this successful model. That is not seen in this FNPRM. Rules that reflect the industry practice of not using the amateur bands and that specify state-of-the-art filtering could protect the Amateur Radio Service and support this still-nascent BPL industry."

==> WALTER CRONKITE, KB2GSD (SK)

Legendary CBS newsman Walter Cronkite, KB2GSD, who held the title of "Most Trusted Man in America," passed away Friday, July 17 after a long illness. He was 92. The avuncular Cronkite anchored the CBS Evening News for 19 years until 1981 when he retired. During that time, he reported on such subjects as the Kennedy assassinations, the Civil Rights movement, the Apollo 11 lunar landing, Vietnam and the Vietnam-era protests, the Arab-Israeli Six Day War, Watergate and the Begin-Sadat peace accords.

Cronkite, an ARRL member, narrated the 6 minute video "Amateur Radio Today" <http://www.arrl.org/ARToday/>. Produced by the ARRL in 2003, the video tells Amateur Radio's public service story to non-hams, focusing on ham radio's part in helping various agencies respond to wildfires in the Western US during 2002, ham radio in space and the role Amateur Radio plays in emergency communications. "Dozens of radio amateurs helped the police and fire departments and other emergency services maintain communications in New York, Pennsylvania and Washington, DC," narrator Cronkite intoned in reference to ham radio's response on September 11, 2001. "Their country asked, and they responded without reservation."

In 1963, it was Cronkite who broke into the soap opera "As the World Turns" to announce that the president had been shot -- and later to declare that he had been killed. CBS called it a "defining moment for Cronkite, and for the country. His presence -- in shirtsleeves, slowly removing his glasses to check the time and blink back tears -- captured both the sense of shock, and the struggle for composure, that would consume America and the world over the next four days."

Steve Mendelsohn, W2ML, was Cronkite's radio engineer at CBS for many years. "I had many chances to discuss my favorite hobby, ham radio, with 'the world's most trusted anchor man,'" he told the ARRL. "Gradually, his interest increased, but on finding that he had to pass a Morse code

test, he balked, saying it was too hard for him; however, he told me he had purchased a receiver and listened to the Novice bands every night for a few minutes. At the CBS Radio Network, Walter would arrive 10 minutes before we went on the air to read his script aloud, make corrections for his style of grammar and just 'get in the mood' to do the show. In those days Rich Moseson, W2VU, was the producer of a show called "In the News," a 3 minute television show for children voiced by CBS Correspondent Christopher Glenn. On this day, Rich was at the Broadcast Center to record Chris' voice for his show and had dropped by my control room to discuss some upcoming ARRL issues." At the time, Mendelsohn was the ARRL Hudson Division Director.

"When Walter walked into the studio, I started to set the show up at the behest of our director, Dick Muller, WA2DOS," Mendelsohn recalled. "In setting up the tape recorders, I had to send tone to them and make sure they were all at proper level. Having some time, I grabbed "The New York Times" and started sending code with the tone key on the audio console. For 10 minutes I sent code and noticed Walter had turned his script over and was copying it. We went to air, as we did every day, at 4:50 PM and after we were off, Walter brought his script into the control room. Neatly printed on the back was the text I had sent with the tone key. Rich and I looked at the copy, he nodded, and I told Walter that he had just passed the code test. He laughed and asked when the formal test was, but I reminded him that it took two General class licensees to validate the test and he had just passed the code. Several weeks later he passed the written test and the FCC issued him KB2GSD."

Mendelsohn helped Cronkite make his first Amateur Radio contact: "Having passed the licensing test, Walter was now ready to get on the air. His first QSO was on 10 meters about 28.390 MHz. He was nervous and I called him on the phone to talk him through his first experience. As we talked on the air, a ham from the Midwest come on and called me. Acknowledging him, I asked the usual questions about where he was from, wanting to give Walter a bit of flavor of what the hobby was about. I turned it over to Walter, and following his introduction, the gentleman in the Midwest said, 'That's the worst Walter Cronkite imitation I've ever heard!' I suggested that maybe it was Walter and the man replied, 'Walter Cronkite is not even a ham, and if he was, he certainly wouldn't be here on 10 meters.' Walter and I laughed for weeks at that one."

In 2007, ARRL Hudson Division Director Frank Fallon, N2FF, presented Cronkite with the ARRL President's Award. This award, created in 2003 by the ARRL Board of Directors, recognizes an ARRL member or members who "have shown long-term dedication to the goals and objectives of ARRL and Amateur Radio" and who have gone the extra mile to support individual League programs and goals. Cronkite was selected to receive the award in April 2005 in recognition of his outstanding support of the ARRL and Amateur Radio by narrating the videos "Amateur Radio Today" and "The ARRL Goes to Washington" <http://www.arrl.org/pio/VTS-video.wmv>. "It was quite a thrill to make this presentation to Cronkite," Fallon said. "He has long been recognized as the 'most trusted man in America,' so

lining our causes to his face, name and voice has been a great help."

A private memorial service was held July 23 in New York City. Cronkite will be cremated and his remains buried in Missouri next to his wife Betsy, who passed away in 2005. A public memorial service will be held within the next month at Avery Fisher Hall at the Lincoln Center for the Performing Arts. In lieu of flowers, the family is requesting donations to the Walter and Betsy Cronkite Foundation through the Austin Community Foundation <http://www.austincommunityfoundation.org/>, which will distribute contributions to various charities the couple supported.

==> THE DOCTOR IS IN THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Jeff Freedman, K7JF, of Gig Harbor, Washington, asks: I am setting up my beam antenna for the first time. I understand there is a true north and a magnetic north (or south for the Southern Hemisphere). What is the difference between true and magnetic? For which of the two should my beam be initially calibrated? If magnetic north, how do I know where to set the beam?

The Doctor Answers -- Magnetic north is the direction a compass needle points to, while true north is the direction to the Earth's northerly rotational axis point. They are indeed different in most places, and the difference is different for each spot on Earth. It also changes over time. The difference is referred to as magnetic variation on nautical charts and as magnetic declination in some other venues.

NOAA's National Geophysical Data Center provides information on the nature of this phenomenon as well as maps showing the correction <http://www.ngdc.noaa.gov/geomag/declination.shtml>. For example, at my station location in Connecticut, in 1981 the magnetic variation was 13 degrees west with an annual increase of 4 minutes. That means in 2009, it should be a bit less than 16 degrees. If you look at the US map on the above Web site you will see that they have it near the -15 degrees line.

In addition to the Web site, you can find your variation on any nautical chart of a location near your station, on any coast and geodetic survey map or call your town engineer. To convert magnetic north readings from your compass to true north, subtract if the variation is westerly (negative on the NOAA map), add if easterly.

Conceptually, either a true or magnetic reference could be used, as long as you keep track and convert everything to the same basis. All propagation programs that I am aware of give bearings with respect to true north, so I would suggest using true bearings on your rotator controller.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org>; or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> HAM RADIO HELPS OUT WITH MOUNTAIN RESCUE

It was a quiet afternoon on July 11 and Rich Lippucci, KI6RRQ, of Vista, California, was monitoring the Catalina Amateur Radio Association (CARA) repeater on his base station. "I heard someone come over the repeater, calling, 'Is there anybody listening?' I responded and the caller said he was on his handheld transceiver hiking around the Mt Baldy area. He was about 2.5 miles off road and resting at the wilderness San Antonio Ski Hut <http://angeles.sierraclub.org/lodges/sanantonioskihut.html>. A few hikers had arrived from farther in the backcountry -- one of their friends had broken an ankle and was a mile or more up the trail and they needed help." Mt Baldy is the highest peak in the San Gabriel Mountains and the highest point in Los Angeles County.

Lippucci asked the caller for his call sign and name. "He told me he was Kirk Gustafson, KE6MTF," he told the ARRL. "I asked Kirk if he had a cell phone, but he told me there was no cell service where they were. I told him I would coordinate emergency services over my landline and asked for his exact location. He did an excellent job; he had a good idea of where he was and wasn't sure which county he was in, but he did have GPS coordinates."

Using his landline, Lippucci called 911 and was transferred three times until he was connected to Chelsea in the San Bernardino County Sheriff's dispatch center. "Chelsea coordinated the rescue with the San Bernardino Fire Department who sent a foot patrol to the area," he said. "The Sherriff's office dispatched a helicopter to meet someone at the ski hut to take them to where the hiker was down. It took a little less than an hour for emergency services to get above the location in a helicopter, but they were not able to land the helicopter due to the rocky terrain at the ski lift." Lippucci said that while the foot patrol and helicopter were on their way, the group of hikers had brought the injured woman down the trail to the ski hut, stabilized her leg and determined it was probably not broken. They still did not feel they could carry her out as the trail down from the wilderness ski lift was so steep." The ski hut can only be reached via a steep three mile hike and 2200 feet elevation gain.

The dispatcher told Lippucci that the helicopter would perform a skid rescue where a crew member suspends a bed basket from the helicopter; the victim is secured and pulled back up to the helicopter. The dispatchers asked Lippucci to relay back to Gustafson, asking if the group needed anything, such as food or water. Gustafson relayed back that they didn't need anything. "After about 15 minutes from arriving on site, the helicopter and its crew got the victim airlifted out successfully without further complications," Lippucci said. Gustafson took a video of the rescue with his cell phone <http://marlene.zimage.com/ke6mtf/hike/rescue/iPhone/IMG_0408.MOV>.

Gustafson and Lippucci -- both ARRL members -- have been in contact since that Saturday afternoon. "Since the incident, Kirk informed me that the injured lady was around 40 years old and that there were up to 15 hikers hanging around the ski hut, some of which were search and rescue volunteers on vacation," he told the ARRL. "They had some kind of radios with them, but their batteries where dead. Kirk said when he got out of his car to start his hike, he grabbed his handheld transceiver radio and GPS. His friends told him 'That's just extra weight -- you won't need that.' He told them, 'I go nowhere without my radio. If I need to call for help, the only way I would be able to let them know where I am is with GPS. I'm bringing them.' I don't think they will say that next time! Kirk said that one of them decided they need to look into getting a ticket and radio and that the search and rescue folks said they were going to look into getting ham radio licenses."

Lippucci said that ham radio saved the day: "A handheld radio, hitting a local wide-area repeater, was what was needed when cell and landline phones were not available. Many thanks to the CARA club for their awesome reach in Southern California on 2 meters. Thanks also to those on the air that where very gracious to respect the traffic and keep communications open during the rescue. This is such an excellent example of the benefits of ham radio. If people had to hike out of the wilderness, get to their cars and find a cell signal, they might have been pushing up against the loss of daylight hours. Any rescue would have been significantly more difficult in the dark."

Lippucci told the ARRL that 911 and the Sherriff's office in San Bernardino accepted the ham radio call without hesitation. "They used a ham radio operator to relay questions to Kirk through me, to gain all the information they wanted and needed to put assets on the emergency," he said. "It was as if I was calling about something in my own backyard, even though the problem was several counties away in the mountains, with people I didn't know. I am proud to have had the opportunity to use my license in service of an emergency situation. As a CERT member <http://www.citizencorps.gov/cert/>, this was the very reason I got my ham radio license in the first place!" -- Information provided by Rich Lippucci, KI6RRQ

==> SPECIAL BONUS SECTION ADDED TO "ARRL HAM RADIO LICENSING MANUAL"

The most common question asked by new radio amateurs is "Now that I have my license, what kind of radio should I get?" The ARRL, in an attempt to help newcomers to Amateur Radio answer that very question, has added a bonus supplement to the ARRL Ham Radio License Manual <http://www.arrl.org/catalog/?item=9639>. "Choosing a Ham Radio: Your Guide to Selecting the Right Equipment" is aimed at the new Technician licensee ready to acquire a first radio, a licensee recently upgraded to General class and wanting to explore HF or someone getting back into Amateur Radio after a period of inactivity.

The guide features two main sections -- one covering gear for the VHF and UHF bands, and one for HF band equipment, including a VHF/UHF and an HF glossary of terms you will encounter. The guide also urges you to

discover just what you want to do with Amateur Radio and where you want to do it from. Do you want to be a "big gun" HF contester? Do you want to ragchew on your local repeater system? Maybe you want to join your local ARES unit and help provide communications support in times of emergency. This guide will help you select the right rig for what you want to do.

"Choosing a Ham Radio: Your Guide to Selecting the Right Equipment" isn't a traditional "buyer's guide" with feature lists and prices for many radios. Manufacturer's Web sites and catalogs from radio stores have plenty of information on the latest models and features. As such, you won't find operating instructions or technical specifications here, but many manufacturers' Web sites will let you download brochures and manuals directly.

Second only to "What kind of radio should I get?" "What kind of antenna do I need?" is the most common question asked by the new amateur. Don't worry! "Choosing a Ham Radio: Your Guide to Selecting the Right Equipment" talks about all kinds of antennas -- from "rubber duckies" to verticals to dipoles to Yagis; it even explains rotators and antenna gain.

An explanation of power, filters and digital signal processing (DSP), as well as special features commonly found on VHF/UHF and HF radios are also included in the guide. ARRL members who are logged on to the ARRL Web site can view the guide online <http://www.arrl.org/members-only/choosingaradio/>.

==>SOLAR UPDATE

Tad "The Sun himself has sent me like a ray" Cook, K7RA, this week reports: No new sunspots yet, but a big surprise this week with aurora and a geomagnetic storm: Sunspot activity peaked around 0300-0900 UTC on Wednesday July 22, with K index as high as 6. The planetary A index for the day was 24. One nice result was aurora propagation on 6 meters. A week ago there wasn't any indicator of increased activity. There is a new sunspot trying to emerge today (July 24), but it looks to be from Solar Cycle 23. Sunspot numbers for July 16-22 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 66.7, 66.2, 67, 67.6, 68.2, 67.7 and 67.8 with a mean of 67.3. The estimated planetary A indices were 4, 2, 3, 2, 6, 4 and 24 with a mean of 6.4. The estimated mid-latitude A indices were 2, 0, 1, 1, 3, 3 and 18 with a mean of 4. Geophysical Institute Prague predicts quiet geomagnetic conditions July 24-25, quiet to unsettled July 26 and back to quiet for July 27-30. The US Air Force and NOAA Space Weather Prediction Center calls for planetary A index of 5 for July 24-25, 8 on July 26, 7 on July 27 and back to 5 though the end of the month. They predict solar flux on July 24-26 at 68, 69 and 70, remaining at 70 through August 7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin

page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by George Gordon, Lord Byron's "Don Juan" <http://en.wikisource.org/wiki/Don_Juan_(Byron)>.

==>IN BRIEF:

* This Week on the Radio: This week, look for an NCCC Sprint Ladder on July 24. The RSGB IOTA Contest is July 25-26. Next week, the ARRL UHF Contest, the 10-10 Summer QSO Party and the North American QSO Party (CW) are August 1-2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration remains open through Sunday, July 26, 2009, for these online course sessions beginning on Friday, August 7, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* "Passport to World Band Radio" in "Limbo": The publisher of "Passport to World Band Radio" <http://www.passband.com/> told readers that the future of the seminal SWL guide is in "limbo." Acknowledging on the Passport's Web site <http://www.passband.com/passport-to-world-band-radio%C2%AE-in-limbo/> that "solid content" is essential to the success of a publication, publisher Larry Magne cited "other considerations" as the impetus behind the decision to possibly cease publication. While Magne gave no exact reason for the decision, it reflects the decline in popularity of shortwave listening, as well as the availability of shortwave schedules on the Internet. Magne said that "Passport to World Band Radio," which just released its 25th edition this year, will continue "to maintain the

WorldScan database and uphold all proprietary material. Among other things, this should help allow for an orderly return to production...should conditions allow. For Passport readers and our small team alike, this is a seminal moment. After all, 'Passport to World Band Radio' goes back a quarter century and has had something like a million readers worldwide. But the future has its own rhythm that confounds prognostication. There may yet be more chapters to this story. Stay tuned." "Passport to World Band Radio" is available from the ARRL Online Store <http://www.arrl.org/catalog/?item=0339>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective.

(NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1668 - July 31 2009

Amateur Radio Newsline report number 1668 with a release date of
Friday, July 31st, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. California hams assist in a mountain rescue.
We have the sound from the scene. Also, a new radio telemetry system
could be a big challenge to BPL for power grid control, another
petition to ban closed and private repeaters is filed with the FCC and
Johannes Kepler is honored with his own spaceship. Who was Johannes
Kepler you ask? Find out on Amateur Radio Newsline(tm) report number
1668 coming your way right now.

RESCUE RADIO: CALIFORNIA HAMS HELP WITH MOUNTAIN RESCUE

A pair of Southern California hams have helped to coordinate a mountain
rescue. This after one received a report from the other over a 2 meter
repeater that a hiker had been injured on one of the highest peaks in
the San Gabriel Mountain range.

Rich Lippucci, KI6RRQ, was monitoring the Catalina Amateur Radio
Association repeater from his home in the city of Vista on Saturday,
July 11th . That's when he heard a station ask if there was anyone
monitoring. He responded and learned that the caller, Kirk Gustafson,
KE6MTF, was on his handheld transceiver hiking around the Mt Baldy
area. He was about 2.5 miles off road at the San Antonio Ski Hut when
other hikers informed him that a woman was hurt up the trail in the
backcountry. They suspected she might have a broken ankle but were not
sure. They also had no cellphone service:

--

Rescue audio. Hear it in the audio version of this newscast
downloadable at www.arnewsline.org

--

Using his wireline telephone, Lippucci called the local 911 emergency
number and was eventually connected to the San Bernardino County
Sheriff's dispatch center. He then worked with an operator only
identified as Chelsea and coordinated the rescue with the San
Bernardino Fire Department who sent a foot patrol to the area:

--

Rescue audio. Hear it in the audio version of this newscast
downloadable at www.arnewsline.org

--

Meantime, the local sheriff's office dispatched a helicopter to meet someone at the ski hut to take them to where the hiker was down. Unfortunately, the chopper could not land in the rugged terrain.

In the meantime, the group of hikers had transported the injured woman down the trail to the ski hut, stabilized her leg and determined it was probably not broken. But they also realized that they could not carry her out of the area due to the steepness of the trail. The dispatcher told Lippucci that the helicopter would perform a skid rescue. That's where a crew member suspends a basket from the helicopter the victim is strapped in and pulled back up. It was not long before the helicopter was getting ready:

--

Rescue audio. Hear it in the audio version of this newscast
downloadable at www.arnewsline.org

--

At that point Gustafson relayed back that the rescue would likely happen momentarily.

--

Rescue audio. Hear it in the audio version of this newscast
downloadable at www.arnewsline.org

--

After about 15 minutes from arriving on scene the helicopter crew got the victim airlifted out and on her way to treatment.

According to Lippucci both the 911 emergency dispatch and the Sheriff's office accepted the ham radio emergency call without hesitation. The San Bernardino Sheriff's office has had a long and very positive relationship working with that county's radio amateurs. In fact, Lippucci says that they used a ham radio operator to relay questions to through him to Gustafson. This, in order to gain all the information they wanted and needed to put assets on the emergency.

The rescue was truly a success for ham radio. Lippucci says that as a CERT member, this was the very reason that got his radio license for, in the first place. (KR6AL)

**

RESCUE RADIO: KY HAMS TO TAKE PART IN INFLUENZA PREPAREDNESS DRILL

Still with rescue radio news, word that the Kentucky Division of Emergency Management and its Department of Military Affairs has invited the states organized emergency communications groups to take part in a statewide pandemic influenza exercise. One that is planned for August 3rd to the 7th.

According to the planners, the communications portion of the exercise will begin each day at 8:00 A.M. and run until approximately 8:00 P.M. Monday through Thursday and will end at 2:00 P.M. on Friday. One of the goals is to use pre-identified 2 meter and 80 meter frequencies to facilitate contact with all 120 counties in the Commonwealth. Some UHF repeaters and Echolink equipped stations will also take part.

Planners say that to some degree the ham radio aspect of the exercise will be like operating a week long net with a station in the Commonwealth Emergency Operations Center used to pass traffic and log check-ins. More information on this massive Kentucky emergency planning exercise can be found at www.kyham.net/kyem2009.html. (KG4KBU via QRZ.com)

EMERGING TECHNOLOGY: RADIO COULD CHALLENGE BPL FOR ELECTRICAL SYSTEM MONITORING

FM subcarriers on broadcast stations also called SCA channels could challenge BPL in the area of power grid monitoring. Jerry Gaul, KE7GGV, has the details:

--

B-P-L watch out. Here comes S-C-A. This, as e-Radio and Direct Energy announce that they are partnering with manufacturers of smart grid devices such as thermostats, in-home displays, load controls and appliances to use broadcast RF as a way to monitor power consumption needs.

Using FM subcarriers leased from radio stations, e-Radio transmits the notifications to the home-based receivers across a municipality or utility service area that results in significantly reduced peak energy demand. The technology can also intervene on the consumer's behalf, cycling off appliances for set periods of time during peak periods.

E-Radio and Direct Energy say that their Utility Message Channel allows utilities, energy retailers or government agencies to send alerts, messages and commands to smart grid-enabled devices and consumer appliances. This is information that tells them to lower their energy consumption and operate more efficiently.

The two partnering companies have conducted pilot tests in California, Texas and Ontario, Canada. In Texas, Direct Energy's affiliate, CPL Retail Energy, has launched a demand-response and energy efficiency pilot program for residential customers. The pilot uses e-Radio-enabled thermostats to achieve and measure peak period reductions.

For the Amateur Radio Newsline, I'm Gerry Gaule, KE7GGV, in Albany, Oregon.

--

Direct Energy has an agreement with e-Radio, which operates wireless communications networks and makes FM receiver modules for "smart grid" devices to partner in this energy saving project. (RW)

RADIO LAW: YET ANOTHER ANTI PRIVATE REPEATER PETITION FILED

Ham radio history is once again repeating itself. This as a Washington D.C. area ham becomes the latest to say its time to outlaw all closed and private repeaters and has asked the FCC for a rules change to outlaw these type of systems. And in a recent interview with Hap Holly, KC9RP, of the Rain Report, Murry Green, K3BEQ, of Cheverly, Maryland, explained what he is asking the regulatory agency to do:

--

Green: "I've asked the FCC to change the rules to prohibit limiting the use of frequencies used by closed repeaters directly or indirectly except where a user blatantly violates the Commissions rules."

Green told Holly that he's taking this action because he believes that the spectrum used by repeaters really belongs to all radio amateurs and that the claim by closed repeaters that limiting access helps share the financial burden has little merit:

--

Green: "Closed repeaters and its regulated frequency should be open to all amateurs having the proper class of licensee and not on a pay for use basis. Voluntary contributions work for the large majority of open repeaters throughout the United States. It can work for closed repeaters provided users are given that opportunity."

--

Green also appears to see closed and private repeaters as both discriminatory and a violation of the FCC's rules:

--

Green: "Its not a closed society. Its not an elitist group. You simply can't discriminate. And also it violates the FCC rules which state that frequencies are to be regulated effectively and used effectively. If you have an elitist group that's discriminating on who can come in, its wrong. It's simply wrong. Its not amateur radio."

--

Green is not the first ham to file a rules change request asking the FCC to outlaw closed and private repeaters. Since Newsline began in 1977 we have reported on at least 6 similar petitions, and maybe more. All of these were denied for the same reasons. First is that the FCC does not recognize the terms open, closed and private in regard to repeaters. To the FCC, a repeater is a repeater and the words open, closed and private are nothing more than ham radio terms that you will not find in the rules.

Also, as recently as last May's Dayton Hamvention FCC Forum, the agency's rules man, Bill Cross, W3TN, reiterated the FCC long standing position that is not in any way discriminatory for a repeater owner operator to be selective in whom he or she chooses to repeat:

--

Bill Cross, W3TN: "One of the common misunderstandings is that amateur radio repeaters are not common carrier systems. There is no duty to serve on a non-discriminatory basis.

"If you want to limit it (access to a repeater) to people in a DX club, that's fine. If you want to limit it rush hour messages that are going to be traffic related or mobiles get priority, that's fine.

"You put the repeater up. Its yours to run and (its) your obligation to control it and limiting it is allowed."

--

At airtime, its not known if the FCC will assign a Rule Making designation to the K3BEQ rules change request or simply dismiss it as being non relevant based on past proceedings. After all, if the regulatory agency does not even recognize the existence of closed and private repeaters as separate and distinct entities, how can it act to make a rule to make them go away. (ARNewsline(tm) with audio provided by RAIN)

**

ENFORCEMENT: REPEATER PROBLEMS CONTINUE IN THE UK

Malicious interference and other firms of on the air abuse are still plaguing repeaters in London, England. Because of this at least one system is considering some drastic action with support of government regulators. Jeramy Boot, G4NJH, reports:

--

Repeater users in the London area will be aware that abuse continues to mar the network with a minority making it unpleasant for those who simply wish to enjoy the hobby. The East London 2m repeater, GB3EL, has been suffering from abuse recently and the Keeper has instigated a curfew between the 6pm and 6am to reduce the instances of abuse.

This action has proven effective in the past and the RSGB Emerging Technologies Committee and Ofcom support the Keeper's actions. The ETCC encourages proactive measures by all Keepers to manage their repeaters in accordance with the terms of their NoVs. Users are especially asked to consider their own actions and not to react when abuse is heard, as this is just what abusers are hoping will happen.

Im Jeramy Boot and you are listening to the Amateur Radio Newsline.

--

The Term NOV used in that report stands for Notice of Variation to a UK ham license that permits one to put up a repeater. Unlike the United States where anyone install a temporary repeater to replace one that's gone dark to fight user abuse, in the UK it's the national society that holds all of the repeater operators licenses. An individual who decides to put one up without it being licensed could wind up doing some serious time in the old gray bar hotel. (RSGB)

NAMES IN THE NEWS: SENATE CONFIRMS CLYBURN AND BAKER AS FCC COMMISSIONERS

The U.S. Senate has confirmed President Obama's nominations of Democrat Mignon Clyburn, and Republican Meredith Attwell Baker, to the remaining two seats on the Federal Communications Commission. Clyburn is the daughter of House majority whip James Clyburn, and the former publisher and editor of the Charleston weekly newspaper, the Coastal Times. She currently serves on the South Carolina Public Service Commission. Baker, the daughter of former Senate Majority Leader Howard Baker, is a former Commerce Department official who oversaw the $40 coupon program for converter boxes during the digital television transition. Both were approved on Friday, July 24th (FCC) **

ELECTRONIC SAFETY: SMOKE DETECTOR RECALL

A product warning from the Consumer Products Safety Council. It says that About 94,000 Kidde model PI2000 dual sensor smoke alarms, have been recalled. This, because the agency says that an electrostatic discharge can damage the unit, causing it not to warn consumers of a fire. The recall includes the date codes 2008 Aug. 01 through 2009 May 04. The products were sold at retail, department, and hardware stores and through electrical distributors nationwide from August 2008 through May 2009. Details by Web at www.kidde.com or http://www.cpsc.gov. (CPSC Release)

**

RADIO EDUCATION: CALIFORNIA TEACHER TURNING OUR SCHOOL AGE HAMS

Amateur radio is finding a receptive young audience among some California school age youngsters. This, according to an article in the Los Angeles Times by writer Bob Poole who says that teenagers in one Los Angeles suburban middle school have been discovering shortwave radio and getting their ham radio licenses

Thanks to science teacher Karl Beutel, KE6MAO, some 75 teenagers in have already become licensed amateur radio operators and more will likely become hams in the coming years. This as the course will continued to be offered at the school.

Buetel said he was motivated to become a ham radio operator by the 1994 Northridge earthquake. You can read the LA Times story at www.latimes.com/news/local/la-me-teen-radio25-2009jul25,0,1740751.story ?trac k=rss (ARNewsline(tm))

**

RADIO PUBLICATIONS: PASSPORT TO WORLD BAND RADIO IN LIMBO

The publisher of Passport to World Band Radio has told readers that the future of the famed SWL guide is in "limbo." Acknowledging on the Passport's Web site that "solid content" is essential to the success of a publication, publisher Larry Magne cited what he termed as other considerations as the reason behind the decision to possibly cease publication.

According to the ARRL, Magne gave no exact reason for the decision, but indicated that it reflects the decline in popularity of shortwave listening, as well as the availability of shortwave schedules on the Internet.

Magne noted that Passport to World Band Radio, which just released its 25th edition this year, will continue to maintain the WorldScan database and uphold all of its proprietary material. He says that this should help allow for an orderly return to production, should conditions allow. (ARRL)

HAM HAPPENINGS: CELEBRATING THE 2010 SUMMER E SEASON

The Oklahoma City DX club recently celebrated the peak summer 6 and 10 meter Sporadic E Season DX season by operating with the call W5E. Its is now looking to expand the celebration in 2010 by asking clubs in other call districts to reserve a W prefix and E suffix call for next June.

Club spokesman Graham Welch, WE5I, says that the W5E call has already been reserved by him for July 2nd to the 11th of 2010. He is now looking for clubs or individuals in each of the 1 to 4 and 6 through 0 call areas who are interested in reserving one of the remaining nine such calls in a joint celebration of the 2010 peak of sporadic E

season. Graham says to contact him by e-mail to we5I (at)cox (dot) net if your club or group is interested in taking part. (Oklahoma DX Club)

**

ON THE AIR: MISSOURI SCOUTS ON HF SEEKING RADIO MERIT BADGES

A group of scouts from Blue Springs Missouri Troop 58 are operating a High Frequency station at the H. Roe Bartle Scout Reservation located in Camp Osceola. The scouts will be on the air in pursuit of their Radio Merit Badge through August 4th on 3.940 and 7.280 MHz using the special call N-Zero-Z. They will also be looking to exchange QSL cards via their Scoutmaster Michael Pratt, KB0EPY, whose address is good in the callbook or on QRZ dot com. (KB0EPY)

HAM RADIO IN SPACE: SPACE JAM 3 IN ILLINOIS

Take one part scouting. Add to it a high altitude ham radio balloon launch and a contact with the International Space Station. Mix it all together and you wind up with an event called Space Jam 3. Jack Parker, W8ISH, has the details:

--

While the world was watching replays of the history making moon walk last week, dozens of Illinois Boy Scouts were taking their first steps toward space technology.

Space Jam 3 got off the ground last week with a high altitude balloon launch in Rantoul, Illinois. Space Jam is sponsored by DePauw University. It's purpose is to get Scouts into technology.

With assistance from the Vermillion County Amateur Radio Association, they were able to launch a helium filled balloon and use the cross band repeater for amateur radio contacts across the Midwest.

The longest radio contact occurred when the balloon reached the 99-thousand foot level. Two stations, one in Walbridge, Ohio the other in Mexico, Missouri, completed a 470 mile QSO.

On the ground, Dave Cline KB9ZMF, said he thought 200 Boy Scouts were on the radios throughout the Space Jam. They also worked on high tech

merit badges in Space Exploration, ,Aviation, Radio & Electronics and on Nuclear Science Composite Materials

Talking with Astronaut Robert Thirsk, VA3CSA, onboard the International Space Station, topped the weekend Space Jam activities.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

Space Jam Four is already being planned for August of 2010. (W8ISH)

HAM RADIO IN SPACE: AMSAT-UK ANNOUNCES FUNCUBE

AMSAT-UK has announced a new amateur satellite project called FUNcube. This is an educational single cubesat project with the goal of educating young people about radio, space, physics and electronics.

FUNcube will support the educational science, technology, engineering, and math curricula and at the same time provide an additional resource for the Radio Society of Great Britain's GB4FUN Mobile Communications Center.

The target audience consists of primary and secondary school pupils and FUNcube will have a high power 145 MHz telemetry beacon that will provide a strong signal for the pupils to easily receive. It will also carry a UHF to VHF linear transponder that will have up to 1 watt and which can be used by radio amateurs worldwide for SSB and CW communications.

The FUNcube project has already received initial funding from the United Kingdom based Radio Communications Foundation and is expected be developed in collaboration with ISIS-Innovative Solutions in Space. (ANS)

**

HAM RADIO NEAR SPACE: BACAR SET TO LAUNCH ON SATURDAY AUGUST 8

The long awaited South African Balloon Carrying Amateur Radio or BACAR flight will take place on Saturday, August 8th. The lighter than air craft will lift off Africa between 08:00 and 08:15 and with a multi-payload which should be of interest to radio amateurs and shortwave listeners around the globe.

The payload includes an APRS system operating on 144.800 MHz which will be switched on 2 minutes before launch and allow APRS stations to follow the flight. A 40 meter beacon will be operating on 7.022 MHz transmitting telemetry information every one minute. The data will include the inside and outside temperature and the pressure in millibars.

The callsign of the APRS transmitter will be ZS6SAT. A full commentary of the launch activity to be broadcast on 7.082 MHz and streaming via EchoLink and on the world wide web. Please visit www.amsatsa.org.za for more information on the flight. (Southgate)

WORLDBEAT: CHINA NOW AT 90000 HAMS

Ham radio is growing in China. According to the Chinese Radio Sports Association which oversees licensing for hobbyists in the world's most populous country, some 90,000 of the worlds radio amateurs live in are in that nation and the number has been steadily growing in recent years. This, despite mobile phones and the Internet becoming commonplace in nearly all of the country. (Published news report)

**

WORLDBEAT: UK CELEBRATES WW2 RADIO SERVICES

Meantime, the famed museum at London's Bletchley Park will be celebrating the essential contribution of radio to the war efforts. This, with the family event the weekend of August 1st and 2nd called Wireless Waves. Various radio societies and other groups will demonstrate a range of equipment from World War Two onwards. Groups taking part include the Vintage and Military Amateur Radio Society, Milton Keynes Amateur Radio Society, Bletchley Park Radio Society and a World War Two replica German field radio station. Full details are at www.bletchleypark.org.uk. (GB2RS)

**

WORLDBEAT: US BASED TRANS-ATLANTIC BEACON UPS POWER

The WA1ZMS trans-Atlantic beacon operated by Brian Justin on 144.285 MHz is now running a 500 watt transmitter and giving the system a 7 kilowatt Effective Radiated Power signal beaming toward Europe. The beacon is G-P-S locked and the antenna is made up of two stacked 5-element yagi's beaming at 60 degrees from grid locator FM07fm. More about this system is on-line at www.directivesystems.com/WA1ZMS.htm (Southgate)

**

THE CONTEST CORNER: THE 2009 EUROPEAN DX CHAMPIIONSHIP

Turning to contest news, Saturday, August 1st is the European HF Championship contest. This event runs from 1200 until 2359 U-T-C using SSB and CW on all HF bands from 80 to 10 meters. The interesting exchange being used this year is the last two digits of the year you were licensed in addition to the obligatory signal report. An interesting exchange indeed. (Via e-mail)

**

DX

In DX, word that a multi-national operation from Swaziland will be on the air through August 11th. They will sign 3DA0SS from the Hawane Resort and a campsite near Manzini. Plans are to cover as many bands and modes as possible, including PSK31, RTTY and CW. Operations will be on or near to scout frequencies. QSLs should be sent via GI4FUM.

P49T and W3TEF portable P4 will activate P41USA over the anniversary date of the USA attacks on September 11th, 2001. Listen for P41USA to be active on all bands between September 8th and the 17th. Activity will include the September VHF Contest. All QSLs go to W3TEF.

OY1CT was active from Streymoy in the Faroe Islands during the RSGB IOTA Contest. If you work him QSL direct to OY1CT.

LA1BN and LA1LO will be operational on 50.155 MHz from grid square JO39 in the Norwegian mountains from August 10th to the 15th. QSL as directed by the operators.

Lastly, JA6VDB and JE6AQP will be active slash 6 from Japan's Nozaki Island, Ojika Island and Goto Island between August 8th to the 12th. Their operation will be on 40 through 15 meters using CW and SSB. QSL via their home callsigns, direct or via the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: HONORING KEPLER WITH A SPACESHIP

And finally this week, any ham who operates or tracks ham satellites is well aware of the term Keplerian Elements. That's the mathematics numbers used to point your antenna. Well in honor of the man who developed them, Europe's next space freighter will be called Johannes Kepler. This, in honor of the great 17th Century German scientist's work. Frank Lusa, VK2FJL, has the rest of the story.

--

Johannes Kepler was the father of celestial mechanics. His three laws describe planetary motion and allow scientists to predict how objects will move through the solar system.

The Automated Transfer Vehicle is currently being assembled in Bremen ready for its 2010 mission to resupply the International Space Station.

European Space Agency delegates agreed to the name at a recent meeting. The first ATV was called Jules Verne after the French science fiction writer and completed a flawless maiden mission last year. It delivered more than five tones of supplies to the orbiting outpost before dropping back to Earth in a controlled burn-up over the Pacific Ocean.

The ATV is one of the most capable spacecraft ever developed in Europe. After launch, the space truck can work out where it needs to go in space, and then makes a fully automatic docking once it arrives at its

destination.

--

Another Kepler spacecraft is also about to make the headlines. The US space agency has also used the Kepler name for its news planet hunting telescope due for launch in August. (WIA News)

ANDREW KOENIG, KE5GDB, NAMED RECIPIENT OF THE 2009 AMATEUR RADIO NEWSLINE(tm) "YOUNG HAM OF THE YEAR" AWARD

"Wow! Oh, my God. All my friends here at Seabase are going to be really impressed. Oh, my God!"

And, that's how it sounded when we caught up with Andrew Koenig, call letters KE5GDB, by cellphone at the Boy Scouts of America Seabase in Key West, Florida, where he had just arrived with members of Troop 848 from Houston for a week of scuba diving adventures.

The Life Scout, who is just shy of his 16th birthday, is working to earn the Eagle rank and was ecstatic to learn he had been chosen for special recognition by the Amateur Radio Newsline. Before telling him he had been selected as the Young Ham of the Year, we asked Andrew how he might feel if he were to receive such an award. He said it would be a nice honor to share with his mentors, including his award nominator Nick Lance, call letters KC5KBO, who has helped several NASA astronauts earn their ham tickets.

"Young Ham of the Year would probably go in the book of things that I've done in ham radio that they are really impressed with," Andrew said. "It would just mean a lot to me.

"Nick Lance, he hasn't really been pushing me to do anything. A lot of the stuff I discover on my own. But, he's one of the big roles, one of the key aspects in ham radio and it would give him a really good feeling to know that one of his students went on to get youth ham of the year."

Andrew holds a General class license and passed the test for his first ticket back in 2005 while a sixth-grader at the Westbrook Intermediate School in Houston where Lance - who is retiring in August from the Johnson Space Center - teaches an amateur radio license class.

Andrew is the son of Joe and Lauri Koenig of Houston. Joe holds the call letters KE5JQA and got licensed as a result of Andrew's interest. Andrew also has a younger brother, Kyle.

Among the achievements Andrew has accomplished is helping with an Amateur Radio on the International Space Station (ARISS) contact at the Westbrook Intermediate School.

"I actually helped test a lot of the equipment for the contact, since it was a telebridge contact," Andrew recalled. "The station that was actually contacting the ISS was in California, I believe.

"And, we were in Clear Lake, Texas. So, for some reason the phone patch wasn't working properly. So, I had to actually go into one of the school phones and test that - I think about 15 minutes worth of testing before the contact started. And, finally right on time, we got it going again and everything was working just fine."

The contact with Astronaut Clay Anderson, who holds the ham radio call sign KD5PLA, was a success - thanks to Andrew.

Andrew also helped facilitate a terrestrial contact between Astronaut Chris Hadfield (ham radio call letters KC5RNJ and VA3OOG) and students at two Canadian schools using an Internet Repeater Linking Project (IRLP) node he had built and placed in his bedroom closet.

Andrew, who enjoys VHF and UHF operations, tried and tried and was finally successful in making his own contact with the space station using his handheld radios and portable directional antenna. He also has participated in training astronauts at the Johnson Space Center on ARISS contacts with schools, conducting simulated contacts with them, playing the role of the school students.

Andrew has also been quite active with public service events through the Clear Lake Amateur Radio Club in suburban Houston where he is immediate past vice president. He is also a member of the Seabrook Citizen's Emergency Response Team.

Among his other achievements is creating his own bicycle mobile setup:

"I had tried putting a handi-talkie on my bike and I wasn't impressed with the results because the rubber duck just didn't get out as far as I wanted to," Andrew recalled. "A couple months before, I had ordered my first mobile rig (radio), the FT-7800.

"And, actually a couple weeks before I decided to put it all together on the bike, I had bought a brand new gel cell battery. So, I thought, you know, hey I've got this remote that came free with the radio, I've got the battery, I've got an antenna, I got everything I need to make it happen. So, I just mounted it all on the bike with zip ties and I

had 50 watts mobile on a bike for VHF and UHF."

That attracted some attention from CQ magazine, which was looking for photo ideas for its 2008 calendar. Photographer Larry Mulvehill (WB2ZPI) visited Houston and Andrew's bicycle mobile became the calendar photo for September 2008. He and his bedroom-closet IRLP node will be featured the cover of the September 2009 issue of CQ magazine.

Andrew is going into his sophomore year at Clear Lake High School where he is a member of the school's marching band. He is also into computers and creating websites and he maintains his own website started when he was in middle school. Check out www.thathamkid.com. It offers kid-friendly information about ham radio, along with a jokes page and a lot more about Andrew's activities in amateur radio - including his working satellites.

His mentor and nominator for this award, Nick Lance, KC5KBO, summed it up best when he said: "Andrew has truly been an outstanding student of amateur radio.....He is an inspiration both to his fellow students and to hams of all ages."

Award Ceremony

The 2009 Amateur Radio Newsline(tm) "Young Ham of the Year Award" will be presented to Andrew Koenig, KE5GDB, on Saturday, August 15th, 2009 at the Huntsville Hamfest in Huntsville, Alabama. As the 2009 "Young Ham of the Year," Andrew will receive -- courtesy of Vertex-Standard -- an expense-paid trip to the Huntsville Hamfest, along with a gift of Yaesu brand ham radio equipment. CQ magazine will treat him to an expense-paid week at Spacecamp Huntsville, and will present Andrew with a variety of CQ products. Amateur Radio Newsline(tm) will provide Andrew with a commemorative plaque at the award ceremony. Once again, the cost of year's plaque has been underwritten by Dave Bell (W6AQ), President of DBA Entertainment Inc., Hollywood California. Heil Sound Ltd. will also be presenting Andrew with a ham radio related gift.

The presentation of the award as a regular feature of the Huntsville Hamfest has been made possible through the generosity and kindness of the event's Planning Committee and the good offices of Huntsville Hamfest Association Vice President Charlie Emerson, N4OKL. (See http://www.hamfest.org)

This year's award ceremony will be hosted by Don Wilbanks (AE5DW) of Amateur Radio Newsline(tm) along with representatives of corporate underwriters Vertex-Standard and CQ Communications, Inc.

Award Program Background

The Amateur Radio Newsline(tm) "Young Ham of the Year" award (formerly the Westlink Report Young Ham of the Year Award) has been presented annually since 1986 to a licensed radio amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his/her community or the betterment of the state of the art in

communications through the Amateur Radio hobby/service. It maintains a website will full information on the award program and background material located at http://www.arnewsline.org.

Award Sponsors

The award program is jointly sponsored by the Los Angeles, California-based Amateur Radio Newsline(tm) with corporate support from Vertex-Standard Corporation of Cerritos, California and CQ Magazine of Hicksville, NY.

Since 1976, the Southern California-based Amateur Radio Newsline(tm) and its predecessor, the Westlink Radio Network, have been providing radio amateurs around the world with up-to-the-minute news at no cost to them. Amateur Radio Newsline(tm) also co-sponsors with the Quarter Century Wireless Association the "Roy Neal, K6DUE, Amateur Radio Mentoring Project" that serves as a clearinghouse to match radio amateurs in need of educational assistance on the hobby with those able to aid them. (See http://www.arnewsline.org)

The award's two corporate underwriters are world leaders in their respective areas of Amateur Radio product support.

Vertex-Standard Corporation is considered the trailblazer in the design, manufacture and distribution of high quality Vertex-Standard commercial two-way radio, monitoring and air-band communications equipment along with its Standard Horizon marine electronics line and Yaesu brand Amateur Radio equipment. The Yaesu name is known world-wide among ham radio aficionados and is synonymous with premium quality ham radio gear. (See http://www.vertexstandard.com)

CQ Magazine and its sister publications, CQ VHF, Popular Communications and WorldRadio Online, are published by CQ Communications, Inc., and are considered the trend-setting publications serving today's modern radio amateur. (See http://www.cq-amateur-radio.com)

Past Recipients

Past recipients of the "ARNewsline Young Ham of the Year Award" include Shawn Alan Wakefield, WK5P, of Bartlesville, OK (1986); David Rosenman, KA9PMK, of Muncie, IN (1987); Jonathan Binstock, NK3D, of Potomac, MD (1988); Erin McGinnis, KAOWTE, of Topeka, KS (1989); Mary Alestra, KB2IGG, of Staten Island, NY (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, MO (1991); Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux, N5XMH, of New Orleans, LA (1993); Allison Daneen Zettwoch, KD4CKP, of Louisville KY (1994); Adam Weyhaupt, N9MEZ, of Alton IL (1995); Toby Metz, KB7UIM, of Boise ID (1996); Brian Mileshosky, N5ZGT, of Albuquerque NM (1997); Richard Paczkowski, Jr., KF4BIA, of Edgewater, FL (1998); Michelle Swann, KE4EZI, of Warner-Robins, GA (1999); Christopher Arthur, KT4XA, of Russelville, AL (2000); Patrick Clark, KC8BFD, of Elkwood, WV (2001); Josh Abramowicz, KB3GWY, of Reading, PA (2002); Jay Thompson, W6JAY, of Santa Ana, CA (2003); Andrea Hartlage, KB4IUM, of Grayson, GA (2004),

Rebekah Dorff, WG4Y, of Hoover, AL (2005), Catherine Ferry, NC8F, of Streetville, OH. (2006), Grant Morine, W4GHM, of Wilmington, NC (2007) and Emily Stewart, KC0PTL, of Leavenworth, KS. (2008).

==> NEVADA HAMS COORDINATE ROADSIDE MEDICAL RESCUE

On the afternoon of July 16, ARRL Elko County (Nevada) Emergency
Coordinator Greg Barker, K7CWL, was making his way home on Nevada
Highway 278 when a van sped past him. About 60 miles later into his
trip, he saw the van slow down and pull over to the side of the road.
Barker, a physical therapist, pulled over and asked if he could assist.
An elderly couple, their daughter and granddaughter were on the way to
the hospital in Elko -- another 60 miles -- as the grandmother was
experiencing what they believed was a series of mini-strokes.
```

The daughter told Barker that their van kept losing power and wouldn't run. Barker assessed the grandmother and tried to call 911 on his cell phone, but there was no coverage in that area. "I put out a call on my mobile radio, requesting immediate assistance, using the 146.850 repeater located about 55 miles away, part of a wide-area linked repeater system maintained by the Elko Amateur Radio Club," he told the ARRL. "Kent LeBart, K6IN, club president and a radio technician for the Nevada State Highway Patrol, was monitoring the system and responded immediately, asking how he could be of assistance."

Using the crossband repeat mode on his mobile radio, Barker was able to stay with the family at the van. He also used his handheld transceiver to tell LeBart that the grandmother needed to get to the emergency room. "Kent contacted central dispatch and relayed the information I gave him and asked me questions from the dispatch about the patient's situation and condition," he said. "Based on that information, they sent a medivac helicopter from Elko and an ambulance from Carlin."

Barker said that Highway 278 has no mile markers: "I relayed information to dispatch about the location using the closest ranch name and mountain pass turn-off as landmarks. With this information, volunteer fire fighters and first responders were on scene in about 20 minutes and the helicopter was on scene in about 30 minutes, followed by the ambulance at about 35 minutes."

Another local ham, Joe Sasgen, AD7OO, was able to offer useful information about approximate arrival times of the helicopter and ambulance. "Joe was monitoring central dispatch out of Elko," Barker said. "This information was reassuring to the family."

Flight paramedics assessed the grandmother and determined that a flight was justified based on her condition, Barker told the ARRL. "I was able to take her husband into the hospital in Elko to meet his wife. This is another testament to the value and utility of Amateur Radio, particularly on the lonely highways of rural Northern Nevada."

==> LOCAL HAMS AID RESCUE SQUAD TO SOLVE PUBLIC SAFETY INTERFERENCE ISSUE

When you live on a remote island with numerous mountains and valleys, communications can be tricky. Add interference that blocks the main communications frequency used by the local emergency rescue squad and you've got a disaster waiting to happen. That's what responders and residents on St John in the US Virgin Islands recently found themselves facing.

On June 12, the primary repeater output frequency for St John Rescue <http://www.stjohnrescue.org/> was completely blocked by a 2-tone AFSK signal that continued for more than a week. Because St John Rescue uses the frequency to dispatch, monitor and provide two-way communications during emergency calls, it was vital that the cause of the problem be detected and corrected.

According to Phyllis Benton, NP2MZ, a Public Information Officer in the ARRL US Virgin Islands Section, some members of St John Rescue are also members of ARES. With some additional help from the FCC, three hams -- Paul Jordan, NP2JF, Mal Preston, NP2L, and George Cline, KP2G -- set out to find the source of the interference.

The interference was not directly affecting operation of a second rescue repeater, Benton told the ARRL. "St John Rescue Chief Gilly Grimes and Paul Jordan, NP2JF, used handheld Yagi antennas to 'fox hunt' for the source of interference," she said. "To their surprise, the signal was being received off the back of the antennas and coming in very strong."

The source of the interference turned out to be 32 miles away from a tower on Mount St Georges on the island of St Croix. "The carrier frequency was just 7.5 kHz above the rescue frequency of 158.7525 MHz," she explained. "Upon closer inspection, the problem was isolated to a repeater that is part of the new US Virgin Islands territory-wide MPT 1327 trunking system. This transmitter was licensed for and was putting out 120 W with a pass band of 50 kHz and was being tested as the control channel."

Benton said that the second, unaffected repeater operates at an output frequency of 159.660 MHz, far enough away from the trunking frequency being tested to avoid being affected: "This second repeater serves areas not covered by the primary repeater. So, until the problem was resolved, a large part of St John was left without reliable rescue emergency radio communications. Once the source of the problem was identified, the interference was turned off on June 19."

To head off any future interference problems, the trunking system promoters have asked St John Rescue to change its current repeater frequencies to frequencies that theoretically would not receive interference from the trunking system. Benton said that St John Rescue is considering this request. -- Information provided by PIO Phyllis Benton, NP2MZ

==> BAKER, CLYBURN CONFIRMED BY SENATE: FCC AT FULL SLATE

On Friday, July 24, the Senate confirmed the nominations of Meredith Attwell Baker and Mignon Clyburn as FCC Commissioners. Both nominees appeared before the Senate Committee on Commerce, Science and Transportation on July 15 to be vetted by the 25 members of the committee. Baker and Clyburn were nominated by President Barack Obama on June 25; no date has been set for their swearing in.

Clyburn will fill the unexpired term of Republican Deborah Taylor Tate, whose tenure as a Commissioner came to a close on January 3, 2009 when the Senate failed to confirm her nomination; Clyburn's term will expire June 30, 2012. Baker will fill the unexpired term of fellow Republican and former Chairman Kevin J. Martin who resigned in January 2009; her term will expire June 30, 2011. Baker will join Robert McDowell as a Republican on the Commission. Current Commissioner Michael Copps is a Democrat, as are Chairman Julius Genachowski and Clyburn. Only three

sitting Commissioners may be members of the same political party.

For much of this year, the FCC has been operating with just three commissioners. Once Genachowski was sworn in as chairman, Commissioner Jonathan Adelstein, a Democrat, left the FCC. He was confirmed by the Senate as the Administrator for the United States Department of Agriculture's Rural Utilities Service (RUS), also on July 24. Chairman Genachowski said that he is looking forward to "forging a strong partnership with Jonathan as the FCC and RUS collaborate to extend the benefits of broadband to all corners of the country."

Meredith Baker Attwell
Baker, the daughter-in-law of former Secretary of State James Baker, served as the Acting Assistant Secretary for Communications and Information and the Acting Administrator of the National Telecommunications and Information Administration (NTIA) from 2007 to January 2009. Named as Deputy Assistant Secretary in February 2007, Baker first joined NTIA as a Senior Advisor in January 2004, and also served as Acting Associate Administrator for the Office of International Affairs and on detail to the White House, Office of Science and Technology Policy.

Baker spearheaded the coupon program for digital-to-analog converter boxes to help facilitate the transition to digital television (DTV). She has served on delegations representing the United States at major international telecommunications conferences and engaged in bilateral discussions with senior level officials from countries around the world. Before joining NTIA, Baker was Vice President at the firm of Williams Mullen Strategies where she focused on telecommunications, intellectual property and international trade issues. From 2000-2002, she held the position as Senior Counsel to Covad Communications. Before that, she was Director of Congressional Affairs at the Cellular Telecommunications Industry Association (CTIA) from 1998-2000. In the 1990s, Baker worked at the US Court of Appeals Fifth Circuit in Houston and later at the law firm of DeLange and Hudspeth. From 1990-1992, she worked in the Legislative Affairs Office of the US Department of State in Washington, DC.

In her opening statement at her confirmation hearing, Baker spoke of the need for broadband technology. "Chairman Genachowski, who is off to a great start at the FCC, gave an inspirational introductory speech to the FCC staff on the day of his arrival," she said. "He stated that the promise of technology has never been brighter and consequently, the obligations of the Commission have never been greater. I share that view. The FCC holds the keys to unleashing the power of broadband, the new media landscape and true public safety interoperability. That responsibility is challenging but the rewards will truly make a difference in the life and future of every American" <http://commerce.senate.gov/public/_files/BakerStatement.pdf>.

Baker reminded the Committee that Congress has directed the FCC to develop and implement a National Broadband Plan by February 2010. "This

directive holds great promise for our nation," she said. "Not only do many aspects of our children's education and opportunities for lifelong learning depend on this directive, but so too does the next generation of health care delivery, smart energy grid development, and public safety interoperability. The FCC will play an important role in making sure that the right regulatory environment exists to incent companies to build out infrastructure faster, to reward innovation and investment and to encourage competition."

She also spoke about the Radio Spectrum Inventory Act that was introduced in March in the Senate; a companion bill was introduced in the House in early July <http://www.arrl.org/news/stories/2009/07/15/10964/>: "I believe we can reap great benefits from a spectrum policy that unlocks the value of the public airwaves in more efficient, transparent and flexible ways. The Spectrum Inventory bill that this Committee marked up last week shows important leadership and is a first step to increasing wireless broadband use in innovative ways such as secondary markets, leasing, and testbeds."

Chairman Genachowski congratulated Baker on her confirmation. "Meredith is a distinguished public servant who will bring unique insight and expertise to bear in the agency's policymaking process," he said. "I enthusiastically await Meredith's arrival at the FCC and the opportunity to collaborate with her on advancing our shared goal of improving the lives of all Americans. With the full slate of Commissioners on board, I look forward to working with all of my colleagues on policies that advance innovation, investment, competition and consumer interests."

Mignon Clyburn
Clyburn, the daughter of House Majority Whip Representative James Clyburn (D-SC), has served on the Public Service Commission of South Carolina since 1998. The Public Service Commission regulates South Carolina's investor owned public utilities, including providers of telecommunications services. Before her election to that body, she spent 14 years as the publisher and general manager of The Coastal Times, a weekly newspaper in Charleston, South Carolina.

In 1998, Clyburn was elected by the South Carolina General Assembly as a Commissioner to represent the Sixth Congressional District; she has been re-elected three times, chairing the Commission from 2002-2004. She is a past chair of the Southeastern Association of Regulatory Utility Commissioners, and is presently the chair of the Washington Action Committee of the National Association of Regulatory Utility Commissioners (NARUC). Clyburn also serves on NARUC's Audit Committee and Utilities Market Access Partnership Board.

Clyburn told the Committee that she will "work with each member of [the Commerce, Science and Transportation] Committee to ensure that the FCC is fair, open and transparent and that it protects consumers, encourages robust competition in the marketplace and champions technological innovation."

In her opening statement, Clyburn emphasized that "We also must ensure that all Americans have access to and can make productive use of the communications tools essential to making the American Dream a reality. Most notably, by providing universal, high-speed, high-quality affordable access to broadband we can establish the essential underpinnings for enduring national prosperity" <http://commerce.senate.gov/public/_files/ClyburnStatement.pdf>.

In speaking to the Committee, she said she was "a strong believer in the value of collaboration within and among levels of the government," and has "witnessed first-hand the benefits of and necessity for cooperation among local, state and federal governmental agencies. These partnerships are essential to achieving a uniform and predictable regulatory environment in which technological innovation can thrive."

Clyburn said that network operators should have "reasonable tools" to control what goes over their networks. She said that whether network neutrality regulations were needed would depend on whether the market was competitive. If so, there might be no need, but if not, it warranted consideration.

"It is with great pleasure that I congratulate Mignon L. Clyburn on her Senate confirmation," Chairman Genachowski said. "Mignon's deep commitment to public service, experience in state government, and entrepreneurial expertise will be invaluable assets to this agency. I enthusiastically await Mignon's arrival at the FCC and the opportunity to collaborate with her on advancing our shared goal of improving the lives of all Americans through communications. With the full slate of Commissioners on board, I look forward to working with all of my colleagues on policies that promote innovation, investment, competition and consumers."

==> FCC ISSUES CITATION TO PART 15 MARKETER

On July 28, the FCC issued a Citation to Hobby Lobby International (HLI) <http://www.hobby-lobby.com/> for marketing non-compliant radio frequency devices <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-1626A1.pdf>. According to the Commission, these devices were in violation of the Communications Act of 1934, As Amended and the Commission's Rules, as well as United States Customs and Border Patrol regulations.

On March 5, the Spectrum Enforcement Division of the Commission's Enforcement Bureau sent HLI a Letter of Inquiry, initiating an investigation. The FCC wanted to know if the Tennessee-based company was marketing an unauthorized radio frequency device, specifically, the Pilot View FPV 2400 video transmitter <http://www.rcgroups.com/forums/showthread.php?t=858566>. According to the Citation, the FCC observed that the device was marketed on the retailer's Web site.

HLI responded to the Letter of Inquiry on May 7, telling the FCC that they began selling the Pilot View FPV 2400 video transmitter on May 12,

2008; they have sold 109 units of the device in the United States. In its reply, the company told the FCC that the manufacturer of the transmitter, Intelligent Flight, an Australian company, represented to them that the device was FCC compliant. HLI admitted they imported the transmitters, but did not file any FCC Form 740s for the imported units (before radio frequency devices may be imported to the United States, an FCC Form 740 [or the electronic equivalent] must be filed with the United States Customs and Border Patrol). According to the Citation, HLI stated that the last date that a transmitter was received was November 17, 2008, which is around the time that HLI's contact at Intelligent Flight stopped responding to their requests for further information concerning the device.

The FCC noted that HLI sent a unit to a test lab prior to receiving the Letter of Inquiry. "After receiving the Letter of Inquiry, HLI contacted the test lab to inquire about the test results and learned, for the first time, that the device is not FCC compliant," the Citation said. "HLI provide[d] a copy of the test results, which indicate that the device substantially exceeds FCC radiated emission limits. HLI state[d] that [they] discontinued selling this device as soon as it became aware that the device was not FCC compliant."

The FCC said "it appears that HLI violated Section 302(b) of the Act and Sections 2.803 and 15.209 of the Rules by marketing in the United States the Pilot View FPV 2400 transmitter. It also appears that HLI violated Section 2.1203 of the Rules by importing the Pilot View FPV 2400 transmitter without making the required import declaration."

HLI was warned that "if, after receipt of this citation, you violate the Communications Act or the Commission's Rules in any manner described herein, the Commission may impose monetary forfeitures not to exceed $16,000 for each such violation or each day of a continuing violation." The company was given 30 days to respond to the Citation either through a personal interview at the Commission's Field Office nearest to your place of business or a written statement. HLI was advised that any response should specify the actions that they are taking to ensure that they do not violate the Commission's Rules governing the marketing and importing of radio frequency equipment in the future.

==> SPACE SHUTTLE ENDEAVOUR TO DEPLOY STUDENT-BUILT SATELLITES

The space shuttle Endeavour returned to Earth on Friday, July 31, but before it left orbit, it deployed four student-built satellites, all with telemetry downlinks in the 2 meter (70 cm) amateur bands.

The twin spherical satellites -- named Castor and Pollux -- were designed by students in cooperation with the Naval Research Laboratory as part of the Atmospheric Neutral Density Experiment (ANDE) <http://www.nasa.gov/mission_pages/station/science/experiments/STP-H2-ANDE.html>. Both satellites will transmit 1200-baud packet radio telemetry on 145.825 MHz. Hams are encouraged to submit telemetry reports with special QSLs and mission patches planned (check the ANDE Web site for

updates).

Castor and Pollux carry an FX.25 experiment that adds Forward Error Correction to standard AX.25 packets. The hope is that FX.25 will improve communication efficiency while still being compatible with existing packet equipment. The satellites also occasionally run GMSK/FX.25 modulation experiments at 9600 baud.

In addition to Castor and Pollux, Endeavour also deployed student satellites from the University of Texas and Texas A&M. The tiny picosatellites, christened BEVO-1 and AggieSat2, respectively, are part of an ambitious experiment that will ultimately culminate in autonomous docking of picosats in orbit. For this mission, however, BEVO-1 and AggieSat2 launched as one unit and then separated to collect position data and test a new NASA Global Positioning System receiver known as DRAGON.

BEVO-1 transmits Morse code beacons (20 WPM) or packet radio data telemetry at 437.325 MHz. AggieSat2 beacons at 436.250 MHz. The satellites primarily transmit 9600-baud packet telemetry when over the United States. As with Castor and Pollux, reception reports are welcome <http://paradigm.ae.utexas.edu/ops/>.

Orbiting at a relatively low altitude of 185 miles, these satellites should be easy to receive with standard FM transceivers and omnidirectional antennas. They should enjoy an operational life of 3-6 months and will likely re-enter the Earth's atmosphere within a year.

==> FUNcube CUBESAT PROJECT ANNOUNCED

AMSAT-UK <http://www.uk.amsat.org/> has announced a new amateur satellite project -- FUNcube <http://www.funcube.org.uk/> -- an educational single cubesat project that features a 435-145 MHz linear transponder for SSB/CW operation. According to AMSAT-UK, FUNcube will "enthuse and educate" young people about radio, space, physics and electronics. "The idea of FUNcube is to combine an educational project to excite young people with a simple linear transponder for radio amateurs to use with either legacy modes like CW and SSB, or, still to come, digital ones," said IARU Region 1 Satellite Coordinator Graham Shirville, G3VZV. Shirville is also affiliated with AMSAT-UK and ARISS-Europe <http://www.ariss-eu.org/>.

FUNcube's target audience consists of primary and secondary school students. The new satellite will feature a 145 MHz telemetry beacon that will provide a strong signal for the pupils to receive. "A simple receiver board is being developed," Shirville explained. "This can be connected to the USB port of a laptop to display telemetry in a fun way for the kids to learn. FUNcube will contain a materials science experiment, from which the school students can receive telemetry data that they can compare to the results they obtained from similar reference experiments in the classroom." FUNcube is the first cubesat designed to benefit this age group and is expected to be the first

British cubesat to reach space.

According to Shirville, FUNcube would be launched into a Sun Synchronous Low Earth Orbit (about 600-700 km above the Earth) using one of the many launch opportunities that exist for cubesat missions. According to QST Editor and satellite expert Steve Ford, WB8IMY, since FUNcube will be in a low orbit, amateurs from all around the world, including North America, should be able to access it.

FUNcube will carry a UHF-to-VHF linear transponder that will have up to 1 W and that can be used by radio amateurs worldwide for SSB and CW communications. Measuring just 10x10x10 cm and with a mass of less than 1 kg, it will be the smallest ever satellite to carry a linear transponder. The choice of frequencies will enable radio amateurs to use their existing VO-52 or DO-64 station.

A key feature of the satellite is the absence of an on-board computer. For reliability and maximum power efficiency, Shirville explained that the design has been kept as "straight-forward as possible," with satellite control being achieved using simple commands.

Shirville said the project should take less than a year to build: "Then we need to find a cubesat launch opportunity. We believe that this is an achievable mission with a relatively short timescale."

AMSAT-UK teams have provided hardware for more than 10 satellites over the past 35 years, including SSETI Express in 2005. They are presently involved with the development of hardware and software for a number of satellite projects, including the European Student Earth Orbiter (ESEO), P3E, SuitSat2 <http://suitsat2.org/>, the Columbus module on the International Space Station and also the GENSO Ground Station Network. "We hope that ESEO and SuitSat2 might have data formats with VHF downlinks that are also compatible with FUNcube-- this would make the educational potential even greater," Shirville said. -- Information provided by Graham Shirville, G3VZV

==>SOLAR UPDATE

Tad "Speckled by the mid-day Sun" Cook, K7RA, this week reports: No sunspot activity this week, and if no sunspot appears today, July 31, the average sunspot number for July will be 5.1; this is down from June's average of 6.6. The monthly average of the daily sunspot number, January-July 2009, is 2.8, 2.5, 0.8, 1.3, 4, 6.6 and 5.1. The three-month averages for October 2008-June 2009 were 4.5, 4.4, 3.6, 2.2, 2, 1.5, 2, 4.2 and 5.2. This takes into account all the daily sunspot numbers for September 2008-July 2009, and those numbers are for the center months of each of those three month moving average periods. Sunspot numbers for July 23-29 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 67.8, 68.3, 69.1, 67.6, 68.4, 68.7 and 68.3 with a mean of 68.3. The estimated planetary A indices were 8, 6, 7, 3, 4, 4 and 2 with a mean of 4.9. The estimated mid-latitude A indices were 8, 5, 5, 1, 2, 3 and 2 with a mean of 3.7. Geophysical Institute Prague

predicts unsettled conditions July 31, quiet to unsettled August 1, quiet August 2-4, quiet to unsettled August 5 and unsettled August 6. For this weekend, the planetary A index is predicted at 7, which is slightly more active than it has been lately. A solar wind from a coronal hole would be the cause. We are hoping for a return of a recent sunspot group, but only a weak sunspot was spotted from European observatories this morning (July 31). For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Samuel Taylor Coleridge's "This Lime-tree Bower My Prison" <http://www.poetryfoundation.org/archive/poem.html?id=173248>.

==>IN BRIEF:

* This Week on the Radio: This week, there is an NCCC Sprint on August 1. The ARRL UHF Contest, the 10-10 Summer QSO Party and the North American QSO Party (CW) are August 1-2. Next week, there is an NCCC Sprint Ladder on August 7. The WAE DX Contest (CW) and the Maryland-DC QSO Party are August 8-9. The SKCC Weekend Sprint is August 9. The MMMonVHF/DUBUS 144 MHz Meteorscatter Sprint Contest and the NAQCC Straight Key/Bug Sprint are August 12. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 23, 2009, for these online course sessions beginning on Friday, September 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE

Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Amateurs Provide Communications Support During Gas Leak: On Friday, July 23 at 2 PM, Sacramento City CERT <http://www.sacramentocert.net/> activated Sacramento City Fire CERT and Sacramento County ARES for a large natural gas leak in South Sacramento. According to ARRL Sacramento Valley Section DEC and CERT Communications Manager Frank Reshke, N6SNO, a two block area was evacuated due to the leak. "Around 30 people came to a shelter that had been set up at a local church," he said. "This is where the CERT and ARES amateurs established a communications network with the Unified Command of Sacramento City Fire and Police and the Red Cross." Reshke said the incident lasted for four hours: "At 6:05 PM, the Unified Command allowed the evacuees back into the neighborhood." -- Information provided by Frank Reshke, N6SNO

* FCC Expands ARRL's 500 kHz Experimental License: On July 28, the FCC approved a modification that expands the ARRL's 500 kHz experimental license WD2XSH <https://fjallfoss.fcc.gov/els/GetAtt.html?id=100140&x=.>. According to Experiment Coordinator Fritz Raab, W1FR, the expansion allows for more frequencies, more stations and portable operations. "We can now operate between 495-510 kHz," Raab said. "We were previously limited to 505-510 kHz. We will not be using 500 kHz itself so as to ensure that there is no conflict with the heritage stations on that frequency. The expansion also gives us the opportunity to expand the number of participating stations. We can now have 42 stations, where before we were limited to 23." Raab said that the expansion will now let participants operate within 50 km of their designated stations. This was not allowed under the previous terms of the experimental license. "Some stations have reduced operating bands to ensure that they do not interfere with nearby non-directional beacons (NDB). The FCC's Office of Engineering and Technology granted the WD2XSH experimental license to the ARRL in September 2006 <http://www.arrl.org/news/stories/2006/09/15/104/>. Find out more information on the ARRL's 500 kHz Experiment in the July/August 2007 issue of QEX <http://www.arrl.org/qex>.

* International Lighthouse/Lightship Weekend: More than 300 lighthouses in more than 51 countries -- from Argentina to Wales -- will be on the air for 2009 International Lighthouse/Lightship Weekend (ILLW) <http://illw.net/> organized by the Ayr Amateur Radio Group (AARG) in Scotland <http://www.gm0ayr.org/>. The event, held for the 11th year in a row, takes place Saturday, August 15 0001 UTC-Sunday, August 16 2359 UTC. While not a contest, the ILLW is more of a QSO Party and Amateur Radio demonstration. The ILLW aims to raise public awareness of lighthouses and lightships and the need for their preservation and restoration, promote Amateur Radio and foster international goodwill. Stations at more than 40 US lights are expected to be on the air for the event, and several stations will identify with special event call signs. Participating lighthouse/lightship stations do not have to be inside the structure or on the vessel itself; a Field Day-type setup at or adjacent

to the light is sufficient. More information about the event, including a registration form, is available on the ILLW Web site <http://illw.net/2009_list.htm>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

333. July 22 2009 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-02 15:31:49 UTC
From: N2EY@AOL.COM
Message-ID: <f8c75249-f75c-462a-a6e5-1dd6619f95ac@p15g2000vbl.googlegroups.com>
Source record: 1943

These are the number of current, unexpired FCC-issued amateur radio licenses held by individuals on the stated dates, and the percentage of the total number of active licenses that class contains.

Percentages may not add up to exactly 100.0% due to rounding.

These totals do not include licenses that have expired but are in the grace period, nor do they include club, military and other station-only licenses.

Effective April 15, 2000, FCC no longer issued new Novice, Technician Plus and Advanced class licenses, so the numbers of those license classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all existing Technician Plus licenses as Technician. The number of Technician Plus licenses still in effect is now less than 1000, and by May 2010 they should all be gone.

It is therefore informative to consider the totals of the two classes, since the Technician class includes a significant number of Technician Plus licenses renewed as Technician.

On February 23, 2007, the last Morse Code test element, the 5 wpm receiving test, was eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%) Technician - 205,394 (30.4%) Technician Plus - 128,860 (19.1%) General - 112,677 (16.7%) Advanced - 99,782 (14.8%) Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%) Technician - 293,508 (44.8%) Technician Plus - 30,818 (4.7%) General - 130,138 (19.9%) Advanced - 69,050 (10.5%) Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of July 22, 2009:

Novice - 17,362 (2.6%) Technician - 328,147 (48.7%) Technician Plus - 820 (0.1%) General - 148,270 (22.0%) Advanced - 61,060 (9.1%) Extra - 117,751 (17.5%)

Total Tech/TechPlus - 328,967 (48.8%)

Total all classes - 673,410

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433 Technician - increase of 88,114 Technician Plus - decrease of 98,042 General - increase of 17,461 Advanced - decrease of 30,732 Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to July 22, 2009:

Novice - decrease of 31,967 Technician - increase of 122,753 Technician Plus - decrease of 128,040 General - increase of 35,593 Advanced - decrease of 38,722 Extra - increase of 39,001

Total Tech/TechPlus - decrease of 5,287

Total all classes - decrease of 1,382

>From February 22, 2007, to July 22, 2009:

Novice - decrease of 5,534 Technician - increase of 34,639 Technician Plus - decrease of 29,998 General - increase of 18,132 Advanced - decrease of 7,990 Extra - increase of 9,481

Total Tech/TechPlus - increase of 4,641

Total all classes - increase of 18,730

Expired in the grace period could be significant. Are they counted as active or expired?

Interesting to note that we have actually seen growth during a sunspot minima, and loss after 9/11 and the focus on Homeland Security.

On my 1976 callbook, it says:
"280,919 US licensed radio amateurs!
19,120 new licenses included, issued
by FCC since the 1975 edition."

Grace period licenses are not included in the posted numbers.

FCC uses the term "expired" WRT amateur licenses to mean licenses that have reached the end of their 10 year term without being renewed. A license that is in the grace period is defined as...an expired license that is in the grace period. Once the grace period ends, it's not a license anymore and is removed from the database.

IMHO, with online renewal and both ARRL and W5YI sending reminders of expiration, I suspect that most licenses that are in the grace period more than a month or two will not be renewed.

> Interesting to note that we have actually seen

What actually happened, in broad terms, is this:

After the 2000 restructuring, the number of US ham licenses grew until July, 2003. The total number of current, unexpired licenses held by individuals reached about 683,000. (Sorry, I don't have exact numbers for that date).

Then the numbers started to decline, until they were below the 2000 level. That decline continued until Feb 2007. Since then they have begun to increase again, and if the trend continues we will soon exceed the 2000 level.

Numbers are numbers I suppose but the obvious weak and unavoidable link in this sort of data is that it cannot include anyone who has died with an active license until that license expires. And given that the average age for radio amateurs has been increasing steadily, it's a good bet that there are tens of thousands of deceased hams being included in the license totals.

The other immeasurable data is how many licensees are no longer active at all yet religiously renew their license since it is free and can be done with almost no effort? That number could be enormous and may hint at why despite having nearly 700,000 names in the hopper, there are only some 150,000 members of the ARRL (not withstanding the naysayers).

If we make the same sort of assumptions as those in the life insurance business, and we suppose that the median age for licensees is now over 60, then between now and 2020 the number of licensees in the database will shrink to below 300,000 due to attrition.

That is assuming we see the same paltry gains in new licensees as is seen at the moment. So while there is some reason to be pleased that the numbers appear to be going up, there remains an inevitable precipice in front of us.

Good point. I know many people in my town who have a license (mostly
Technician) who rarely use it to transmit. My wife Bonnie is one of
them. She got her Technician license 9 years ago when her husband at
that time, Paul, got the ham radio bug, and pestered her to get
licensed so they could "enjoy the hobby together." Bonnie used her
license a couple of times to keep in touch with Paul when he took
walks out in the desert behind their house. Then seven years ago Paul
died. Bonnie and I got together, and were married the next year.
Since then, she hasn't transmitted at all. But we have changed
mailing addresses a few times, and we both update our licenses on the
FCC ULS site. And, when her licence expires next year, no doubt she
will renew it. But I consider her inactive.

Why should St. John Rescue have to change its frequencies. They were
there first, and the new system is causing the interference.
Let the new system change its frequenciesy.
Also, who's going to pay for St. John's frequency change? They would
have to retune the repeaters and all of their mobile radios.
St. Johns shouldn't have to pay.

Or until the ham's family reports the death to FCC with the required
paperwork. This is common, and is usually driven by the desire to keep
the SK's call active and "in the family".

> And given that the average age

I don't take it as a given that the average age of hams is increasing
steadily. I don't think anyone has a *scientific* number for the
average/median age for US hams.

Yes, one occasionally sees some number or other quoted for the "average
age", but not how it was derived. FCC doesn't have complete data
because they haven't consistently required birthdate info.

Sure, if one goes to a hamfest or club meeting, one sees a lot of folks
who are probably AARP-eligible. But are those folks a representative
sample? I know more than a few younger hams who don't show up at such
gatherings because they simply don't have the time.

But yes, there are probably a considerable number of hams in the
database who are SKs.

ARRL membership has been growing, too.

I suspect that there have always been a considerable number of
inactive-but-licensed hams. Particularly for the reasons you state:
renewing is free and easy to do.

But are those assumptions valid? Americans are living longer, having fewer kids, having them later in life, and the median age of the population as a whole is rising. IIRC, the median age for the US population was between 39 and 40 years of age as of the 2000 census, and had risen almost 5 years between the 1990 and 2000 census-takings. I wonder what the 2010 census will tell us?

> That is assuming we see the same paltry gains in new licensees as is seen at

Maybe. Or maybe the gains will continue. Remember that the license term has been 10 years for more than a quarter-century now.

As for paltry gains, if my math is right, the past 2-1/2 years have yielded growth of more than 2.8%. More important, the growth rate seems to be increasing. Imagine the possibilities when the sunspots come back...

But you cannot ignore the other end of the curve. How many licensed hams aren't showing up because they are too old to travel?

Maybe hamfest attendees and club meetings aren't a representative sample of the ham community. But if that's the case, it has always been the case. I can't claim scientific accuracy, but the age mix that I remember from a few decades ago was much younger, and that's through the eyes of a kid who thought anyone who was over 40 was tottering on the grave's edge.

It just seems intuitive to me that the population in the hobby is aging. In order for it not to be, you would need to recruit enough new hams who were young enough to offset the march of time for the rest of the population. A lot of new licensees these days are middle aged, rather than the teenagers we used to see. Although their age is lower than the current mean age, you have to have more of them to offset the inertia of incrementing everyone's age each year.

Not that there's much you can do about the issue even if you accept the fact that we may be marching off a cliff. I applaud the ARRL's efforts to interest young folks in the hobby, and I hope it's working better in other localities. I don't see a lot of success here.

That is true and any evidence is purely anecdotal. But we can make a few assumptions based on the bubble of the 1950s when the growth of the amateur service was meteoric. With the exception of those hams who were licensed as pre-teens, most of the others would be past retirement age by now.

The same is now becoming true of those licensed in the 60s so while I have no evidence or hard data, I think it is safe to say that the majority of licensed radio amateurs in the US are now over 60 years old.

You are correct that folks are living longer these days and that will no doubt work in our favor, but it is inevitable that we will begin losing hams in much greater numbers as we approach 2020.

> ARRL membership has been growing, too.

That has been a bright spot, in my opinion, but I only point it out because some League detractors use the old line that the ARRL can only attract 25% of licensed hams as an argument for how unpopular Newington is among the base. I'd argue that it better reflects the actual number of active radio amateurs since those who are no longer active would not likely maintain league membership and the most active among us invariably do.

> As for paltry gains, if my math is right, the past 2-1/2 years have
> yielded growth of more than 2.8%. More important, the growth rate seems
> to be increasing. Imagine the possibilities when the sunspots come
> back...

I'm all for growth since I think we are in for a big dip in the not too distant future, but I'm also not certain that there is any historic correlation between growth in the service and sunspot activity. And if there is, it might be bad news since Cycle 24 is now predicted to be the weakest cycle in a century.

We probably won't be able to bring new hams onboard at a pace that will match the attrition of the next decade, but that is no reason not to do all that we can -- and one thing is to begin thinking about how we are going to justify our continued occupation of radio spectrum with a lot fewer licensees.

It's a problem that Icom, Kenwood, Yaesu and the others are no doubt already thinking about too...

The real problem is that the affected receiver is "wide band" and the new system is on a "narrow band" channel that was created when the FCC standards for the land mobile services were changed and the wide band channels were split into several narrow band channels. Wide band operations could continue unless harmful interference was caused or experiences.

This sort of problem is not new. Their have been such splits before, the one in the 1950s (60 kHz spacing going to 30 kHz spacing) resulted in the availability of lots of older commercial mobile gear for the ham community, and there was another one in the 1980s (30 kHz to 15 kHz) and this one came about in the late 1990s (15 kHz to 7.5 kHz). We're just starting to see the results in outlying areas that did not go to narrow banding earlier.

>Let the new system change its frequenciesy.

It doesn't work that way. The FCC stated in a case that I was involved in some 12 years ago that there is no protection for wide-band receivers. The whole land mobile community either knows this or has to be reminded of it on a regular basis.

>Also, who's going to pay for St. John's frequency change? They would
>have to retune the repeaters and all of their mobile radios.
>St. Johns shouldn't have to pay.

"Shouldn't have to" and "will" are two different things. The only reason that it popped up here was that hams were involve din the DF. In most cases, the agencies themselves do that sort of thing and professional spectrum managers (like my company) can find it on paper quite easily and verify it with a few phone calls. It's routine stuff.

I think that the issue is closer than that, and more significant. The problem is that as the ham radio population ages, a lot of the older hams become inactive. They're still licensed and that license is still counted in the statistics, but as far as the health of the hobby goes they're effectively gone.

I wonder. There are active hams who don't belong to the ARRL because they're too cheap or because they have policy disagreements with the organization. There are inactive hams who do belong to the ARRL just to keep up with a hobby that they want to get back into some day. I have no idea which segment is bigger, but I suppose that ARRL membership does correlate with the number of active hams.

I agree with both statements.

At least part of the growth in recent years has been from people who "always wanted" to get a ham ticket but were put off by the code requirement. This pent up demand will eventually be exhausted.

As for the magic of the sunspot cycle, what percentage of new hams get into the hobby so that they can work DX? Those are the ones that would be affected by knowing that band conditions are improving. My personal experience suggests that that is a small percentage.

For HF, that isn't likely to be much of an issue since the commercial
and government users have found other alternatives, resulting in much
less demand for that bandspace. I wonder about VHF/UHF . . . since
there's so much more of it, maybe it will not be a huge issue.

> It's a problem that Icom, Kenwood, Yaesu and the others are no doubt already
> thinking about too...

The big players have protected themselves by making the ham radio market
only a tiny part of their sales. But you're right; with less customers
out there, the prices will go up and the amount of choice will go down.

Let's look at the US amateur population over time. The following
numbers have been posted by W5ESE on QRZ.com and elsewhere:

Year Population # Hams Hams as % of US Population 1913 97225000
2000 0.002% 1914 99111000 5000 0.005% 1916 101961000 6000 0.006% 1921
108538000 10809 0.010% 1922 110049000 14179 0.013% 1930 123202624 19000
0.015% 1940 132164569 56000 0.042% 1950 151325798 87000 0.057% 1960
179323175 230000 0.128% 1970 203211926 263918 0.130% 1980 226545805
393353 0.174% 1990 248709873 502677 0.202% 1997 267783607 678733 0.253%
2000 281421906 682240 0.242% 2005 296410404 662600 0.224% 2006
299291772 657814 0.220% 2008 303000000 658648 0.217%

Quoting W5ESE: "Many folks consider the 1950's as the "Golden Age of
Amateur Radio", but as you can see, the fractional part of the US
population that was licensed at that time was between 0.057% and
0.128%.

That is much lower than the 0.217% of the US population that are
licensed today."

I agree with W5ESE. Numbers I have gathered from old QSTs and Callbooks
agree with his numbers.

Note how the growth has varied with time, both in percentages and
totals. Oddly enough, the period of most-rapid-growth in terms of
percentage was the 1930s, when the number of US hams almost tripled,
despite the Great Depression.

> With the exception of those hams who were licensed as
> pre-teens, most of the others would be past retirement age by now.

But there were only 230,000 US hams in 1960. There's been a lot of
growth since then.

> The same is now becoming true of those licensed in the 60s so while I hav
e
> no evidence or hard data, I think it is safe to say that the majority of

Well, I must respectfully disagree; we don't really know the median age
of US hams today or in the past. Nor do we really know how it compares
to the median age of the US population.

I'm not arguing with anybody's opinion, I'm just pointing out that the
numbers often tossed around are not derived from hard data.

> You are correct that folks are living longer these days and that will no
> doubt work in our favor, but it is inevitable that we will begin losing h
ams
> in much greater numbers as we approach 2020.

Maybe. I was first licensed in 1967 at the age of 13, and I hope to be
around for quite a while after 2020. Since 1967 I have seen a lot of
people younger than myself become licensed, too.

IMHO there are four reasons hams don't join ARRL:

1) They're inactive and don't see the point of getting a mag and
mailings for something they don't do. 2) They don't like the ARRL for
some reason or other. Often it's a single policy issue, or something
done decades ago. 3) They equate ARRL membership with QST, and to them
the mag isn't worth $39 a year. Particularly when there's so much info
on the web now. 4) They have a specific focus in amateur radio (local
comms, QRP, Skywarn, EME, whatever) and ARRL is general-purpose
organization.

> I'm all for growth since I think we are in for a big dip in the not too

It used to be that most new hams started out on the lower HF bands such
as 80 and 40 meters, making regional contacts. 500 to 1000 miles was DX
to a Novice, and staying up late at night to work it was par for the
course.

Nowadays most new hams start out on VHF/UHF with equipment that usually
limits them to relatively local QSOs. Those who venture to HF often
start on the higher bands (10-20 meters) because the antennas are
small, Techs and Novices have voice on 10 meters and that's where the
DX supposedly is. Trouble is, during sunspot minima those bands can be
completely dead. At best they're daylight bands and quite unreliable,

particularly with a basic station.

sees.

Not to be a Pollyanna, but I've heard basically the same predictions
for 40+ years. For a whole bunch of reasons.

For example, OTs tell me that in the 1950s there were big concerns that
SSB and TVI would kill ham radio. In the 1960s, I recall many saying
that incentive licensing and the counterculture would be the end (how
many hams were there at Woodstock?). In the 1970s it was cb, repeaters
and the demise of many US equipment makers. In the 1980s it was
computers, in the 1990s the internet and cellphones. Etc.

Personally I think the biggest threats today are two:

1) Lack of publicity/visibility 2) Anti-antenna restrictions

As others have stated, I suspect that the most-threatened bands are our
VHF/UHF allocations, because they're relatively wide and most in demand
by other services. As much as we hated to lose 220-222, can we honestly
say that 222-225 became overcrowded because of that reallocation?

I don't think it's the number of licensees as much as the use of bands
that is the big thing. If we don't use a band, what does it matter how
many hams there are?

> It's a problem that Icom, Kenwood, Yaesu and the others are no doubt alre
ady
> thinking about too...
>
Maybe. Remember that in the past there were far fewer hams, and yet
there was a wide selection of manufacturers. The actual market for new
ham gear before about the 1970s was very small. This was because the
rigs were very expensive when you adjust for inflation, hams tended to
sell their old gear to other hams in order to buy new, and a lot of
hams converted surplus or built their own. Some years back Electric
Radio published the total number of amateur transmitters, by model and
year, that EF Johnson produced; I was amazed at how small the totals
were, considering how popular the rigs were in the 1950s and 1960s. (I
can post them if anyone's interested).

What has really changed, though, is the distribution of amateurs around
the world. Decades ago, the number of US hams was greater than all the
rest of the world put together. That's not true anymore, even if you
don't count Japan's numerous fourth-class licensees.

Think of what the future could be if and when amateur radio becomes even moderately popular in countries like China and India.

Percentage in this case is misleading since going from zero hams to one ham is a 100% increase. I wouldn't put much stock in numbers, growth or percentages prior to 1946 since those years included the start of amateur radio and the shutdown/restart from two world wars.

True enough, folks have been crying wolf for decades. But the shift in technology that we have witnessed in the last decade has been all about communication and that has been a change from the previous distractions. No one needs to get an amateur license to enjoy a face-to-face video chat (with no additional charges) with people around the globe. Part of the reason that we have such a tough time interesting kids in our way of communicating is it must seem horribly quaint when you have a cell phone, laptop, and a high speed net connection.

Still, I do believe amateur radio has something to offer and that is camraderie and friendship. You can't well make a "friend" by making random cell phone calls and yet we do it with a random 'CQ' and that makes the amateur service special in my book. Not to mention the opportunity to experiment with radio and electronics. Getting those points across is indeed the challenge.

Having said that, I think come 2020 we will be looking at 300-350k licensees in the US. I'll be 61 then and having been licensed for 43 years then, I will be more than happy to have been wrong. :-)

Enjoyed the conversation Jim, the moderated group here is always a pleasure.

I hope that you're wrong, Jeff, but it's a slim hope.

I expect that a generation from now (a couple of sunspot cycles) the number of active (mark that word, "active) US amateurs will be under 10,000.

I moved to my current location 30-some years ago (in my late 30's). Joined two active radio clubs (MWA for contesting, TCDXA for DXing). At that time, most of the members of each club were about my age, or a little younger. Most members of each were very active amateurs.

Today, 30 years later, most of the members of each club are about my age, or a little older. Most are still very active, and both clubs are still very vibrant, but between the two clubs (combined rosters about 300, but perhaps really only about 200 hams due to dual memberships), there are only a handful of members (maybe 25) under age 55, and maybe 5 or 10 in late 30's or younger.

It's been a nice run.

Amateur Radio Newsline(tm) Report 1669 - August 7 2009

Amateur Radio Newsline report number 1669 with a release date of
Friday, August 7, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Restructuring comes to Tonga, 40 meter
expansion is delayed in France, four new hamsats are on-orbit but only
two are operational, a broadcaster is fined for alleged interference to
aviation radio and a long overdue editorial from us to you. What's it
about you ask? Find out right here on Amateur Radio Newsline(tm)
report number 1669 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: MAJOR CHANGES IN TONGA

Major changes are taking place in amateur radio in Tonga. This,
according to Paul Kidd, A-35-R-K, who tells the Ohio Penn DX Newsletter
that he recently had a meeting with that nations radio Licensing
Officer and the Technical Officer in the newly formed Department of
Communications. Amateur Radio Newsline's Don Carlson, KQ6FM, is here
with some of what A-35-R-K learned.

--

In the past, amateur radio licenses in Tonga have been managed and
issued by a variety of different government agencies. That's now
changed with the creation of the Department of Communications which is
already building a website and plans to make license application forms
available online.

For newcomers, a 'Novice' or some other type of entry level license may
be created to encourage more activity. The formation of a club station
and licensing classes, possibly through the Tonga Maritime Training
Institute, was also discussed.

Licensing procedures for visiting operators and yachts in transit will
be simplified, especially for those entering the country somewhere
other than the capital. The new agency may make it possible for
visitors to apply on-line, however, they will still want to see an
applicant in person before issuing a license.

As to call signs, A35 single letter suffix calls may soon be issued to
resident Advanced Class licensees, and possibly to special event and
contest operations as well. A35 two letter suffix callsigns may be

issued to entry level licensees while 3 letter suffix callsigns will likely be issued to short-term visitors and transiting yachts.

In other changes, the permitted output power will increase to 400 watts to bring Tonga up to the same level that is authorized in New Zealand and Australia. The current 40 meter allocation of 7.0- to 7.1 MHz will be continued but 7.1 to 7.2 MHz operation will be permitted on a secondary basis as well. An allocation for 60 meters was discussed, but no action on this will be considered until further studies and consultations are made.

Maybe most important of all, A35RK says that Tonga now has a government Emergency Response Plan, and amateur radio participation in it is authorized. This, in conjunction with the Tonga Defense Force, the Tonga Meteorological Service, the Ministry of Civil Aviation, and the Tonga Red Cross. In all some very positive steps forward for ham radio in that nation.

For the Amateur Radio Newsline, I'm Don Carlson, KQFM, in Reno.

--

The Tonga government also intends to more carefully monitor amateur and maritime communications in an effort to reduce unlicensed operation and to insure compliance with regulations. (OPDX)

**

RESTRUCTURING: 7.1 - 7.2 MHz STILL OFF LIMITS IN FRANCE

If you plan to vacation in France, be sure to avoid 7.1 to 7.2MHz . At least for now. This is because French telecommunications authorities have not authorized that spectrum parcel in that country. Although the Department that controls frequency allocation in France, the AFN, has approved the use of that portion, it has yet to be signed off by a Ministerial Decree nor published in the official Journal.

** HAM RADIO IN SPACE: FOUR NEW MICRO HAMSATS ON-ORBIT BUT ONLY TWOP WORK

Four new ham radio satellites have been deployed from the Space Shuttle Endevour during the now concluded STS-127 mission. The new birds are named Castor, Pollux, BEVO1 and AggieSat but only two appear to be working.

Castor and Pollux are reported to be O-K. They will transmit on 145.825 MHz at 1200 baud AFSK and 9600 baud FSK. The transmitter uses the AX.25 protocol. Initial Keplarian elements to track them are posted on the AMSAT website.

BEVO1 and AggieSat2 were also ejected together from the Space Shuttle but it appears that they failed to separate. No signals have been heard from BEVO1, although beacon packets have been reported as coming from AggieSat2.

The current theory is that only partial separation occurred. And while the inhibit switches keeping the satellites powered off have been closed, allowing the satellites to boot up it is likely that the antennas did not deploy correctly. AggieSat2 transmits with 1watt of power so it is easier to hear, while BEVO1 only has 200 milliwatts out during beacon mode.

More is on the web at
http://www.amsat.org/amsat/archive/amsat-bb/48hour/msg72870.html (ANS)

**

HAM RADIO IN SPACE: BETTER THAN USUAL PERSEID METEOR SHOWER ON AUGUST 12

Meteor scatter enthusiasts listen up. This year's Perseid meteor shower could be even better than usual.

According to NASA's Meteoroid Environment Office, a filament of comet dust has drifted across Earth's path. When Earth passes through it, sometime between 0800 and 0900 UTC on August 12th, the Perseid meteor rate could surge to twice its normal value.

Translated into ham radio language, this means more meteors leaving ionized trails as they burn up in the Earth's atmosphere and more chances for those involved in the meteor scatter mode to make contacts by bouncing signals off those ionized trails.

You can check spaceweather.com for details on this years Perseid meteor shower and tips on how best to observe it. (Spaceweather)

**

RESCUE RADIO: HAM RADIO REPORTS CITED IN CANARY ISLAND FIRE

Strong winds fanned forest fires on Saturday and Sunday August 1st and 2nd on the Spanish Canary Island of La Palma. According to news reports attributed to unnamed radio amateurs large plumes of smoke could be seen rising from the island's southern tip where fires were active on two fronts.

The reports said that firefighters were forced to retreat as flames raged out of control near two towns. Some 4,000 residents were evacuated from the area Saturday.

La Palma is located of the coast of West Africa, and is one of the least developed of the Canary Islands. At airtime news reports say that the fire has destroyed some 50 homes. No other information on the role ham radio operators may have played in rescue radio efforts was included in news reports from the region. (Published news reports)

**

RESCUE RADIO: NEVADA COUNTY THANKS HAMS

Back in the United States, several Nevada Amateur radio operators conducted a Simulated Emergency Test at the Panaca Nevada Fire Department on June 27 and 28. The test was used to demonstrate ham the radio operator's emergency communications capabilities using various modes of operation. This included Digital, Single Side Band and CW.

Rick Stever, head of Lincoln Co. Emergency Management, thanked Lee Hone K7NKH and Chuck Reifsnyder AD7OY for their help in organizing the ham radio aspect of the event. Stever also voiced his support to the members of the community who participated and who continue to support the county's Emergency Management. (Lincoln Record)

**

RESCUE RADIO: HIGH WINDS VS. HAMS ACROSS THE MIDWEST

Central Indiana hams felt like thy got dumped on this past week and for good reason. 4 to 8 inches of rain fell on south-central Indiana the morning rush hour and the noon hour.

Johnson county hams, just south of Indianapolis, were busy calling in reports of flooded streets as they had flashbacks to last years 100 year flood. That June 2008 event tore out bridges, ripped open a dam and flooded homes throughout the county.

In rural Brown county, high winds toppled trees, damaged homes and brought down power lines leaving thousands of residents in the dark and without phone service. EMA Director Richard Woehlecke, K9VM, said it was the worst flooding and wind damage that he had seen in a decade.

Further south in Jackson county, much heavier rains flooded county roads keeping some closed for most of the week. Some hams maintained stand-by communications throughout the incident.

And west if Indianapolis QIN Net manager Ivan Flint, W9ILF, is picking up pieces of radio equipment and his home after high winds ripped through the area. Flint's amateur radio and antennas were damaged as a result of the high winds.

Reporting from Indianapolis, this is Jack Parker, W8ISH. (W8ISH)

**

ENFORCEMENT: FCC WARNS HLI ABOUT UNCERTIFIED VIDEO TRANSMITTER

The FCC has issued an official Citation to Hobby Lobby International for marketing what the agency terms as non-compliant radio frequency devices. According to the Commission, these devices called Pilot View FPV 2400 video transmitter exceeded the maximum radiated power limit for a Part 15 device.

Back on March 5th, the FCC's Spectrum Enforcement Division sent Hobby Lobby International a Letter of Inquiry asking if the Tennessee company was marketing an unauthorized radio frequency device through its website. The company responded by telling the FCC that they began

selling the Pilot View FPV 2400 video transmitter in May of 2008 and so far had sold 109 units of the device in the United States. Hobby Lobby also noted that the Australian manufacturer of the transmitter, Intelligent Flight, had represented to them that the device was FCC compliant.

The FCC noted that Hobby Lobby sent a unit to a Commission's lab for evaluation prior to receiving the Letter of Inquiry. After receiving the Letter of Inquiry, Hobby Lobby contacted the test lab to inquire about the test results. At that point it learned that the device is not FCC compliant. According to the Citation, Hobby Lobby says that the last date that a transmitter was received by it was November of 2008. Its also the time when it lost all contact at Intelligent Flight.

In the Citation, the FCC says that it appears that Hobby Lobby violated several sections of the Rules by marketing the Pilot View FPV 2400 transmitter in the United States. The company was then told that future violations of this sort could lead to monetary forfeitures of up to $16,000 for each violation or each day a violation continues. (FCC)

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AA4ED repeater serving Broward County Florida.

(5 sec pause here)

**

ENFORCEMENT: BROADCASTER FINED FOR AVIATION BAND INTERFERENCE

The FCC has affirmed a $4000 fine issued against California based Playa Del Sol Broadcasters. This after it determined that a broadcast translator at its transmit site was causing interference to three frequencies in the aviation band. Bruce Tennant, K6PZW, reports:

--

On March 12, 2008, the FCC Enforcement Bureau's San Diego, California, office received a complaint of interference from the Riverside County Sheriff's Department regarding the aviation frequency of 122.875 MHz, in the Indian Wells, California area. The Sheriff's Department identified the interference as having the same audio as station KRCK on 97.7 MHz in Mecca, California. That's a station licensed to Playa del Sol

On March 13, 2008, an agent from the San Diego Office traveled to the Indian Wells and was able to detect the audio of KRCK on three separate frequencies in the VHF aviation band. These were 109.5 MHz, 122.2 MHz, and 136.1 MHz. The agent also determined that the three signals were emanating from the KRCK studio which is collocated with FM Broadcast

Translator station K238AK.

On March 14, 2008, the agent returned to the studio location of KRCK and inspected FM Broadcast Translator station K238AK. During the inspection, the agent requested that the translator station be taken off the air. By using portable measurement equipment, the agent determined that all three signals previously measured in the aviation band went off the air and returned whenever the K238AK transmitter was switched off. The agent determined that the measured signals on 109.5 MHz, 122.2 MHz, and 136.1 MHz, were spurious emissions emanating from station K238AK.

On July 31, 2008, the San Diego Office issued a Notice of Apparent Liability in the amount of $4,000 to Playa. The notice found that Playa apparently willfully and repeatedly violated the Rules by failing to adequately attenuate by at least 60 db the spurious emissions from its translator.

In its Response, Playa argues that a forfeiture is not warranted in this case because it responded to the San Diego Office and addressed the issue "promptly and fully," and that the violation was not willful or repeated.

Now, after weighing the Playa del Sol response and in conjunction with the agency's Forfeiture Policy Statement the FCC conclude this past July 17th that Playa del Sol Broadcasting willfully and repeatedly violated Section 74.1236(c) of the Rules. Considering the entire record including the fact that Playa did not cease the unauthorized emissions until the San Diego agent confirmed its translator as the source of the interference, the FCC says that neither reduction nor cancellation of the proposed $4,000 forfeiture is warranted.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Playa del Sol Broadcasting was given the customary 30 days to pay or to file an appeal. (FCC)

**

ENFORCEMENT FOPLLOW-UP: FCC ISSUES $24000 NAL TO ALLEGED SHOPING CENTER RADIO JAMMER

The FCC has issued a $24,0000 Notice of Apparent Liability for Forfeiture to Kevin W. Bondy, licensee of GMRS station WQGX752, in Encino, California. This for apparently willfully and repeatedly violating Section 95.183(a)(5) of the Commission's Rules by engaging in unlicensed radio operation and intentional interference to licensed radio operations; and apparently willfully and Section 95.115 of the Rules by failing to allow an inspection of his radio equipment by Commission personnel.

You may remember our story a few months ago when an agent from the Los Angeles FCC office used direction finding equipment to locate the source off interference to the shopping centers radio system. Using mobile direction finding gear the agent traced the signal to Bondy's car and accompanied by deputies from the Ventura County Sheriff's office confronted him. The FCC agent identified himself to Bondy and explained that a refusal to allow an inspection could result in a fine. Then the agent asked Bondy if he could perform an inspection of all radios in his vehicle. Initially, Bondy refused to allow an inspection, then later agreed to allow an inspection, then refused again. Bondy's refusal was witnessed by the Sheriff's Department deputies.

Now, after weighing all the evidence the FCC says that in its opinion that Kevin W. Bondy's actions warrant not only the base amount fine for each violation but an enhancement based an several circumstances. These include the nature, circumstances, extent, and gravity of the violations, and with respect to the violator, the degree of culpability, and history of prior offenses, ability to pay, and other such matters as justice may require. Applying the Forfeiture Policy Statement and the statutory factors to the case, the FCC concludes that Bondy is apparently liable for a $24,000 forfeiture.

As is always the case, Bondy was given the customary 30 days from the May 14th date of the liability notice to pay or to file an appeal. That date has long since passed. Meantime an informed source indicated to the CGC Communicator that Bondy may walk away free from the most serious criminal charges levied against him. CGC reports that its possible that a Ventura county prosecutor filed the wrong charges with a wiretapping charge being at the heart of the matter. The presiding judge dismissed that charge on July 23, along with another charge stemming from it. As of now, the only prevailing criminal charge against Bondy is one of making annoying phone calls, but the prosecution has the option to re-file its case. (FCC, CGC)

**

RADIO LAW: COMMENTERS TO FCC FEAR IBOC INTERFERENCE

Mentions of alleged interference due to increased FM In Band On Channel or IBOC digital radio m power levels are now cropping up in filed comments to the Federal Communications Commission. The FCC had asked about how to treat cases of alleged interference when it sought the next round of comments on the proposed voluntary FM IBOC power increase.

According to Radio World On-Line, approximately 32 of 41 comments filed oppose a blanket power increase for IBOC operations. Many urge the FCC to wait until after the tests being conducted by National Public Radio Labs are concluded before the agency makes a decision on the proposed power increase.

In its filing, NPR stated that the few commenters supporting the proposed blanket power increase have offered no new evidence or basis to justify the proposal. NPR calls this a significant omission, particularly given the failure of the prior testing to examine the impact of the proposed increase on analog SCA subcarrier services for the visually impaired and other SCA compatibility.

The comment period on this matter closed about three weeks ago. (RW)

NAMES IN THE NEWS: K0DQ FIRST EVER TO WIN ALL MAJOR DX CONTESTS SINGLE OP

A McLean, Virginia ham operating the 2008 CW weekend of the CQ World Wide DX Contest has perhaps become the only person ever to win single-op world championships in all six major ham radio DX contests John Scott Redd, K0DQ, on the air from Aruba as P40Q racked up over a million more points than his closest competitor in the Single-Operator Low Power Class

Redd got his first taste of contest victory back in 1966 as a Navy officer posted to Uruguay and operating CX2CO in the phone weekend of the CQ World Wide DX Contest. Redd worked his way up through the Navy ranks to Vice Admiral and became Commander of the Fifth Fleet. He then served as a civilian in the Iraq Coalition Provisional Authority and as Director of the National Counterterrorism Center before retiring in late 2007.

But ham radio and contesting were never far away, and operating from Mexico as XE1IIJ in the early 1970s, Redd won single-op world championships in the CQWW Phone Contest, the ARRL DX Phone and CW Contests and the CQ WPX Phone Contest. Thirty years later, when his professional life permitted a little more hamming time, he added the WPX CW crown as P41P, operating from P43P's station in Aruba, in 2002. The only prize that eluded him was the CQWW CW. That is until now.

Redd has already been inducted into the CQ Amateur Radio Hall of Fame for his contesting achievements on top of all his other accomplishments. (CQ)

THE SOCIAL SCENE: ARRL / TAPR DCC IN SEPTEMBER IN CHICAGO

Turning to the ham radio social scene, the joint ARRL and Tucson Amateur Packet Radio Digital Communications Conference will again be held this year in the Chicago area. The dates are on September 25th to the 27th. This conference offers both technical and introductory presentations. The sponsors welcome the submission of both technical papers and presentations for the event covering all digital voice and data technologies. More information is on line at www.tapr.org. (TAPR)

**

THE SOCIAL SCENE: ILLW THE WEEKEND OF AUGUST 15

Some 300 lighthouses and light ships representing 50 nations are set take part in the 2009 International Lighthouse/Lightship Weekend and the total number is expected to exceed 400 by the time the event takes place. Organized by Scotland's Ayr Amateur Radio Group International Lighthouse/Lightship Weekend will happen the weekend of Saturday, August 15th at 0001 UTC through Sunday, August 16 at 2359 UTC. More information about the event, including a registration form is available on the web at illw.net/2009. (ILLW)

**

THE SOCIAL SCENE: CELEBRATING SVARC AT 50

And words of congratulations to the Scioto Valley Amateur Radio Club of Chillicothe, Ohio which is celebrating it's 50th anniversary this year. Established in 1959, over the years this club has served many amateur radio operators in Southern Ohio. And in recognition of this milestone the club will be sponsoring a special event station from 1400 to 2200 U-T-C on October 10th with stations will be operating on 10, 15 and 20 meters. Commemorative QSL cards will be available. More information is at www dot qsl dot net slash W8BAP. (KD8EAD)

EMERGING TECHNOLOGY: MARINE CORPS BANS SOCIAL NETWORKING SITES

The U.S. Marine Corps has banned MySpace, Twitter, Facebook, and several other social media sites from its networks. The ban which is effective immediately was instituted in response to a late July warning from U.S. Strategic Command.

According to news reports the Strategic Command told the rest of the military it was considering a Defense Department-wide ban on the Web 2.0 sites. This, due to what the government says are network security concerns.

The Marine Corps says it will issue waivers to the Web 2.0 blockade if a "mission critical need" can be proven. They will continue to allow access to the military's internal "SNS-like services." But for most members of the Corps, access to the real, public social networks is now shut off for at least the next 12 months. (Published news reports)

RADIO FINDINGS: OLDER AMERICANS PREFER NEW GADGETS

A study called: "Graying Gadgets: How Older Americans View Consumer Electronics." Says that 67% of those Americans over the age of 70 use a cell phone on a weekly basis. Also that 27% more likely to visit travel Web sites than the average Internet user, and 98% more likely to visit health sites. When asked about what top five consumer electronics they intend to buy in the next year, this demographic listed High Definition TV sets, laptop computers, cell phones, digital cameras or GPS devices.

Even though this group consisting of boomers and World War II-generation Americans grew up with radio, it was not listed in their top five items that they must have. For manufacturers of consumer goods this seems to bolster the argument for having an AM / FM radio included on cell phones.

More than 3,000 older Americans took part in the study in November and December 2008. Those interviewed ranged in age from 55 to 85. (RW)

RADIO IN SPACE: YOUR NAME HEADED TO MARS

Your name and call could be added to a microchip on the Mars Science Laboratory Rover heading to the red planet in 2011.

All you need to do is to go to the Jet Propulsion Laboratory U-R-L found in this weeks printed Newsline report and fill in the blanks. While there is no space for your callsign, many hams are simply adding it right after their last name.

The Mars Science Laboratory is part of NASA's Mars Exploration Program. This is a long-term effort of robotic exploration of the red planet. The Mars Science Laboratory is a rover that will assess whether Mars ever was, or is still today, an environment able to support microbial life.

Again, to get your name on that Mars bound microchip is to http://mars9.jpl.nasa.gov/msl/participate/sendyourname/index.cfm (VK2SKY)

**

RADIO IN SPACE: EXTENDING THE WORLD WIDE WEB INTO THE FINAL FRONTIER

The University of Colorado at Boulder is working with NASA to extend the Interenet into the final frontier. The two are working to develop and test the new communications technology which will extend Earth's Internet into outer space and across the solar system.

Called Disruption Tolerant Networking, or DTN, the new technology will enable NASA and other space agencies around the world to better communicate with international fleets of spacecraft that will be used to explore the Moon, Mars and beyond in the coming decades. Or put another way, its expanding the Internet where no website has ever been before. (NASA)

**

ON THE AIR: CELEBRATING KARATE IN GERMANY IN DECEMBER

Members of Germany's Waldkirchen Radio Club will activate special event station DP3SSKW on CW and SSB through December 31st. This, to celebrate the 3rd Shito-ryu Shukokai Karate 2009 Worldcup. Skeds for 40 and 80 meters are possible via E-mail to DK7FK at b (dot) barth (at) pension-monika (dot) de. QSL via the bureau or direct to DK7FK. (Southgate)

**

ON THE AIR: UK RAYNET SPECIAL EVENT AUGUST 9

>From the U-K word that Norfolk County RAYNET will be operational on Sunday August 9th with a special event station. GB4NCR, from Walcott in Norfolk on 80 meter SSB with a primary frequency of 3.663MHz. 40 meters will be used if 80 isn't open. QSL cards are available and can be send either via the bureau or direct to G4PSH with a stamped self-addressed envelope. (RSGB)

**

ON THE AIR: CELEBRATING THE SPANISH FORMULIA 1 RACE

Ham Radio will be a part of the Formula 1 Spanish Grand Prix will take place in Valencia Spain from August 8th to 23rd. Commemorative stations AM5FUV, AO5FUV, AN5FUV EG5FUV and EH5FUV will take to the airwaves to help commemorate this years event. A special award will be

issued to those who will make at last 3 QSO's with 3 different event stations. The QSL Manager will be EA5FL. Further information can be found at QRZ.com. (Southgate)

**

ON THE AIR: THE IOWA QSO PARTY IN OCTOBER

Back in the USA the 2009 Iowa QSO Party takes place on October 17th from 1400 to 2300 U-T-C. All band and modes are included but no contacts using repeaters or other relay devices are allowed. More information plus summary sheets are at www dot wa0dx dot org. (Via e-mail)

**

DX

In DX, word that 3B8FQ has received approval and will be active as 3B7FQ from St. Brandon Island, in August. He will depart Mauritius on the 10th of August and returns from St. Brandon on the 30th. Operation will be SSB and CW on 40 to 10 meters. This may be his last visit to 3B7 for the next five years. QSL via K5XK.

More than 12,000 contacts were made by VK9NI from Norfolk Island during mainly the RSGB Islands on the Air contest on July 5th and 6th. This, despite poor band conditions on 160 through to 10 meters. A nine-member team ran multiple stations using phone, CW and RTTY. If you worked them, QSL as directed on the air.

JM1LJS and JA3RAF will be active from Wallis Island between August 9th and 15th using the callsign FW1W. They plan to operate SSB, CW and possibly some digital modes on 40 through 6 meters. QSL direct via their home calls only.

A multi-national group is on the air from Swaziland until August 11th signing 3DA0SS. Operation is from both the Hawane Resort and a campsite near Manzini. Plans are to cover as many bands and modes as possible, including PSK31, RTTY and CW. QSL as directed on the air.

OH1TX and OH0RJ will be leading a three man team on a two day trip to Market Reef in mid-August. They expect to arrive on the `Rock' by noon on August 10th and to depart early on the 12th. They will use the call O-J-0Zero-Japan.

Lastly, CT1GPQ will be active from Timor Lorosae between August rd and the 3rd of October. His activity will be on 40, 30, 20 and 17 meters using SSB, RTTY and CW. The pilot station and QSL manager is CT1GFK.

Above from various DX news sources

THAT FINAL ITEM: AN EDITORIAL ON INTERFERENCE

And finally this week, we depart from the customary to bring you one of our infrequent editorials. This one deals with malicious interference, those who cause it and also those who seem to seek it out. Here's our Producer Bill Pasternak, WA6ITF:

--

Over the past two weeks we have been getting complaints that Newsline is jamming and in other ways harassing users of the frequency of 14.275 MHz on the 20 meter band.

For the record, we at the Amateur Radio Newsline are information providers only. We have no broadcast equipment and we air nothing ourselves. Our audio content is distributed over the Internet and by automated telephone and is formatted for retransmission specifically over VHF and UHF FM repeaters because that is where we believe that it belongs. It was never intended for retransmission on the High Frequency bands, however there are some hams who have chosen to do so for reasons known only to themselves.

If you are among those being interfered with on 14.275 MHz and live within the United States or its possessions, we suggest you obtain the call letters of the station that is doing the rebroadcast that is interfering with you and file a formal complaint with the FCC. It is the responsibility of that Federal Government agency to police the airwaves and only that agency can solve your problem.

That said, we would also question why anyone would even want to operate on or near 14.275 MHz. That is a frequency with a long history of being the home of numerous problems in our service.

With so many other frequencies available on 20 meters alone, there would seem to be no reason to congregate on 14.275 MHz other than to satisfy ones own voyeuristic needs. And in our humble view, that is not a good reason to tune a radio to that frequency.

If you cannot help yourself and feel a need to be there, please do not call or e-mail us to say that you were jammed or harassed. We will only respond that we warned you not to waste your time operating on or near 14.275.

I'm Bill Pasternak, WA6ITF, and that how we see it in the studio in Los Angeles.

--

There is simple solution to the problem of 14.275 MHz or any other frequency like it. Just don't bother listening and forget those who are making it into a mess even exist. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that next weekend, August 15th and 16th is the Huntsville Hamfest and the presentation of the 2009 Young Ham of the Year Award to Andrew Koenig, KE5GDB. We hope to see and meet many of you there.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

From Playa del Sol's perspective, this fine would be cheap at twice the
price. I was once a broadcast engineer, and although the salaries

weren't much to brag about, Playa del Sol would have to pay at least ten times that amount to employ a licensed engineer for a year.

Since the FCC eliminated the requirement to have a licensed engineer available, broadcasters have to trust the manufacturer's claims as to the quality of their equipment, and guesswork as to its proper installation and operation.

Yes, those grapes _were_ sour: but there's a serious point here. The broadcast industry used to be a career path for ham operators who were willing and able to take their skills and performance to the next level. Now, broadcasters no longer have a pool of independent, neutral expertise to rely on when setting up and operating RF devices.

==> THE ARRL TEACHERS INSTITUTE WRAPS UP SUCCESSFUL SUMMER SESSIONS

In 2004, the ARRL held its first Teachers Institute on Wireless
Technology <http://www.arrl.org/FandES/tbp/ti.html>. That summer, nine
teachers came from across the country to learn how to bring this
exciting technology back to their classrooms. Six years later, 93
teachers from 29 states attended eight sessions of the ARRL Teachers
Institute. "The ARRL Teachers Institute continues to be a resounding
success," said ARRL Education Program Coordinator Mark Spencer, WA8SME.
"These teachers, upon returning to their classrooms, will reach out to
```

approximately 3000 students, using new approaches to instructing the science of radio through the many hands-on activities that they learned about during the Teachers Institute."

This year, the eight sessions of the Teachers Institute were held at various venues in Arizona, California, Florida, Michigan, New Mexico and Ohio, with the last session taking place at ARRL Headquarters in Connecticut. "By holding the Teachers Institute sessions at various locations in the country, it gives them a national flavor," Spencer said. "This increased tempo of offerings was made possible with the addition of Miguel Enriquez, KD7RPP, and Nathan McCray, K9CPO, who joined me on the Teachers Institute instructor team."

Spencer said that a typical Teachers Institute session includes about 12 participants, with about half of those licensed amateurs. "The final section at Newington this year was unusual in that eight of the 11 participants were hams before the session," Spencer recounted, "but the three non-ham teachers studied for and passed their Technician licenses exams during the session, rounding out the roster with 100 percent hams!" The ARRL VEC expedited their applications so three new hams received their call signs that day. "These teachers had the unique experience of making their first ham radio contacts with the headquarters station W1AW, with the appropriate pomp and circumstance for such a momentous experience in a ham's career," Spencer said.

The ARRL Teachers Institutes provide a four-day, intensive in-service training opportunity for classroom teachers in basic electronics, the science of radio, bringing space technology into the classroom, microcontroller programming and basic robotics. For the first time, an advanced session of the Teachers Institute was added this summer. This session, made available to a few Teachers Institute graduates, included an expanded space in the classroom unit. This inaugural session, dubbed TI-II, focused on assembling and integrating the equipment and software required to setup a satellite Earth ground station, how to operate the ground stations to communicate with other hams via ham radio satellites, and finally how to intercept, copy, decode, interpret and use satellite telemetry in the classroom.

The Teachers Institute program is one component of the grant offerings within the Education and Technology Program (ETP) http://www.arrl.org/FandES/tbp/ti.html>. This portfolio of resources is made available to schools and school teachers to advance the integration of wireless technology literacy and ham radio into school curricula. The ETP is possible only because of the generous donations from those who share in the passion of ham radio <https://www.arrl.org/forms/development/donations/education/2008/>. The Dayton, Ohio session of the Teachers Institute was supported by the Dayton Amateur Radio Association (DARA) <http://www.w8bi.org/>. The cost of the equipment provided to the teachers during the TI-II was offset by the generous support of Yaesu <http://www.yaesu.com/>.

The success of the Teachers Institute is best told by the participants themselves:

* "I highly recommend this inspiring and practical course -- it covered everything from basic electronics to satellite operations to robotics in ways that are directly applicable to many grade levels and subject areas. What a fantastic way to integrate knowledge and get students inspired to learn!"

* "It made me realize that if we can get students interested in radio and electronics technology, there are no limits to what they can achieve and develop. The TI was an eye opener, even for a long time teacher like me. It made me excited to learn again."

* "This program is perfect for a teacher who wants to learn basic electronics and wireless technology. This is a great workshop to put on your resume and a great investment in you and your students."

* "I thought that I knew the Parallax BOE-BOT before the TI, but I learned more than I previously knew during the TI. Before the session, I would not have gotten my Technician class license; I did so only because of the encouragement of the instructor and my fellow TI participants."

* "This was a great program and very productive use of time. The pace was good for varying levels. I found exciting new ideas for use in the classroom. The most important thing for classrooms: Having Fun!"

* "I can't wait to implement the ideas in my classroom that were presented during the TI."

* "ARRL: Keep up the good work!"

Information on the 2010 sessions of the ARRL Teachers Institute on Wireless Technology will be available in February.

==> MEREDITH ATTWELL BAKER, MIGNON CLYBURN SWORN IN AS FCC COMMISSIONERS: NOW THERE ARE FIVE

The Federal Communications Commission now has its full complement of five Commissioners. On Friday, July 31, Meredith Attwell Baker joined Chairman Julius Genachowski, Robert McDowell and Michael Copps. On Monday, August 3, Mignon Clyburn came on board.

Baker was sworn in on July 31 by Chairman Genachowski in a private ceremony in the Chairman's office. "I am grateful to President Barack Obama for nominating me -- and the United States Senate for confirming me -- to this important position and I look forward to rolling up my sleeves and working on policies and programs that will help build a 21st century communications infrastructure that can provide sustained economic growth, opportunity and prosperity for the nation, and for all telecommunications users," Baker said. "The FCC staff is well known for their expertise, professionalism and dedication, and I look forward to working together on these important issues. I am excited to be joining Chairman Julius Genachowski, and Commissioners Michael Copps, Robert McDowell, and Mignon Clyburn to ensure that our communications networks

and technologies serve the nation's needs and improve the lives of all Americans"
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-292494A1.pdf>.

Clyburn was sworn into office at 11 AM on August 3 by Senior District Judge Matthew J. Perry Jr in her home state of South Carolina. "I am deeply honored that President Obama and the United States Senate have entrusted me with the privilege of serving as a Commissioner of the Federal Communications Commission," she said. "I look forward to working with the Administration, Congress, Chairman Genachowski, my fellow Commissioners and the incredibly talented FCC staff, to ensure that all Americans enjoy the tremendous benefits offered by modern communications. This is an exciting and challenging time in our nation's history. I am eager to hear from and work with all stakeholders to carry out, along with my colleagues, communications policies that protect consumers and encourage robust competition and innovation"
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-292513A1.pdf>.

Pointing out Baker's "broad and deep experience" and Clyburn's "years of state-level and private-sector experience," Chairman Genachowski welcomed both women to the FCC. "At this critical moment in history, I look forward to collaborating with my fellow Commissioners on ways that the agency can improve the lives of all Americans through communications."

Baker fills the unexpired term of fellow Republican and former Chairman Kevin J. Martin who resigned in January 2009; her term will expire June 30, 2011. Clyburn fills the unexpired term of Republican Deborah Taylor Tate, whose tenure as a Commissioner came to a close on January 3, 2009 when the Senate failed to confirm her nomination; Clyburn's term will expire June 30, 2012. Baker will join Robert McDowell as a Republican on the Commission. Chairman Julius Genachowski and Michael Copps are Democrats, as is Clyburn. Only three sitting Commissioners may be members of the same political party.

==> LOOK FOR THE SEPTEMBER ISSUE OF QST IN YOUR MAILBOX

The September issue of QST -- our annual Emergency Communications issue -- is jam-packed with all sorts of things that today's Amateur Radio operator needs, with a special focus on Public Service. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Have you ever thought about becoming involved with Amateur Radio in your Section? ARRL Chief Operating Officer Harold Kramer, WJ1B, demystifies the ARRL Field Organization in his article "Your Place in the ARRL Field Organization." Mike Bryce, WB8VGE, knows that as hams, we need to be ready to go on a moment's notice. In his article "A Gel Cell Battery Charger for the Low Power Station," he tells how you can keep those batteries charged for the next time you get called into action. Bob Bruninga, WB4APR, has a proposal that builds on the groundwork of sending text messages via Amateur Radio in his article "Universal Ham

Radio Text Messaging Initiative."

QST Product Review Editor Mark Wilson, K1RO, reviews SPE's expert 1K-FA linear amplifier. According to Wilson, "With the SPE Expert 1K-FA, you can add power on 160 through 6 meters to your home or portable station. The built-in antenna tuner allows operation with a variety of antennas." QST Contributing Editor Phil Salas, AD5X, also takes a look at some antenna accessories from Array Solutions.

If you have been participating in phone contests for a while and are looking for a new challenge, CW contesting may be what you're looking for. But how does one new to CW -- or the owner of a rusty fist -- get started? ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at that very question in "This Month in Contesting." The results of the 2009 ARRL International DX Phone Contest are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

Of course, there are all the columns and features you know and love in September QST: Hints & Kinks, The Doctor Is IN, How's DX, Vintage Radio, ARRL VEC Honor Roll, Hamspeak and more. Look for your September issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment covers the month of July.

The ARRL Board of Directors held its 2009 Second Meeting July 17-18 in Windsor, Connecticut <http://www.arrl.org/news/stories/2009/07/24/10980/?nc=1>. The Board devoted the second day to reviewing and revising the ARRL Strategic Plan that was adopted in October 2006 <http://www.arrl.org/members-only/stratplan/ARRL_Strategic_Plan_October_2006.pdf>.

The Administration and Finance Committee and the Programs and Services Committee -- two standing committees of the ARRL Board of Directors -- met prior to the 2009 Second Meeting <http://www.arrl.org/news/stories/2009/07/10/10958/?nc=1>.

Three newly appointed Vice Directors -- Pacific Division Vice Director Jim Tiemstra, K6JAT, Southeastern Division Vice Director Jeff Beals, WA4AW, and West Gulf Division Vice Director John Thomason, WB5SYT -- attended an orientation session at ARRL HQ just before the Board meeting <http://www.arrl.org/news/stories/2009/07/16/10968/?nc=1>.

The 2008 ARRL Annual Report reviews the major events of the year, documenting the renewed growth of the ARRL and the activities of the

Amateur Radio Service. It is available online <http://www.arrl.org/announce/annualreport/> and in print.

HR 2160, The Amateur Radio Emergency Communications Enhancement Act of 2009, gained 11 new Congressional co-sponsors <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>.

QST Technical Editor Joel Hallas, W1ZR, prepared an expanded look at new products -- including new VHF and antenna-related equipment, as well as many categories of accessories -- introduced at the 2009 Dayton Hamvention <http://www.arrl.org/files/qst-binaries/QS0709NewatDayton.pdf>.

ARRL Technical Relations Manager Brennan Price, N4QX, attended the United States ITU Association (USITUA) and the US Working Party 5B (maritime, aeronautical and radiolocation) meetings. ARRL Technical Relations Specialist Jon Siverling, WB3ERA, attended meetings of US Study Group 1 (regulatory) and Working Party 7D (propagation).

W1AW/KL7 and NU1AW/KH6 represented the ARRL and IARU, joining more than 85 IARU HQ stations in the IARU HF World Championships <http://www.arrl.org/news/stories/2009/07/06/10947/?nc=1>.

Frank Piper, KI8GW, of Pickerington, was appointed Section Manager of the ARRL Ohio Section <http://www.arrl.org/?artid=9056>.

A special bonus section to help new amateurs choose a radio was added to the "ARRL Ham Radio License Manual" and made available for download to ARRL members <http://www.arrl.org/news/stories/2009/07/22/10975/?nc=1>.

W1AW, the Hiram Percy Maxim Memorial Station, in conjunction with WA6ZTY on the West Coast, conducted a summer Frequency Measuring Test <http://www.arrl.org/news/stories/2009/06/15/10884/?nc=1>.

ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, received reports of inappropriate language on 20 and 80 meters, a possible jamming signal on 20 meters, unlicensed hunters using 2 meters, as well as a continuous carrier on 2 meters.

ARRL Laboratory Manager Ed Hare, W1RFI, and Lab Engineer Mike Gruber, W1MG, held a telephone conference with Laura Smith and the FCC's Kansas City Field Office regarding a powerline noise case in that state.

ARRL Regulatory Information Branch Manager Dan Henderson, N1ND, together with Media and Public Relations Manager Allen Pitts, W1AGP, compiled an information packet for Division Legislative Action Chairs, Legislative Action Chairs and Legislative Action Assistants to use when speaking with Congressional members about Amateur Radio and HR 2160.

ARRL ARISS Program Manager Rosalie White, K1STO, attended the ARISS annual meeting in the Netherlands <http://www.rac.ca/ariss/oindex.htm>.

The ARRL Executive Committee approved eight Education and Technology Program grants.

==> SCOTT REDD, K0DQ: THE BIGGEST GUN OF ALL

Vice Admiral John Scott Redd, K0DQ (US Navy, retired) has, throughout his 36 year military career, helped to make the world a safer place. >From postings in Uruguay to Iraq to serving as Commander of the Navy's Fifth Fleet as a naval officer, to becoming Director of the National Counterterrorism Center (NCTC), Redd has served his country with distinction. Earlier this year, President George W. Bush presented him with the National Security Medal in a White House ceremony <http://www.arrl.org/news/stories/2009/01/27/10594/> for "his more than 40 years of exceptional service to the Nation, strengthening its intelligence capabilities and improving national security." President Bush called Redd "an innovator, a strategic thinker, an inspirational leader and a dedicated servant to the Nation, respected for his vision, courage and integrity." But intermingled in his Navy career was Amateur Radio. This year, Redd, an active DXer and contester, became the first person ever to win all six of the major HF contests: The ARRL International DX Contests (SSB and CW), the CQ World Wide Contests (SSB and CW) and the CQ Worked All Prefix (WPX) Contests (SSB and CW).

"Ham radio was my 'Internet' in the 1950s," he told the ARRL. "Growing up in a very small town (Sydney, Iowa, population 1000), ham radio was my window on the world that generated an interest in far-away places and a vision to do something beyond my home town. That turned out to be the US Navy, via the US Naval Academy. That changed my life. The Navy is a technological service and virtually everything in the military has a technical dimension. Electricity, electronics and especially, the electromagnetic spectrum, were key aspects of most of my seagoing tours and, indeed, even my later policy assignments. Being comfortable with technology -- having built kits, antennas and the like -- and being zapped with 110 ac more than a few times -- gave me a leg up."

Redd started out in 1954 as a DXer as K(N)0DQI; he had earned DXCC by the time he turned 13, "which I audaciously proclaimed on my QSL cards as the youngest in the world (no one ever objected!)," he quipped. "Climbing the DXCC Honor Roll died as a dream when I went to the Naval Academy in 1962, so the logical thing was to turn to DX contesting. I operated contests as a multi-operator from W3ADO for four years then, as CX2CO in 1967 CQWW in Uruguay as a Fulbright Scholar. That was my first World Championship, competing in the M/S [multi-operator/single transmitter] category; that was also my last multi-operator experience."

In the early 1970s, Redd was on assignment at the Mexican Naval Academy. While there, he was "contesting consistently as XE1IIJ (with a number of aliases, including 6D1AA, 4C5AA and 6J9AA). In the 1971/2 contest season, I managed to win four of the five major contests: Both modes of ARRL DX, CQWW Phone and WPX SSB (there was no WPX CW in those days). I placed third in the world in CQWW CW. That set me on a personal quest to win all five (later six) of the major DX contests."

Redd pointed out that one of his many contesting highlights was working 10,000 QSOs in the 1973 ARRL International DX Phone Contest: "This was before 5BDXCC and 10 meter Novice phone and it was the first time that had been done -- it was also the last time I did a phone contest to any useful effect. I think that stands as the all time two weekend ARRL DX phone record (it's sort of like Roger Maris breaking Babe Ruth's home run record -- it gets an asterisk)."

As his naval career progressed, he didn't have the chance to contest as much as he had before, "other than occasional contests from Lenny Chertok's W3GRF (now a Silent Key), QTH. Most were Top 10 finishes, but I only won the US once -- the ARRL DX CW in 1986. My next contesting opportunity was A92Q in 1995 when I was the Fifth Fleet Commander, homeported in Bahrain. By that time, there was a CW WPX and that contest was my first contest in almost a decade (and the first one using a computer to log)."

Six years later, after Redd retired, Jim Neiger, N6TJ, introduced him to Jacky Oduber, P43P, and "goaded me into going down to Aruba," he told the ARRL. "My first contest from Aruba was CQWW CW in 2001 as P40Q. I would classify this as a 're-learning experience,' but it resulted in a #5 finish in SOABHP [single operator, all band, high power]. Seven months later, I went back to Jacky's for WPX CW and won the World SOABHP as P41P. So I had now won the World in the SOAB category in five out of six of the majors, but I was still missing a CQWW CW win for the Grand Slam."

Calling the 2002 CQWW CW the "Year of Aruba" -- the three top scores in the contest came from there -- Scott placed second. "In 2003, I was going back into government and preparing to go to Iraq, so there was no contesting," he recounted. "In 2004, I headed back to Aruba for the CQWW CW, but I came up short as #3 WW in SOABHP. In spring of 2005 -- just after having been nominated by President Bush to be Director of the National Counterterrorism Center (NCTC) <http://www.nctc.gov/> -- I went back to Aruba and won CQ WPX CW in the Low Power category; I barely missed the SOAB LP all-time record. In the process, I found out I enjoyed the LP category. The next three years were completely driven by work at NCTC. I finally got back to contesting almost four years later when P40A's QTH was available for CQWW CW 2008. There were no amplifiers, so I entered SOABLP [single operator, all band, low power]: That resulted in the final piece of the puzzle falling into place."

Jeff Briggs, K1ZM, invited Redd to operate VY2ZM on Prince Edward Island for the ARRL DX CW Contest in February this year. "That was clearly right place (great low band antennas and near Europe) at right time (sunspot minimum), resulting in #1 W/VE, as well as top worldwide SOABHP," he told the ARRL.

"The 'bookends' for ARRL DX are almost four decades apart: The Mexican operations (winning the world on phone and CW in '72 and phone in '73) and, interestingly, winning W/VE from VY2ZM in this year's ARRL DX CW," he said. "That also turns out to have been the top worldwide score. In between, I've probably operated a dozen ARRL DX contests as W3GRF or,

more recently, W4RX (or K0DQ from W4RX's station), all near Washington, DC and at great disadvantage to the New Englanders. Most were Top 10, but the only one I won before this year was the 1986 one from W3GRF."

In 2008, Redd was inducted into the CQ Amateur Radio Hall of Fame <http://www.arrl.org/news/stories/2008/05/16/10100/>. The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to Amateur Radio, and those amateurs who have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet.

Redd calls Amateur Radio "a magical hobby, even for me at 64. Although I would certainly have liked to have been more active over the years, absence did make the heart grow fonder and I still get a blast out of contesting, even though I feel like I'm always relearning old lessons which have receded in my subconscious."

==> FCC ISSUES CITATION TO WASHINGTON COMPANY FOR SELLING, IMPORTING UNAUTHORIZED RF DEVICES

On July 28, the FCC issued a Citation to The Spy Store <http://www.thespystore.com/> for marketing unauthorized radio frequency devices <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-1697A1.pdf>. According to the Commission, these devices were in violation of the Communications Act of 1934, As Amended and the Commission's Rules, as well as United States Customs and Border Patrol regulations.

On February 13, the Spectrum Enforcement Division of the Commission's Enforcement Bureau sent Spy Store a Letter of Inquiry, initiating an investigation. The FCC wanted to know if the Washington State company was marketing an unauthorized radio frequency device, specifically, the GPS-JM2 GPS Jammer. According to the Citation, the FCC observed that the device was marketed on the retailer's Web site on September 4, 2008. The device jams signals emitted by a GPS transmitter, disabling a receiver from finding the location.

Spy Store responded to the Letter of Inquiry on March 2, telling the FCC that they began selling the GPS-JM2 GPS Jammer on or about July 31, 2007; they have sold 69 units. In its reply, the company told the FCC that they began importing the devices beginning in 2007, with subsequent deliveries continuing into 2008, for a total of 90 units delivered. Spy Store told the FCC that "the importation of GPS-JM2 was discontinued once [they] became aware that the units were unlawful in the USA."

Even though Spy Store imported GPS-JM2 GPS Jammers on five different occasions, they did not file any FCC Form 740s for the imported units; before radio frequency devices may be imported to the United States, an FCC Form 740 (or the electronic equivalent) must be filed with the United States Customs and Border Patrol. The company admitted to the Commission that the device was not certified in accordance with FCC

Rules, but stated that the Chinese supplier advised them that "it was lawful to offer this unit for sale and as such, took no further efforts to determine if the device complied with the Rules."

The FCC noted that Spy Store explained that they "would not have offered, marketed or sold the GPS-JM2 GPS Jammer had [they] known it was an unlawful device." Spy Store also told the Commission that they no longer offer or market any other jamming devices and have ceased all marketing and sales of the GPS-JM2 GPS Jammer and have disposed all of the remaining units.

The FCC said "it appears that Spy Store violated Section 302(b) of the Act and Sections 2.803 and 15.205(a) of the Rules by marketing in the United States a radio frequency device not eligible for certification. It also appears that Spy Store violated Section 2.1203 of the Rules by importing the GPS-JM2 GPS Jammer without making the required import declaration."

Spy Store was warned that "if, after receipt of this citation, you violate the Communications Act or the Commission's Rules in any manner described herein, the Commission may impose monetary forfeitures not to exceed $16,000 for each such violation or each day of a continuing violation." The company was given 30 days to respond to the Citation either through a personal interview at the Commission's Field Office nearest to their place of business or a written statement. Spy Store was advised that any response should specify the actions that they are taking to ensure that they do not violate the Commission's Rules governing the marketing of radio frequency jamming devices in the future.

==>SOLAR UPDATE

Tad "Bring back the friendship of the Sun" Cook, K7RA, this week reports: We had some nice sunspot activity from July 3-10 -- and we were hoping for a return 27-28 days later -- but it never happened. Varying by latitude, the Sun rotates relative to Earth about every 27.5 days. If that same region was still active or the activity renewed, we might have seen something July 30-August 7, which is today. Instead, the quiet continues. Sunspot numbers for July 30-August 5 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68, 68.7, 68.1, 68.1, 67.4, 65.8 and 66.2 with a mean of 67.5. The estimated planetary A indices were 3, 5, 4, 3, 10, 4 and 6 with a mean of 5. The estimated mid-latitude A indices were 2, 4, 3, 2, 7, 4 and 5 with a mean of 3.9. The predicted planetary A index for August 7-11 is 5, 5, 7, 5 and 5. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Allingham's "Song" <http://www.potw.org/archive/potw363.html>.

==>IN BRIEF:

* This Week on the Radio: This week, there is an NCCC Sprint Ladder on August 7. The WAE DX Contest (CW) and the Maryland-DC QSO Party are August 8-9. The SKCC Weekend Sprint is August 9. The MMMonVHF/DUBUS 144 MHz Meteorscatter Sprint Contest and the NAQCC Straight Key/Bug Sprint are August 12. Next week is the NCCC Sprint on August 14. The ARRL 10 GHz and Up Contest, the North American QSO Party (SSB) and the SARTG WW RTTY Contest are August 15-16. On August 15, look for another NCCC Sprint, as well as the Feld Hell Sprint. The New Jersey QSO Party is August 15-17 and the Run for the Bacon QRP Contest is August 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 23, 2009, for these online course sessions beginning on Friday, September 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* MFJ Acquires Cushcraft: On August 7, MFJ Enterprises <http://www.mfjenterprises.com/> announced they had purchased the Cushcraft Amateur Radio antennas product line from Missouri-based Laird Technologies <http://www.lairdtech.com/> effective July 31. According to MFJ, Cushcraft -- makers of HF/VHF/UHF vertical, beam and Yagi antennas for the Amateur Radio community -- will continue to be manufactured in Manchester, New Hampshire. "We are excited to have the Cushcraft Amateur Radio Antennas product line alongside our other five companies," said Martin F. Jue, President and founder of MFJ Enterprises, Inc. "This product line increases our ability to offer our customers a wide range of antenna options at different prices. Customers will be able to choose

from Cushcraft Amateur Radio antennas, Hy-gain and MFJ antennas through one source." MFJ purchased Hy-gain in 2000 the company also owns Ameritron, Mirage and Vectronics. Jue said that the Cushcraft line will bring more than 50 new products to MFJ's Amateur Radio product line. "We will add more new products to this antenna line and will continue the Cushcraft Amateur Radio antennas name long into the future. Cushcraft Amateur Radio antenna product customers will appreciate the continued and expected top-quality manufacturing of this product in New Hampshire and the MFJ commitment to superb after-the-sale service and tech support in Mississippi," said Jue. The 120 page 2010 MFJ catalog will include the entire Cushcraft Amateur Radio antennas product line. MFJ has set up a special customer support line -- 662-323-5803 -- to handle Cushcraft antenna product technical support, parts requests and customer services.

* Robert Wilson, AL7KK/VE7ZKK, Wins July QST Cover Plaque Award: The winner of the QST Cover Plaque Award for July is Robert Wilson, AL7KK/VE7ZKK, for his article "A High Gain Single Wire Beam." Congratulations, Robert! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the August issue by Monday, August 31.

* Get Ready for the Perseids!: On the night of August 11 and well into the next day, Earth will make its annual passage through the bulk of the debris shed by a comet known as Swift-Tuttle <http://en.wikipedia.org/wiki/109P/Swift-Tuttle>. Much of the debris is composed of dust-sized grains, but when these fragments come plunging into our atmosphere they can create a dazzling meteor display. Not only are the meteors fascinating to watch, they also leave short-lived streams of ionized gas in their wake. As hams have known for years, these meteor trails are excellent reflectors of radio waves. The Swift-Tuttle meteor showers are known as the Perseids <http://science.nasa.gov/headlines/y2009/31jul_perseids2009.htm> because they appear to come from a point in the sky that lies within the constellation Perseus. This year's shower is forecast to be especially active because we're about to pass through a somewhat thicker filament of dust that boiled off Swift-Tuttle in 1862. If you own a 6 or 2 meter SSB/CW transceiver, you can get in on the action, bouncing your signals off Perseid meteor trails and making quick meteor scatter contacts over hundreds of miles, and possibly even as much as 1200 miles <http://en.wikipedia.org/wiki/Meteor_scatter>. Meteor scatter operation is particularly easy on 6 meters where 100 W and an omnidirectional antenna will do the job. On 2 meters a directional antenna (such as a multielement Yagi) usually yields better results. Some meteor scatter operators prefer to use SSB, making rapid exchanges of signal reports and grid squares. In recent years digital meteor scatter has been increasing in popularity. With the free sound-card-based WSJT software suite by Joe Taylor, K1JT, it is possible to make digital meteor scatter contacts almost any time of the day or night, not just during annual showers <http://physics.princeton.edu/pulsar/K1JT/>. Most WSJT scatter

operators use a mode known as FSK441 and center their activities on calling frequencies at 50.260 and 144.140 MHz. They also announce their availability by using Web sites just as N0UK's Ping Jockey Central <http://www.pingjockey.net/cgi-bin/pingtalk>. So turn on your radio late Tuesday night and start listening. As the shower intensifies, you'll begin hearing bursts of signals. That's the time to grab the microphone (or keyboard) and get on the air!
==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

Don't miss out on the fun. Put our ARRL Maryland-DC Section on the air this weekend on HF, VHF and UHF. It runs from noon Saturday to midnight, then noon Sunday to 8 p.m.

For guidelines, suggested frequencies and rules please visit their website at: <http://www.w3cwc.org/2009rules.htm>.

Thanks to the Antietam Radio Association for handling the Maryland-DC QSO Party for the last twenty years. The time and effort that they have put into it exemplify the Special Service Club designation that they hold.

And thanks to the Anne Arundel Radio Club for taking on the QSO Party for the next decade. It's really great to have clubs willing to step up and keep a good thing going.

Look forward to working lots of you on the air this weekend!

73, Jim Cross WI3N
SM MDC

I"m a bit puzzled by this; the rules say "Phone and CW (includes
digital modes in CW) are allowed." About the only mode I *do* work
from home these days is PSK-31. That's a digital mode ... but it
utilizes AF frequencies, so I'm assuming it's not allowed for the
contest. Is RTTY allowed? That WAS basically a two-frequency CW mode
originally, right? So even though most of us now use AF and a
computer soundcard, RTTY would be allowed for the Maryland contest?

The rule is somewhat ambiguous.

As I read it, it would seem that a digital entry competes (and is scored) as
a CW entry.

I wondered about that, but as it turned out, I didn't spend much time
with the radio this weekend, and I'm a little close to Maryland (North
Carolina) for propagation, most of the day.

BTW, unless I am grievously mistaken (which does happen), I recognize
your name and call from the old Fidonet ham echos! Remember those
long-ago days? Nice to see you still active, Hans! 73!

355. Driving Distracted

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-10 18:30:07 UTC
From: Jeff Davis <ke9v@arrl.net>
Message-ID: <h5poqt$8f5$1@news.albasani.net>
Source record: 1865

The ARRL seems to be taking a fairly strong position with regards to amateur mobile operation in the face of a mountain of evidence suggesting that texting or cell phone use while driving is as dangerous, or more so, as drinking and driving:

http://www.arrl.org/news/stories/2009/08/09/11012/?nc=1

No matter your position on the mobile issue, does it seem to you that by taking such a stand the ARRL is exposing itself to a boatload of liability the first time a mobile operating radio amateur plows into someone on the Interstate and the amateur operation is cited as a primary cause for the accident?

I think you said it all when you pointed out that there's a boatload of reliable data indicating that it's dangerous to use a cell phone while driving. Trying to operate a transceiver while driving certainly can't be any less dangerous. In spite of the fact that licensed amateur radio operators think they're completely capable of operating and driving at the same time, hams are people just like the rest of the population. Obtaining a license from the FCC does not improve ones ability to drive while distracted.

Trying to justify an exception to these laws based on emergency communication is simply ludicrous. Only a tiny fraction of in-motion mobile is actually related to an emergency. I think that this stance by the ARRL is simply wrong.

Yes, it fly in the face of years of tradition that one should not operate in-motion mobile. But when data showed that seat belts save lives, we started using them. When data showed that smoking was bad, we stopped smoking. For folks who are still driving without a seat belt, smoking, and ragchewing all at the same time, nothing I say is going to change your mind.

I doubt that any liability could extend to an organization that simply
advocated a position.

Besides, this business of passing laws outlawing or allowing individual
activities, one at a time, is silly.

Any driver who contributed to an accident by being "distracted" or
"impaired" for any reason should be culpable.

If you're able to drive safely while talking on your rig while shaving
while eating a sandwich, well, more power to you :-)

Holding a cell phone to your ear keeps you from being able to turn your head to check your blind spots. This is the #1 thing I watch out for when I see another driver is on the phone and it has saved me again and again. A mic, you can just drop in your lap when you need to. Most people I have seen driving with hands-free systems and voice recognition dialing on their cell phones drive no worse than they normally do.

Aside from that, people who have problems with keeping their attention span primarily to the driving, shouldn't drive. You don't have to look at the mic, so it is actually potentially safer than having a passenger in the car. It is that simple. Would you outlaw passengers? This always seems to be goal of any discussions like this.

Some people seem to be intent on outlawing every thing that somebody else does because they know they can't do it right themselves. The insurance companies would have nothing to do if people got their license pulled for getting in wrecks rather than outlawing everyone else.

I have seen boatloads of data that gets overturned by boatloads of different data all the time. After 40+ years in the land-mobile industry, and rubbing elbows with many others in the community, experience with the real thing is a lot more telling. I can tell you that "texting" and typing on a computer keyboard certainly needs to be the job of the co-pilot.

Not really. All the ARRL is doing is advocating that amateur radio not be lumped into the same category as cellphones or texting.

More important, consider that amateurs have been operating mobile rigs for at least 75 years (including WERS mobiles during WW2). In all that time, can anyone cite a case - just one - where amateur radio operation was cited as a primary or even a secondary cause for an accident?

Meanwhile, consider that while cell phones have only been common for about 15 years, if that, the documented cases where cell-phone-use-while-driving has been a major contributing factor to accidents are so numerous that several states and municipalities have banned their use while driving, or required hands-free operation only.

Disagreement? Bad press? Hard feelings? Quite possibly.

Liability? No, I don't think so. All they're doing is advocating (as
in "free speech" and "lobbying"), and in fact they're specifically
advocating that hams who do operate mobile do so only in ways which
don't put others at risk.

Granted, anybody can sue anybody for anything for any reason in this
country... but I think it'd be a very long stretch for someone to
succeed in winning a case against the ARRL based on their position and
statements.

Steve Bonine <spb@pobox.com> wrote:

True.

> Trying to operate a transceiver while driving certainly can't
>be any less dangerous.

Well, it *can* be less dangerous (or so I believe). I think that this
is a good area in which to base actual legislation (or a decision not
to have legislation) on actual research and facts, rather than on
guesses and conjectures and opinions.

My guess (>>grin<<) is that it depends very much on what you're doing with
the ham radio.

If you're just listening - it's probably no worse than listening to
the car FM or AM radio.

If you're tuning around - it's probably about as dangerous as tuning your car FM radio, or trying to put a different CD into the player. Could be dangerous.

If you're talking on the mike - you're more distracted then when you're just listening, but unlike the tuning-around situation (or changing a CD, etc.) you don't have to take your eyes off of the road. Might be very distracting, might be no problem at all, depending on how engaged you are in the conversation. [The same is true with conversations with passengers in the car, by the way... anywhere from no-problem-at-all to OK-now-look-at-the-tree-you-made-me-drive-into.]

If you're trying to dial in a message to be transmitted via APRS, it's probably about as dangerous as cell/SMS-texting while driving (i.e. insanely dangerous IMO, please do *not* do this!)

>Obtaining a license from the FCC does not improve ones ability to drive
>while distracted.

Granted.

The real question is, just how *much* distraction actually results
>from various forms of equipment usage?

>Trying to justify an exception to these laws based on emergency
>communication is simply ludicrous. Only a tiny fraction of in-motion
>mobile is actually related to an emergency.

If ham radio transmitting while driving is to be outlawed because it's inherently too distracting and dangerous, then (as the ARRL points out) one should outlaw *all* similar transmission behavior by *all* drivers who are not actually involved in an in-progress emergency.

That would include public-safety land-mobile (i.e. most police radio use by the driver), private land-mobile (e.g. cab drivers, business radio use by delivery trucks), CB (truckers), FRS (by families in convoy), and so forth.

Sauce for the goose is sauce for the gander.

>Yes, it fly in the face of years of tradition that one should not
>operate in-motion mobile. But when data showed that seat belts save
>lives, we started using them. When data showed that smoking was bad, we
>stopped smoking.

And, *if* actual *data* shows that typical land-mobile radio use does result in a high enough level of distraction to significantly raise the accident rate, then I'd agree that legislative action is called for.

I don't feel that simply taking data on cellphone usage effects, and applying these data willy-nilly to land-mobile/CB/ham use, is justified. I've seen some discussions which indicate that there are valid psychological reasons why cell-phone conversations are *extremely* distracting during driving... and that these factors do not necessarily apply to typical land-mobile / ham usage.

Good point about the bad press. I suppose if it were ever to happen that a person plowed into a school bus (heaven forbid) because they were distracted by operating their ham radio equipment, and the mainstream media got hold of the public letters sent by the president of the ARRL to the National Safety Counsel explaning how radio hams should be exempt from any laws preventing their use of radio equipment while driving ... it could get fairly ugly.

And I still wouldn't rule out financial liabilty, especially since these things tend to follow the money. And while suing the bejeezus out of WD9GCT might not yield much dough, suing the ARRL just might and of course that is the way lawyers think.

The points made about 'simplex' operation versus 'duplex' may very well be valid, but it's also a bit of a red herring since other modes of operation are available to the radio amateur.

A few years ago I was having an enjoyable CW QSO with a fellow in Wisconsin who had a great fist but every now and then it would fall apart. Eventually he apologized for his "bad" fist explaining that the highyway he was driving on had a lot of chuck holes and was in need of repair.

He was operating CW with a key strapped to his thigh -- while driving to work.

I like ham radio, and I like that guy ... but I don't want him operating a moving vehicle anywhere within a hundred miles of me or my family... even when all else fails...

> even when all else fails...

You have captured the essence of my feelings in two sentences.

There is a body of reliable data that indicates that distraction during driving causes accidents, no matter what is causing the distraction. It is obvious that operating a ham radio causes distraction. You can argue that the amount of distraction depends on what you're doing, or that similar distraction is caused in other services like public safety or land mobile, but the fact remains that operating a ham radio while driving increases the probability that you'll have an accident.

Does it increase the probability enough to lump it in with cell phone use and discourage the behavior by passing laws? I think that it does; I recognize that there are dissenting opinions.

But for the ARRL to defend the right of hams to distract themselves based on emergency communication is not logical. If they want to make the case that operating a ham radio is sufficiently different than using a cell phone that such laws should not apply, I still wouldn't agree but at least the premise would be logical.

I have seen several close calls related to people chattering away on cell phones while driving. I am convinced that the issue of distracted drivers having accidents is real, and I support laws that prohibit that behavior because I believe it to be dangerous both to the person who is doing it and to me. I don't buy that operating a ham radio is sufficiently less distracting that it should be exempted.

I don't think ARRL would be liable for the action of any individual ham.

But I do believe two things:

1) Operating an amateur radio rig while driving is every much a distraction
as talking on a cell phone.

2) Amateur radio operators should not be eligible for "exemptions" not
available to the general public.

That's part of it all right.

Another factor is that holding a cell phone has the person driving
one-handed all the time.

But the biggest difference is psychological. Telephone conversations
tend to be two-way (duplex), radio is almost always one-way, and the
distraction level is very different.

> Aside from that, people who have problems
> with keeping their attention span

That's true, but who decides such things? Almost all of the bad drivers
I know think they are good drivers!

You don't have to look at the passengers while driving, either. I sure
don't.

Some of them! (Actually, if a certain passenger is a distraction, I
pull over).

I disagree.

The problem is that too many people are poor judges of how well they can do something. Particularly in real-life situations. After an accident is too late to do prevention. Pulling the license doesn't bring back the dead or instantly heal the injured. (And some folks will simply drive without the license!)

Where I work, we have a saying: "The safety book is written in blood".

> I have seen boatloads of data that gets
> overturned by boatloads of different
> data all the time.

Sure. But we have to go with the data we've got, and that data proves over and over that cell phone use while driving seriously reduces driving skills.

If someone did a lot of testing, they could probably find certain individuals whose driving skills with an illegal blood alcohol level were better than those of certain other individuals who were stone cold sober. IOW, exceptions that prove the rule.

But the law has to be written and applied the same for everyone.

>I can tell you that "texting" and typing on a computer
> keyboard certainly needs to be the job of the co-pilot.

Of course! And you would think that everyone would have the common sense to know that. But they don't.

That's the real issue - people's lack of self-awareness, good judgement and common sense. Maybe we can't legislate those things, but we can try to prevent some of the obvious bad results.

>at least the premise would be logical.

But they did: that article discussed the difference between simplex
(ham radio) and duplex (cell phone) operation. I agree with them that
that's a defensible difference.

It also ties into the comparison with having a passenger in the car.
If the passenger is an adult, they will likely notice when the driver
is in a tricky situation and stop talking. That's certainly what I do.
I'll stop talking in the middle of a sentence if I see that the driver
has to deal with some traffic that has suddenly bunched up, or some
other issue. A person on the other end of a cell phone can't see what's
happening and know to stop talking.

I actually have a non-driving example of this. A few years ago, I was
on the phone (with someone in Newington, coincidentally!) on a day when
we had had a small earthquake. Another one struck while the other person
was talking. I asked her to hang on, because I needed to gauge whether
it was big enough that I needed to move away from my desk. But she, of
course, had no idea that anything was happening and didn't hear my first
couple of requests to hold the conversation. So I was distracted from
dealing with the actual situation by trying to get the attention of the
person on the other end of the phone. Now, had I been in a car and some
dangerous situation had suddenly arisen, I would have simply dropped the
phone. But I still think this points to the greater distraction of phone
conversations during local "emergencies." And I think it's not as much
of an issue with simplex conversations.

This is the essence of dealing with anything else in the cockpit. It all
has to be secondary to what is going on "out there". If that mindset isn't
drilled, trained, cultivated or however you get that unfailingly into the

brain, you have no business on the road because no amount of excuses or inanimate objects we can come up with to blame or outlaw can make up for a tragedy.

In my own experience, anything that takes more than 2 seconds of my eyes off the road is not worth doing on the road, and if there aren't 2 seconds to spare, it can wait. I can count to 2 without letting my mind wander to Strawberry Fields Forever, and I haven't lost any friends by asking them to repeat themselves.

I guess I think the problem is we're concentrating too much on
preventing behaviors that *might* lead to dangerous activity and not
enough on preventing the dangerous activity itself.

For example (bear with me here!) DUI is not in itself dangerous.* Heck,
on any given night the vast majority of drunks on the road get home
without harming anyone or anything.

The dangerous activity is running red lights, driving way too fast,
moving out of your lane without regard for the presence of other
vehicles, etc...

Of course, being drunk makes you FAR, FAR more likely to commit one of
these dangerous activities. Being drunk is not an *excuse* for these
activities. I do not mean to suggest DUI is a good idea, nor that we
should make it legal.

But if your mom gets run over by someone blowing through a red light at
30 over the limit, should that person get off more lightly because they
were sober and just thought they were too important to obey traffic
signals?

IMHO we should be spending more resources patrolling our roads and
stopping those who are actually doing dangerous things, *regardless* of
why they're doing it -- and stop diverting those resources to people who
are doing things that *might* be dangerous.

The quote from Sumner is, "Simplex, two-way radio operation is simply different than duplex, cell phone use. Two-way radio operation in moving vehicles has been going on for decades without highway safety being an issue. The fact that cell phones have come along does not change that."

It's "simply different"? What's inside that cell phone? A two-way radio. In both cases you've got two people talking to each other. If you compared the conversational style between two hams chatting on two meters and the same two people chatting on a cell phone, you wouldn't see much difference. Maybe years ago when one party would expound for 9.9 minutes and then hand it over to the other for his 9.9 minutes there was more difference, but even then you still had distraction.

As for this argument that there was never an issue before, how do we know this? How much has the population of vehicles capable of two-way radio communication grown since the cell phone came along? From perhaps .1% to 80%? I have no idea what the actual numbers are, but I know it's a huge difference. So now we're seeing the problem. Is this because two-way radio operation is safe, but bundle the radio into a cell phone and it becomes deadly? I don't think so; I think it's the population increase.

The bottom line is that using a ham radio transceiver while driving is distracting. Depending on what the operator is doing, it can be less distracting than using a cell phone, or a whole lot more distracting. I have seen hams operate HF while driving, including changing bands, picking a new frequency, and adjusting the tuning on both the transmitter and antenna, and that is absolutely more distracting than talking on a cell phone. I've also observed a fair number of people whose idea of operating mobile is to use their HT in the car.

A license from the FCC does not imbue special distraction-avoiding skill. If limiting cell phone use while driving is A Good Thing, then

the same should apply to use of ham radio.

> For example (bear with me here!) DUI is not in itself dangerous.

Yes, it is.

Here's why:

First, one of the prime properties of drinking ethanol is behavorial disinhibition - meaning that a person's restraint and judgement tend to be impaired. That makes it more likely they will do something dangerous than if they were sober. (Some might say that behavioral disinhibition is a prime reason to drink ethanol, but that's a different discussion...)

Second, another of the prime properties of drinking ethanol is that it slows down reaction time and impairs driving skills and coordination. This is readily demonstrated by having a person drive a test route sober and then with varying blood alcohol levels. The result is that a driving situation in which a sober person would stop in time, swerve to avoid an obstacle, etc., can turn into an accident simply because the person's reactions and skills are impaired. This is true even if the person doesn't speed, doesn't run red lights, etc.

> Heck,
> on any given night the vast majority of drunks on the road get
> home
> without harming anyone or anything.

Yes, they do. But that doesn't prove DUI isn't dangerous. The vast majority of people who do all sorts of dangerous driving things, like running a stop sign, get away with it simply because all the conditions for a disaster aren't there at the same time.

> The dangerous activity is running red lights, driving way too fast,
> moving out of your lane without regard for the presence of other
> vehicles, etc...

That depends on how we define "dangerous". Most of those activities are only dangerous if other conditions are present. For example, if there are no other cars present, what's the danger of running a red light?

> Of course, being drunk makes you FAR, FAR more likely to
> commit one of
> these dangerous activities.

Exactly! And that alone makes DWI dangerous, at least by some
definitions.

> But if your mom gets run over by someone blowing
> through a red light at
> 30 over the limit, should that person get off more
> lightly because they
> were sober and just thought they were too important to obey traffic
> signals?

It depends on the case. Intent is a major factor in determining whether
an action is a crime, and how severe a crime it is. Because we know
that DWI unnecessarily increases the risk of a tragedy, DWI itself
becomes a crime.

For example, suppose A shoots B and B dies. A's intent could be the
difference between self-defense and first-degree murder.

> IMHO we should be spending more resources patrolling
> our roads and
> stopping those who are actually doing dangerous things,
> *regardless* of

> are doing things that *might* be dangerous.

Well, I don't know about where you are, but around here, I see far more
resources allocated to stopping dangerous behaviors (speeding, running
red lights, failing to signal, following too closely, etc.) than to
trying to find DWIs. The DWIs I do know about in this area are usually
the result of a traffic stop for another reason (police see somebody
blow through a red light, they pull the car over, turns out the driver
has had too many too recently. Driver gets charged with both the red
light violation and the DWI.)

Maybe it's different where you are.

--

Here's an analogy:

Here in PA we have annual auto safety inspections. One of the things
checked is tire wear; if your tires are down to a certain point, they
have to be replaced. If you're stopped with below-wear-limit tires, you
can get a ticket.

But in most situations worn-down tires aren't any more dangerous than
new ones. The difference only matters in wet, snow, ice and high-speed
conditions. Yet even if it's a dry summer day and you're driving slow,
you can get a ticket for worn-out tires because of the *potential*
hazard if it should rain or you take the car on the freeway.

I don't know how it is generally in the US, but here in the UK there is
a specific law prohibiting the use of *hand held* phones whilst driving.

This law does *not* apply where hands-free equipment is in use, as long
as the phone itself is fixed in a cradle and not lying around loose
somewhere.

It also applies *solely* to phones and *not* to any other form of radio
communications, including two-way radio (of any type, business radio or
amateur, CB etc.) So I can quite legally use a hand-held microphone on
2m but not a hand-held phone.

Of course the police could quite easily charge me with the offence of
driving without due care and attention or even dangerous driving, but
for some reason they saw fit to introduce a law banning hand-held phones.

>
> Simply different.

Yes, certainly simplex and duplex are different.

But what the ARRL is saying is that there is a fundamental difference between communicating using mobile radio and communicating using a cell phone. Sumner is using the terms "simplex" and "duplex" to describe this. Since "simplex" and "duplex" are not common words generally used by the public, I conclude that he has picked them primarily to control the discussion. Rather than admit that they don't understand what the words mean, many people will just say, "Sure".

The issue is distraction to a driver. It makes no difference whether you can hear the other person while you're talking. Whether you're using a cell phone or a mobile radio, you're having a conversation with another person and fiddling with the actual equipment -- flipping open a cell phone to answer a call, or changing the frequency on the ham transceiver. In fact, there are a whole lot more buttons to push and potential distractions with the transceiver than with the cell phone.

If cell phone use while driving is an activity that needs to be discouraged, then mobile radio operation while driving should also be discouraged because they both result in distraction. To say, "The driver isn't distracted because he can't hear the other person while he's talking" is not logical. Saying it using fancy words like "simplex" and "duplex" does not make it more valid.

Source record: 1885
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.dx,rec.radio.info

Working Hawaii can be a challenge, especially for east coast (US) hams suffering from historically crummy HF propagation. Your chances of putting HI in the log gets much better when there are a bunch of Hawaiian hams calling you!

The Hawaii QSO Party contest will run from 07:00 UTC Aug 22, 2009 to 22:00 UTC Aug 23, 2009, for a total of 39 hours. Stations may work the entire contest period.

The rules have been changed to emphasize that this is a QSO party, to make as many QSL/able contacts as possible, emphasize the rare modes/bands and remove the county hunter aspect and even the playing field by offering the same point structure to stations, Hawaiian and non-Hawaiian. Contest period has been changed to allow for more dark time to support the low bands better. Exchange format is unchanged, but counties are not multipliers. Only band and mode multipliers exist.

More information can be found at:

http://tinyurl.com/hi-qso-party

Good luck!

I disagree.

It makes all the difference in the world.

In typical amateur simplex operation, the person who is talking
controls the conversation. S/he cannot be interrupted and can always
just drop it or say "wait".

> Whether you're
> using a cell phone or a mobile radio, you're having a conversation with
> another person and fiddling with the actual equipment -- flipping open a

Actually not. At least not for the kind of mobiling most hams do.

Here's a personal example. I used to do quite a bit of 2 meter FM
mobiling. Never had an accident or a close call.

My 2 meter rig was an HW-2036 mounted under the dash. The only controls
were off-on-volume, squelch, offset and thumbwheel switches for the
frequency. The knobs were big and I could operate the rig without
looking at it by counting clicks and listening to the effects.

A typical mobile operation consisted of setting the rig to a local
repeater *while stopped*, then listening. The speaker meant I could
listen with two ears instead of one, and with both hands on the wheel.

If I wanted a QSO and the repeater was quiet, I'd wait for a time when
I was stopped and announce my presence as "N2EY mobile three,
listening". If I got a call, I'd just pick up the mike and talk when it
was safe to do so and have a QSO. If there was an ongoing QSO that I
wanted to join, I'd wait for a break and announce my presence. Same
resulty.

In all cases the other hams on the repeaters knew that mobiles might
not come back right away, might miss words or entire transmissions, or
might disappear for no reason because they needed to concentrate on the

road or had gone down into a bad spot, etc. No worries and no pressure. Most of them had enough operating sense to talk clearly and relatively slowly, to repeat important words and phrases and to structure the conversation in a way that made sense.

In amateur operation, there are lots of cues about when it's your turn to talk and such. Callsigns and prosigns and such help a lot.

Of course sometimes folks get carried away:

http://www.youtube.com/watch?v=KJCfUm21BsI

Now I have a cell phone, and it's a whole different world. I used to use it while driving, and while I never had a close call, I simply stopped because it was simply too distracting.

For one thing, when the cell rings, you have only a certain amount of time to answer before it goes to voicemail. The result is a mad grab to get the phone, see who it is and open it up.

When the phone is answered, many callers don't ask if you can talk, they just launch into a conversation. They expect your full attention to the conversation and often don't realize you need to focus on the road even when you tell them. Often the conversations are about important stuff like who has to be where when, which is even more distracting. People often expect instant back-and-forth on the cell, which takes a much different toll on the gray matter.

Cell phones also require that you drive one-handed all the time unless you have a hands-free setup. Even with one of those, you're only listening with one ear, which is different from a speaker. I suppose a voice-operated speaker box is the best option.

So now I just don't answer the cell while driving. If it rings and there's someone else in the car, I let them answer it. If not, I let it go to voicemail and call back when I can talk safely and am not driving. That is, if I even have the phone on while in the car.

> If cell phone use while driving is an activity that needs to be
> discouraged, then mobile radio operation while driving should also be

For some reason talking on the cell phone while driving seems to capture my full attention and concentration. Even when I am looking at the road. The mobile half duplex requires much less attention and/or concentration for me.

It is like you have to think when to reply or talk on the phone. I just wait for the other station to stop transmitting. Not much thought or less brain engagement.

Are you kidding? My cellular phone is filled with little tiny buttons
and it has a little tiny screen filled with little tiny menu items. It
doesn't have a flip cover.

I may or may not have to change the frequency of my mobile rig. Mine
has a outboard front panel which is mounted on my dash. I don't need to
look away from the road to see it.

If you don't like it, Steve, then don't operate your cellular phone or
your mobile amateur station. Don't tell me that I can't because then
you are on that slippery slope. There'll be those who tell us that we
can't eat that Big Mac, sip that coffee or Pepsi, use that GPS, change
that CD or even listen to that broadcast radio while moving. Me? I've

been operating mobile for over forty years and have never had an accident while doing so--FM, SSB or even CW.

The plural of "anecdote" is not "data".

There are millions of people who have driven millions of miles drunk and not had an accident, but laws were enacted banning DUI. I believe that laws banning cell phone use while driving are appropriate. Yes, it's a slippery slope, but all laws are a slippery slope. That's why our lawmakers are so well paid and respected <grin>.

In your opinion, mobile radio operation is less distracting than cell phone use. I can't prove that it is or isn't, and there will never be a scientific study on this narrow topic. That means that our lawmakers must make the decision based on input from us and organizations like the ARRL. That's a scary thought, but it's the way that the process works.

I believe that the ARRL's position on the issue is wrong. You don't. Reasonable people can agree to disagree. But I'd like to leave it at that. I am not "telling you" what you can or cannot do; I am expressing my opinion.

Amateur Radio Newsline(tm) Report 1670 - August 14 2009

Amateur Radio Newsline report number 1670 with a release date of Friday, August 14, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. A circus performer will be the next tourist in space. Will he also be the next ham radio operator on-orbit? Also, South Africa's next ham-sat is set for a mid-September launch, 2 meters proves to be a good band for DX, the vanity call sign fee is going up and ham radio will help to coordinate National Wildlife Refuge Week. All this and more on Amateur Radio Newsline(tm) report number 1670 coming your way right now.

HAM RADIO IN SPACE: CIRQUE DU SOLEIL FOUNDER TO BE NEXT TOURIST IN SPACE

A former stiltwalker and fire-eater will be the next mega-millionaire tourist to visit the International Space Station. This with word that Cirque du Soleil founder Guy Laliberte is shelling out a reported $35 million for his round-trip ticket aboard a Russian spacecraft to visit the orbiting outpost. Bill Pasternak, WA6ITF, has more:

--

Guy Laliberte will rocket into orbit from Kazakhstan at the end of September with an American astronaut and Russian cosmonaut as his travel mates. Like his predecessors, Laliberte will then spend more than a week at the space station.

At a news conference in Houston, Laliberte said that he will be like a kid in a candy store" and will be experimenting with zero-gravity tricks.

Liliberte explained that he is not a scientist, a doctor nor an engineer. Rather he sees himself as an artist and creator. As such he says that he will try to accomplish this mission with his creativity and what life has given him as a tool.

Laliberte assured reporters that he will not play with any fire in space, but he hopes to try some acrobatics in weightlessness and may teach his crewmates a card trick or two.

Lileberte described his life as a fairy tale and said watching men land on the moon 40 years ago on a black-and-white television in a campground in the middle of the forest was his inspiration. He said this taught him that all things are possible. Now he says that it's his turn to inspire the next generation.

What's not known is whether or not Laliberte will get his ham ticket and conduct ARISS contacts with those of us here on Mother Earth.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

For those of you who do not speak French, Cirque du Soleil translates into the Circus of the Sun. It's a truly amazing performance of acrobatic skill combined with dance and circus acts that once you see you will never forget. (Space Science Review)

HAM RADIO IN SPACE: SUMBANDILASAT TO LAUNCH JUNE 15

South Africa's latest ham radio satellite called SumbandilaSat is now due to launch on September 15th. According to the Southern African Amateur Radio Satellite Association website the bird is already on its way to the Baikonur Cosmodrome in Kazikstan from where it will be carried into orbit on board a Russian Soyuz launch vehicle.

The amateur radio payload on board SumbandilaSat is made up of an FM voice transponder with an uplink in the 2 meter band and a downlink in the 70 centimeters. It also carries a store and forward voice digipeater and a voice beacon. These will be operating in conjunction with the University of Stellenbosch Software Defined Radio project that will share the on-orbit VHF receiver and UHF transmitter.

SumbandilaSat will also carry a Very Low Frequency or V-L-F radio experiment from the University of KwaZulu-Natal. More on this South African ham radio in space project is on the World-Wide-Web at www.amsatsa.org.za. (AMSAT-ZA)

**

HAM RADIO IN SPACE: A $8000 PERSONAL HAMSAT

In the old days hams bought a kit to build a transmitter or a receiver. Now, in the 21st century we seem to have entered the age of the personal satellite with the introduction of Interorbital's TubeSat Personal Satellite Kit.

The new IOS TubeSat PS Kit is the low-cost alternative to the AMSAT-developed CubeSat. It has three-quarters of the mass (and volume of a CubeSat, but still offers plenty of room for most experiments or functions including those that enterprising ham radio groups might come up with. Perhapps a tiny D-Star repeater or linear translator. And

best of all, the price of the TubeSat kit includes the price of a launch into Low-Earth-Orbit on an IOS Neptune 30 launch vehicle.

There is one negative to the Tubesat concept. Since the these tiny satellites are placed into self-decaying orbits only 192 miles above the Earth's surface they will eventually fall back and burn up as they re-enter the atmosphere. On the other hand, being relatively short lived they will not contribute to any long-term build-up of orbital debris.

Launches are expected to begin in the fourth quarter of 2010. The total price of the TubeSat Kit including a placing it in orbit is only $8,000. More is on-line at http://spacefellowship.com/2009/08/01/interorbital-syatems-tubesat-personal- satellite-kit/ (VK4TJ)

**

RADIO LAW: VANITY CALL SIGN FEE RISING IN SEPTEMBER

The cost of a United States amateur radio vanity call sign is once again going up. On August 11th, the FCC announced that the cost of an vanity call will increase from $12.30 to $13.40 for its 10 year term. Now that notice has been published in the Federal Register, the increase will take effect in 30 days on September 10th. (ARRL, FCC)

**

RADIO LAW: ITS REALLY A MOBILE

A UK ham who thought he had found a novel way around local zoning restrictions is facing challenges from his neighbors. This, over 60 foot high telescoping tower complete with rotor and tri-band antenna mounted on a vehicle parked on his property.

Robert Dodson, G4RNK, is fighting calls to remove the tower that nests down to 27 feet from his back garden despite complaints from neighbors. Dodson claims he has not breached neighborhood planning regulations because the entire antenna system is mounted on a trailer,

Dodson was served an enforcement notice for its removal after he erected it without permission last September. At a planning inquiry on Wednesday, July 29th, Michael Matthews who is a lawyer representing Dodson outlined his grounds for appeal while senior enforcement officer Jamie Cooper upheld the authority's position. Both parties thrashed out legal issues surrounding the tower and argued whether it is a temporary or permanent structure, which would determine if it needed planning permission.

Also present at the hearing were several neighbors who called the mast an ï¿½eyesore' and claimed it interfered with their TV, radio and telephone signals. In rebuttal, Dodson said the entire installation had twice been tested and approved by U-K telecommunications regulator Ofcom.

A decision is expected to be made within the next month. (eHam.net)

**

ENFORCEMENT: UNLICENSED BROADCASTER DINGED $10000

The FCC has ordered Texas resident Radhames Severino to pay a $10,000 fine. This for allegedly operating of an unlicensed radio transmitter on the frequency 101.5 MHz in the Houston area.

In its forfeiture order adopted on August 5th, the FCC noted that on May 26th the Commission's Houston Resident Agent Office of the Enforcement Bureau had issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Severino for the alleged offense. To date, Severino has not filed a response to the order.

This case dates back to On October 23 and 25, 2006. That's when the FCC responded to a complaint about an unlicensed radio station in the Houston area. An agent from the Commission's Houston Office T-hunted the signal on 101.5 MHz to a building in the Houston area. On October 31, 2006, an agent from the Houston Office inspected the radio station located in suites K-M of the building, which was labeled as the home of the Iglesia Misionera Evangelistica Elohim church. The agent determined that Severino leased these suites, was responsible for the station, and was the pastor for the church.

On November 7, 2006, the Houston Office sent a formal Notice of Unlicensed Operation to Severino at his residence. The notice warned him that operation of an unlicensed radio station violated Section 301 of the Act and directed him to cease all unlicensed operations immediately. The letter also outlined the potential penalties for such a violation,.

But the FCC warning to Severino apparently went unheeded. On January 30, March 12, and October 15, 2008, agents from the Houston Office, again T-hunted the signal on 101.5 MHz to Severino leased suites. This in turn lead to the issuance of a $10,000 Notice of Apparent Liability to Severino to which he never responded. As a result, Severino was given the customary 30 days to pay or to file an appeal. (FCC)

THE SOCIAL SCENE: HUNTSVILLE HAMFEST VIDEO ON-LINE

If you want to be at this years Huntsville Hamfest but cannot make the trip Tom Medlin W5KUB, will be able to take you there vicariously. That's because Tom bringing it direct to your computer screen through the magic of streaming video over the Internet.

Tom tells Newsline that he will be going live Friday morning August 14th at 08:00 Central time. This, to broadcast the 2009 Huntsville Hamfest on his world wide internet site that this year will feature a chat room for hams to discuss the convention with others. Tom also plans to give away prizes to viewers almost every hour during this live event.

Included in this years coverage will be the presentation of the Amateur Radio Newsline Young Ham of the Year award to Andrew Koenig, KE5GDB. That takes place on Saturday afternoon, August 15th.

Tom's video streaming website is very easy to find. Simply type in w5kub.com or wa5kub.com to your web browser without the www and it should take you right these.

The bottom line: If you cannot make the trip to Huntsville this year, then tune in on w5kub.com and vicariously join in on the fun. (W5KUB)

SPECIAL REPORT: E SKIP ON 2 METERS

Friday, July 31st was an amazing day for DX. That is if you happened to have been on 2 meter SSB or Morse that day. Yes, we said 2 meters. Take a listen:

--

Actual contact audio: Hear it in the MP3 version of this report downloadable at www.arnewsline.org

--

That's Jacque Dupuy, N0IRS, in Kansas City, Missouri, making the kind of VHF contacts that those who limit their operation only to repeaters are missing out on. Heres more:

--

Actual contact audio: Hear it in the MP3 version of this report downloadable at www.arnewsline.org

--

The secret to working DX like this is to be using the right mode on the right frequency when the band is open with E skip. With many of today's repeaters employing tone access, the day of listening for an out of area station on your favorite machine is fast coming to an end. You need to have a receiver capable of CW and SSB reception and be monitoring on or near 144.200 MHz to know when the DX is in.

And for those of you who want to hear more of what K0IRS has worked on 2 meters, simply go to YouTube dot com and put his call in the search box. What you see and hear may make a lot of you want to buy a big 2

meter antenna and a VHF multi-mode rig. (ARNewsline(tm) with audio from N0IRS video)

**

RESCUE RADIO: OWENSBORO KY TRAINS TO EMCOMM HAMS

Local officials in Owensboro, Kentucky, are again turning to ham radio to solve some of the communication problems they encountered.

During that severe winter weather crisis cellphone service throughout the Owensboro area was disrupted, sometimes for days at a time. Landline phones were also affected, and communication problems were cited by multiple emergency response agencies as the biggest issue they faced.

But Owensboro is one community well acquainted with turning to ham radio in such situations thanks in great part to the late George Wilson, W4OYI. Long before he became President of the ARRL Wilson brought the concept of turning to radio amateurs for emergency assistance to the attention of city leaders.

That was several decades ago. Now, many other hams are following in George Wilson's steps including Bob Spears, AA4RL, who is a member and past president of the Owensboro Amateur Radio Club. He says that drawing on the experience of the amateur radio operators, emergency management officials decided to sponsor a class on amateur radio operation. The five-week session teaches the skills and rules needed to pass the Technician class amateur radio test.

Spears, who has been licensed since 1961 said in a recent newspaper interview that this educational series will be good for the community because it will provide more people who can be deployed with radios. Spears said that these new hams can serve as weather spotters as well as assisting the Red Cross assess damage. Having amateur radio operators throughout the county would give real-time, on-the-scene feedback to emergency managers and to officials with the National Weather Service office in Paducah.

Owensboro Kentucky has a long history of cooperation between rescue radio hams and city officials. This is just another example of how that tradition carries on. (ARNewsline(tm) and Published reports)

**

RESCUE RADIO: HAWAII HAMS WERE PREPATED FOR FELICIA

Hams in Hawaii were ready for a big storm that never arrived. This as the threat from hurricane Felicia was downgraded to a tropical depression and has now has passed.

Ron Hashiro, AH6RH, is the Hawaii State Civil Defense RACES coordinator. He says that in preparation for Felicia that daily nets were in operation. But as the storm approached and broke apart the

need for the Skywarn activation was cancelled.

Ron says that the daily State Civil Defense net was instead operated as an ARES net instead of a RACES activation. Because the threat did not materialize, RACES was not activated and this daily ARES net carried informational bulletins with revised frequencies and times as conditions warranted.

Hashiro says that it was a textbook example of coordination, information sharing and dissemination under the umbrella of ARES prior to activation to keep the amateur radio operators informed.

As an aside, Len Winkler, KB7LPW, who used to host the radio program Ham Radio and More now lives in Hawaii. He reports over Facebook that the area ended up with a total of 2" of rain but at the time of his posting on Wednesday, August 12th, they experienced some high winds that had began some 7 hours earlier. He reported that the winds were in excess of 35mph.and coming in from the West which is totally different than our normal. He added that his trees were not enjoying their swaying and that there were avocados everywhere. (AH6RH, KB7LPW)

**

RESCUE RADIO: MISSOURI HAM ASSISTS LOST HIKERS

A Houston, Missouri amateur radio operator played a role in aiding some lost hikers recently in the Paddy Creek area in northwest Texas County. On Saturday, August 1st, Richard Wood, KB0MPO, was monitoring a local repeater when he heard a call for help. The person was asking for assistance for himself and several hikers who became lost on the Paddy Creek Trail.

It appears that one o the hikers had his own ham radio equipment with him and found a local repeater frequency to call for help. The hikers described their location. Wood assessed the situation and gave directions to return to their campsite.

When some of the hikers decided it was too far to make the trip back, KB0MPO notified the sheriff's department to make a rescue. The hikers ultimately returned to their starting point without further incident. (KA0ADI)

**

RESCUE RADIO: CAR HORN BASED EMERGENCY ALERT SYSYEM PROPOSED IN GERMANY

In the past, Germany used sirens to warn the population in the streets against floods and other dangerous situations. Today, most sirens are gone having been dismantled after the Cold War.

Now, researchers of the Fraunhofer Institute for Technological Trend Analysis want the population to be warned of pending disasters by use of common car horns. In fact, they have applied for a patent of a

technology which allows the horns of parked cars to be activated in cases where such an immediate emergency natice to the Gerrman public is required..

The technology is based on the Germany's eCall emergency system, which new cars are going to be equipped with beginning in September 2010. The eCall system was developed at the initiative of the European Union Commission to help reduce the number of road traffic fatalities. It consists of a GPS sensor and a mobile phone component, which is activated only in case of an accident such as when airbags are triggered. The system then can transmit data such as the time and location of an accident and driving direction of the vehicle to an emergency call center.

The researchers soon realized that the eCall infrastructure can also be used to warn the population. Once the cars are equipped with a radio receiver, their horns can be triggered in case of disaster authorized civil protection agencies. This proposed new system is meant to complement rather than replace the other emergency alert options already in place in Germany many of which are broadcast based. More on this concept is on line http://www.sciencedaily.com/releases/2009/07/090720083423.htm (Science Daily)..

RADIO BUSINESS: MFJ ACQUIRES CUSHCRAFT AMATEUR ANTENNAS

In ham industry news, MFJ Enterprises, Inc., of Starkville, Mississippi has purchased Cushcraft Amateur Radio Antennas Product Line from Laird Technologies, St. Louis, Missouri. The sale was effective July 31, 2009 and MFJ has announced that Cushcraft products will continue to be manufactured in Manchester, New Hampshire.

According to MFJ Founder Martin Jue, K5FLU, Cushcraft Amateur Radio Antenna products have long been a popular source for a wide range of HF, VHF and UHF vertical, beam and yagi antennas for the amateur radio community. He says that the acquisition of Cushcraft Amateur Radio Antennas will bring over fifty new products to MFJ's amateur radio product line. Jue added that his company will add more new products to this antenna line and will continue the Cushcraft Amateur Radio Antennas name long into the future. Look for more information soon at www.mfjenterprises.com. (MFJ)

**

RADIO BUSINESS: RADIO SHACK TO BE KNOWN AS THE SHACK

And in case you have not heard the latest, Radio Shack will call itself the polite version of what hams have long called the chain. The Shack.

According to Chief Marketing Officer Lee Applbaum, customers, associates and even the investment community have long referred to

Radio Shack as 'The Shack. So says Applbaum the company has decided to embrace that fact and -- in his words not ours -- to share it with the world.

According to Applbaum customers see more of a focus on mobility and wireless products in the new advertising. He says that the company is contemporizing the way it wants people to think of the brand, rather than actually changing the official name of the company.

The word contemporizing does not seem to appear in any dictionary but we did find the words contemporize. It means to give a modern or contemporary character or setting or to update. It also means to place in or regard as belonging to the same age or time. (Published reports)

**

HAM HELP: PENNSYLVANIA HAM SEARCHING FOR ONE OF HIS OLD QSL CARDS

A Pennsylvania ham is looking for someone who has one of his old QSL cards so that he can recreate it and start using that design once again. Phil Lanse, K3IB, id that ham but the card he is looking for has his old K2IBP call sign on it.

Phil tells Newsline that he used those cards between 1953 and 1990 while he was very active on terrestrial VHF and EME from New Jersey. He says the card in question was printed by Richard "Brownie" Brown, W3CJI, who is now a silent key. The design featured Phil's K2IBP call in fluorescent blue letters outlined in black and black lettering on a fluorescent red background.

Phil says he would like to get a scan of one of his old cards so that he could have another print shop recreate it for him to use once again, If you can assist, please contact Phil by e-mail to l31nesep(at) epix (dot) net. He will be very grateful to anyone who can assist. (K3IB)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: ART HOUSHOLDER, K9TRG - S.K.

One of the hams who contributed mightily to the initial growth of FM in ham radio has become a silent key. Art Housholder, K9TRG, the founder of the Chicago-area based Spectronics passed away on Tuesday July 7th at age 82.

A a longtime resident of Elk Grove Village, Illinois, Art was one of those kids bitten by the amateur radio bug and soon became K9TRG. In the late 1960's his store, Spectronics was one of the centers where hams nationwide could purchase surplus land mobile two-way gear that they could convert to amateur radio use as mobile and fixed stations as well as repeaters.

Its unknown just how many repeaters started as used taxi and police radios that were recycled to ham radio through Spectronics, but the number had to have been into the hundreds if not thousands. In the process it also made the name Art Housholder and the call letters K9TRG a kind of early FM legend in the ham radio community.

Art Housholder was age 82 when he passed away at the Alexian Brothers Medical Center. A memorial was held on Saturday, July 11, at St. Michael the Archangel Cemetery in Palatine, Illinois. K9TRG leaves behind a legacy of helping to create a facet of ham radio that will likely live on for decades to come. (ARNewsline(tm))

EMERGING TECHNOLOGY: 6 IN 10 COMPANIES TO SKIP WINDOWS 7 FOR NOW

The upcoming release of Microsoft's Windows 7 operating system has the computer world buzzing but the long awaited replacement for Vista may not get the level of corporate sales that its developers are hoping for. David Black, KB4KCH, reports:

--

Six in 10 companies in a survey plan to skip the purchase of Microsoft Corp's Windows 7 computer operating system, many of them to pinch pennies and others over concern about compatibility with their existing applications.

Windows 7 will not be released until October 22nd, but has already garnered good reviews. This, in contrast to its disappointing current version known as Vista. Vista simply did not catch on with either consumers or the business world and many P-C makers opted to stay with the proven and popular Windows XP. Also, many companies rejected Windows Vista as unstable. For example, the chip maker Intel Corp, stayed with the older XP system.

So why will adoption of Windows 7 be slower than Mivrosoft expected? Many of the more than 1,000 companies that responded to a survey by ScriptLogic Corp say they have economized by cutting back on software updates and lack the resources to deploy Microsoft's latest offering. The survey found about 60 percent of those surveyed have no plans to deploy Windows 7. About 34 percent will deploy it by the end of 2010 and only 5.4 percent will deploy by the end of 2009

Forty-two percent said their biggest reason for avoiding Windows 7 was a "lack of time and resources. Another 39 percent of those surveyed said they had concern about the compatibility of Windows 7 with

existing applications.

--

ScriptLogic is a corporation that provides help to companies in managing their Microsoft Windows-based networks. It sent out 20,000 surveys to information technology administrators to learn the state of the market. (Technology OnLine)

**

EMERGING TECHNOLOGY: USB PORT PROTECTION FROM L-COM

A surge protector for your U-S-B ports. That's the latest product from a company called L-com that is offering its model AL-ECF504-AB. This is a USB 2.0 connector port resistant to power surges and shielded against electromagnetic as well as RF interference. The unit is available as both Type A and Type B connectors. More is on-line at www.L-com.com. (L-COM)

**

PUBLIC SERVICE: HAM RADIO TO COORDINATE NATIONAL WILDLIFE REFUGE WEEK

Ham radio is about to become involved with improving the environment. This with word that the KP1-5 Project, which sponsored the 2009 Desecheo Island DXpedition has announced that it will be serving as national coordinator for Amateur Radio's involvement in the 2009 National Wildlife Refuge Week from Sunday, October 12th to Saturday, October 18th.

The goal this year is to combine amateur radio's communication skills with ones enjoyment of the outdoors to help others learn about the National Wildlife Refuge System. Hams worldwide can help spread the word about the National Wildlife Refuge System by operating in or near a refuge during National Wildlife Refuge Week.

Only authorized, responsible access to refuges is sanctioned by this event. For more details please visit www.nwrweek-radio.info

By the way: This year the National Wildlife Refuge System celebrates 106 years of conservation and quality recreation in 2009. (Press release)

**

WORLDBEAT-UK: AMSAT-UK COLOQUIUM VIDEOS NOW ON LINE

In news from around the world, the videos of presentations at this years AMSAT-UK International Space Colloquium are now available to watch on the British Amateur Television Club website. All 18 sessions can be seen at www.batc.tv (Southgate)

**

WORLDBEAT-AUSTRALIA: NEW VK BANDPLANS AND TONE ACCESS PLANS RELEASED

And word that the Wireless Institute of Australia has released revised repeater access plans that specifically include CTCSS tones, Echolink and D-STAR frequencies.

Under the revised scheme 91.5 Hz is the new CTCSS tone for standard repeater activation in Australia. It replaces 123 Hz which is no longer recommended for future relay devices due to problems with false detecting. 141.3 or 146.2 Hz are to be used to activate links to repeaters on other VHF and UHF bands. 85.4 Hz will be used to activate links to other bands that some operators are not permitted to directly use.

The WIA has also revised band plans so as to include recommended frequencies for D-Star and Echolink simplex operation. Included is an interim plan for the new 2200 Meter or 135.7 to 137.8 kHz very low frequency band as well. (WIA News)

**

ON THE AIR: CELEBRATING A MUSEUM IN THE NETHERLANDS

On the air, listen out for PD55EA. That station will be on the air until August 28th to celebrate the 55th birthday of the "Ellert and Brammert" Museum in Schoonoord, the Netherlands.. They group will be active on 40, 20 and 10 meters using SSB and the digital modes. There may also be activity on 2 meters as well. QSL's will be sent automatically via the bureau. If you want to QSL direct, please send your QSL via PD7BZ. (DXNL)

**

DX

In DX, F2VX and FYFYD, will sign portable 4J from August 11th to 29th, from Azerbaijan using mainly H-F SSB. QSL via direct with an self addressed envelope plus postage or via the French Ref-Bureau only.

And T6AD will be on the air using mainly CW during his free time from Afghanistan until 22nd of August. QSL via K2AU.

W2LPL will be operational portable A25 from Botswana from August 16th to the 19th. Plans are to use SSB and PSK31 on 20 meters. QSL's go to W2LPL.

EI6DX, will be active as portable 6W between November 7th to the 16th from Somone, Senegal which is located about 70 km southeast of the city of Dakar. He will concentrate on the lower bands and CW. QSL to RX3RC, direct or via the bureau.

EI3IO says he is leaving Ireland and will move to Bahrain for at least 2 years. He has not yet received his callsign yet but plans to be active on 160 meters through the VHF bands. Listen for him on 20 meters starting in September. Hopefully more details will be

forthcoming at his Web page at http://EI3IO.com

Lastly, W2VQ and WQ2N using their own calls stroke FJ from St. Barthalamy between August 18th nto the 25th. Their operation will be on 80 through 6 meters using CW, SSB, RTTY and PSK31. An online log will be available during and after the operation.

(Above from various DX news sources.)

**

THAT FINAL ITEM: RADIO LAW: TEEN SUES AMAZON OVER 1984 BOOK DELETION

Radio transmission is what makes the Amazon Kindle electronic book work and its Amazon's use of radio to delete a book from the Kindle that has lead to legal action against the merchandising giant. This, as a 17 year old student from Michigan has filed a lawsuit against Amazon after it deleted a book he had purchased for his Kindle device. Jerry Gaul, KE7GGV, has the details:

--

The high school student, Justin D. Gawronski, filed suit in a Seattle, Washington court. He claims that Amazon forcibly recalled copies of George Orwell's "1984" in July after it was revealed that it was an unauthorized version. Gawronski's complaint alleges that he was reading "1984" over the summer for an advanced placement class and had to turn in notes called reflections on each hundred pages. Gawronski claims that with the loss of the digital book, his page count was thrown off and his notes were -- in his words -- "rendered useless because they no longer referenced the relevant parts of the book."

While buyers received refunds for the electronically recalled copies of the Orwell books, the fact that no advance notice has created an uproar against Amazon. The lawsuit, for one, alleges that Amazon did not make it clear enough to customers that remote book deletions were even a possibility. It also alleges that the company violated its own terms of use by radioing Gawronski work notes away, without giving him a chance to save it first.

For the Amateur Radio Newsline, I'm Jerry Gaule, KE7GGV.

--

Gawronski along with a California resident are seeking class action status for the suit. Amazon has so far declined to comment on the tort action filed against it. (Todays Technology and other published news reports)

381. 2m coverage in C. Crane radio

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-14 15:39:42 UTC
From: patty1@sonic.net

Source record: 1891

Last night I was listening to KGO, the top-rated station in San Francisco, and the host did a commercial for C. Crane. They often advertise their AM/FM radios on KGO in the evening and overnight because KGO has regular listeners all the way up to British Columbia, so they have a ready-made audience of people who want radios that can pull in distant stations well.

Anyway...this is the first time I've heard the 2m ham band mentioned in a commercial for an AM/FM radio! I don't know whether the "CC Radio 2" is a new product, or whether they just hadn't mentioned this band before. (It also gets the weather band.) They said that they had included the 2m band in the radio so that listeners could get valuable information during an emergency. Yay us! :-)

I just looked at their website, and they provide even more positive mention of amateur radio there. Their CC2 page:

http://www.ccrane.com/radios/am-fm-radios/ccradio-2.aspx

says, "The addition of the 2-Meter Ham band may make the CCRadio-2 a life saver during an emergency like hurricane Katrina. 2-Meter Ham operators are early on the scene and they donate their time while handling perhaps 90% of the emergency coordination efforts." They have even put up an entire page called, "What Can I Hear on the 2-Meter Amateur Radio Band?"

http://www.ccrane.com/library/2-meter-amateur-radio-band.aspx

After going on and on about how wonderful hams are, that page tells how to get a ham license and gives a link to the League's website. All in all, very cool!

Usual disclaimers: I don't work for C. Crane, don't know anyone who does, don't even own any of their radios. Just really liked this good publicity they're giving us!

Patty N6BIS

p.s. Do any folks from Newington read this group? If not, I'll send this info to someone there.

==> ARRL PRESIDENT HARRISON PRESENTS LEAGUE'S VIEWS ON DISTRACTED
DRIVING LAWS TO SAFETY ADVOCACY GROUP

To ensure that Amateur Radio is not an unintended victim of the growing
public debate over what to do about distracted drivers, ARRL President
Joel Harrison, W5ZN, has written a letter to the National Safety Council
(NSC) <http://www.nsc.org/>, highlighting issues regarding the use of
```

Amateur Radio emergency communications devices in vehicles <http://www.arrl.org/news/files/NSC_Letter7-30-09.pdf>. Many states have outlawed the use of cell phones while driving; some states with these laws have ambiguous wording (such as "mobile communication devices" or "mobile electronic devices") concerning the use of Amateur Radio while driving.

According to their Web site, the NSC is "on a mission" to "alert the American public that different kinds of distractions have different levels of crash risk. Talking on a cell phone and sending text messages are much higher risk activities that occur for longer durations and with more people than most other actions engaged in while driving." They also seek to "lead a change in our nation's cultural norms, so people come to view cell phone conversations and text messaging while driving as unsafe and socially unacceptable. Calling for a legislative ban on these activities is the first step in a long-term process to educate Americans to their risk and change the culture" <http://www.nsc.org/resources/issues/distracted_driving.aspx>.

Harrison explained to NSC President Janet Froetscher that Amateur Radio operators provide essential emergency communications when regular communications channels are disrupted by disaster: "Through formal agreements with federal agencies, such as the National Weather Service, FEMA and private relief organizations, the Amateur Radio volunteers protect lives using their own equipment without compensation. The ability of hams to communicate and help protect the lives of those in danger would be strictly hindered if the federal, state and local governments to not ensure that Amateur Radio operators can continue the use of their mobile radios while on the road."

According to ARRL Chief Executive Officer David Sumner, K1ZZ, it boils down to the difference between simplex -- when only one message can be sent in either direction at one time -- and duplex -- a communications mode, such as a telephone system, that provides simultaneous transmission and reception in both directions. Harrison, citing Sumner's 40-plus years of experience as an Amateur Radio operator, puts it this way: "Simplex, two-way radio operation is simply different than duplex, cell phone use. Two-way radio operation in moving vehicles has been going on for decades without highway safety being an issue. The fact that cell phones have come along does not change that."

Harrison attached a copy of the ARRL's Policy Statement on Mobile Amateur Radio Operation to the letter to the NSC. "Amateur Radio mobile operation is ubiquitous, and Amateur Radio emergency and public service communications, and other organized Amateur Radio communications activities and networks necessitate operation of equipment while some licensees are driving motor vehicles," the Policy Statement reads. "Two-way radio use is dissimilar from full-duplex cellular telephone communications because the operator spends little time actually transmitting; the time spent listening is more similar to, and arguably less distracting than, listening to a broadcast radio, CD or MP3 player.

There are no distinctions to be made between or among Amateur Radio, public safety land mobile radio, private land mobile radio or citizen's radio in terms of driver distraction. All are distinguishable from mobile cellular telephone communications in this respect. Nevertheless, ARRL encourages licensees to conduct Amateur communications from motor vehicles in a manner that does not detract from the safe and attentive operation of a motor vehicle at all times. See the Policy Statement on the ARRL Web site:
<http://www.arrl.org/govrelations/MobileAmateurRadioPolicyStatement.pdf>

This is the first time I've seen a company named "C. Crane" mentioned.
Do they market solar-powered or hand-powered radios? Are they an OEM, or
are they rebrands of some other manufacturer?

==> ARRL PRESIDENT HARRISON PRESENTS LEAGUE'S VIEWS ON DISTRACTED
DRIVING LAWS TO SAFETY ADVOCACY GROUP

To ensure that Amateur Radio is not an unintended victim of the growing
public debate over what to do about distracted drivers, ARRL President
Joel Harrison, W5ZN, has written a letter to the National Safety Council
(NSC) <http://www.nsc.org/>, highlighting issues regarding the use of
```

Amateur Radio emergency communications devices in vehicles <http://www.arrl.org/news/files/NSC_Letter7-30-09.pdf>. Many states have outlawed the use of cell phones while driving; some states with these laws have ambiguous wording (such as "mobile communication devices" or "mobile electronic devices") concerning the use of Amateur Radio while driving.

According to their Web site, the NSC is "on a mission" to "alert the American public that different kinds of distractions have different levels of crash risk. Talking on a cell phone and sending text messages are much higher risk activities that occur for longer durations and with more people than most other actions engaged in while driving." They also seek to "lead a change in our nation's cultural norms, so people come to view cell phone conversations and text messaging while driving as unsafe and socially unacceptable. Calling for a legislative ban on these activities is the first step in a long-term process to educate Americans to their risk and change the culture" <http://www.nsc.org/resources/issues/distracted_driving.aspx>.

Harrison explained to NSC President Janet Froetscher that Amateur Radio operators provide essential emergency communications when regular communications channels are disrupted by disaster: "Through formal agreements with federal agencies, such as the National Weather Service, FEMA and private relief organizations, the Amateur Radio volunteers protect lives using their own equipment without compensation. The ability of hams to communicate and help protect the lives of those in danger would be strictly hindered if the federal, state and local governments to not ensure that Amateur Radio operators can continue the use of their mobile radios while on the road."

According to ARRL Chief Executive Officer David Sumner, K1ZZ, it boils down to the difference between simplex -- when only one message can be sent in either direction at one time -- and duplex -- a communications mode, such as a telephone system, that provides simultaneous transmission and reception in both directions. Harrison, citing Sumner's 40-plus years of experience as an Amateur Radio operator, puts it this way: "Simplex, two-way radio operation is simply different than duplex, cell phone use. Two-way radio operation in moving vehicles has been going on for decades without highway safety being an issue. The fact that cell phones have come along does not change that."

Harrison attached a copy of the ARRL's Policy Statement on Mobile Amateur Radio Operation to the letter to the NSC. "Amateur Radio mobile operation is ubiquitous, and Amateur Radio emergency and public service communications, and other organized Amateur Radio communications activities and networks necessitate operation of equipment while some licensees are driving motor vehicles," the Policy Statement reads. "Two-way radio use is dissimilar from full-duplex cellular telephone communications because the operator spends little time actually transmitting; the time spent listening is more similar to, and arguably less distracting than, listening to a broadcast radio, CD or MP3 player.

There are no distinctions to be made between or among Amateur Radio, public safety land mobile radio, private land mobile radio or citizen's radio in terms of driver distraction. All are distinguishable from mobile cellular telephone communications in this respect. Nevertheless, ARRL encourages licensees to conduct Amateur communications from motor vehicles in a manner that does not detract from the safe and attentive operation of a motor vehicle at all times. See the Policy Statement on the ARRL Web site: <http://www.arrl.org/govrelations/MobileAmateurRadioPolicyStatement.pdf> .

"The ARRL acknowledges numerous and increasing instances of state legislative proposals (and occasionally municipal ordinance proposals) to curb the use of cellular telephones while operating motor vehicles, ranging from prohibitions on hand-held telephones to prohibitions on all forms of electronic devices," the Policy Statement maintains. "These statutory proposals would supplement the more generalized motor vehicle code requirements that exist in various forms in virtually all States, which require operators of motor vehicles to pay full time and attention to the operation of the vehicle while driving. ARRL understands that driver inattention is a leading cause of automobile accidents, and it is not unreasonable to be concerned about substantial distractions to drivers of motor vehicles."

Saying that the League understands that driver inattention is a leading cause of automobile accidents, "it is not unreasonable to be concerned about substantial distractions to drivers of motor vehicles. Given the necessity of unrestricted mobile Amateur Radio communications in order for the benefits of Amateur Radio to the public to continue to be realized," the policy statement reads, "the ARRL urges state and municipal legislators considering restrictions on mobile cellular telephone operation to (I) narrowly define the class of devices included in the regulation so that the class includes only full duplex wireless telephones and related hand-held or portable equipment; or alternatively (II) specifically identify licensed Amateur Radio operation as an excluded service."

"The ARRL is aware of no evidence that [mobile] operation contributes to driver inattention," the Policy Statement asserts. "Quite the contrary: Radio amateurs are public service-minded individuals who utilize their radio-equipped motor vehicles to assist others, and they are focused on driving in the execution of that function."

==> ARRL RESPONDS TO FCC'S PROPOSED ALLOCATION FOR MEDICAL DEVICES IN 70 CM BAND

ARRL General Counsel Chris Imlay, W3KD, on behalf of the ARRL, filed comments <http://www.arrl.org/news/files/MannFoundationDocket_09-36Comments08_11_09.pdf> on August 11 regarding a Notice of Proposed Rule Making (NPRM), ET Docket 09-36, issued by the FCC in March 2009 <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-09-20A1.pdf>. In

the NPRM, the FCC proposed to allocate spectrum and adopt service and technical rules for the utilization of new implanted medical devices that operate on 413-457 MHz (70 cm). According to the Commission, these devices -- called implanted neuromuscular microstimulators -- would greatly expand the use of functional electric stimulation to restore sensation, mobility and function to those persons with paralyzed limbs and organs; they would be implanted in a patient and function as wireless broadband medical micro-power networks (MMNs). These devices would be used on the 70 cm band on a secondary basis as part of the Medical Data Radiocommunication Service in Part 95 of the FCC rules. The Amateur Radio Service has a secondary allocation in the 70 cm band.

Researchers with the Alfred Mann Foundation -- a leading medical research organization located in Santa Clarita, California <http://www.aemf.org/> -- have developed a wireless medical micro-power network to tie together tiny devices implanted in victims of paralysis, creating an artificial nervous system to restore sensation, mobility, and function to paralyzed limbs and organs. "The Mann Foundation argues that the frequency range just above 400 MHz is optimum for their application, which requires no more than 1 mW of RF spread across about 5 MHz of bandwidth," ARRL Chief Executive Officer David Sumner, K1ZZ, wrote in "It Seems to Us," published in the June 2009 issue of QST <http://www.arrl.org/news/features/2009/06/01/10784/>. "However, recognizing the presence of a variety of incumbent radio services in that range, specifically including the amateur service, they have proposed four channels for flexibility in avoiding localized interference. Two of the four channels are 426-432 and 438-444 MHz; the other two are above and below the 420-450 MHz band."

In its comments to the FCC regarding the NPRM, the ARRL said it believes that the choice of frequency bands for MMNs as proposed is "unfortunate and unnecessary" and that "the WMTS [Wireless Medical Telemetry Service] offers a far more suitable solution than does the 413-457 MHz band for MMNs."

Sumner, in his editorial, said that the FCC's proposed rules raise two concerns: "First and foremost, the devices would be required to accept interference only from stations authorized to operate on a primary basis. The Mann Foundation has assured us that amateur stations will not cause its system to malfunction, so we see no reason why this cannot be reflected in the rules, even though our allocation is on a secondary basis. Second, while the Mann Foundation researchers appear to have done their homework, others who try to take advantage of the new rules may not be as rigorous."

The ARRL asserts in its comments that due to redundant interference rejection design, the devices developed by the Alfred Mann Foundation "appear to have some reasonable prospect of avoiding the disastrous consequences of RF interference to implanted MMNs." The ARRL stressed, however, that the FCC should not permit the marketing of MMNs or any similar device in the 420-450 MHz band: "(1) unless and until thorough

RF interference susceptibility testing is conducted on the AMF devices relative to high power Amateur Radio equipment; (2) at parameters other than those inherent in the Mann system, which incorporates notably redundant interference rejection design characteristics; and (3) without very specific patient notifications and labeling of the body-worn MCUs [Master Control Units] and other portable components which provide firm assurance that the devices will not malfunction in the presence of RF fields from authorized radio services in the same bands."

The ARRL did acknowledge that it thought the Commission to be correct when it stated in the NPRM that "[g]iven the low transmitter power and duty cycle limits that would typically be used by either the implanted MMN device or the external MCU, we expect that the risk of interference from MMNs to incumbent operations in these frequency bands would be negligibly small." The ARRL pointed out, however, that no testing has been done to verify this conclusion and "such testing should be concluded and the results analyzed before this anticipatory conclusion can be relied upon."

In its comments, the ARRL made note of the fact that there is Part 90 spectrum above 450 MHz available for low-power biomedical telemetry, but "the Alfred Mann Foundation argues that bands between 450 and 470 MHz are unsuitable due to the fact that the band is 'congested and populated with commercial, high-power transmitters that could preclude reliable operation of lower-power, wireless medical implant devices.' This, the ARRL said, "is a very worrisome contention, and not the argument that should be made by the proponent of a new service that is secondary to other incumbent licensees. ARRL contends that if the 450-470 MHz band hosts services that are incompatible with reliable operation of MMNs, then the 420-450 MHz band, and especially the segment proposed for MMNs at 438-444 MHz is equally incompatible with MMNs."

Pointing out that Amateur Radio television transmitters and repeaters and FM voice repeater input and outputs operate in this segment in particular, "the potential for interference to MMNs is on the same order, or worse, than would be the case if MMNs were to operate in the Part 90 biomedical telemetry band between 450 and 470 MHz," the ARRL told the FCC. "In the segment 426-432 MHz, amateur television stations transmit on a wide bandwidth basis. Amateur Radio stations are permitted to operate at power levels up to 1500 W PEP output, and the RF environment at 420-450 MHz, with primary government radiolocation facilities and highpower amateur facilities is no more conducive to reliable MMN operation than would be the 450-470 MHz band."

The ARRL also voiced concerns that nowhere in the NPRM does it mention what the allocation status of MMNs would be relative to the Amateur Radio Service. Though the Alfred Mann Foundation has proposed that MMNs would be secondary to incumbent licensed operations in the subject bands, the Amateur Service is presently secondary to government radiolocation in this band; this represents a cooperative sharing arrangement that is satisfactory to both government agencies and the

Amateur Service, the League contends.

"While it is presumed that the proposal is for MMNs to be secondary to both government radiolocation and to the Amateur Service (as opposed to Amateur stations and MMNs being co-secondary) this is not clear from the NPRM," the ARRL maintained. "Because the interference susceptibility of MMN devices generally is not known, it would be improper to create a co-secondary allocation for MMNs anywhere in the 420-450 MHz band at this time. The Amateur Service has a practical inability to protect patients wearing RF susceptible MMNs from interference from ongoing amateur operations in the 420-450 MHz band, and therefore all MMN operation is going to have to be conditioned on the ability to withstand and operate in the presence of such high-power signals, and thus subordinate in allocation status to the Amateur Service. Unless this interference rejection capability is demonstrated by MMN proponents in advance, the devices should not be allowed to operate anywhere in the 420-450 MHz band."

Imlay and ARRL Technical Relations Manager Brennan Price, N4QX, met with the Alfred Mann Foundation in February 2009, but Imlay said that so far, they have not responded to the ARRL's request to "cooperate in a firm statement that their devices would not malfunction in the presence of nearby RF signals from Amateur Radio stations. Failing that, these comments reflect our continuing concern about the effect on implant patients from unpredictably close Amateur Radio station operations. Other radio services affected, both above and below the 430-450 MHz band, are taking similar positions."

==> ARRL EXECUTIVE COMMITTEE APPROVES EIGHT EDUCATION & TECHNOLOGY PROGRAM GRANTS

In July 2009, the ARRL Executive Committee reviewed grant applications for the ARRL's Education & Technology Program (ETP) <http://www.arrl.org/FandES/tbp/>, awarding nearly $9000 to eight schools. More than 370 schools across the country have received support from the ETP in the form of grants for equipment, curriculum and resources, as well as teacher in-service training through the Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>. The Executive Committee reviews applications for equipment and resource grants twice each year.

ETP Grants
ETP grants consist of Amateur Radio equipment, enabling the school to set up a station. Schools may receive activity kits in addition to station equipment. The following schools recently received ETP grants:

Bob Jones High School, Madison, Alabama: One teacher from this school -- and another seven from the school's district -- attended the ARRL Teachers Institute this summer. The grant application proposed a basic Amateur Radio station to implement what these teachers learned during the Teachers Institute. The proposal detailed a long range plan with incremental steps; this basic station set-up is the first step to school

district-wide programs within numerous schools in the district.

Armada Middle School, Armada, Michigan: The program articulated in this grant application is the typical entry level program that includes Amateur Radio as an extracurricular activity, and asks for a basic Amateur Radio station. The instructors plan to mainstream the program as they gain experience and student support.

Hidden Valley High School, Roanoke, Virginia: This grant application asks for a basic Amateur Radio station. As the school gains experience with ham radio in the classroom, their program will be refined. Their application requests a basic station set up and has plans for future expansion.

Progress Grants
In order for a school to be considered for a Progress Grant, it must already be an ETP School. If a teacher attends a session of the Teachers Institute, that school is automatically considered an ETP School. The following schools received Progress Grants:

West Pines Elementary School, Greenville, Tennessee: The lead teacher -- a graduate of the Teachers Institute -- wants to integrate the weather satellite system that was demonstrated during the Teachers Institute. This will be used as a beginning to expand the program to include space in the classroom content.

Morris County School of Technology, Denville, New Jersey: The lead teacher is a graduate of the Teachers Institute, but has moved to this school since that time. He would like to integrate the weather satellite system that was demonstrated during the Teachers Institute as a beginning to expand the program to include space in the classroom content.

Highland Middle School, Beaver Falls, Pennsylvania: The lead teacher is a graduate of the Teachers Institute and wants to integrate the weather satellite system that was demonstrated during the Teachers Institute as a beginning to expand his program to include space in the classroom content.

Sister Lakes Elementary School, Dowagiac, Michigan: The lead teacher, a graduate of the Teachers Institute, was selected to participate in the inaugural Teachers Institute II this summer. He has proven to be a strong advocate for integrating ham radio not only in his previous school assignment as a teacher, but also in his current position as a school administrator. He is requesting the equipment resources to develop the Mars Lander simulation that is demonstrated during the Teachers Institute.

Livingston High School, Livingston, New Jersey: The lead teacher for this program is a recent Teachers Institute graduate. He wants to expand the use of the activity board resources he learned about during the Institute into his regular curriculum.

Nichols Junior High School, Arlington, Texas: The lead teacher is a graduate of the Teachers Institute and wants to integrate the weather satellite system that was demonstrated during the Teachers Institute as a beginning to expand his program to include space in the classroom content.

A goal of the ARRL Education & Technology Program is to improve the quality of education by providing an educationally sound curriculum that employs Amateur Radio to integrate technology, math, science, geography and language arts with core curricula. Amateur Radio and an understanding of radio science are keys to building Wireless Technology Literacy, another important objective.

==> QEX: LOOK FOR THE SEPTEMBER/OCTOBER 2009 ISSUE

The September/October issue of QEX is coming soon, and it is full of theoretical and practical technical articles that you won't want to miss <http://www.arrl.org/qex>.

Richard Chapman, KC4IFB, shows how to use the Arduino prototyping board to design a project, and then gives us a lesson in programming the microprocessor to "Build a Low-Cost Iambic Keyer Using Open-Source Hardware." W. G. Moneysmith, W4NFR, was a new repeater trustee needing a duplexer for a 70 cm repeater. He presents his solution in "A Homecrafted Duplexer for the 70 Centimeter Band."

Robert Zimmerman, VE3RKZ, describes one of his recent antenna experiments in "An Easily Erected 20 Meter Antenna for Emergency Use." Mike Hamel, WO1U, discusses "Phase Controlled Differential Drive for EER Amplifiers" in this presentation about envelope elimination and restoration as a way to achieve linear operation with high efficiency (such as Class E) amplifiers.

Gary Steinbaugh, AF8L, presents Part 4 of "A Cybernetic Sinusoidal Synthesizer." In this installment, Gary describes an RF power level control module for the synthesizer, and concludes with a 53.3 MHz low phase noise synthesizer using the 10 MHz reference signal. Bob Miller, KE6F, explains how you can use a surplus rubidium oscillator to build an "Atomic Frequency Reference for Your Shack." He presents information about the stability and accuracy of rubidium oscillators, as well as a number of practical applications for such a reference.

Would you like to write for QEX? It pays $50/printed page. Get more information and an Author's Guide <http://www.arrl.org/qex/#aguide>. If you prefer postal mail, send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494. QEX is edited by Larry Wolfgang, WR1B <lwolfgang@arrl.org>, and is published bimonthly. The subscription rate (6 issues) for ARRL members in the US is $24. For First Class US delivery, it's $37; in Canada and internationally by airmail it's $31. Nonmembers add $12 to these rates. Subscribe to QEX today <http://www.arrl.org/qex>.

==> CUTTING EDGE ARRL CONTEST RUNS THIS WEEKEND

If you enjoy the technical side of Amateur Radio and being on the cutting edge, you might want to take a look at the microwave bands. This weekend gives you a perfect chance to explore this portion of the radio spectrum with the ARRL 10 GHz and Up Contest <http://www.arrl.org/contests/rules/2009/10-GHz.html>.

There are two weekends of activity: August 15 and 16, and again on September 19 and 20. The contest period for both weekends starts at 6 AM local time Saturday and runs until Midnight local time Sunday. QSO points are awarded based on the distance of a QSO, and operating from several locations during the contest period is not only allowed, it's encouraged! SSB is the mode commonly used, although there is some CW used as well. Power levels are relatively low compared to HF; most stations run several hundred milliwatts. A station running a few watts is considered a "Big Gun." Antennas are usually dishes, like those used for receiving satellite TV.

Many QSOs are completed on the microwave bands by bouncing signals off of other objects, such as mountains, buildings, even raindrops! You can also get lucky and catch a good tropospheric opening; in the 2007 contest, a QSO of 907.2 miles was made on 10 GHz on the NA West Coast between California and Mexico.

If you have a person in your area active on the microwave bands, ask if you can tag along and observe. If you live in an area that has a microwave club, such as the North Texas Microwave Society, the North East Weak Signal Group, the Mt Airy VHF Club and several others, find out what their members are doing for the contest. Elmering is a big part of the microwave groups and they are only too happy to introduce their fun to you.

Exploring different facets of Amateur Radio gives you the opportunity to see what others enjoy and why they enjoy it. You might be missing out on something you would really like. Think outside the box and try something new!
==> AMATEUR RADIO STATION WX4NHC FEATURED IN NATIONAL COMMERCIAL

WX4NHC, the Amateur Radio Station at the National Hurricane Center (NHC) <http://www.wx4nhc.org/>, is featured in a 60 second radio spot for Duracell batteries. The commercial, which begins airing this month, highlights the efforts of an all-volunteer army of ham radio operators for WX4NHC. Narrated by actor Jeff Bridges, it describes the important role that radio amateurs play during severe weather conditions -- enabling communications with emergency medical teams, police and fire departments -- when the power goes out. The narration underscores the importance of a reliable battery to power the portable ham radios, which are crucial to WX4NHC's work. Listen to the spot here: <http://www.arrl.org/news/files/HURRICANE_60_PREPAREDNESS_MIX.MP3>.

"This commercial is being played nationally during hurricane season and will help promote awareness of Amateur Radio and the public service we do to provide emergency communications, especially during and after hurricanes, when we have experienced complete electrical and

conventional communications blackouts for periods of days and weeks," WX4NHC Assistant Coordinator Julio Ripoll, WD4R, told the ARRL.

Ripoll said that he and WX4NHC Amateur Radio Coordinator John McHugh, K4AG, worked with the ACME Marketing Firm and Duracell for several weeks to help produce the radio commercial. "It captures the essence of Amateur Radio volunteer public service and the important role of Amateur Radio performs during emergency communications in 30 seconds," Ripoll said. "The President and Creative Director of ACME and the Duracell national representative also flew down to Miami and received a tour of NHC and of the WX4NHC station where they learned about our many modes of communications, including our portable VHF/UHF radios and other portable battery operated equipment."

"With this new spot, we are helping to showcase the important contributions made by the Miami ham radio operators," said Duracell's Bob Jacobs. "These heroic teams are working to save the lives of others. When storms strike, the radio operators are donating their time to make sure communications stay intact, facing intense pressures and dangerous conditions to those in need. We're proud that our batteries can help power these life-saving efforts."

==> 7O1YGF OPERATION APPROVED FOR DXCC CREDIT

On August 12, ARRL DXCC Manager Bill Moore, NC1L, announced that after more than eight years, the 7O1YGF operation in 2000 from Yemen <http://www.arrl.org/news/stories/2002/08/15/2/?nc=1> has been approved for DXCC credit. Moore cited a review of "recently received information," as well as "additional dialogue" with the leader of the 7O1YGF DXpedition, as reasons for the approval. Because so much time has passed since the DXpedition, Moore asked that those amateurs seeking credit for 7OYGF follow certain procedures.

If you are seeking credit for 7O1YGF only:
* If you live in the US, send only the 7O1YGF QSL card with your application to DXCC; enclose a self-addressed, stamped envelope. If you live outside the US, please enclose return postage, so we may return the card to you. DXCC will then process the card. Applicants will not be charged a submission fee.
* Bring the card to a DXCC Card Checker. The card checker will forward the confirmation to the DXCC Desk for processing. Again, there will be no submission fee if this is a single card submission; however, you still must fill out an application form.

If you are submitting 7O1YGF with other QSL cards:
* Applicants may include their 7O1YGF QSL card with their next QSL card submission and it will be handled as usual.

Moore said that the DXCC Desk will work with the 7O1YGF team to use Logbook of the World (LoTW) <http://www.arrl.org/lotw>, if possible. "Remember, the cutoff date for the 2009 DXCC Annual listing and Honor Roll list is December 31, 2009," Moore reminded DXers. "We encourage

applicants to handle this sooner, rather than waiting until the last minute."

==>SOLAR UPDATE

Tad "The fair haired Sun rises in the sky" Cook, K7RA, this week reports: Another quiet week on the Sun. Last week on Earth we neglected to mention the Perseids meteor shower, which peaked this week on August 12-13. A nice statistical display from the International Meteor Organization is at <http://www.imo.net/live/perseids2009/.> A look at <http://www.swpc.noaa.gov/ftpmenu/forecasts/45DF.html> on August 13 showed possible heightened geomagnetic activity returning around August 18-19, with a planetary A index of 20 and 12, respectively. Sunspot numbers for August 6 through 12 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. 10.7 cm flux was 66.8, 67.8, 67, 67.2, 67.1, 66.6 and 66.5 with a mean of 67. Estimated planetary A indices were 14, 8, 4, 8, 4, 4 and 5 with a mean of 6.7. Estimated mid-latitude A indices were 8, 8, 2, 6, 3, 2 and 2 with a mean of 4.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Rhonda Baker's "August Sun" <http://www.poemhunter.com/poem/august-sun/>.

==>IN BRIEF:

* This Week on the Radio: This week, there is an NCCC Sprint on August 14. The ARRL 10 GHz and Up Contest and the North American QSO Party (SSB) are August 15-16. On August 15, look for another NCCC Sprint, as well as the Feld Hell Sprint. The New Jersey QSO Party is August 15-17 and the Run for the Bacon QRP Contest is August 17. Next week, there is another NCCC Sprint on August 21. Check out the Hawaii QSO Party and the Ohio QSO Party on August 22-23. The SKCC Sprint is on August 26. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 23, 2009, for these online course sessions beginning on Friday, September 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a

Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* RadioShack Rebranding Itself as The Shack: In early August, a RadioShack Corporation news release touted its new branding: THE SHACK. The stated purpose: THE SHACK is friendlier-sounding and less "corporate" than RadioShack <http://ir.radioshackcorporation.com/releasedetail.cfm?ReleaseID=400656>.

* FCC: Vanity Call Sign Fees to Increase September 10: On August 11, the FCC announced that the cost of an Amateur Radio vanity call sign will increase $1.10, from $12.30 to $13.40. Now that notice of the increase has been published in the "Federal Register" <http://edocket.access.gpo.gov/2009/pdf/E9-19104.pdf>, the increase will take effect in 30 days, September 10, 2009. The FCC is authorized by the Communications Act of 1934, As Amended, to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new 10 year term. The notice in the August 11, 2009 Federal Register, entitled "Assessment and Collection of Regulatory Fees for Fiscal Year 2009," includes regulatory fees; these fees are expected to recover a total of $341,875,000 during FY2009, encompassing all the Services the FCC regulates. For more information, see the recent ARRLWeb article, "FCC Looks to Raise Vanity Call Sign Fees for Second Consecutive Year" <http://www.arrl.org/news/stories/2009/05/18/10825/?nc=1>.

* Mickey "Santa Claus" Hicks, WO6T (SK): Mickey Hicks, WO6T <http://www.wo6t.com/> -- known to many amateurs and their children as Santa Claus -- passed away Sunday, August 9. He was 79. For the past 38 years, Hicks, a ham for almost 50 years and a long-time ARRL member and Amateur Radio instructor, would get on the air for 10 days each December as W6S (Whiskers-6-Santa). ARRL Youth Editor Duncan MacLachlan, KU0DM, profiled Hicks in December 2008 <http://www.arrl.org/news/features/2008/12/01/10479/>: "The Amateur Radio community has been quick to embrace the W6S operation. Mickey says that the first year operating as W6S was 'a hit with the operators of all ages and their children.' Mickey noted that most children are a bit apprehensive of talking over the radio, let alone to Santa! Hicks told the ARRL in 2001 that his Santa's Workshop has been a great ham radio recruiting tool <http://www.arrl.org/news/stories/2001/12/21/3/?nc=1>.

One of his most memorable experiences was when a young girl he'd once spoken with on the air as Santa came by with her ham ticket in hand to thank him in person for getting her interested. "I had tears in my eyes, of course," he said. -- Thanks to "The Daily DX" <http://www.dailydx.com/> for providing some information for this story

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

- A list of News Service Providers maintained by the Big-8 Management Board:

http://www.big-8.org/dokuwiki/doku.php?id=faqs:news_providers&s=news%20service%20providers

- A list of Public News Servers at the Open Directory Project:

http://www.dmoz.org/Computers/Usenet/Public_News_Servers/

- An article with links and reader suggestions at Broadband Reports:

http://www.broadbandreports.com/shownews/96318

- Google Groups:

C.Crane is a specialty mail-order/internet retailer who started out selling
the GE "Super Radio" and similar products to AM DX listeners around
the US. They have since expanded both their range of radio products and
also branched out into semi-related products. Including alternate-power
receivers, flashlights, etc.

They seem to be branding products from several OEMs. I wouldn't be
surprised if a ham or two were working for the company somewhere.

And a lot of other products, too. See their main page
http://www.ccrane.com .

I never bought a radio from them. But I did buy two other items.

One is an LED flashlight I got 9 years ago which I use frequently. I'm
still on the original alkaline batteries.

Another was a miner's-cap headlamp. I could not stand the odor from
the straps which held it to my head. They took it back, and refunded
not only the original price plus shipping, but an extra $5 for my
trouble!

>>Are they an OEM, or are they rebrands of some other manufacturer?
>
>I don't know.

I remember an ad for one of their radios saying something like: Made
by <big German radio manufacturer> to our specifications.

Dick, AC7EL

I wonder how useful (or lifesaving, as they claim) it would be to listen
in on amateur 2m communication during an emergency?

Maybe it would be more effective to budy a normal radio and one of
those Chinese 2m (or even dualband) portables?
(wouxun puxing weierwei fdc etc.)

This would at least have transmit capability...

I spent a few minutes searching the web for wouxun, puxing, weierwei
and fdc radios. I found models of wouxun and fdc which transmit in
the ham bands. These radios would be useful, provided that someone
buying one of these understands that (1) to transmit with it legally
they need a ham license (and abides by this rule); and that (2)
lacking a ham license they are not allowed to transmit with it unless
it is a real emergency and no other means of communications is
available.

G7VJR has established a rather neat on-line application for those who like to "slice-and-dice" their logs to learn things about their operations that aren't always evident in traditional logging programs.

You upload your log in ADIF, and then use any of several tools to analyze it. Free.

This is not another LoTW or eQSL, but a handy supplement to them.

Amateur Radio Newsline(tm) Report 1671 - August 21 2009

(Please note that this is an extended Newsline report running 32 minutes and containing 3 breaks. Thank you.)

Amateur Radio Newsline report number 1671 with a release date of Friday, August 21, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two hams reported safe after a terrorist bomb blast in Kabul. We have one of them here with the story. Also, the ARRL DXCC Desk says yes to the 2000 Yemen, GAREC 09 to take place in Tokyo, a move in Congress to ban all texting while driving and the FCC starts to tweet. All this and more on Amateur Radio Newsline(tm) report number 1671 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: TWO HAMS SAFE FOLLOWING KABUL BLAST

Two hams are safe after a bomb blast rips through a crowded area in Kabul, Afghanastan. One of them is Steve Herman, T6AD, who is a news reporter on assignment in Kabul. He has this report:

--

First off I can report that both Jim McLaughlin, T6AF, and this reporter are fine following the suicide car bombing here in Kabul at 08:30 local time on Saturday, August 15th. Sadly, that blast did kill at least seven people and injured nearly 100.

In my case I was at my hotel a few miles away when the explosion occurred. I'm a news correspondent by profession and as you might guess, I did what any newsman would do in a situation like this. I quickly began filing news reports, in my case for the Voice of America.

Jim McLaughlin, T6AF, lives a lot closer to the explosion than I do. He reports a couple of windows in his residence adjacent to the US Embassy, were blown out but his shack is fine. Thankfully, he was not there at the time.

Ironically Jim and I had held our first eyeball QSO only 24 hours earlier. In fact, we met very close to the spot where the bomb went off. That was near the front gate of NATO's military headquarters in the Afghan capital. As far as we know, we may be the only two hams who are actually on the air from this war torn nation.

In Kabul, Afghanistan, I'm Steve Herman, T6AD, for the Amateur Radio Newsline.

--

Steve adds that like true hams, by the end of the day, both he and Jim were back on the air. In Steve's case he operates using a Yaesu FT-897 at 100 watts into a G5RV antenna just above what he calls a hot tin roof. You can usually find him on 15, 20, 30 and 40 meters operating either CW and PSK. Steve adds that the noise level in Kabul is nearly always S9 and that most signals are very weak. Because of this he says that your patience in making a QSO happen is very much appreciated. (T6AD, ARNewsline(tm))

**

BREAKING DX NEWS: 2000 YEMEN OPERATION GRANTED DXCC STATUS

Its taken almost a decade but the ARRL DXCC Desk has finally approved the 7O1YGF April 16 through April 26, 2000 operation from Yemen for DXCC accreditation. According to a release from Awards Branch Manager Bill Moore, NC1L, after reviewing recently received information regarding the operation, and after additional dialogue with a leader of the DXpedition, the DXCC desk has approved this operation.

Moore says that considering the length of time that has passed since this operation, he is asking that DXCC participants who would like to claim credit for 7O1YGF follow one of two options. The first is to send their 7O1YGF card by itself to DXCC with a SASE, or return postage if outside the United States. The DXCC will process the card and applicants will not be charged a submission fee.

The alternative is to bring the card to a DXCC Card Checker. The card checker will forward the confirmation to the DXCC desk for processing. Again, there will be no submission fee if this is a single-card submission but you must fill out an application form.

In all other cases applicants can include their QSL card with their next submission, and it will be handled normally. However 7O1YGF cards included with other cards will be handled as part of a normal submission and a normal fee will apply.

And less we forget. The cutoff date for the 2009 DXCC Annual listing and Honor Roll list is December 31st. We will have more DX related news later on in this weeks Newsline report. (ARRL)

**

RESCUE RADIO: GAREC-2009 AUGUST 24 AND 25

The Fifth Global Amateur Radio Emergency Communications Conference, will be held on August 24thnand 25th in Tokyo, Japan. Norm Seeley, KI7UP, has more:

--

Hosted this year by the Japan Amateur Radio League, the theme of the 2009 Global Amateur Radio Emergency Communications or GAREC Conference will be "Emergency Communications across Borders." As such, the program will include presentations regarding amateur radio operations during disasters that occurred since last year's conference. There will also be discussions concerning new developments in communications and technology and their application in ham radio emergency communications.

Holding the conference in Tokyo also marks the first time at a Global Amateur Radio Emergency Communications will have taken place in ITU Region 3. The first and the second conferences were in Finland in ITU Region 1. The third was here in the USA in Huntsville, Alabama in ITU Region 2. Then it was back to Region 1 in 2008 for the fourth that was held in Germany.

By the way, for those interested in some heavy rescue radio related reading, the proceedings of the 2005, 2006, 2007, and 2008 conferences can be found at the Global Amateur Radio Emergency Communications website. A link to it is in this weeks printed Newsline report.

Reporting from Scottsdale, Arizona, I'm Norm Seeley, KI7UP, for the Amateur Radio Newsline.

--

GAREC 2009 is being held in conjunction with the Japan Amateur Radio League's annual Tokyo Ham Fair. Having these rescue radio gatherings annually has become an important factor in developing world standardization of ham radio communications in times of across borders or global emergency communications needs. More is on-line at www.rientola.fi/oh3ag/garec/ (Southgate)

**

RADIO REGULATION: FCC STARTS BLOGGING AND TWEETING

Back in the United States, the FCC is now blogging and tweeting. As a result of Chairman Julius Genachowski stated goal that expansion of broadband internet access is at the top of his list of priorities, the regulatory agency has created an on-line blog and has opened a Twitter account as ways of better keeping the public informed on what it is doing on a day to day and hour to hour basis

Both services began on Tuesday, August 18th. In his first post on the new blog Chairman Genachowski stated that the feedback, ideas, and discussions generated will be critical in developing the best possible National Broadband plan possible for the nation. He added that be believes that the new FCC blog demonstrates that the Internet is changing and expanding the way Americans communicate. This, providing them with what he sees as unparalleled access to information.

In conjunction with the blog the FCC is also now operating an account on the Twitter social networking site. Its account that can be

accessed at @fccdotgov.

Its believed that the FCC will use Twitter tweets to help promote new initiatives and at the same time press for public involvement on these issues. Tweets are the 140 character messages that Twitter allows. What's not likely is a two-way dialogue between the FCC and others using Twitter. At least the FCC is not following any other Twitter accounts at this time. (FCC and published news reports)

RADIO LAW: SEPTEMBER MEETING IN DC TO DISCUSS TEXTING WHILE MOBILE

A national ban against texting and possibly other forms of communication while mobile could be in the nations future. This with word that Transportation Secretary Ray LaHood plans to assemble a group of experts to figure out what to do about drivers who use cell phones and do texting while behind the wheel. Bruce Tennant, K6PZW, reports:

--

In an August 4th release Transportation Secretary Ray LaHood says that he intends to gather safety advocates, law enforcement and transportation officials, members of Congress and scholars who have studied distracted driving for a summit meeting in September in Washington D.C.. In his statement Secretary LaHood said that everyone knows that text messaging while driving is dangerous and the government is going to do something about it.

While no mention was made regarding the use of two-way radio while driving a vehicle this should be of concern to hams who like to operate mobile in motion. If some sort of federal ban on the use of electronic communications devices while driving does come about it could easily be broad based and all inclusive. This in turn could place hams, CB operators and other two-way radio users in the position of having to seek after the fact exemptions to continue the operations they have safely performed for years.

As we go to air there are fourteen states plus the District of Columbia that have passed laws banning text messaging while driving. Also, many states require the use of hands free devices to use cellular voice telephones while in motion although most have specific exemptions included for federally licensed ham radio operators.

LaHood indicates that that summit meeting will present several recommendations for specific actions to address the problem of distracted drivers on a national level. For ham radio it means keeping a close eye one the outcome and any laws that such a gathering of experts might recommend.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

And in a related development ARRL President Joel Harrison, W5ZN, has written a letter to the National Safety Council To ensure that Amateur Radio is not an unintended victim of the growing public debate over what to do about distracted drivers. In his note to NSC President Janet Froetscher, Harrison explained that Amateur Radio operators provide essential emergency communications when regular communications channels are disrupted by disaster. Harrison noted that the ability of hams to communicate and help protect the lives of those in danger would be strictly hindered if the federal, state and local governments to not ensure that amateur radio operators can continue the use of their mobile radios while on the road. (Published news report and ARRL)

**

RESCUE RADIO: NEW HAM RADIO HOTLINE IN INDIA

Ham radio based rescue radio continues to grow in India. Its latest expansion is a new joint agreement announced on Wednesday, August 12th between the Amateur Radio Society of India and the Indian Red Cross Society to establish a radio hotline. It was inaugurated by Governor of Karnataka, and is located on the premises of the Red Cross Society.

The facility installed at the station includes, high frequency and VHF radios and antennas that can be used for local, as well as long distance communications. The station has been assigned the call VU2ZH by the Ministry of Communication, Government of India.

According to the society, ham radio operators in India have provided communication links during the Indian Ocean tsunami, Latur earthquake, Koyna dam disaster and during numerous floods and hurricanes, in the recent past.

(Deccan Hearald)

**

RESCUE RADIO: NHC HAM STATION FEATURED IN NATIONAL DURACELL COMMERCIAL

WX4NHC, the Amateur Radio Station at the National Hurricane Center is featured in a 60 second radio spot for Duracell batteries. The commercial, which begins airing this month, highlights the efforts of the volunteers who man and assist the ham radio operations for National Hurricane Center station WX4NHC.

With a voice over by actor Jeff Bridges, the spot describes the important role that radio amateurs play during severe weather conditions by enabling communications with police and fire departments along with other first responders when electrical service and telephones go away. The narration underscores the importance of a reliable battery to power the portable ham radio gear which the spot describes as essential to the work of WX4NHC.

The commercial is being played nationally during hurricane season. It should help promote awareness of the vital public service role played by amateur radio. You can hear the new Duracell ham radio spot at the link found at www dot arnewsline dot org

**

THE SOCIAL SCENE: A REVIEW OF THE ARRL SW DIVISION CONVENTION

Turning to the ham radio social scene, the August 15th one day convention in Santa Barbara, California, that took the place of the usual 3 day ARRL Southwestern Division show that was almost cancelled earlier this year appears to have been more than a mild success. According to Dave Bell,, W6AQ, about 500 or so drove from sweltering Los Angeles and other areas to the seashore community with 450 signed up for the famed Santa Barbara barbecue lunch alone.

Not a lot of big name exhibitors but some important names were there. These included Ham Radio Outlet, Vertex-Standard Yaesu, and Elecraft. In fact Elecraft showed their new P3 Pan-Adapter for the first time. W6AQ was told that the techs at Elecraft literally finished putting together this prototype at 2 AM in the morning and then drove all the way down from Aptos California to be in Santa Barbara in time for the gates to open.

The ARRL was represented by Southwestern Division Director Dick Norton, N6AA, Vice Director Marty Woll, N6VI and Washington attorney Christopher D. Imlay, W3KD. And while small by comparison to any past ARRL Southwestern Division Convention that anyone can remember, nobody is complaining. In fact there are at least 500 hams who are singing the praises of the Santa Barbara Amateur Radio Club which heroically stepped forward and picked up the pieces at the last minute, when the original sponsoring group pulled out. Or put another way, sometimes the best things come in the smallest packages.

(W6AQ)

**

NAMES IN THE NEWS: BOB HEIL K9EID TO PERFORM ORGAN CONCERT IN SACRAMENTO

Some names in the news. First up is ham radio's "Mr. Audio," Bob Heil, K9EID. Bob will perform in concert on the Mighty Wurlitzer theatre pipe organ at the California Auto Museum in Sacramento, California on Sunday, September 27th. The performance starts at 2 p.m. Pacific

Daylight Time and is free with a paid museum admission fee.

As some of you may know, Bob learned the art of playing theater organ a student of legendary organist Stan Kann. In making the announcement of the upcoming concert Bob says that he has always loved the rich, pretty sounds of the Wurlitzer. Now he is looking forward to sharing the experience with both his amateur radio friends and his theater organ fans in the Sacramento area.

Again the concert is free with a paid admission to the museum. For more information, call (916) 442-6802 or take your web browser to www dot sierrachapteratos dot org.

(CGC)

NAMES IN THE NEWS: THREE NEW ARRL SM'S ELECTED

Los Angeles, California has a new ARRL Section Manager. This with word that David Greenhut, N6HD, of Woodland Hills, has been elected to that post after beating out 11 term incumbent Phineas Icenbice, W6BF. Greenhut received 838 votes while Icenbice garnered only 149.

Meantime in South Texas, Lee H. Cooper, W6LHC, was elected Section Manager with 647 votes. Challengers Lou Everett, Sr, WA5LOU, received 601 votes and Gary Tangrady, K5GST, of San Antonio, received 142. Cooper will be taking on the Section Manager's role from Ray Taylor, N5NAV, of San Antonio. Section Manager since 1997, Taylor decided not to run for another term.

And Georgia will be getting a new Section Manager starting on October 1st. This as Eugene "Gene" Clark, W4AYK steps into the position taking over from Susan Swiderski, AF4FO, who has been Section Manager since 2002. Swiderski, who is the co-recipient of this year's Joe Knight Distinguished Service Award, decided not to run for another term of office. Clark has been the Georgia Section Emergency Coordinator for the last year and was a District Emergency Coordinator prior to that appointment.

RADIO AWARDS: OMIK SCHOLARSHIP FUND SURPASSESW $100,000 AWARDED

The OMIK Radio Scholarship Fund has now surpassed $100,000.00 in educational monies awarded. This with word from Richard Reese, WA8DBW, that the fund presented a $1000 check to Caitlin Grey of Wadsworth, Ohio, to help defray her future education costs.

Reese says that Caitlin Grey was the top recipient selected from a nationwide list of applicants. She graduated with honors from Wadsworth High School in May of 2009. While attending, she was involved in her Student Council, the National Honor Society, and several important projects. She was also a member of the yearbook staff and a varsity cheerleader an academic and athletic letterman and received the United States Achievement Academy award of excellence in a foreign language.

The OMIK Scholarship Fund is a separate organization of the OMIK Amateur Radio Association, Inc. The fund was established to manage and administer the OMIK sponsored scholarship program. According WA8DBW, the Fund's goal is to provide financial assistance to deserving youth who are pursuing education beyond high school.

**

NAMES IN THE NEWS: FAR SCHOLARSHIP WINNERS ANNOUNCED

And the Foundation for Amateur Radio has announced the list of recipients for the 2009 through 2010 academic year scholarship awards. Topping the list is 2008 Amateur Radio Newsline Young Ham of the Year Emily Stewart, KC0PTL, of Leavenworth, Kansas. Emily will be receiving a $1000 grant from the Ralph V. "Andy" Anderson, K0NL, Memorial Scholarship which is one of many administered by the foundation.

A complete list of all the recipients of this latest series of Foundation for Amateur Radio administered scholarship grants can be found on the front newspage at QRZ.com. We at the Amateur Radio congratulate Emily and all of this years scholarship award winners and thank the Foundation for Amateur Radio for its ongoing work to make these educational grants available each year.

**

HAM RADIO IN SPACE: NEW ON-LINE HAMSAT MAP

A map showing the current satellite location for most of the amateur satellites are now available on the AMSAT web site. From the AMSAT front page, use the left hand side navigation, go to the 'Satellite Information' navigation box, then select 'Satellite Status. Next click on an underlined satellite name in the left hand column. This will display a satellite summary, scroll to the bottom of the page and there will be a map showing the current location of that satellite and the illuminated and dark portions of the earth. This feature can be used for a quick check of the satellite's location or to verify that your tracking program was setup correctly. W2GPS and N2YO are the duo who have provided this useful new feature. (WA4SXM)

**

RADIO AND SPACE: AIR FOCE PERMITS AMSAT TO CONTINUE KEPS

AMSAT North America has received approval from the Air Force Space Command to continue re-distribution of Keplerian elements data sourced from the Space Track website.. This means that the AMSAT Keplerian Elements in verbose format and the 2-line format can be freely distributed by those who receive them from AMSAT. The agreement covers the period of April 1, 2009 to April 1, 2010. (WA5QGD, ANS)

**

HAM RADIO IN SPACE: AMSAT-UK COLOQUIUM VIDEOS NOW ON LINE

Videos of the presentations at this years AMSAT-UK International Space Colloquium are now available to watch on the British Amateur Television Club website. All 18 sessions can be seen at www.batc.tv (Southgate)

**

WORLDBEAT: OFCOM SAYS OK TO SPECIAL EVENT SCOTLAND LOCATOR

U-K telecommunications regulator Ofcom will permit Scottish hams to participate in the upcoming Homecoming Scotland celebrations. Individual qualifying licensees will be able to obtain a special temporary authority enabling them to use the Regional Secondary Locator of the letter A for Alba to identify their station as being situated in Scotland. This locator will be available in addition to the existing identifier M, though only one locator should be used in a callsign. The permit to do this will not be valid for stations situated outside Scotland. Homecoming Scotland is an event celebrating that nations contributions to the world. (Southgate)

ON THE AIR: VHF ACROSS THE ATLANTIC

Meantime if you want to try your luck DXing VHF across the Atlantic pond, be aware that Sunday, August 30th is the date for the Ireland's Autumn 2 Meter Counties Contest. This event takes place between 14.00 and 16.00 local time in Ireland. The full rules are available on the IRTS website under the contest tab. QSL any stations you work as directed by them on the air. DX

In DX, word that G4MKP, will be active stroke 5B from Cypress through August 25th. His activity will be mainly CW and RTTY on 80 through 10 meters. Look for him during the mornings and evenings on or around 7.010, 14.010, 21.010 and 28.020 MHz running Morse. His RTTY anywhere in the band segment. QSL via M0URX, direct or via E-mail request for a bureau QSL.

PA2AM, will be active as 9H3DZ from Malta between September 4th to the 14th. His operation will be active mostly on 30, 17 and 12 meters using CW and RTTY. QSL via his home callsign.

3B7FQ will be active from St. Brandon Island until the end of August. He will operate CW and SSB in his spare time and will use the island's G5RV and a vertical with a 100 watt transceiver powered by a 12 volt battery that will be charged daily. QSL via K5XK. He says that direct is preferred.

F2VX and F6FYD will be active portable 4J from Azerbaijan until August 29th. August. They will operate SSB on the HF bands. QSL via their home calls, either direct or via the bureau.

Lastly, W8SMH has just received his Kenyan license and will active portable 5Z4 from Nairobi for the next 3 years. Steve is on assignment with the Salvation Army as second in command at their headquarters in Nairobi. His travel schedule may limit his operating, and he is a rookie at DX operations so please be patient. His other limiting factor is that Nairobi is experiencing power shortages and as a result they are doing rolling blackouts 2 or 3 days a week in his area. Steve's equipment is an Icom IC-718, dipoles and a multi-band vertical. QSL direct to his home callsign on QRZ.com with an IRC or SASE.

THAT FINAL ITEM: ANDREW KOENIG RESENTED WITH 2009 YHOTY AWARD

And finally this week its time to celebrate the achievements of another of the nations young radio amateurs. His name is Andrew Koenig, callsign KE5GDB, and on Saturday, August 15th he was introduced at the Huntsville Hamfest as the 2009 Amateur Radio Newsline Young Ham of the Year. Don Wilbanks, AE5DW, represented Amateur Radio Newsline at the

presentation and also has this report:

--

While the tropics were heating up in the Atlantic and the Gulf of Mexico it was brilliant sunshine in Huntsville Alabama, where we honored a brilliant young man as the recipient of the 2009 Young Ham Of The Year award, Andrew Koenig, KE5GDB. Andrew is a 15 year old rising star in the ham radio and space radio world. He not only helped set up a successful ARISS school contact but he also helps train astronauts in the ins & outs of talking to students participating in these contacts at the Johnson Space Center in his hometown of Houston, Texas. He has also helped in the maintenance and moderation of W5KUB's chat room on his hamfest video website. He's an engaging young man who is going places. But he didn't do it alone:

--

Award presentation audio. Hear it by downloading the MP3 version of this weeks newscast at www.arnewsline.org.

--

Of course, we weren't alone in this either. Corporate sponsor CQ publishing's Rich Moseson, W2VU on what it takes to win this award:

--

Award presentation audio. Hear it by downloading the MP3 version of this weeks newscast at www.arnewsline.org.

--

Rich presented Andrew with a week at Spacecamp courtesy of CQ Magazine as well as copies of all of their other publications. But that's not all. Yeasu's Dennis Motschenbacher, K7BV:

--

Award presentation audio. Hear it by downloading the MP3 version of this weeks newscast at www.arnewsline.org.

--

Next up was Heil Sound's Chip Margelli, K7JA.

--

Award presentation audio. Hear it by downloading the MP3 version of this weeks newscast at www.arnewsline.org.

--

Chip of course pulling out his cellphone making reference to his now-famous appearance on the Tonight Show with Jay Leno. Next up was Greg Sarratt, W4OZK, ARRL Southeastern Division Director with

congratulations for Andrew:

--

Award presentation audio. Hear it by downloading the MP3 version of this weeks newscast at www.arnewsline.org.

--

I dedicated this years award in the memory of a great friend to Newsline, Sandy Donahue, W4RU who passed away in May of this year. Sandy was instrumental in getting the award to Huntsville some 15 years ago and served as a greeter, taxi service or whatever we needed him to do for the winner. Sandy was a friend to all and we at the Amateur Radio Newsline miss him very much. Again, congratulations to Andrew Koenig, KE5GDB, your 2009 Young Ham Of The Year.

Thanks again to our corporate sponsors, CQ Publishing, Vertex Standard Yaesu, Heil Sound, Dave Bell W6AQ for the fine plaque, and Charlie Emerson, N4OKL and all at the Huntsville Hamfest for having us. We'll see you again next year on the third weekend in August for the 2010 Young Ham Of The Year award.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW.

--

Between Santa Barbara and Huntsville it was two great ham radio conventions and one very happy teenage ham. (AE5DW, ARNewsline(tm), YHOTY)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

==> SANTA CRUZ HAMS PROVIDE SUPPORT DURING WILDFIRES

As wildfires threaten the central California coast near Santa Cruz --
located between San Jose and Monterey -- area radio amateurs have been
providing support to law enforcement and fire authorities. According to
Santa Cruz County Public Information Officer Bill Conklin, AF6OH, the
Santa Cruz County Emergency Operations Center requested support from
ARES on Wednesday, August 12: "We activated and established an informal
Net to provide fire support resources." Just two days later, Governor
Arnold Schwarzenegger declared a State of Emergency for Santa Cruz
County.
```

On Thursday, three amateurs staffed the County's Emergency Operations Center for the ARES Net, beginning at 5 AM and going for 16 hours. Monterey County ARES District Emergency Coordinator Dave Burbidge, W6IIQ, also helped to provide coverage.

"Once we were activated, about 30 amateurs signed in to a Resource Net on a local repeater managed by Bob Wolbert, K6XX," Conklin said. "These hams were assigned various duties, including providing support for animal rescue operations. Some were assigned to specific locations in order to support law enforcement and fire authorities. The Santa Cruz Chapter of the American Red Cross initiated staffing and evacuation centers on Wednesday night, and we deployed the ARES Step-Van to support a shelter in Davenport, about 15 miles north of Santa Cruz on Highway 1. Due to the low volume of shelter clients, these facilities did not require further staffing by local ARES team members."

Officials declared a mandatory evacuation in the affected area on Thursday, namely for the towns of Swanton and Bonny Doon; an estimated 2500 people were evacuated from their homes. On Sunday, officials allowed residents from Bonny Doon who had been evacuated to return to their homes, but warned them to be on a state of alert and to be ready to move as needed.

Dubbed the Lockheed Fire, the blaze was 90 percent contained on Friday, August 21. More than 7500 acres are affected by the blaze; the cause of the fire is under investigation. Approximately 2000 firefighters -- equipped with almost 300 fire engines, 14 helicopters, 30 bulldozers, six air tankers and 21 water tenders -- were trying to get the fires under last weekend. As of August 21, there are 1595 fire personnel on site with 125 engines and five helicopters. To date, no homes have been destroyed by the fire, but 13 outbuildings were burned to the ground. The damage is estimated at $21.4 million.

Conklin said that the Santa Cruz County Equine Rescue Team was activated in response to the fire, providing large animal rescue support. "In the past year, many members of the team received their Amateur Radio license," he explained. "They were instrumental in organizing and rescuing horses, llamas, alpacas, goats, sheep, chickens and ducks, as well as arranging transport for 100 head of cattle. Working in conjunction with County of Santa Cruz County Animal Services, they were able to transport and relocate the animals to safety at two sites within the county."

Volunteers staged an equine and large animal rescue at the cement plant in Davenport. A shelter for smaller animals was established at the Santa Cruz County Fairgrounds in Watsonville, about 15 miles south of the City of Santa Cruz.

The weather continues to be a major concern, as do the steep terrain and limited access to the fire's perimeter, Conklin said: "Conditions continue to be very fluid and may change quickly based on weather factors. Firefighters will continue to construct fire line around the perimeter of the fire." Governor Schwarzenegger visited the Fire

Operations Center in Watsonville and thanked all of the firefighters for their assistance.

"Once again, Amateur Radio and ARES proved to be an essential resource in times of emergency," Conklin said. "The citizens of Santa Cruz County are fortunate to have this trained, technical resource available to provide these essential communications resources."

==> HURRICANE BILL DOWNGRADED TO CATEGORY 2; AMATEUR RADIO HURRICANE NETS READY

Now that Tropical Storms Ana and Claudette have dissipated, Hurricane Bill -- downgraded from a Category 4 storm to a Category 2 storm -- is churning its way across the Atlantic with sustained winds near 110 miles per hour. Even though the storm's projected path does not make landfall in the US, hams affiliated with the Hurricane Watch Net (HWN) and the VoIP Hurricane Net (VoIPWX) are ready to provide communications support.

Hurricane Watch Net

As Bill approached, HWN Manager Dave Lefavour, W7GOX, told the ARRL that Net members are "limbering up their microphones and checking their antennas. We're all very carefully watching the storm. We could activate sometime during the next few days, based on the forecast tracks and intensity. We always ask all of our Amateur Radio friends and any new stations that might have data for us in the Atlantic, Caribbean, the Gulf of Mexico and the Gulf coastal areas to dust off their weather instruments. We'll probably need to establish communications with them very soon."

The HWN -- operating on 14.325 MHz -- relays real-time weather observations to WX4NHC <http://www.wx4nhc.org/> at the National Hurricane Center (NHC) <http://www.nhc.noaa.gov/>. "We want all of our reporting stations, especially those closer to the US, to keep in mind that we're also prepared to operate the HWN on 7.168 MHz or 3.668 MHz," Lefavour explained. "If propagation is such that we cannot maintain contact with reporting stations on 14.325 MHz, we'll open a Net on one or the other of those frequencies. Plans are to try 40 meters first, with 80 meters as our last choice of bands."

Lefavour encouraged hams to monitor the HWN Web site <http://www.hwn.org/> for Net activation plans: "We have placed data products from the NHC on the HWN Web site, including maps and charts of tropical storm activity."

VoIP Hurricane Net

The VoIP Hurricane Net -- which meets weekly during the hurricane season months of June-November and monthly from December-May -- has also been monitored Tropical Storms Ana and Claudette last week and is closely monitoring the progress of Hurricane Bill this week <http://www.voipwx.net/>.

"We are continuing to closely monitor the storm's progress," said VoIP Hurricane Net Director of Operations Rob Macedo, KD1CY. "Since 2002, we have been gathering surface reports to help WX4NHC save lives," he said. "The Net activates whenever there is a landfalling hurricane and will review any and all sources to gather surface data for WX4NHC as required."

The weekly VoIPWX Net had a surge in activity last week as Tropical Storms Ana, Bill and Claudette formed almost right on top of each other. Macedo told the ARRL that hams, many of whom are in hurricane-prone areas, were informed of the advisories for each tropical system. "The Net also informally activated as Claudette made landfall as a tropical storm in the Florida Panhandle," he explained. "The VoIP Hurricane Net Activation Policy <http://www.voipwx.net/node/235> is to activate during hurricanes, but will sometimes activate in the event of strong tropical storms that are near hurricane strength."

The VoIP Hurricane Net meets every Saturday evening at 8 PM EDT (0000 UTC Sunday) on the *WX-TALK* EchoLink Conference Node: 7203/IRLP Reflector 9219 system. When hurricanes threaten land, the Net meets and stays active as long as required on the system with listen-only EchoLink conferences and IRLP systems and streaming audio systems available.

>From the National Hurricane Center

At 1800 UTC on Friday, August 21, the center of Hurricane Bill was located about 290 miles (465 km) south-southwest of Bermuda and about 695 miles southeast of Cape Hatteras, North Carolina. Bill is moving toward the northwest at a speed near 18 MPH (30 km/hr). This track is expected to continue through Saturday. The core of Hurricane Bill is expected to pass over open waters between Bermuda and the East Coast of the United States early Saturday. Large swells generated by this hurricane are affecting Puerto Rico, Hispaniola, the Bahamas and Bermuda, moving to East Coast of the US and the Atlantic Maritimes of Canada during the next day or two. These swells will likely cause extremely dangerous surf and life-threatening rip currents.

The Bermuda Weather Service has issued a hurricane watch and a tropical storm warning for Bermuda. A hurricane watch means that hurricane conditions are possible within the watch area, generally within 36 hours.

==> HPM/140 BIRTHDAY CELEBRATION EVENT COMING NEXT MONTH

The Hiram Percy Maxim Birthday celebration is back! This year, the ARRL is honoring the 140th anniversary of the birth of the League's first president and cofounder. Hiram Percy Maxim, W1AW, was born September 2, 1869 and died February 17, 1936, in a Colorado hospital of complications stemming from a throat infection; his widow died just nine days later.

The operating event is open to all amateurs, and the goal is straightforward: Find the stations adding /140 to their call signs, and contact as many as possible during the event period, September 2-9. Who is eligible to sign /140? ARRL members who hold ARRL appointments, ARRL

elected volunteers (such as ARRL Directors and Section Managers), ARRL Life Members, ARRL Headquarters staff and VEs, AECs, QSL bureau workers and awards managers (who are ARRL members). The complete list of eligible positions can be found on page 20 of the September 2009 issue of QST. If you work at least 25 /140 stations, an attractive certificate can be yours! The certificate can be endorsed in increments of 25 QSOs, up to 100.

Time Period: 0000 UTC September 2 until 2400 UTC September 9.

Exchange: All stations signing /140 send RS(T), their appointment and their name; others send RS(T) and their name.

Eligibility: All amateur stations may participate. ARRL Life Members, and those persons holding ARRL appointments, elected positions or ARRL HQ staff, may add /140 to their call signs for the duration of the celebration. Volunteer Examiners, Assistant Emergency Coordinators, QSL Bureau workers, Registered Instructors and Awards Managers who are ARRL members are also invited to participate.

Miscellaneous: /140 stations may be contacted on any band or mode for credit. You can work a station once per band and mode. Repeater contacts are valid for credit, but please be considerate of the users during a repeater's busy periods. All /140 stations are encouraged to be as active as possible on local repeaters and nets. The certificate is available for making at least 25 contacts with /140 stations, with endorsement increments of 25, and a maximum endorsement of 100. To receive the award, send in a log extract with the date, time, band, call sign worked and exchange for each /140 contact. Include your name, call sign and address, and tell us how many /140 stations you worked. Mail everything to HPM/140 Celebration, c/o W1AW, 225 Main St, Newington, CT 06111-1494. You can also send in your entry on a disk or CD in regular text format. All entries must be accompanied by a check or money order for $5 (US) payable to ARRL. Please make sure your entry is postmarked by October 9, 2009.

==> ARRL SECTION MANAGER ELECTION RESULTS

Of the nine Sections holding Section Manager elections this month, three will be getting new Section Managers: Los Angeles, South Texas and Georgia. The Sacramento Valley, Eastern Washington, Colorado, Western Washington, West Virginia and San Francisco Sections will keep their incumbent Section Managers. The new terms of office start October 1, 2009. Ballots were counted at ARRL Headquarters on Tuesday, August 18.

In Los Angeles, David Greenhut, N6HD, of Woodland Hills, was elected as the new Section Manager with 838 votes. He defeated incumbent Phineas Icenbice, W6BF, who received 149 votes. Icenbice has been the Los Angeles Section Manager for 11 straight terms of office since October 1, 1987. Greenhut, a licensed radio amateur for 35 years, has a strong interest in ARES and emergency communications; he has served as the District Emergency Coordinator for the Northwest District of the Los

Angeles County since 2006.

With 647 votes, Lee H. Cooper, W6LHC, of Leander, was elected Section Manager of the South Texas Section. Challengers Lou Everett, Sr, WA5LOU, of Kennard, received 601 votes and Gary Tangrady, K5GST, of San Antonio, received 142 votes. Cooper, presently the South Texas Section Public Information Coordinator, is active in emergency communications, representing ARES on the newly formed State Communications Coordination Group. He was also the Travis County Emergency Coordinator from 2000-2004. Cooper will be taking on the Section Manager's role from Ray Taylor, N5NAV, of San Antonio. Section Manager since 1997, Taylor decided not to run for another term of office.

In Georgia, Eugene "Gene" Clark, W4AYK, of Albany, will be stepping into the Section Manger's position. He will be taking over from Susan Swiderski, AF4FO, who has been Section Manager since 2002. Swiderski, co-recipient of this year's Joe Knight Distinguished Service Award, decided not to run for another term of office. Clark has been the Georgia Section Emergency Coordinator for the last year and was a District Emergency Coordinator prior to that appointment.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next two year terms of office beginning October 1, 2009: Ron Murdock, W6KJ, Sacramento Valley; Mark Tharp, KB7HDX, Eastern Washington; Jeff Ryan, K0RM, Colorado; Jim Pace, K7CEX, Western Washington; Ann Rinehart, KA8ZGY, West Virginia; and Bill Hillendahl, KH6GJV, San Francisco.

==> THE LOCAL CLUB RESOURCE

Norm Fusaro, W3IZ, shares his views on how clubs play an important role in Amateur Radio. Fusaro is Assistant Manager of the ARRL's Membership and Volunteer Programs Department. He is also the ARRL Affiliated Club/Mentor Program Supervisor.

I am very fortunate to be in a position at ARRL which allows me significant interaction with our members. It is very fulfilling to be able to put a smile on someone's face by helping them find a solution to their problem, regardless of the complexity. Sometimes it is not possible to be as helpful over the telephone or with e-mail, so I will try to direct the individual to a local club where they may be able to get some side-by-side coaching. The local radio club is without a doubt the place where most of us received our ham radio education. The club is where we learned the jargon and techno-speak used on the air and where we met folks to emulate and folks whom we swore we would never be like. Everything that we know about ham radio that didn't come from a book was probably learned at club meetings or late night Field Day chats over burnt coffee. Personally, I have made many longtime friendships from my involvement in local radio clubs and I am sure many others can say this as well.

Clubs, by definition, are groups of like-minded people who share a common interest. In reality a club is an eclectic assembly of individuals, each with a unique perspective of their activity. The dynamic of a club is no different than that of a large family. Think of your last family get-together and then take a look at your radio club. If everybody was the same, life would be very boring. In every club, there is the usual cast of characters who add their distinctive flavors to the stew and make things interesting. It is diversity that makes a club work well. I have seen that no matter how varied the personalities are in a club, most of these personalities are also eager to help. Helping each other is characteristic of radio amateurs.

How often have you experienced something like this? Two hams will be in QSO -- perhaps discussing an antenna installation or radio repair -- when another radio operator will break in with a helpful suggestion. This situation may have happened to you, or you may have even been the breaking station. The same thing happens (or should happen) at club meetings. If you need help with something, the closest resource is your local club. On the surface, the club may appear to be dysfunctional, but once you are involved, you will find that it is actually very productive.

The Pareto principle, commonly known as the 80-20 rule is a simple expression that 80 percent of the effects come from 20 percent of the causes. As applied in the business world, this would be 80 percent of the sales are driven by 20 percent of the customers. In a club, the percentages may be slightly different, but the fact remains that a small percentage of the membership is responsible for making things happen.

This is not to suggest that 80 percent of the members do not participate, but without a "sparkplug," some things would never get started. These people are the doers. The doers don't take no for an answer and are always willing to take on more responsibility. But where is the fun in jump-starting a project without someone telling you it would never work? Of course, it would be much more fun without the negative comments, but that goes against human nature. Ever since man tried to open a coconut with a rock, someone was right beside him offering a thousand excuses why it won't work: "You'll smash your thumb." "The rock will break." "You should invent a wheel and roll it over the coconut." "Let's just eat the bananas." The cynics of the world are an essential part of society -- and of our clubs. They challenge us and make us work harder to prove them wrong. Learn to accept these people but never let them distract you from moving forward.

You only get as much from a club as you put into it. A majority of the club bashers tend to be long time hams with a "been there, done that" attitude, asking what a club has to offer them for them. To borrow from President John F. Kennedy, "ask what you can do for your club." Of course, we took more than we had to offer when we were younger and inexperienced. But over the years, we have gathered knowledge that we can share with the newcomers. Based upon my countless interactions with hams of all levels of experience, the novice has much to offer the

old-timer, even if it is just reliving the joy of discovery. The local radio club has something for everybody who is willing to get involved.

Don't know where you local club is? Use the ARRL Affiliated Club search <http://www.arrl.org/FandES/field/club/clubsearch.phtml>. You can reach Fusaro by e-mail <w3iz@arrl.org>.

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Suspended in the blinding, sunlit blue" Cook, K7RA, this week reports: The quiet Sun continues to baffle us. If there are no sunspots today -- and I don't expect any to emerge -- this will be the 42nd day in a row with no sunspots; July 10 was the last day we saw any spots. There is really no way to predict when the next sunspot will appear. If we see no sunspots through the end of the month, then nearly 80 percent of 2009 so far will have been spotless. Sunspot numbers for August 13-19 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 67.2, 67.6, 68.1, 68.8, 68.1, 67.4 and 67.1 with a mean of 67.8. The estimated planetary A indices were 5, 4, 3, 3, 3, 4 and 10 with a mean of 4.6. The estimated mid-latitude A indices were 3, 2, 1, 0, 2, 2 and 8 with a mean of 2.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Dana Gioia's "California Hills in August" <http://www.danagioia.net/poems/californiahills.htm>.

==>IN BRIEF:

* This Week on the Radio: This week, look for an NCCC Sprint on August 21. Check out the Hawaii QSO Party and the Ohio QSO Party on August 22-23. The SKCC Sprint is on August 26. Next week, there is another NCCC Sprint on August 28. The Kansas QSO Party is August 29-30. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 23, 2009, for these online course sessions beginning on Friday, September 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* 7O1YGF Now on Logbook of The World: ARRL DXCC Manager Bill Moore, NC1L reports that the logs for the 2000 DXpedition to Yemen, 7O1YGF, have been uploaded to Logbook of The World (LoTW) <http://www.arrl.org/lotw>. Last week, Moore announced that after more than an eight year delay, the DXCC Desk approved the operation after a review of "recently received information," as well as "additional dialogue" with the DXpedition leader <http://www.arrl.org/news/stories/2009/08/12/11022/?nc=1>. Moore outlined the process to receive credit via LoTW for 7O1YGF:
* As with paper applications, if you submitted 7O1YGF in the past and had it rejected, we will accept an e-application via LoTW; you will not be charged a submission fee for the 7O1YGF submission only.
* Make sure you have uploaded your QSOs. DXCC cannot open and search the logs for your QSO, since doing this will not show the match that is required for an LoTW confirmation.
* Access your account and begin the application process.
* If you select only 7O1YGF QSOs, you will not be assessed the fees that LoTW will report back to you. If you choose other QSOs, a regular submission fee will apply;
* Complete the application (all four parts) and DXCC will place your e-application on the list for processing.

* A special note for 7O1YGF applications only: On Part 4 of the LoTW application, click "Payment by mail." This step is very important to assure proper handling. If you clicked on Part 1 for any QSOs other than 7O1YGF you must make proper payment. This is only for 7O1YGF submissions. Applications with other QSOs will be handled and charged as a regular submission.
* DXCC will not acknowledge completion of the application. When finished, your numbers in LoTW will reflect the completion of your e-application.
* If you achieve Honor Roll or Top of the Honor Roll from this submission and you would like to order the wall plaque, send Moore an e-mail <dxcc@arrl.org>, or you can fax your order or send the order form by regular mail.

* FCC Blogs, Twitters: On Tuesday, August 18, the Federal Communication jumped on the technological bandwagon and began "Twittering." Twitter <http://twitter.com/> allows text-based posts of up to 140 characters displayed on the author's profile page and delivered to the author's subscribers; to date, the FCC's Twitter page has almost 1900 followers. The FCC has also started a blog called Blogband <http://blog.broadband.gov/>. According to Chairman Julius Genachowski (who made the first post), "Blogband is part of the FCC's commitment to an open and participatory process. Blogband will keep people up-to-date about the work the FCC is doing and the progress we're making. But we want it to be a two-way conversation." Readers may leave comments after each post, but comments will be monitored during normal business hours and will be reviewed as "speedily as possible" before posting. "As this blog demonstrates, the Internet is changing and expanding the way Americans communicate, providing them with unparalleled access to information." Genachowski wrote. "So visit Blogband often to keep up with the latest news and -- more importantly -- get involved." The FCC pointed out that commenting in the blog "is not a substitute for submitting a formal comment in the record of a specific Commission proceeding." Find the FCC's Twitter page at <http://twitter.com/fccdotgov>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

396. NTS Training

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-24 22:00:54 UTC
From: Richard Crowley <rcrowley@xp7rt.net>
Message-ID: <7fggrtF2lqgoiU1@mid.individual.net>
Source record: 1806

I am working on putting together an computer (online, downloadable,etc.)
based training package for learning to properly handle National Traffic
System (NTS) messages.

First, is there already something out there? I don't want to re-invent
any wheels here. Second, if not, does anybody have audio recordings
of an NTS traffic net (voice, not CW) that we could use both as an
example, and ideally for actual practice.

Or, does anybody here know if there are any NTS traffic nets that
I can hear and record myself in the PDX area? There was a weekly
practice sked many months (years?) ago, I remember coming across
them every so often. But now when I went out to look, I can't find
anything.

Please reply here in this newsgroup. Thanks
Richard KE7GKP

There is quite a bit of information available on the ARRL web site. As
for finding an actual net, check the net directory at
http://www.arrl.org/FandES/field/nets/client/netsearch.html

Might I suggest that if you're planning to create audio examples it
makes more sense to record them using people who are reading from
scripts. I say this because you'll get better quality audio, have
control of what you're recording, and because most of the voice NTS nets
that I've heard in the past decade or so are not the kind of operation
that I'd want to use as an example of how to do it right.

You might consider teaching the basic skills rather than focusing on a
specific protocol for formal traffic. Knowing how to send and receive
traffic is a much different, basic, and useful skill than knowing how to
put it in the NTS format. People who haven't done it equate this with
"talk" and "write", but there's a lot more to it than that. When your
students can relay a list of ten items like "fifteen packages of twenty
infant size diapers" from point A to point B _with zero errors_, then it
is time to think about specific traffic protocol wrappers.

398. Offutt Air Force Base (Nebraska) Air Show

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-27 14:52:51 UTC
From: ARRL NE Section <memberlist@www.arrl.org>
Message-ID: <20090827135604.C36F031174@www.arrl.org>
Source record: 1808
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.dx,rec.radio.info

I am delighted to forward this email from Dennis Mitchell, KC0YKN. It looks like a great event and a lot of fun! Nice job, Dennis!

73, Art K0AIZ

Please feel free to forward this e-mail to anyone you believe might be interested. It is being sent to BARC & SACMARC club members as well as other selected amateurs.

Sarpy County's big weekend is upon us. This Saturday and Sunday Offutt Air Force Base will open their gates to the public for their 2009 Open House and Air Show (http://www.offuttairshow.com/). The U.S. Navy Blue Angels are the headline performers this year, but Amateur Radio will be there as well.

The Bellevue Amateur Radio Club (BARC) and the Strategic Air Command Memorial Amateur Radio Club (SACMARC) have partnered to setup a special event station at the air show. We'll be operating Saturday and Sunday using SACMARC's K0GRL callsign in honor of General Curtis LeMay's time as Commander in Chief of Strategic Air Command at Offutt AFB. If you'd like to join us from home, we plan to operate on 20 meters, on or about 14.247 Mhz.

The special event station will be operating on the flight line among the throngs expected to visit the air show. This gives us a chance to show off ham radio and tell visitors about our hobby. With the forecast weather this weekend (sunny with highs in the mid 70's) it will be a beautiful day to be outside.

This is a perfect opportunity for anyone who doesn't have an HF station at home (or doesn't have HF operating privileges) to get on the air. There will be Extra class control operators, so any ham, or even a non-ham, is welcome to spend some time at the microphone. We also need people to help log contacts and talk about amateur radio with people wandering by. If you have amateur radio related apparel this is a great time to wear it, a club polo shirt, field day shirt, anything clean and presentable. Remember, we'll be the ambassadors of our hobby to a lot of people.

It's easier than field day (no lugging gear), and the entertainment is great, both IN the air and ON the air. For food you're on your own, but as exhibitors at the air show we should be supplied with bottled water & ice by the air show staff.

If you're interested in participating you don't need to bring anything, we'll have the station setup both days. I would appreciate it if you'd send me an e-mail to let me know that you are interested and what days/times you'd like to operate or spend time at the station. As yet we don't know exactly where we'll be located, but I will be able to provide that information Friday evening.

Incidentally, even if you don't want to operate, if you're at the air show this weekend, stop by and say hello. Look for us in the blue picnic shelter under the dipole antenna.

Finally, if the thought of being shoulder-to-shoulder with 100,000+ of your closest friends doesn't interest you, there is a very low key opportunity to volunteer. If there were to be a incident at the Air Show it might be necessary to activate the Omaha Metropolitan Medical Response System (OMMRS) radio network. If you would be willing to help in that circumstance, please plan to monitor local repeater frequencies during the air show so you will be aware of events. In the event of an OMMRS activation a message would be broadcast on all area repeaters to notify available hams. I would be grateful if anyone planning to serve in that capacity would let me know so I can have a list of people likely to be available in the unlikely event of an emergency needing our assistance.

Amateur Radio Newsline(tm) Report 1672 - August 28 2009

Amateur Radio Newsline report number 1672 with a release date of
Friday, August 28, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. A study says that sunspots seem to be
disappearing. Will they stay away for good? Also, a new a microwave
contact distance record is set in New Zealand, uncoordinated digital
audio repeaters are found to be interfering with ham radio satellites
and an editorial in QST warns against amateur radio's emergency
communications capability being used improperly. All this and more on
Amateur Radio Newsline(tm) report number 1672 coming your way right
now.

(Billboard Cart Here)

RADIO WAVES: TWO ASTRONOMERS PREDICT SUNSPOTS WILL SOON COMPLETELY
DISAPPEAR

Are sunspots disappearing for good? Two solar researchers say this is
the case. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

Most hams users know that there is a direct correlation between
sunspots and high frequency propagation conditions. In general, the
more sunspots there are, the more DX you will be able to work. This
usually happens in 11 year cycles with the last solar maximum having
taken place in 2000.

The current Solar Cycle which is Cycle 24 should peak in roughly next
year in 2010. Only one problem. There have been few sunspots this
year and very little easy to work DX. And now there may be an answer
as to why.

Spaceweather.com reports that astronomers Bill Livingston and Matt Penn
of the National Solar Observatory in Tucson, Arizona, have found that
sunspot magnetic fields are definitely waning. Not only that. They
say that sunspots could completely disappear within decades.

Livingston and Penn have been measuring solar magnetism since 1992.
Their technique is based on a complex system called the Zeeman
splitting of infrared spectral lines emitted by iron atoms in the
vicinity of sunspots. They reached their conclusion by extrapolating
their already collected data into the future.

But Spaceweather also says not to count out sunspots just yet. It notes that while the data of Livingston and Penn is widely thought to be correct, that any far reaching extrapolations may be premature. It says that this type of measurement is relatively new, and the data reaches back less than 17 years. In the end it appears as if the giant solar disk we call the sun is the only one who holds the answers to the future of its spots and how good DX will be in the coming years.

In Scottsdale, Arizona, I'm Norm Seeley, KI7UP, for the Amateur Radio Newsline.

--

And a bit of an astro physics lesson before we leave this story. For those not aware, sunspots are made of magnetism. In other words a sunspot is not matter but rather a strong magnetic field that appears dark because it blocks the upward flow of heat from the sun's fiery depths. Spaceweather says that without magnetism, there would be no sunspots. (Spaceweather, others)

**

RADIO RECORDS: NEW ZL 3 CM RECORD SET

A new record for a microwave contact has been established down-under. This with word that an April 1st SSB voice contact on 10.368 GHz between ZL1TPH in Cape Reinga and ZL2IP operating from North Egmont has been confirmed under New Zealand Association of Radio Transmitters Society rules.

The distance between the two hams was 551 Kilometers and its considered as being a new New Zealand milestone record. It is also believed to be the longest terrestrial distance contact ever recorded on the 3 centimeter band made to date. (NZART, Southgate)

**

RADIO LAW: NO MORE Q SUFFIX CALLS IN SOUTH AFRICA

South Africa's telecommunications regulator ICASA has confirmed that it has blocked the further issuance of any ham radio call with suffixes that are part of the Q codes and will also not issue a call with the suffix SOS.

Its reported that only a few South African hams and one club call sign are in the now unused Q-code group. When these call signs are no longer in use they will also be added to the blocked list. South African hams who have call signs with Q-code suffixes are being urged to apply for a call sign change. (SARL)

**

RADIO LAW: UNCOORDINATED D-STAR REPEATERS IN ITU REGION 1 INTERFERING WITH HAMSATS

D-Star repeaters in I-T-U Region 1 operating uncoordinated in the Amateur Satellite band are reportedly playing havoc with ham radio satellite communications worldwide. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

ITU Region one is made up of Europe, Africa, the Middle East west of the Persian Gulf including Iraq, the former Soviet Union and Mongolia. The problem came to light with the recent publication of the International Amateur Radio Union Region 1 VHF/UHF/Microwave newsletter. It details the interference problems being caused by uncoordinated D-Star repeaters operating in the band segments reserved for Amateur Satellite operations.

The newsletter says a recent planning conference recognized the frequency needs for digital voice, and the bandplans were adjusted accordingly. In other words there are now specific spectral parcels in I-T-U Region One where repeaters using digital voice technology are to operate and no place else.

But the story goes on to note that the rising number of D-Star users in some countries has lead to what it terms as uncoordinated growth. It also notes reports that D-Star repeaters are operating in the 2 meter protected satellite segment.

The newsletter condemns these operations calling them deplorable. It goes on to note that hams complain about interference in the satellite segment caused by pirate operators and illegal telephone systems, while jamming the satellite segment themselves with uncoordinated digital voice repeater operations. It also notes that what it terms as irregular repeater shifts or input to output separation is yet also another source of interference to other ham radio operations.

IARU Region 1 is now laying down the proverbial gauntlet. It says that whenever a new D-Star repeater is to be set up, it must operate on a coordinated frequency pair. This, even if this means that an existing analogue repeater has to be switched off for this purpose.

Michael Kastelic, OE1MCU, who edits the IARU Region 1 VHF/UHF/Microwave newsletter takes it even a step further. He is urgently requesting that all Region 1 VHF managers monitor the developments in their countries and to use their influence to remedy the situation as required. And while he does not say it in these specific terms Kastelic seems to be suggesting that if an uncoordinated D-Star repeater shows up in the amateur satellite subband it may be time to have government telecommunications regulators for the nation its in, order it off the air.

No word from if any of the uncoordinated repeaters targeted by this editorial have or will voluntarily comply and move out of the amateur satellite band.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In many ways it appears as if the popularity of D-Star in some parts of the world is such that its literally going through the same growing pains that analog FM repeaters saw in the late 1960's through the early 1970's. You can read more on-line at www.iaru-r1.org/index.php?option=com_remository&Itemid3&func=select &id=6 (IARU, Southgate)

**

D-STAR NEWS: FIRST EVER NON-ICOM D-STAR REPEATER JOINS G2 NETWORK

Meantime, David Lake, G4ULF, and members of the Ashdown Forest Repeater Group have the first non-Icom D-Star repeater in coordinated prototype operation in the United Kingdom. The GB7MH repeater hardware is a modified Tait T800 repeater operating in full GMSK mode with the D-Star standard 6.25 KHz bandwidth. The repeater uses the GMSK Node Adapter developed by Satoshi Yasuda, 7M3TJZ, in Japan.

With the cooperation and support of the Trust Server Team in Texas, the repeater GB7MH is connected to the G2 network. It is running popular software including the DPLUS module developed by Robin Cutshaw, AA4RC. It also can run Pete Loveall, AE5PL's DSTARMONITOR code unmodified.

The repeater is usually connected to REF005A and is capable of full callsign routing to and from the live G2 network. It provides station updates and includes a self-service registration page similar to the Icom registration.

The GB7MH D-Star system is currently undergoing rigorous testing to ensure the integrity of the worldwide G2 network. The software will not be made available until testing has been completed. You can follow the developments of this first ever non-Icom D-Star repeater at t http://g4ulf.blogspot.com. (Georgia D-Star, QRZ.com)

RADIO RULES: PECUNIARY INTEREST - A QST EDITORIAL BY K1ZZ

Whether or not you are a member of the ARRL, the editorial in the September issue of QST Magazine is must reading for any radio amateur

who is even remotely concerned over the rising problem of ham radio being used for things its was never intended. We are talking about the attempt to commercialize the hobby by some cities, towns and employers under the guise of it being emergency preparedness. Bill Pasternak, WA6ITF, is in our newsroom with more:

--

Titled "It Seems To Us: Pecuniary Interest" the editorial was penned by ARRL Executive Officer Dave Sumner, K1ZZ. In it he takes a close look at the level to which ham radio emergency communications has matured to where its looked upon as being among the most reliable in the world. And because of this, there are some who would exploit it as a way to have an emergency communications or public service network available and on call at little or no cost to a given business or municipality.

Indeed, Sumner cites one case of a medical worker who objected to the FCC interpretation of rule 97.113(a)(3). This when that unnamed worker was told that employees cannot transmit communications on behalf of the hospital while on duty.

Sumner's editorial says that the ARRL Board of Directors is already looking at the problem, but he really implies that it is the nations ham community that must think carefully about what its being asked to do by municipalities, service providers and employers before signing on. K1ZZ notes that there are other radio services designated for the purpose of routine business communications and warns that ham radio must not permit itself to be exploited by those who are to frugal to use them.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the City of Angels.

--

"It Seems To Us: Pecuniary Interest" can be found on page 9 of the September issue of QST. Reading it aloud and discussing it might make for an excellent program for your next radio club meeting. (ARNewsline(tm) based on K1ZZ editorial)

**

HAM RADIO FUTURE: HAS CONTESTING REACHED ITS PEAK

Another article worth reading and discussing is titled Has Contesting Reached Its Peak appearing in the still available August issue of CQ Magazine. In it author John Dorr, K1AR, notes that even with a decline in the overall number of licensed radio amateurs world-wide that interest in radio sporting or contesting is at an all time high. Dorr's article looks into the likely reason for this interesting trend and postulates on what the future may be. It's a good read for anyone with an interest in radio sports or the overall future of our hobby. (ARNewsline(tm))

**

ENFORCEMENT: MALL RADIO JAMMER BONDY FINED $24,000 AND PUT ON 2 YEARS PROBATION

And yet another follow-up on the strange case of a man who tried to jam a mall security operation off of its assigned frequencies. A California State Court has put 25 year old radio jammer Kevin William Bondy on two years of probation, fined him $24,000, and ordered him to forfeit his radio gear.

According to the Ventura County Star newspaper, the sentence was imposed by Superior Court Judge Edward Brodie as part of a plea agreement. This after Bondy pleaded no contest on Thursday, August 20th to a misdemeanor charge making annoying phone calls in connection with an incident that happened last spring.

As you my recall, Bondy was caught by an FCC agent and local police officers while interfering with the radio operations at The Oaks Shopping Center in Thousand Oaks, California. Reports say that Bondy had demanded that the mall's security officers turn their radio frequencies to him and threatened to jam all of the malls radio communications unless his demand was met.

After he was caught the FCC issued its own $24,000 Notice of Apparent Liability to Monetary Forfeiture to Bondy. This for what it termed as his apparent, willful and repeated violation of the Commission's Rules by engaging in unlicensed radio operation, intentional interference to licensed radio operations and failing to allow an inspection of his radio equipment by Commission personnel. That order has since been affirmed.

Bottom line: Bondy has to pay $24,000 to the Federal government and another $24,000 to the state of California. This, with the latter keeping track of him over the next 24 months. (CGC)

**

RADIO LAW: CONGRESS MAY ALLOW CELLPHONE JAMMING IN PRISONS

States may soon seek permission to legally jam wireless cell phones in prisons to stop inmates from organizing crimes from behind bars. This, under a under a measure recently approved by a Senate committee.

The bipartisan measure is being sponsored by Senator Kay Bailey Hutchison of Texas and Maryland's Senator Barbara Mikulski as its Democratic co-sponsor. The Senate Commerce, Science, and Transportation Committee has endorsed the measure and has now sent it to the full Senate for consideration.

Law enforcement officials nationwide have long called for a change in the current law, which doesn't allow states to interfere with cell phone transmissions. The new legislation would require the FCC to consider all available technologies that could be used to block unauthorized wireless communications in correctional facilities.

If signed into law, the legislation would allow states to petition the FCC for permission to use wireless cell phone jamming technology. However critics contend that cell phone jamming could interfere with emergency response and legitimate cell phone use near prisons. (Published news reports)

**

RADIO LAW: LACK OF GLOBAL DEMAND ENDS MOST COPPER THEFTS

It wasn't long ago when we were reporting that the theft of copper and other conductive metals was rampant. Power lines were cut down for their copper content, pipes in buildings under construction were ripped away, and wiring was disappearing.

But that's no longer the case as the global recession has resulted in a drop in demand for most metals with copper among the hardest hit.

The price of copper reached an all-time high in mid-2008 of more than $4 per pound on the world market, with the greatest demand from China. That price then plummeted to $1.50 per pound shortly after the global economic recession began last fall. This makes it not very profitable for a thief to risk his or her life for less than the price of a hot dog from a street vendor.

Add to this newly enacted laws like one in California that requires scrap metal dealers buying bulk metal to get a photo ID from anyone bringing in the items and to delay payment for three days. It also requires recyclers to photograph the items, pay only by check and take the seller's thumbprint. (Union-Tribune)

**

RESCUE RADIO: PAINT ON PHOTOVOLTAIC SOLAR CELLS HOLD PROMISE FOR ENCOMM

Science Daily reports that solar cells could soon be produced more cheaply using nanoparticle inks that allow them to be printed like newspaper or painted onto the sides of buildings or rooftops. This to absorb sunlight and produce electric power.

The article cites the work of University of Texas chemical engineer Brian Korgel. Korgel is hoping to cut the cost of producing high output solar cells to one tenth of their current price by replacing the standard manufacturing process for solar cells.

Right now photovoltaic cells are made using a gas phase depositing system that must be carried out in a vacuum chamber and requiring high temperatures. For the past two years, Korgel and his team have been working on this low-cost, nanomaterials solution to photovoltaics manufacturing. He believes that nanomaterial inks could be printed onto a surface using a roll-to-roll process on a plastic substrate or stainless steel. Because of this the prospect of being able to paint the inks onto a rooftop or building is not far fetched as one might at first believe.

His team has so far developed solar-cell prototypes with efficiencies at one percent but notes they need to be about 10 percent. He says that if he can get the level to the 10 percent mark, then there's real potential for commercialization. He says that then you could see this new production technique being used in three to five years. For hams involved in public service and emergency communications work, such a source of sunlight power used to charge battery banks would mean communications could continue even if the power mains we out of service for an extended period of time.

Funding for the research comes from the National Science Foundation, the Welch Foundation and the Air Force Research Laboratory. The complete story is at www.sciencedaily.com/releases/2009/08/090824115907.htm (Science Daily)

**

A SIGN OF THE TIMES: ONCE BUSY UK PACKET NODE TO CLOSE

Call it a sign of the times. The GB7NT packet radio node is to close due to an ever dwindling numbers and the often thankless task of maintaining the equipment.

The GB7NT packet radio node first came on the air in October 1993 and has been providing a service to radio amateurs in the South-East Wales area for almost seventeen years. But the use of Packet as a direct or forwarding messaging system has been on the downslide for years, supplanted by e-mail over the Internet.

Now, Steve Cole, GW4BLE, the SysOp GB7NT says that he will close the node unless there is shown to be sufficient enthusiasm for it to remain on-air. He says that currently most former the daily users of the service are now using other non-radio means to access DX Cluster information. (GW4BLE, Southgate)

**

THE SOCIAL SCENE: ILLW 2009 DEEMED AN OVERWHELMING SUCCESS

The International Lighthouse and Lightship Weekend held on August 15th and 16th had an all time record 442 registrations from 50 countries. The event began in 1995 in Scotland as the Northern Lighthouses Award for ham radio operators, and went international event two years later.

Alaska was a first this year with an entry for Sentinel Island. Germany listed 55 lighthouses, Australia 49, USA 47, and England 43. Malaysia celebrated its lighthouse weekend with nine lighthouses. The Azores, Balearic Islands, Egypt, Slovenia, Panama were some of the smaller countries represented with one entry from each. The initial tally shows participation by lighthouses and Lightships worldwide up some 10% over 2008. (Amateur Radio Victoria)

**

THE SOCIAL SCENE: CELEBRATING HPM AT AGE 140

And back in the United States the ARRL has announced that the Hiram Percy Maxim Birthday celebration is back this year honoring the 140th anniversary of the birth of the League's first president and co-founder who held the call letters W1AW. The special event is open to all amateurs, and the goal is to work the stations adding /140 to their callsigns, and contact as many as possible during the event period, September 2nd to the 9th. A special certificate is available for making at least 25 contacts with endorsement increments of 25, and a maximum endorsement of 100. More information can be found in the September issue of QST magazine. (ARRL)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: THE LATEST DTV CONVERSION STATS

Almost everyone in the United States who watches television can now see it digitally. Again, Amateur Radio Newsline's Don Wilbanks, AE5DW, has the latest numbers:

--

The A.C. Nielsen data survey company now reports that as of Wednesday, July 29th that 98.9% of United States homes are able to receive digital television signals. This is a gain of 229,000 homes in the last two weeks of July and 1.3 million homes since the week of the June 12 digital television transition.

Among the 56 local markets that Nielsen measures there are 32 markets not far behind with less than 1% of TV households completely unready. Albuquerque and Santa Fe New Mexico at 3.5% each continue to have the highest percentage of homes that cannot receive digital signals from full powered U.S. television stations. In fact, the markets with the most households unable to receive digital television tend to be in the Western United States. That's where cable availability is lower than to the East.

--

The report did not say how long it might be before the remaining 1.2% without digital converters or a pay service will take to get on board with DTV. (TV Tech)

**

WORLDBEAT: VK RADIO ANALOG STATIONS WANT GOVERNMENT JAMMING OF DIGITAL

Legal jamming on the broadcast band. That's what some analogue FM radio stations in the Australian city of Geelong are asking their telecommunications regulator to do. This, because they fear their listeners will be lured to tune into the new digital transmission stations in near-by Melbourne.

Grant Broadcasters Pty Ltd which operate two FM stations in Geelong has called on the Australian Communications and Media Authority to jam the Melbourne signals. They say this is needed is because there will be a considerable time delay in extending digital radio to Geelong and other regional areas and they do not want to loose listenership in the meantime.

The government owned broadcasters ABC and SBS are obviously opposed to their digital signals being denied to Geelong or anyplace else. The Australian Communications and Media Authority says that it is considering options for the introduction of what it terms as coverage management systems to stop the fortuitous digital radio coverage.

According to news reports, if the proposed jamming of the digital broadcasts does go ahead it would need to be funded by broadcasters claiming the need for market protection. (VK3PC)

**

HAM RADIO IN SPACE: SUITSAT 2 NOW ARISSAT-1

The SuitSat-2 project now has a new name to go with its new shape. Its now known as ARISSat-1.

ARISS Chairman Gaston Bertels, ON4WF, the announced the new name for the satellite project last week. The team is now moving ahead using the same hardware that was to fly in the Russian spacesuit that got tossed away into space.

The ARISSat-1 team is re-configuring some of the modules to fit into the new space structure being designed by Bob Davis, KF4KSS and his crew. No date as to when ARISSat-1 will be tossed into orbit from the ISS. (AMSAT)

**

ON THE AIR: TEXAS CLUB TO ACTIVATE WILLOW ISLAND ON SEPT 5

On the air, the Tri-County Amateur Radio Club of North Texas, will activate for the first time as WC5C from Willow Island located in Lake Worth, Tarrant County, Texas. The operation will take place on September 5th mainly be on 40 and 20 meter SSB but they will QSY to accommodate stations on other High Frequency bands or modes. In addition to SSB, PSK31 and CW will both be available.

Willow Island is primarily Tanglewood and poison ivy with some wildlife. The club will access the island by boat, canoe and kayak. Primary hours of operation will be 1400 UTC to 2200 UTC, but possibly continuing into the night depending on conditions.

A commemorative QSL card will be sent to all contacts acknowledging them as remote participants in the first activation of Willow Island. Return cards from all who make contact will be appreciated by the club so as qualify the island for future status. (Southgate)

**

ON THE AIR: THE 2009 EUROPEAN PSK CONTEST

And the European PSK Club is inviting hams world wide to take part in the 2009 CIS DX QPSK63 Contest. The event is slated for September 19th and 20th. Contest, rules and other information can be found on the Web at www.cisdx.srars.org (Southgate)

**

DX

In DX, word that SP5EAQ and -SP5DRH will be active as 3D2MJ and 3D2KJ, respectively, from Viti Levu, Fiji for four starting October 1st. Their operation will be on all bands, but with an emphasis on the lower high frequency bands. They plan to use two stations with small amps and vertical antennas. QSL via their home callsigns.

Currently, two operators are active from here. CT1GPQ, now active from Timor Leste as 4W6AL, will be there until October 3rd. He is there with a medical team and radio operations will take place only during his spare time. QSL via CT1GFK.

Also on from Timor Leste is VK4FR active as 4W6FR. He will be there until mid-October on a work assignment. He is believed to be operating on 30 and 20 meters using PSK31. QSL 4W6FR via VK4FW.

HA3JB, will be active portable 5B from Cyprus through October 2nd. This is a new Hungarian International Police Association activation and is valid for HA-IPARC Award. QSL as directed on the air.

AC2AI will be active as 9M6 stroke JJ2CJB from the Langkah Syabas Beach Resort on the Island of Borneo for the CQWW DX SSB Contest on October 24th and 25th. He plans to run 400 watts into a Force12 C4 beam. QSL via LoTW, e-QSL or the JA Bureau.

PA1TK, PA5WT and PA3GVI will be on the air from Luxembourg stroke LX between September 4th to the 7th. Look for Kees and Rob to focus on 80-10 meters using CW and SSB while Theo operates in the IARU VHF Contest on 2 meters. QSL via their home callsigns.

Lastly, AA5UK, will be active portable EA6 from Ibiza in the Baleric Islands from October 14th to the 29th. His operation will be holiday style on 160 through 10 meters using mostly SSB and various Digital modes. Also, look for satellite activity on various birds. QSL via his home callsign, via the bureau, LoTW or eQSL.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE STORY OF THE MAN WHO TRAINS ASTRONAUTS TO BE HAMS

And finally this week, since 1983 many orbital space missions have taken along amateur radio gear. The first ham in space was Owen Garriott, W5LFL. He was followed by Tony England, W0ORE, after which ham radio in space was formalized. First, under the title of the Shuttle Amateur Radio Experiment or SAREX and today as ARISS or Amateur Radio on the International Space Station. And with amateur radio a part of the astronauts training, someone on the ground has to teach them. Recently, Amateur Radio Newsline's Mark Abramowicz, NT3V, had a chance to meet and talk with the man who really is the ham behind the ham radio operators in space: Nick Lance, KC5KBO:

--

Do you remember where you were when NASA embarked on the Apollo space program that culminated with U.S. astronauts landing on and exploring the moon? Nick Lance, KC5KBO, does.

He joined NASA at the Johnson Space Center in Houston at the time of Apollo 7 in the late 1960s. He was there through that historic Apollo 11 mission and worked for some 40 years for the space agency until his retirement Aug. 1.

"The first 17 years I worked in advanced life support - that's where we developed the hardware and technology to keep the astronaut alive and comfortable," Lance recalls. "And, since that time I've been in many different roles in the program and project management, including program management for the international space station way back in the mid-80s to 90s, and other roles in the engineering directorate."

But in the mid-1990s, Lance says his friend, astronaut Marsha Ivins, came to him with a proposal. She has flown on five space shuttle missions and is currently assigned to the Constellation branch of the astronaut office.

"She said if you could teach ham radio to your young kids - my son got his license when he was 7 - that I could teach it to astronauts, too, probably," Lance says. "So we developed a course, an accelerated course because their time is valuable. And, were able to teach them, in probably at the time, maybe six hours when there were about 900 questions in the Technician question pool.

"And now that there are less questions, we can do that in about three hours for the current crew.

That was at least 10 years ago, Lance says, and a lot of astronauts have gotten their ham ticket thanks to his efforts as their Elmer.

"Well, we've probably licensed - I'm going to guess - in the 50 range or so, probably anybody with a Kilo Charlie or Kilo Delta or Kilo Echo 5 call sign has gone through the radio class that we provide there," Lance says. "There are some crewmen who have not gone up yet and hopefully they'll get a chance to before the space station program is

over."

And, Lance says his classes have attracted more than just the astronauts.

"We had several classes of astronauts who brought their wives and their children in to so they could all learn together," Lance says. "It was a good opportunity because some of the crew wanted to talk to their family from space, too. "And that afforded them the opportunity to do those direct contacts."

Lance says once licensed and aboard the space station on missions, the astronauts enjoy getting on the amateur radio spectrum talking to school students as well as regular hams around the globe.

"Well, a lot of them do like to participate in the ARISS program, get to talk to people on the ground. It's a neat way to be in contact, in direct contact with the supporting public."

Lance says he's pleased with the feedback he's gotten over the years from inside as well as outside NASA.

"It's great to hear that other people have the opportunity now to talk to an astronaut, something that, you know, was heretofore reserved for capsule communicators," Lance says. "But now it opens it up to anybody with a two-watt hand-held. So that's really heartening to know that I had a small part in doing that."

And, despite his recent retirement, Lance says he will voluntarily continue his work training the next generation of astronauts to get their ham tickets.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Ocean City, MD.

--

That's only a small part of what KC5KBO has to tell. You can hear Mark's complete 8 minute interview with him on our website under Special Reports. We think that you will enjoy the story that Nick has to tell. (NT3V, ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson, KQ6FM, in Reno, Nevada, saying 73 and we thank you for listening.

==> FCC TO UTILITIES: DON'T LOOK TO HAMS TO PAY FOR YOUR TESTING

In a case that goes back more than 10 years, the FCC has told a
Pennsylvania utility that the utility is responsible for paying for
"efforts to locate and correct instances of [power line] noise"
<http://www.fcc.gov/eb/AmateurActions/files/Duque09_08_07_5108.pdf>. At
least one amateur has been complaining to the FCC since 2000 regarding
harmful radio interference possibly caused by power line equipment
maintained by Pittsburgh's Duquesne Light Company (DLC)
<http://www.duquesnelight.com/>.

Bob Thacker, K3GT, of Allison Park, Pennsylvania -- a suburb just
northeast of Pittsburgh -- first noticed harmful interference back in
```

1996. He told the ARRL that DLC would come out and fix things, but that he would soon hear noise again. After a few years of this, he complained to the FCC, and in 2005, the FCC notified DLC of the complaint. A month later, DLC responded to the FCC, detailing their efforts to resolve the matter and indicated that the most recent complaint was the result of changed conditions, not the continuation of an old problem.

According to the FCC, DLC again communicated with the FCC in a letter dated June 2, 2005, explaining the efforts they had taken to repair three lightning arrestors. During the latter half of 2005 and into 2006, Thacker continued to experience interference and continued to report these instances to DLC, requesting that DLC correct the problems. In 2007, he located a specific pole as one source of noise and advised a Mr Luther of DLC of this fact; Mr Luther advised Thacker that he would submit a work order.

In March 2008, DLC contacted Thacker, indicating that it had swept the area where the suspected pole was located and discovered no noise. DLC indicated that the noise source was a neon light. Finally, DLC stated that it had spent "significant amounts of time and money" attempting to address his concerns and that DLC would require him to pay for any additional efforts to locate and correct instances of noise.

Special Counsel for Amateur Enforcement Laura Smith responded to DLC in July of this year, saying "Such a response is not acceptable." She spelled out what she called "the most important rules relating to radio and television interference from incidental radiators," specifically:

47 CFR, Section 15.5: General Conditions of Operation <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr15.5.pdf>; 47 CFR, Section 15.13: Incidental Radiators <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr15.13.pdf>, and 47 CFR Section 15.15: General Technical Requirements <http://edocket.access.gpo.gov/cfr_2002/octqtr/pdf/47cfr15.15.pdf>.

"Given the fact this case has been ongoing for quite some time without resolution and DLC has had ample time to locate the instances of interference and make the necessary repairs," Smith told the utility, "you are directed to respond to [me] within 60 days of receipt of this letter, detailing what steps you have taken to resolve the remaining instances of interference that are reported as being caused by your equipment. Should the remaining interference problems not be resolved within those 60 days, DLC will be required to provide [me] with a status update every two weeks going forward as to what progress, if any, has been made to resolve the matter."

ARRL Lab Engineer and power line noise expert Mike Gruber, W1MG, was pleased with Smith's decision, and said that amateurs should not be made to pay fees to the utilities to test for harmful interference by the same utilities. "It is not the responsibility of an Amateur Radio operator to track down and get rid of power line noise -- that's the utilities' job. I am pleased with the precedent that Laura Smith and the

FCC have set here. Now maybe more utilities will take power line noise interference more seriously in the future."

==> HURRICANE BILL PASSES NEW ENGLAND, FINDS NEWFOUNDLAND

Along Coastal New England and the Canadian Maritimes, residents boarded up windows in preparation for Hurricane Bill. Even though the storm -- eventually downgraded from Category 4 to Category 1 -- was considerably weaker than it had been when it was in the Caribbean earlier last week, those who live and work in the region were not taking any chances. To assist the National Hurricane Center (NHC) <http://www.nhc.noaa.gov/> in tracking the storm, hams with the Hurricane Watch Net and the VoIP Hurricane Net relayed traffic and spotting reports to WX4NHC, the Amateur Radio Station at the NHC <http://www.wx4nhc.org/>.

"For the second year in a row -- last year with Hurricane Kyle, and now Hurricane Bill -- the Amateur Radio operators in the Canadian Maritimes proved their skills at supporting the needs of the hurricane centers and in passing information vital to the public's safety," said ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. "We know that should even more severe tropical events impact that area, the hams will be ready with this increasing experience of late, and we will be ready to support them."

Bill's top-sustained winds fell from 105 MPH on Friday night to just 85 MPH by Sunday morning. But as the storm's wind speed dissipated, its size didn't: The diameter of tropical storm-force winds stretched 550 miles, the distance from Atlanta to Washington, DC. During the early hours of Sunday morning, Bill's center of circulation passed about 160 miles to the east-southeast of Nantucket, Massachusetts, its closest approach to the United States. There were wind gusts ranging from 25-35 MPH along the eastern coast of Massachusetts and a few bands of rain swept northward across Cape Cod, but not enough to cause any flooding.

The VoIP Hurricane Net (VoIP Net) <http://www.voipwx.net/> activated at 4 AM EDT on Sunday, August 23, wrapping up at 6 PM that evening. "Nova Scotia amateurs relayed a significant number of reports to WX4NHC via the Net," said Director of Operations for the VoIP Hurricane Net Rob Macedo, KD1CY. "They described tropical storm force conditions and pockets of wind damage, including a few coastal road washouts from storm surge but the region was spared hurricane force winds. This is likely because of Bill's track parallel to the coast, just south of the province. The highest wind gusts were in the 45-55 MPH range over land."

Macedo said that during the weekly VoIP Net on Saturday evening, Net Control conducted a special roll call, lining up Canadian stations from the affected area: "Martin Thomas, VE1AUZ, was the key liaison station monitoring the local VHF/UHF repeaters, feeding the information to the VoIP Hurricane Net. Several other Canadian stations also relayed reports, including Geoff Wilson, VE1GW, and Frank Leslie, VE1FWL. VE1EMX, an official station for the Municipality of the County of Cumberland's Emergency Measures Organization, was also on the air. More

than a dozen Canadian stations were connected into the VoIP Hurricane Net during the height of Bill's impact on the Maritimes. This is our second time in two years working with Canadian amateurs and amateurs affiliated with Radio Amateurs Canada and they did a terrific job once again."

RAC Vice President of Field Services Doug Mercer, VO1DTM, told the ARRL that he, Newfoundland Section Emergency Coordinator Rendyl Godwin, VO1RYL, and four District Emergency Coordinators were "actively passing traffic hourly to the Hurricane Watch Net since 1200 UTC [Sunday]."

Hurricane Watch Net (HWN) <http://www.hwn.org/> Manager Dave Lefavour, W7GOX, told the ARRL that they received an activation request from WX4NHC, their first activation of the 2009 hurricane season: "We opened the Net at 8 AM EDT on Sunday, August 23 on 14.325 MHz, and operated continuously until 7 PM. We had a successful spring recruiting campaign that brought several new members to the Net, and Hurricane Bill allowed us to introduce them to our Net protocols. It's one thing to read about how we do things, but there is no substitute for experience. Conditions on 20 meters were difficult, but with the additional members added to our roster, we were able to maintain communications with our Canadian reporting stations. Kudos to three hams -- Derek King, VE1AWT, David Myrick, VO1VCE, and Fredrick Snow, VO1FJS -- are in order, as they were stalwarts during this HWN session, providing timely information that we relayed to the National Hurricane Center in Miami. By the end of the day, 22 HWN members had participated in the Net."

Lefavour thanked all amateurs who kept the 20 meter frequency clear so they could support WX4NHC. "With the unpredictable shifts in propagation on the 20 meter band, and considering the conditions under which these folks are operating, the signals of our reporting stations are often weak," he said. "This was certainly the case for Sunday's Net session."

WX4NHC Assistant Coordinator Julio Ripoll, WD4R, thanked the hams who supported the operation: "I would like to echo my thanks to everyone for making the effort to support our friends in Canada during Hurricane Bill. It was truly an international effort with Net Controls from many parts of the US and as far away as Germany. The highest wind reports that I saw come in came from Sable Island with a population of five people and 300 wild horses."

Ripoll singled out five Canadian hams "who truly deserve special mention for their extra efforts and long hours relaying reports: Martin Thomas, VE1AUZ; Joseph Wilson, VE1GW; Frank Leslie, VE1FWL; James Hannon, VE1EMX, and Fredrick Snow, VO1FJS."

"Bill opened the 2009 hurricane season for us," HWN's Lefavour said. "We hope that we are not needed for the rest of the year, but the peak of the hurricane season is yet to come. We're ready."

==> ARRL VICE DIRECTOR ELECTIONS SET FOR NOVEMBER

Responding to solicitations in the July and August issues of QST, ARRL members in the Central, Hudson, New England, Northwestern and Roanoke Divisions have nominated 11 candidates for the 10 positions of Director and Vice Director of each of the five divisions. Seven incumbents have been declared elected without opposition, while there will be balloting for Vice Director in the Central and Roanoke Divisions; ballots will be counted on Friday, November 20, 2009, and those elected will serve three-year terms beginning at noon on January 1, 2010.

The ARRL Ethics and Elections Committee has reviewed and confirmed the eligibility of all 11 candidates and has declared the following re-elected: Central Division Director George R. Isely, W9GIG; Hudson Division Director Frank Fallon, N2FF, and Vice Director Joyce Birmingham, KA2ANF; New England Division Director Tom Frenaye, K1KI, and Vice Director Mike Raisbeck, K1TWF; Northwestern Division Director Jim Fenstermaker, K9JF, and Roanoke Division Director Dennis Bodson, W4PWF. The rules state that if a candidate is running unopposed, he or she shall be declared the winner without balloting. No one from the Northwestern Division requested a petition form for the Vice Director position, so that position will become vacant at noon on January 1, 2010; William J. Sawders, K7ZM, is the current Northwestern Division Vice Director. The ARRL President is empowered by the ARRL Articles of Association and Bylaws to appoint someone to fill the vacant position.

Roanoke Division Vice Director Patricia Hensley, N4ROS, decided not to seek another term. Nominated to succeed her are South Carolina Section Manager James F. Boehner, N2ZZ, of Aiken, and former West Virginia Section Manager Hal Turley, W8HC, of Huntington.

In the Central Division, incumbent Vice Director Howard S. Huntington, K9KM, of Hawthorn Woods, Illinois, is being challenged by VHF/UHF Advisory Committee (VUAC) Chairman Kermit Carlson, W9XA, of Batavia, Illinois.

The policies of the League are established by 15 Directors who are elected to the Board on a geographical basis to represent their divisions and constituents. These 15 Directors serve three year terms, with five standing for election each year. Vice Directors, who succeed the Director in the event of a mid-term vacancy and serve as Director at any Board meeting the Director is unable to attend, are elected at the same time.

Full members of the ARRL in the Central and Roanoke Divisions will be mailed ballots in late September. To receive a ballot you must be a member as of September 10. To be counted, ballots must be returned so as to be received at ARRL HQ no later than noon Eastern Standard Time on Friday, November 20. The count will be conducted on that date under the supervision of three tellers and a certified public accountant.

Absentee ballots are available to those ARRL full members licensed by the FCC but temporarily residing outside of the US. Members overseas who arrange to be listed as full members in an appropriate Division prior to September 10, 2009, will be able to vote this year where elections are

being held. Even within the US, full members temporarily living outside the ARRL Division they consider home may have voting privileges by notifying the ARRL Secretary prior to September 10, 2009, giving their current QST address and the reason another Division is considered home.

==> SPACE SHUTTLE DISCOVERY: THREE HAMS ON BOARD

Tuesday's launch of the Space Shuttle Discovery (STS-128) <http://www.nasa.gov/mission_pages/shuttle/shuttlemissions/sts128/index.html> was scuttled when thunderstorms -- including a lightning strike just five miles from the launch pad -- popped up unexpectedly Monday evening, continuing into Tuesday morning. With plans to reschedule the launch the next day, NASA technicians found problems with the shuttle's fill and drain valves. Discovery is now scheduled to launch into space at 11:59 PM (EDT) on Friday, August 28, carrying a crew of seven astronauts, including three radio amateurs.

Commanded by Frederick W. "Rick" Sturckow and piloted by Kevin A. Ford, Discovery is poised to blast off on a 13 day mission to deliver more than 7 tons of supplies, science racks and equipment, as well as additional environmental hardware to sustain six crew members on the International Space Station (ISS). The shuttle also has a crew of five Mission Specialists: Jose Hernandez, KE5DAV; Nicole Stott, KE5GJN; Christer Fuglesang, SA0AFS/KE5CGR; Patrick G. Forrester, and John D. "Danny" Olivas.

When Discovery undocks from the ISS, Stott will be left behind in the orbital outpost. Timothy Kopra, KE5UDN -- who has been on the ISS since July -- will return to Earth on the shuttle. Kopra's departure and Stott's arrival makes for six astronauts on board the ISS, and all but one are licensed radio amateurs: Commander Gennady Padalka, RN3DT; Flight Engineer Michael Barratt, KD5MIJ; Flight Engineer Frank DeWinne, ON1DWN; Flight Engineer Robert Thirsk, VA3CSA, and Flight Engineer Roman Romanenko.

Stott -- who holds a BS in aeronautical engineering from Embry-Riddle Aeronautical University and a master's degree in engineering management from the University of Central Florida -- joined NASA in 1988 as an Operations Engineer in the Orbiter Processing Facility (OPF) at the Kennedy Space Center (KSC) in Florida. Soon after, she was detailed to the Director of Shuttle Processing as part of a two-person team tasked with assessing the overall efficiency of shuttle processing flows and implementing tools for measuring the effectiveness of improvements. During her time at KSC, Stott also held a variety of positions within NASA Shuttle Processing, including Vehicle Operations Engineer, NASA Convoy Commander, Shuttle Flow Director for Endeavour and Orbiter Project Engineer for Columbia. In 1998, she joined the Johnson Space Center team in Houston as a member of the NASA Aircraft Operations Division, where she served as a Flight Simulation Engineer on the Shuttle Training Aircraft.

Selected as a mission specialist by NASA in July 2000, Stott reported for astronaut candidate training the next month. Following the completion of two years of training and evaluation, she was assigned technical duties in the Astronaut Office Station Operations Branch, where she performed crew evaluations of station payloads. She also worked as a support astronaut for the Expedition 10 crew. In April 2006, she was a crew member on the NEEMO 9 mission (NASA Extreme Environment Mission Operations) where she lived and worked with a six-person crew for 18 days on the Aquarius undersea research habitat.

In a NASA pre-flight interview, Stott said that while on board the ISS, the crew will "be continuing the final assembly of the space station, and also moving more actively into the utilization phase of station, with the science and research that will be going on." Her primary responsibility on the ISS will be "to maintain the U.S. systems as well as the payloads that are on the US side, and that also includes the Japanese Experiment Module and the Columbus experiment module. And I think one of the really cool things about Expedition 20 and 21 is that we'll be a six person crew on board the station at that time."

STS-128 marks the first spaceflight for Hernandez, a native of Stockton, California. Selected as a NASA astronaut in 2004, he completed his initial training in February 2006. While on Discovery, he is slated to perform robotic operations to inspect Discovery after launch and assist with cargo transfer from the shuttle to ISS. Hernandez holds a BSEE in electrical engineering from the University of the Pacific and a master's degree in electrical and computer engineering from the University of California Santa Barbara.

Fuglesang, from Sweden, is an astronaut with the European Space Agency (ESA); he flew as a mission specialist and conducted three spacewalks on STS-116 in 2006. He was selected to join the ESA astronaut corps in 1992 and began training at NASA's Johnson Space Center in Houston in 1996. Fuglesang has a master's degree in engineering physics from the Royal Institute of Technology and a PhD in experimental particle physics from the University of Stockholm.

NASA has said that if Discovery is not launched by Sunday, the mission would have to be delayed until mid-October to provide launch opportunities for other spacecraft, including a Russian crew capsule and an unmanned Japanese cargo ship destined to visit the ISS. If NASA decides workers have to make repairs, that could mean a weeks-long delay.

Stott is scheduled to return to Earth on the Space Shuttle Atlantis (STS-129) <http://www.nasa.gov/mission_pages/shuttle/shuttlemissions/sts129/index.html>, set to launch in November 2009. -- NASA provided the information for this article

==> SUITSAT-2 NOW CALLED ARISSAT-1

The SuitSat-2 project -- an Amateur Radio satellite housed in a Russian spacesuit -- now has a new name to go with a new shape: ARISSat-1. On Wednesday, August 19, Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm> Chairman Gaston Bertels, ON4WF, announced the new name for the satellite and project. According to ARRL ARISS Program Manager Rosalie White, K1STO, the project team is moving ahead, using the same hardware that was to fly in the Russian Orlan suit. Russia will continue to call the satellite Radioskaf-2, so ARISS is designating it ARISSat-1/Radioskaf-2.

Plans to launch a second SuitSat-spacesuit-turned-satellite were the subject of discussions and presentations at the November 2006 AMSAT Space Symposium and ARISS International Delegates' meeting. Despite a weaker-than-anticipated 2 meter signal, SuitSat-1 sparked the imagination of students and the general public and turned into a public relations bonanza for Amateur Radio <http://www.arrl.org/ARISS/Suitsat.pdf>. ARISS hopes to capitalize on the concept by building an even better SuitSat that will include ham radio transponders. The SuitSat.org Web site <http://www.suitsat.org/> attracted nearly 10 million hits during the SuitSat-1 mission. Designated by AMSAT as AO-54, SuitSat-1 remained in operation for more than two weeks, easily outlasting initial predictions that it would transmit for about a week. SuitSat-1 re-entered and burned up in Earth's atmosphere in September 2006. ARISSat-1/Radioskaf-2 is expected to be live for at least six months.

Due to storage considerations, the two surplus Orlan space suits in storage on the ISS were discarded via the Progress Cargo Vessel earlier this year. One of these suits was to be used to house the electronics for the upcoming SuitSat-2 mission; the batteries were to be mounted inside the suit, solar panels attached to the extremities with the electronics, video cameras and antenna mounted on the helmet by the ISS crew prior to deployment during an extra-vehicular activity (EVA), commonly called a spacewalk. The removal of the Orlan space suits from ISS removes the "Suit" component of the deployment and the new name reflects the change in configuration.

White told the ARRL that the ARISSat-1/Radioskaf-2 team, through Gould Smith, WA4SXM, made the final decision for the satellite to be square, with solar panels on all 6 sides. "The team is mounting a 70 cm quarter-wave whip on the bottom and a 2 meter quarter wave whip on the top," she said. "All of the hardware and software goes inside the square, and cameras go on the outside." The experiment being developed by Russia's Kursk State University is expected to be integrated into the electronics once the US-produced equipment is delivered to Russia this fall.

AMSAT <http://www.amsat.org/> and ARISS pointed out that the importance of this project to both organizations is not diminished. "ARISS sees this mission as an important component of education outreach, as it will provide an opportunity for students around the world to listen for recorded greetings from space, as well as learn about tracking

spacecraft in orbit," White said.

The ARISSat-1/Radioskaf-2 transmitter and receiver will be based on a Software Defined Transponder (SDX) system. It will consist of two major components: The RF Module and the Digital Signal Processor (DSP) module. In the RF module, there will be an up converter that receives a signal from the DSP module as a 10.7 MHz intermediate frequency RF signal with a 50 kHz bandwidth, and up converts it to 145 MHz signal of 50 kHz bandwidth centered on 145.9375 MHz. The receiver is a down converter with a 50 kHz bandwidth centered on 437.6125 MHz. The output of the receiver is a 10.7 MHz RF signal with a bandwidth of 50 kHz. The DSP processor receives the 10.7 MHz signal from the receiver down converter and processes it and outputs a 10.7 MHz signal to the transmitter up converter. The DSP can also inject signals such as the CW ID, telemetry, audio and packet signals as determined by the software on the DSP.

AMSAT calls the deployment of the SDX "a critical milestone" for the organization. "This upcoming flight provides an opportunity to flight test the next generation of spacecraft hardware," Bertels said. "Lessons learned from this deployment will be applied to future flight opportunities as AMSAT moves towards a 'modularization approach' to spacecraft development with the expectation the future spacecraft missions will utilize a derivative of SDX and the associated hardware."

The ARISS International Team has been informed that there is still space available for shipment of the ARISSat-1/Radioskaf-2 electronics on the projected cargo flight to the ISS in January 2010, and the extra-vehicular activity scheduled for April 2010 still has a SuitSat-2 deployment on the schedule.

==> SOUTH AFRICAN HAMS TO PUT ZS10WCS ON THE AIR BEFORE, DURING WORLD CUP

With World Cup soccer coming to South Africa in 2010, hams in that country will commemorate the event starting in September 2009 with a special call sign: ZS10WCS. According to the South African Radio League (SARL) <http://www.sarl.org.za/>, that country's IARU Member-Society, the call sign will be used in two ways: In the months leading up to the Word Cup, to be held June 11-July 11, 2010, and for times during the event itself. SARL is requiring that clubs selected to use ZS10WCS before the event be on the air on weekends, Friday night through Sunday night. Clubs using the special call sign during the World Cup are expected to be on the air each day.

SARL will supply the special event QSL cards, and requests for direct QSLs will be handled by the SARL QSL bureau. Direct QSLs must include a self-addressed envelope and one IRC or US $1. Amateurs may also QSL via e-mail <wcs@sarl.org.za>, but those hams sending an e-mail QSL will only receive an e-mail QSL in return, and not the commemorative printed QSL.

When the World Cup was in Germany in 2006, 38 different special event stations were on the air to celebrate the event. From May 13-July 16, 26

special district stations (DQ2006A to DQ2006Z) and 12 special stadium stations (such as DR2006B and DR2006C) at the various venues were on the air. The Deutsche Amateur Radio Club (DARC) offered a gold, silver and bronze award for contacting each station; there is no word if SARL will offer an award in 2010. -- Some information provided by SARL

==>SOLAR UPDATE

Tad "The Sun just touched the morning" Cook, K7RA, this week reports: Sunspot numbers for August 20-26 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 67.6, 66.4, 66.6, 67.3, 67.6, 67.1 and 67.3 with a mean of 67.1. The estimated planetary A indices were 11, 8, 5, 5, 3, 3 and 4 with a mean of 5.6. The estimated mid-latitude A indices were 8, 6, 3, 3, 1, 2 and 4 with a mean of 3.9. Geophysical Institute Prague predicts quiet to unsettled conditions August 28, quiet August 29-30, quiet to unsettled August 31, September 1 quiet, quiet to unsettled September 2 and active conditions on September 3. NOAA and the US Air Force predict the planetary A index for August 28-September 6 at 5, 7, 10, 7, 5, 12, 7, 5, 8 and 6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Emily Dickinson's "The Sun Just Touched the Morning"
<http://www.quotesandpoem.com/poems/poeticworks/Dickinson/Complete_Poems:_Nature_-_1/5>.

==>IN BRIEF:

* This Week on the Radio: This week, look for an NCCC Sprint on August 28. The Kansas QSO Party is August 29-30. Next week is the All Asia Contest and Colorado QSO Party on September 5-6. The Tennessee QSO Party is September 6-7. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 6, 2009, for these online course sessions beginning on Friday, April 18, 2009: XXXXXX. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times

convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* 2009 Field Day Logs Received, Posted Online: All 2009 Field Day logs that have been received have been posted to the Claimed Scores page on the ARRL Web site <http://www.arrl.org/contests/claimed>. They reflect all applications sent from the b4h.net Web applet, as well as those received via the US Postal Service and usable electronic submissions sent via regular e-mail (non-Web applet submissions). If you find an error in your listing, or your entry is missing, please contact ARRL Field Day Manager Dan Henderson, N1ND, via e-mail <dhenderson@arrl.org> or by phone at 860-594-0236. If your entry is listed as needing more information, please contact Kathy Allison, KA1RWY, via e-mail <kallison@arrl.org> or by phone at 860-594-0295. She has all of the entries received and can determine what specifically is missing from those entries with problems.

* Kansas QSO Party Back on the Air for 2009: This weekend offers an opportunity to work rarely activated Kansas counties -- all 105 of them!The Kansas QSO Party <http://www.ksqsoparty.org/> returns to the airwaves for the first time since 2002, making it possible to put the Kansas state flag on your Year of the State QSO Party certificate <http://www.arrl.org/awards/ysqso>. The contest begins at 1400 UTC Saturday, August 29 and runs throughout the weekend.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

401. August 21, 2009 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2009-08-29 00:22:12 UTC
From: N2EY@AOL.COM
Message-ID: <44fc5738-adf5-4d2b-aeef-5c8df15886fd@z24g2000yqb.googlegroups.com>
Source record: 1811

These are the number of current, unexpired FCC-issued amateur radio licenses held by individuals on the stated dates, and the percentage of the total number of active licenses that class contains.

Percentages may not add up to exactly 100.0% due to rounding.

These totals do not include licenses that have expired but are in the grace period, nor do they include club, military and other station-only licenses.

Effective April 15, 2000, FCC no longer issued new Novice, Technician Plus and Advanced class licenses, so the numbers of those license classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all existing Technician Plus licenses as Technician. The number of Technician Plus licenses still in effect is now less than 1000, and by May 2010 they should all be gone.

It is therefore informative to consider the totals of the two classes, since the Technician class includes a significant number of Technician Plus licenses renewed as Technician.

On February 23, 2007, the last Morse Code test element, the 5 wpm receiving test, was eliminated as a requirement.

The current total number now exceeds the May 14, 2000 number.

The ARS License Numbers:

As of May 14, 2000:

Novice - 49,329 (7.3%) Technician - 205,394 (30.4%) Technician Plus - 128,860 (19.1%) General - 112,677 (16.7%) Advanced - 99,782 (14.8%) Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%) Technician - 293,508 (44.8%) Technician Plus - 30,818 (4.7%) General - 130,138 (19.9%) Advanced - 69,050 (10.5%) Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of August 21, 2009:

Novice - 17,308 (2.6%) Technician - 329,427 (48.8%) Technician Plus - 626 (0.1%) General - 148,908 (22.0%) Advanced - 61,018 (9.0%) Extra - 118,143 (17.5%)

Total Tech/TechPlus - 330,053 (48.9%)

Total all classes - 675,430

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433 Technician - increase of 88,114 Technician Plus - decrease of 98,042 General - increase of 17,461 Advanced - decrease of 30,732 Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to August 21, 2009:

Novice - decrease of 32,021 Technician - increase of 124,033 Technician Plus - decrease of 128,234 General - increase of 36,231 Advanced - decrease of 38,764 Extra - increase of 39,393

Total Tech/TechPlus - decrease of 4,201

Total all classes - increase of 638

>From February 22, 2007, to August 21, 2009:

Novice - decrease of 5,588 Technician - increase of 35,919 Technician Plus - decrease of 30,192 General - increase of 18,770 Advanced - decrease of 8,032 Extra - increase of 9,873

Total Tech/TechPlus - increase of 5,727

Total all classes - increase of 20,750

To: <cq-contest@contesting.com>; "Fabian Kurz" <mail@fkurz.net>
>Subject: [CQ-Contest] Special Announcement from 6Y1V

It's official! 2009 is the year of the Young Ham Contest Program!

Krassy, K1LZ and I (KY1V) have agreed to sponsor a Young Ham team for piloting the 6Y1V contest station in this years CQWW DX SSB contest!

What does this mean? Well, quite simply, four (4) very lucky young hams will be selected this year for an all expense paid trip to Jamaica.

Wow are we excited. Get your essays in quickly. September 30th is approaching fast!

73 and good luck!

David ~ KY1V

PS: Remember, we just create the opportunity. Get on the air and work these kids. YOU make their dreams come true!

>From: "David Kopacz" <david.kopacz@aspwebhosting.com>
Sent: Tuesday, August 25, 2009 4:33 PM
To: <cq-contest@contesting.com>
>Subject: Re: [CQ-Contest] Why Are European Contesters Younger?

Since we're on the subject of youth and contesting, please take a moment to pass this to any young ham, a parent of a young ham or post in your next club publication.

Once again we are sponsoring one young ham operator (21 or under) to join our team and receive an all expense paid trip to operate in the 2009 CQWW SSB or CW contest with the 6Y1V team. You can reside in any country in the world and be considered for this opportunity provided you hold a valid amateur radio license in your country.

This is a gift to a young ham who has a passion for Ham Radio and DX'ing/contesting. It is our way of giving something back to this great hobby that has given so much to us!

To qualify, you must send an email to contest at 6y1v.com containing an essay of 500 words or more, in English, describing how you got started in ham radio, who guided you through the process (tell us about your Elmer), and tell us why you should be selected for this DX/contest opportunity. Please include your full name, call sign and home address.

We are looking for a young ham (21 or under), with some DX/contest experience, that would consider this opportunity a dream come true! You must have your parent's written permission to make the trip on your own, or they may join you, at their own expense.

We will continue to take applications from young hams until September 30, 2009. Our team will review all applicants for the young ham position and select one young ham to join us for this exciting DXpedition and contest opportunity.

We will pay all expenses for the young ham, including airfare, license fees, QTH rental share and food. The rest of the 6Y1V team will ensure this is the most memorable ham radio experience ever!

The selection process is based soley upon each young hams written essay of 500 words or more.

We are particularly interested in young hams that have never operated outside of their home country, have never been on any DXpedition and would not otherwise have opportunity to do so under any other circumstances.

403. FCC license for Midland GXT1000VP4?

Newsgroup: rec.radio.amateur.moderated

New to the group. New to the subject. Trying to find any answers.

Some of my friends and I are planning a 110 mile canoe trip in Montana next year. I would like to bring along a pair of walkie talkies that are somewhat water proof, can accept AA batteries, have decent range, and have NOAA in case the weather takes a turn. I've been doing research and found the Midland GXT1000VP4 walkie talkies fit the bill.

Of all the websites I hit, only one brings up the FCC license subject. I can't get a direct answer from anyone since everyone is trying to sell them to me and not worried about what I think after they got my money.

Will I need an FCC license? They say the radios work right out of the box but some of the channels might be blocked without the license. How much is the license? Are the unblocked channels over crowded and worthless?

I guess there is no way around this. ??

Thanks.

Smed

AFAIK, if you use only the FRS channels, you won't need a license. You
won't get to use the higher power settings, though.

If you want to use high power, you'll need to apply to the FCC for a
GMRS (General Mobile Radio Service) license.

See http://www.fcc.gov/Forms/Form605/605.html for details on the
application process.

I wouldn't worry about it if I were you: you're going to an isolated
area, you'll be talking across water most of the time, and so I think
FRS will be fine.

HTH. YMMV.

Bill, W1AC

There are two radio service available to you that these devices support.

FRS, Family Radio Service, does not require a license of any kind. The maximum power is 1/2 watt. The radio will automatically reduce power on FRS-only channels.

GMRS, General Mobile Radio Service, does require a license. Higher power is allowed, and the amount available will depend on the device. I went to the Midland site and they do not list the actual power output for the radio, which for me would be enough that I would not buy the radio.

Bottom line: How much range do you need? If your communication will be over open water, the 1/2 watt that the FRS provides will be more than adequate, and you can probably find much cheaper units at your local big box store that will fill the bill. If you have a need to communicate over longer distances, which I can't see happening on a canoe trip, go with a more powerful unit that supports GMRS and get the license. But do not believe the claims on the web site of 36 mile range; you might get 36 miles over open water with full power on GMRS, but in general use I would expect no more than a couple of miles at best.

I don't think you will run into any problems with channel overcrowding on FRS channels, especially in the wilds of Montana. Pick something other than "1" and you should be fine. And should you run into another group that has picked the same channel, all you need to do is change.

And "blocked" is rather a misnomer. The radio doesn't know if you have a license. FRS and GMRS share some channels, and the license is required to use high power.

Have a good trip.

73, Steve KB9X

Thanks for the reply!

Even if I'm on FRS without a license, will that effect the NOAA channel or
does that just limit the transmissions and not the receptions?

Thanks again.

First, thanks for the reply!

As far as how much power do I need, I really don't think I will be talking to anyone at any great distance for the most part. The safety issue is what I'm mostly looking at with the NOAA radio and in case we need to contact emergency personnel (we plan on bringing a Spot Satellite GPS Messengers). Where we are setting on, there really isn't any set off points for around 110 miles and cell phones will be worthless.

So if I have this right, the FRS channels limit the radio to 1/2 a watt but if you switch over to the GMRS channels you can boost it to full power? Is there a block out or password for the GMRS channels? If I had to switch over to the GMRS to contact help, will the radio allow me access to the more powerful channels?

Thanks again and sorry for the newbie questions.

Smed

I'd expect a 36-mile range only if you're standing on top of a
mountain, talking with someone else who is also standing on top of a
mountain, with a clear line-of-sight between the two mountain tops.

In cluttered ground-level applications, I agree, a couple of miles is
about the best you can expect. In hilly terrain it's likely to be
less than that.

There are also some GMRS-only channels. A license is required to use
these at *any* power level. I don't know whether the Midland radio in
question has access to these channels at all.

See the following URL for the FCC's take on the issue:

http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

A GMRS license currently costs $85, and is good for five years. The
license covers an adult applicant and his/her immediate family.

Where I used to work we used Kenwood Freetalk FRS (1/2 watt) radios. From the ground, I was able to "work" a co-worker who was at 8500' some 38 miles away, but I had to position myself between buildings so that I could literally see the mountain. We were not quite full-quieting, but pretty well up there. Those radios are pretty impressive.

Howard

Amateur Radio Newsline(tm) Report 1673 - September 4 2009

Amateur Radio Newsline report number 1673 with a release date of
Friday, September 4, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Wildfires rage in Southern California and
hams go on alert, the father of A-P-R-S proposes a universal ham radio
text messaging initiative, a Virginia ham will commemorate the memory
of those lives lost on 911 and more about those disappearing sunspots.
All of the details coming your way on Amateur Radio Newsline(tm) report
number 1673 right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE SOUTHERN CALIFORNIA WILDFIRES

Ham radio has been put on alert as wildfires rage across the state of
California. Bill Pasternak, WA6ITF, is in our newsroom in hot and
smoky Los Angeles with what we know so far:

--

On alert is probably the best way to describe amateur radio's role so
far as emergency responders and firefighters from across the region
responded to a series of wildfires sparked by the intense heat gripping
the great American Southwest and what appears in some cases to be human
carelessness. Investigators will eventually determine the causes but
those of us who live and word in the region only want to see them out.

The biggest of the blazes, and the one that affected ham radio in
several ways is the Station fire that began in the foothills above the
San Gabriel Valley of Los Angeles and raced North across those hills to
threaten the city of Acton. As we go to air, the Station fire has
consumed 144,000 acres in an area that's about 20 miles high by 30
miles wide and is now only about 38% contained. At least 50 homes have
been lost and two firefighters lost their lives when their engine fell
from a winding mountain road and tumbled some 800 feet.

Because of the hardening of the states radio communications system and
the redundancy of gear, few if any emergency communications facilities
were affected by any of the blazes. None the less, several of the
states Disaster Communications Service groups are on alert ready for
full activation at a moments notice. The largest of these is the group
allied to the K6CPT repeater operating on 145.300 MHz and serving the

greater Los Angeles area. As this is written, the repeater is in what can best be described as stand-by alert with all communications restricted to the assisting those fighting the Station fire.

Still with the Station fire, one ham radio repeater network was partially taken off the air by it. Dick Mc Kay, K6VGP, who operates the multiple-site Disaster Amateur Radio Network or DARN reports that their radios on Mt. Disappointment were taken off the air when the fire raced up the hill and took out the power lines. News photos show that one building that housed radio equipment was destroyed, but according to K6VGP the bunker that houses the ham radio system is concrete and its hoped that the radio system survived. The photo shows that the DARN antenna system is still there but its likely that the transmission line from the repeater to it may have melted away.

Dick says that he won't know the condition of the radio gear until he is allowed to make a trip up the mountain to visually inspect the site. The DCS system 145.3 MHz mentioned earlier is also on Mt. Disappointment and is still operating using a massive battery back-up system. This is one of the best ways McKay can be certain that the building that houses both repeaters is still in tact.

And as we go to air, that's about all that's known regarding ham radio in the current spate of fires in the region. But as those of us who live out here know, the worst months of what we call the fire season lies ahead. That comes in a few weeks when the seasonal Santa Ana winds team up with the dry and hot fall weather to create the potential for wind driven brush fires that have been known to swoop down and destroy entire communities within minutes. With this having been an exceptionally hot and dry year, everyone including ham radio first responders will be on high alert until the winter rains come, if we have any this year at all.

Reporting from Los Angeles where the sky is yellow with smoke, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline

--

It will be a while before many of these wildfires are declared contained or controlled and we will have follow-ups in future Newsline reports. (ARNewsline with assistance from CGC Communicator, K6VGP, K6OQK, others)

**

RESCUE RADIO: A UNIVERSAL HAM RADIO TEXT MESSAGING INITIATIVE

A universal ham radio text messaging initiative has been proposed by the ham who gave the hobby APRS. Writing in the special emergency communications issue of QST magazine, Bob Bruninga, WB4APR, introduces a broad new initiative to find ways to seamlessly connect many of the dozens of existing amateur radio text messaging capabilities together.

Bruninga's concept is that of a universal information exchange between ham radio, the Internet, cellphone and other broadband devices. Also included is the ability to do station tracking using APRS and message exchange to and from DTMF equipped ham radio gear.

Under the WB4APR concept all a ham radio operator would need would be his or her callsign as a text address to have emergency test messaging available. His article titled a Universal Ham Radio Text Messaging Initiative begins on page 72 of the September issue of QST. (ARRL)

**

HISTORY REMEMBERED: W0YR TO COMMEMORATE 911

A ham in Virginia will take to the airwaves to remember the lives of those who perished in the terrorist attacks of September 11th 2001. Michael Lonneke, W0YR, of Round Hill, says that his year after year operation as W0YR stroke 911 has several objectives. First is to honor and commemorate the lives of those lost in the terrorist attacks on the World Trade Center Twin Towers in New York City, the Pentagon in Arlington, Virginia, and the plane that crashed into a field near Shanksville, Pennsylvania.

Lonneke also says he does this every year to remind those whom he contacts of what this country endured on September 11th 2001 because of hatred. He also wants to remind those who would be revisionists of history and who want to minimize or forget the attacks that they were an act of terror against our nation.

Lonneke says that he will be operating CW, RTTY and SSB 10 through 80 meters and that a special QSL will be issued. QSL Mike via W0YR at his callbook address.

W0YR says that the memory of those who perished on September 11th, 2001, will never be forgotten. Two of those who died were his friends. (W0YR)

SOLAR PROPAGATION: FINALLY A SHORT LIVED SUNSPOT

The imminent demise of Sunspot 1025 seems to reinforce our report last week on the work of astronomers Bill Livingston and Matt Penn of the National Solar Observatory in Tucson, Arizona. They have found that sunspot magnetic fields are definitely waning and believe that sunspots could completely disappear within a few decades.

According to Spaceweather dot com, sunspot 1025, which emerged on Monday, August 31st to interrupt a string of 51 spotless days. Sunspot 1025 was described in an eHam.net posting by Thomas Giella, NZ4O, as a small solar cycle 24 sunspot group that had emerged in the northern and western hemisphere of the Sun. But it did not last very long. On Wednesday, September 2nd, Spaceweather announced that sunspot 1025 was rapidly fading away. (Spaceweather, eHam)

**

BREAKING DX NEWS: FIRST EVER EME DXPEDITION TO MONGOLIA

Some breaking DX news. This with word that JT1UN and JT1UN/5 will be the call signs of the first ever E-M-E DXpedition to Mongolia by W7EME, and K7YO. The operation will begin on October 10th and continue through the 14th. W7EME will operate JT65B on 144 MHz with K7YO on 432 MHz. Equipment on 2 meters will be a single M2 yagi and 450 watts output. The70 centimeter station will run 250 watts to a pair of long beams. More details are at www.mmmonvhf.de/latest.php?id(49 (MMMonVHF)

**

WORLDBEAT: RADIO CHINA TO VACATE 7.1 TO 7.2 MHz HAM SPECTRUM

Good news for hams who use 40 meters. The IARU Region 1 website reports that Radio China is to stop broadcasting on five frequencies in the 7.1 to 7.2MHz range.

Chinese authorities say that they have made frequency adjustments to their broadcasting schedule as it affects all transmissions that were previously operating in the new, exclusive, worldwide 7.1 to 7.2MHz amateur radio band. Transmissions from the Radio China transmitters should be out of that spectrum shortly. (ARRL, WIA, others)

PUBLIC SERVICE: HAMS NEEDED TO ASSIST IN BOSTON JIMMY FUND WALK

Steve Schwarm, W3EVE, says that he is in need of several hams to help with the Jimmy Fund Walk on Sunday September 13th This is a one day event dedicated to conquering all forms of cancer held on the Boston Marathon course and taking up most of the day.

Steve says that as with the Marathon, radio amateurs on 2 meter FM will be on posted on transport busses and at each first aid and water stations. If you live in the Boston area or will be there on the day of the event please contact Steve by e-mail to w3eve (at) earthlink (dot) net. More on the event is on line at www.jimmyfundwalk.org (W3EVE)

**

WRONG HEADED ENFORCEMENT: FCC CITES CALIFORNIA RESIDENT OVER DEFECTIVE INDOOR TV ANTENNA

You may find this one hard to believe, but the FCC has issued a Citation to California resident Irma Frausto for using a defective amplified indoor television antenna in the residence in the city of Compton. One that she could not possibly know was playing havoc with a nearby cellular telephone site. Bruce Tennant, K6PZW, has more:

--

On August 13th agents from the Los Angeles FCC Office investigated a complaint that something was interfering with the operation of a Verizon cellular site. The agents T-hunted the interference to the Frausto's residence. Further investigation revealed that the source of the interfering signal was a Philips model MANT 300 amplified television antenna installed on top of a television set in the Fausto home. .

Apparently the antennas internal amplifier had broken into self-oscillation on 840.356 MHz. The spur was strong enough to interfere with the input to a Verizon local cell site. And you would think that's where it would all end. Disconnect the faulty antenna and problem solved. But that's not where this story ends.

On August 20th the FCC issued a Citation to Irma Fausto naming her as the responsible party. Why the FCC chose to issue a Citation rather than the usual warning letter or any letter at all is not explained.

And if we may editorialize a moment, even stranger is the demand by the FCC that Ms. Fausto respond to the Citation and specify what actions have been taken to correct the violation when its likely all she would do is return it to where she bought it or throw the thing in the nearest garbage can. At least that's what we would do.

We also wonder if the FCC intends to follow up with Philips to make certain that no other MANT 300 amplified indoor antenna is causing similar problems elsewhere in the United States. One would think that Phillips is the responsible party in this scenario since it was the one who manufactured the defective amplified antenna in the first place.

Lastly we must ask why so much emphasis is being put on reprimanding a citizen for something beyond her control when there are far more important matters to contend. This definitely includes cleaning up the now almost two decade old rats nest of jamming, filthy language, illegal broadcasting and other violations found on 14.275 MHz in the 20 meter band. Violations that the FCC seems to be turning a blind eye to no matter how much the ham radio community complains.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting and editorializing from Los Angeles.

--

Oh yes. Those of you interested in a good lesson in government bureaucratese can read the entire text of the Citation issued to Irma Fausto at http://www.fcc.gov/eb/FieldNotices/2003/DOC-292933A1.html (CGC, FCC, ARNewsline(tm))

**

ENFORCEMENT: FCC ORDERS TV STATION TO STOP ITS ANALOG AUDIO TRANSMISSIONS

The FCC has ordered a television broadcaster to cease its audio transmissions on 87.9 MHz in the FM broadcast band. Since last June 12th conversion of all TV from analog to digital the digital signal of Freedom Broadcasting's WRGB-TV, channel 6 in Schenectady , New York has been broadcasting its audio over analog 87.9 FM, but it was apparently without permission.

Now the FCC orders that the station cease doing so immediately and WRGB has complied. Station manager Robert Furlong admitted in a posting to the stations website that it did not have FCC authorization to transmit any analog signal at this time. Furlong said that the station is reviewing for getting the station back on FM. (FCC)

**

WORLDBEAT: ZL 3 CM CONTACT IS NOT A WORLD RECORD

A follow up to last weeks story on the hams down-under setting what some thought might be a new worlds record for the 3 centimeter band. According to Gene Zimmermann, W3ZZ, who writes the World Above 50 MHz column for QST magazine, that 3 cm microwave contact may have been a record for New Zealand but it's definitely not a terrestrial world record.

According to Gene, as recently as August 25th K2LNS operating at WA2FGK worked W9ZIH over a distance of 1086 km. Many longer contacts across the Mediterranean have also been made. Currently, the world terrestrial record is I stroke DJ3KM to 4X slash DJ4AM. That one was over a path of 2079 km. (W3ZZ)

**

HAM HELP REQUIRED: AMSAT NEEDS TWO PUBLICATION VOLUNTEERS

AMSAT-North America currently has two positions that need a volunteer to jump in and assist with its publishing efforts.

First, the AMSAT Journal needs a person who can provide translation from German to English. This is because AMSAT-DL has published several significant updates about the Phase 3 E satellite project which need to be shared with English speaking operators. The same volunteer would also be tasked with translation from English to German to enable sharing of articles both ways.

Also, the weekly AMSAT News Service ANS Bulletins has an opening for an editor to take on news gathering and reporting work. This is a rotating position shared with 3 existing editors so your duty would occur approximately once every 4 weeks.

If you can help please contact AMSAT Vice President of User Services, Gould Smith, by e-mail to wa4sxm@amsat.org (AMSAT-NA)

**

HAM HAPPENINGS: VW MOBILE DXPEDITION NEEDS OPERATORS

A three month mobile DX expedition in a restored 1971 VW van is looking for operators. The course will begin in Mexico in November and wind up in Tierra del Fuego off the southernmost tip of the South American mainland. Those interested must be in good health, expect an arduous high drama journey and be ready for weather variations ranging from the searing heat of the Amazon jungle to the bitter cold of windswept Cape Horn. For more information, contact K0GMO by e-mail to gorvonj4@frontiernet.net . (K0GMO)

**

HAM HAPPENINGS: FREE DXPEDITION TRIP FOR A YOUNG HAM

The operators of the 6Y1V contest station in Hopewell, Jamaica, are offering a young radio amateur the chance to join their team for the 2009 CQWW SSB or CW contest. Applicants must be age 21 or younger. The operator selected will receive an all expense paid trip to join the teams operations in one of the two contest operations. The 6Y1V group calls this project a gift to a young ham whom has a passion for ham radio, DX'ing and contesting. It says that it's the groups way of giving something back to this great hobby that has given so much to them. More information is on line at www.6y1v.com/youth.htm (6Y1V)

**

THE SOCIAL SCENE: DIGICON 09 IN IRELAND SEPTEMBER 19

Turning to the ham radio social scene, word that the Northern Ireland Digital Communications Conference known as Digicon 09 takes place on Saturday September 19th . The venue is the Technology Education Center in Tyrone, Ireland. The Digicon 09 features lectures on D-STAR, Satellite Communication, Digital ATV, Echolink and more. Further details are on line at www.wtarc.co.uk (MI0MSO)

**

ON THE AIR: CELEBRATING THE 19TH ORKNEY INTERNATIONAL SCIENCE FESTIVAL

The Orkney Wireless Museum Amateur Radio Station in the United Kingdom will be in operation from its premises at Kiln Corner, Kirkwall through Wednesday 9 September. This, during the 19th Orkney International Science Festival. Probable operating periods will be weekdays and Sunday afternoons between 2.30 and 4.30pm and Saturday morning between

10 am and 12.30pm. Operation of this special events station will be primarily on High Frequency SSB. The Science Festival attracts participants from as far away as Australia, Slovenia, Ghana, Russia, Denmark, Spain, as well as from across the UK. Topics range from studies of the ice of the Antarctic to the Cross River gorillas of Nigeria and the Cameroon. (Southgate)

**

THE SOCIAL SCENE: DAYTON 2009 VIDEOS FROM ARVN

And back in the United States, producer Gary Pearce, KN4AQ, spent his days at the 2009 Dayton Hamvention with camera in hand. Now after three months of editing in his North Carolina studio, Gary and his Amateur Radio Video News organization has released what he called the 2009 Dayton Collection. This years set includes the FCC forum where you get to know the new ham radio rules enforcer Laura Smith. Also included are the ARRL, TAPR and Software Defined Radio sessions along with a tour of all the goodies to be seen at this years Hamvention. For details take your web browser to www dot arvideonews dot com. (ARVN)

EMERGING TECHNOLOGY: MEASURING THE NEAR INFRA-RED SPECTRUM

In what may prove to be a major development for scientists in fields ranging from forensics to quantum communications, researchers at the National Institute of Standards and Technology have developed a new, highly sensitive, low-cost technique for measuring light in the near-infrared range. According to Science Daily, the technique can measure the spectrum of the specific wavelengths of near infrared light used widely in telecommunications as well as the very weak infrared light at single-photon levels given off by biomaterials and nanomaterials. More on this interesting scientific concept can be found on-line at http://www.sciencedaily.com/releases/2009/08/090826152723.htm (Science Daily)

**

HAM RADIO IN SPACE: FO-29 IN RECOVERY MODE

In ham radio space related news, JE9PEL reports that the Fuji Oscar 29 ground control stations have been working on recovering this satellite. This, after an outage reported by users during the week of August 24th.

As of August 28 the control station has succeeded in transmitting commands to the satellite and received good response. But to be on the safe side FO-29 is available only when it is over Japan so that the control station can command the satellite, retrieve telemetry data, and analyze the results.

The receiver aboard FO-29 is used for both command and transponder operations. If it were open for general world-wide use there might be far too many stations attempting to uplink to the bird that would interfere with ground controllers efforts to command the satellite.

Fuji Oscar 29 controllers say that they will advise when the satellite becomes available for general amateur radio use. Check the AMSAT website for the latest information on the satellites availability. (ANS)

**

HAM RADIO IN SPACE: GOOD NEWS FOR ARISSAT-1

Some good news regarding the ARISSat-1 project. The ARISS International Team has been informed that there is still space available for shipment of the ARISSat-1 electronics on the projected cargo flight to the International Space Station in January of 2010.

As reported last week, ARISSat-1 is the new name for SuitSat-2. This, the result of the spacesuit that was to house SuitSat-2 being cast away from the International Space Station several weeks ago.

And speaking of SuitSat-2, word is that the spacewalk to launch it is still set for April 2010. Only now it will likely be the ARISSat-1 deployment instead. (ANS)

**

WORLDBEAT: 6 TO 10 METER CROSSBAND REPEATER PROPOSED IN THE UK

A new 6 meter to 10 meter crossband repeater may soon come on the air from the United Kingdom. G3ZXX reports on a meeting with the nations Emerging Technology Coordination Committee which is responsible for vetting all repeater proposals within the UK and with telecommunications regulator Ofcom. He says that no special authority in the form of a Notice of Variation has been granted for the machine. However, subject to some minor changes to the application its hoped that it will be approved. Further information and updates on this project re at the URL found at http://twxrg.web.googlepages.com/home (G3ZXX)

**

WORLDBEAT: NEW VK 137 kHz BEACON ON THE AIR ON WEEKENDS

The Wireless Institute of Australia reports that a new low frequency beacon is on-the-air from the township of Wonga Park. Operated by Drew Diamond, VK3XU, the system consists of a 50 watt transmitter into a long-wire antenna operating CW on 137.4 kHz. Its on the air Saturday and Sunday afternoons and evenings local time. QSN reports go to Drew by e-mail to vk3xu (at) wia (dot) org (dot). Please provide the date, time, signal strength and grid locator of the received signal at your station. (WIA)

(WIA)

**

ON THE AIR: 4U1VIC TO OPERATE WORKED ALL EUROPE DX CONTEST

On the air, word that the Vienna International Center Amateur Radio Club station 4U1VIC will be on the air during the Worked All Europe DX Contest on September 12th and 13th. This will be a SSB only operation with the station is located in the secured United Nation campus in Vienna, Austria. Due to access restrictions, the operators will not be able to be on the air continuously for the full 48 hours, however they will be on the air as much as possible. QSL this operation via the bureau. A new video about the 4U1VIC is available at www.vimeo.com/6301009 (OPDX)

**

ON THE AIR: CELEBRATING RAILWAYS IN IRELAND

And from Erin's Isle comes word that GB2STI will be on the air again this year from the Railway Preservation of Ireland base in Whitehead County Antrim. This in celebration of the Open House Day of the Society. Operation will be on Sunday the 13th of September and as an added attraction there will be train rides on site. All QSL's go via the bureau to GI0KPF. (IRTS)

**

ON THE AIR: ZS10WCS TO CELEBRATE 2010 WORLD SOCCER GAMES

As of September 1st, members of South Africa's Boland Amateur Radio Club have taken to the air as Zed-S-10-W-C-S. This, to commemorate the upcoming 2010 World Cup Soccer games. The special event station will be on the air over weekends South Africa time as propagation conditions allow. Full details of preferred frequencies and QSL information are available on www.sarl.org.za. (Boland Amateur Radio Club)

**

DX

In DX, word that Bob Paton VK0BP, is currently working at the Antarctica Davis Base Station and will be there until November 1st. Check for him on 14.010 to 14.350 MHz from about 1500 to 1800 UTC on

SSB and PSK31. The Shortwave Central blog says Bob may also activate other field huts in the area where he will sign-on as VK0BP slash P. QSL as directed on the air.

EA5BZ and possibly other operators from the U-R-E Contest Group will be active as C37URE from Andorra during the CQWW DX RTTY Contest. This, on September 26th and 27th. QSL via EA5BZ.

F4EUG, will be active from Guadeloupe portable FG through September 10th. His activity will be on all bands and modes. QSL via his home callsign, direct or by the Bureau.

HB9VELO will be on the air throughout September to mark the U-C-I Road World Championships taking place in Mendrisio, Switzerland. Operation is SSB, CW, PSK and RTTY on all bands. The QSL manager is HB9OCR.

A station signing C31LJ slash M heard on August 27th is reported to be a pirate operation. VE3EXY the real C3ILJ is currently in Canada.

HS8JYX, is planning to be in the CQWW DX SSB from Thailand. That radio sport event takes place October 24th to the -25th and he will enter as a Single-Op/Single-Band 20 meter entry. QSL via HS8JYX.

OY4TN reports that OY2J is once again active from Faroe Island after being QRT for many years. He has retired from his job and has finally found time to set up his radio station again. Reports indicate that he has been on 20 meters using CW and SSB.

Higher in frequency, N8OFS will be using the special callsign N8O on 6 meters from Geneva State Park in Grid EN91MV. This for the Ohio State Parks On The Air and ARRL September VHF Contests on September 12th between 1800 and 2400 UTC. Operation will be FM only on 52.525, 52.54, 52.49, 52.51 and 52.55 MHz. QSL direct only to N8OFS

Lastly, where there is no 4 Meter band in I-T-U Region 2, its widely used in Region 1 especially in Europe. Now word that G0HIK, with 2 friends, will be traveling to the Scottish island of Isla for a week from September 12th. He hopes to be active for the 4 Meter contest on Sunday 13th. He will probably be using 150 Watts into a 7 element beam on 70 MHz, and possibly 2 meters with a 13 element beam and 200 watts. If you have a 70 MHz receiver, you might want to listen out for this 4 meter signal from across the Atlantic pond.

Above from various DX news sources

**

THAT FINAL ITEM: AN ADDED FEATURE FOR A POPULAR HT

And finally the story of a strange feature of a popular HT. One that could save your life. Well, maybe. Marilyn Syme, VK3DMS, of the WIA News has this rather dramatized comedy report:

--

A practical example of the Emergency feature on the FT-60R. After testing the Emergency feature of the FT-60R, a web poster has scenario created the following for your enjoyment.

>From the manual: "Use this feature if you are out on a walk and want a quick way of alerting a family member to a dangerous situation. The alarm sound may discourage an attacker and allow you to escape."

(It might work this way)

Mr. Ham : "It's a lovely day for a walk."

Attacker: "I'm going to attack you."

Mr. Ham : "Wait right there, Mr. Attacker while I unlock my FT-60R keypad, place it in VFO mode, set the volume to maximum, and hold down the Emergency key shortcut for 2 seconds."

FT-60R: *blink, blink, blink* *beep, beep, beep*

Mr. Ham: "Ah ha! Now Mr. Attacker, my blinking LCD display and DTMF keypad will blind you while the beeping sound will disorient you."

Attacker: "Oh no!"

Mr. Ham: "In 60 seconds, my FT-60R will also send SOS de CALLSIGN via CW on the UHF calling frequency and any amateur radio operator within 1/2 mile who both knows the frequency of and is monitoring the UHF calling frequency will hear *beep, beep* on his radio too. He will then return home and either retrieve his UHF direction finding go-kit or improvise some from the ARRL Handbook. When he returns and locates my position, he will then call the authorities and inform them of my situation."

Attacker: "I am discouraged."

Im Marilyn, VK3DMS.

--

Well, that might work down-under but here in the USA the radio would likely be up for sale on the Internet long before you could report the theft to the local police. (WIA News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. ==> GET SET FOR THE 2009 SIMULATED EMERGENCY TEST

It's time to get ready for the 2009 ARRL Simulated Emergency Test! ARRL
Field Organization leaders are planning an event that will actively
involve members of the Amateur Radio Emergency Service (ARES), the Radio
Amateur Civil Emergency Service (RACES), the ARRL National Traffic
System (NTS) and many other related groups that prepare for and respond
to emergencies. Public service agencies and organizations in your
community, ARRL Section or state will also be invited to participate.
```

You, too, are invited to be a part of this ARRL sponsored nationwide exercise on October 3-4, 2009, or whenever it is held in your area.

Although October 3-4 is the focal point weekend, ARRL Sections, ARES teams and nets may conduct their exercises anytime -- and especially during September through December. If you don't know who to contact, please touch base with your ARRL Section Manager and/or Section Emergency Coordinator or Section Traffic Manager for assistance. See page 16 of QST for Section Manager contact information or check the ARRL Web site <http://www.arrl.org/sections/>. From there, you'll find links to ARRL section pages with appropriate contact information. There can be a role for you no matter what your level of experience. After all, it is a training opportunity to try out something new under simulated emergency conditions, learn or practice useful skills in traffic handling and net operation, and observe emergency communications protocols and management.

ARRL Field Organization officials in your area and Section are planning the simulated emergency scenarios that will be used during the SET event. These scenarios are designed to help you gain valuable operating experience, or to practice what you have learned previously or to put your Amateur Radio Emergency Communications Course training into action. In any emergency -- real or simulated -- a number of public service or public safety agencies and organizations are often also involved in the response.

ARRL Section Leaders and local or district-level leaders are encouraged to work closely with these served agencies, and the SET is a great chance to demonstrate the capabilities of Amateur Radio in the community and beyond. For more information on whom the ARRL maintains a National Memoranda of Understanding with, check this page <http://www.arrl.org/FandES/field/mou/>. Guidelines and specific SET reporting forms for ARRL Section and Field Leaders will be posted online <http://www.arrl.org/FandES/field/forms>. Please report your SET activities to your Section Leaders and to HQ.

==> ARES AWAITS ACTIVATION FOR WILDFIRES, TROPICAL STORMS

Even as the Station fire threatens Los Angeles' communications infrastructure atop Mt Wilson and Tropical Storm Erika and Hurricane Jimena die down in the tropics, amateurs -- including ARES groups -- await being called to help.

Mt Wilson houses many antennas for television and FM radio stations in the Los Angeles area, as well as antennas for pagers, cell phones and even Amateur Radio repeater systems. But even as the fire encroaches on these vital communications links, the infrastructure is still in place and working.

"We have established coordination with Dennis Smith, KA6GSE, the Section Emergency Coordinator for the Los Angeles Section," said ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD. "As of the

afternoon of Thursday, September 3, no ARES missions have been established. Of course, if the communications infrastructure at Mt Wilson is compromised in any way, area ARES groups will be ready to do whatever is needed to provide communications support."

As of Friday afternoon, what was once Tropical Storm Erika has weakened and is now classified as a remnant over the northeastern Caribbean.

Angel Santana-Diaz, WP3GW, an ARRL Public Information Officer in Puerto Rico, told the League that "at 8:10 AM [on Thursday, September 3], I made contact with Lionel Ellis, J69KZ, on St Lucia on 7.169 MHz, where he does a regular net. I asked him how were they doing, and he told me that there are thunderstorms and copious rain, but nothing serious at the moment. I am monitoring the band if something comes up. Over here in Puerto Rico, the government is finishing the preparations to be ready when Erika passes by, which is expected to be tomorrow, possibly as a tropical depression." The NWS said that unsettled weather will spread across the US and British Virgin Islands and Puerto Rico later Thursday, continuing through Friday. It would then spread across Dominican Republic and Haiti this weekend and possibly into the Bahamas early next week.

Pacific Hurricane Jimena -- a Category 1 storm -- made landfall near the southern Baja near San Buenaventura, Mexico on Wednesday, September 2. According to the NWS, there have been reports of damage to poorly constructed buildings, major beach erosion over the southern Baja and flash flooding; resorts along the southern tip of Baja California did not experience any major damage. Jimena has now weakened over land and has been downgraded to a tropical storm over the central Baja, with maximum sustained winds decreasing to 45 miles.

The NWS said that Jimena will likely become a depression late Thursday and then drift slowly west and southwest as a remnant low on Friday. Heavy rains and flooding will be the primary impacts over the central Baja and adjacent portions of the western coast of Mexico. Some gusts to tropical storm strength are still possible.

Dura said that WX4NHC, the Amateur Radio station at the National Hurricane Center <http://www.wx4nhc.org/>, has also been monitoring Erika and Jimena, but did not activate for the storms. "There really aren't that many amateurs in the affected areas, which makes reporting conditions quite difficult," he said. "We here at ARRL HQ are keeping a close eye on everything."

==> THE DOCTOR IS IN THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Jim Walker, KN6TC, of Wiggins, Mississippi, asks: My repeater's PC controller to radio interface provider requires a "COS (Carrier Operated Signal) from the radio." The manufacturer states that this "greatly

reduces drop out and falsing" that are sometimes experienced while using VOX receive/transmit control. It seems to be an alternate for VOX, but I have failed to receive an answer as to what it is in terms I can understand. Neither radio nor interface providers have responded to my e-mail questions.

The Doctor answers: Early repeaters were generally switched to transmit by a carrier operated relay, or COR. The relay would be actuated if the repeater receiver detected a carrier on frequency, as indicated by the opening of the squelch. This was a much more reliable switching mechanism than if the repeater transmit switching responded to detected speech (VOX), since VOX could toggle back and forth due to gaps in speech.

In the early days of repeaters, the equipment was constructed around vacuum tube and relay technology. Current technology is based on solid state devices -- including transistor switching -- that is more reliable than the earlier electromechanical relays. Thus, the more general term "COS" for Carrier Operated Signal, Carrier Operated Squelch or Carrier Operated Switch is often used instead of COR. For more information, check out this Web site <http://www.repeater-builder.com/tech-info/repeaterterm.html>.

Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment covers the month of August.

The Central and Roanoke Divisions will hold elections for Vice Director on November 20. The incumbent Directors in the Central, Hudson, New England, Northwestern and Roanoke Divisions faced no opposition and were declared elected <http://www.arrl.org/news/stories/2009/08/26/11041/?nc=1>.

The ARRL responded to the FCC's Notice of Proposed Rule Making, ET Docket 09-36, concerning implanted medical devices that operate on 413-457 MHz (70 cm) <http://www.arrl.org/news/stories/2009/08/12/11020/?nc=1>.

ARRL President Joel Harrison, W5ZN, wrote a letter to the National Safety Council, highlighting issues regarding the use of Amateur Radio emergency communications devices in vehicles <http://www.arrl.org/news/stories/2009/08/09/11012/?nc=1>.

The DXCC Desk approved the 2000 DXpedition to Yemen, 7O1YGF, for DXCC credit. Amateurs may also apply for DXCC credit for 7O1YGF via Logbook of The World <http://www.arrl.org/news/stories/2009/08/12/11022/?nc=1>.

ARRL Technical Relations Manager Brennan Price, N4QX, attended meetings of United States Working Party 5A (the Land Mobile Service excluding IMT, plus the Amateur and Amateur-Satellite Services). He also worked on a proposal for the 500 kHz agenda item for WRC-12. ARRL Technical Relations Specialist Jon Siverling, WB3ERA, attended meetings of US Study Group 1 (regulatory). He is preparing for ITU-R meetings, scheduled for later this month in Geneva.

Come October 1, there will be new Section Managers in the Los Angeles, South Texas and Georgia Sections <http://www.arrl.org/news/stories/2009/08/19/11027/?nc=1>.

The ARRL announced that it will honor the 140th birthday of co-founder Hiram Percy Maxim by authorizing eligible amateurs to add /140 to their call signs from September 2-9 <http://www.arrl.org/news/stories/2009/08/17/11025/?nc=1>.

All 2009 Field Day logs that have been received have been posted to the Claimed Scores page on the ARRL Web site <http://www.arrl.org/?artid=9141>.

The ARRL Executive Committee reviewed grant applications for the ARRL's Education & Technology Program (ETP), awarding nearly $9000 to eight schools <http://www.arrl.org/news/stories/2009/08/11/11016/?nc=1>.

The ARRL Teachers Institute on Wireless Technology wrapped up. During 2009, 93 teachers from 29 states attended eight sessions -- including two at ARRL HQ -- and a new TI-2 for previous TI graduates <http://www.arrl.org/news/stories/2009/08/05/11003/?nc=1>.

W1AW, the Hiram Percy Maxim Memorial Station, changed over to new digital modes <http://www.arrl.org/?artid=9068>.

The October issue of QST, the September/October issues of QEX and NCJ and the 2010 edition of The ARRL Handbook were released to the printer.

The winner of the QST Cover Plaque Award for August is Allen Baker, KG4JJH, for his article "A 10 Meter Moxon Beam" <http://www.arrl.org/?artid=9153>.

Staff Travel: Chief Executive Officer David Sumner, K1ZZ, and Membership and Volunteer Programs Manager Dave Patton, NN1N, traveled to Tokyo for Ham-Fair and GAREC 2009; Field and Regulatory Correspondent Chuck Skolaut, K0BOG, represented the ARRL at the Kansas State Convention; Media and Public Relations Manager Allen Pitts, W1AGP, traveled to the New Mexico State Convention; Lab Manager Ed Hare, W1RFI, attended the West Virginia State Convention and the IEEE Electromagnetics Compatibility Society EMC Symposium in Texas; Field and Public Service Team Supervisor Steve Ewald, WV1X, represented the League at the National Conference on Community Preparedness, and Emergency Preparedness and Response Manager Dennis Dura, K2DCD, went to the Texas State Convention.

==> GET READY FOR THE UPCOMING ARRL SEPTEMBER VHF QSO PARTY

September is here, and according to ARRL Contest Branch Manager Sean Kutzko, KX9X, that means the VHF bands are getting a workout. "If you've never experienced the fun of VHF+ operating, the ARRL September VHF QSO Party <http://www.arrl.org/contests/rules/2009/sepvhf.html> is a great place to start.

"With many HF radios now offering at least 6 meter SSB/CW capabilities -- and some offering 2 meters and 70 cm as well -- any amateur with a Technician class license or higher can experience long-haul communication on the VHF bands," he said. "Getting on the VHF bands is simple," he said. "If you have a radio that can transmit on both CW and SSB, that's great, but you can operate on either mode." When operating on VHF, Kutzko explained that your Maidenhead grid square is the common geographical information exchanged <http://www.arrl.org/locate/gridinfo.html>.

While there will be some contest activity on FM simplex (especially near large population centers), Kutzko said that most long-distance VHF+ QSOs are conducted on CW or SSB; that means horizontally polarized antennas: "A dipole for 6 meters is only 9 feet, 4 inches long and is an easy construction project," he explained. "Try to get the dipole in the air as high as possible, but even 15 feet off the ground will make some QSOs. If you have an antenna tuner that can handle 6 meters, you can try loading up another of your antennas on 6 meters with reasonable success. For 2 meters and 70 cm, a horizontal loop will work nicely for SSB and CW contacts." You can find plans for simple VHF antennas at the Technical Information Service area of the ARRL Web site <http://www.arrl.org/tis/info/other-v.html>, in the Antennas chapter of The ARRL Handbook <http://www.arrl.org/catalog/?item=NO-HB2009>, or in the VHF and UHF Antenna Systems chapter of The ARRL Antenna Book <http://www.arrl.org/catalog/?item=9876>.

Kutzko advises that there are a few things to know about operating on 6 meters: In the US and Canada, there is a "calling frequency" on 50.125 MHz USB. Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If conditions are exceptional, Kutzko said you may hear signals above 50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The frequencies between 50.100 and 50.125 MHz are a 'DX Window,' meaning it is reserved for QSOs between W/VE and DX stations. Please do not make stateside-to-stateside QSOs in the DX Window."

Because VHF+ antennas are relatively small, Kutzko said that many amateurs operate from portable locations, such as a hilltop or a campground. Others operate the contest as a "rover," operating from their car or truck while transmitting from multiple grid squares over the contest period. "Tracking rovers during the contest is almost as much fun as the contest itself," he said.

The ARRL September VHF QSO Party runs from 1800 UTC Saturday, September 12 through 0300 UTC Monday, September 14. Be sure to use those extra bands on your transceiver and get in on the fun you've been missing on 6 meters and up! <http://www.arrl.org/contests/rules/2009/sepvhf.html>

==> HAPPY BIRTHDAY, HIRAM!

On Tuesday, September 2, the League celebrated the 140th anniversary of the birth of ARRL's co-founder and first President, Hiram Percy Maxim, W1AW. Maxim -- born in 1869 -- decided a national organization for Amateur Radio was in order after he needed a "relay" station in Agawam, Massachusetts to pass a message he was sending from Hartford to Springfield, Massachusetts. In honor of The Old Man's (TOM) birthday, the ARRL is holding a week-long Special Event, where eligible amateurs may add /140 to their call signs. A complete list of who may add /140 can be found on page 20 of the September 2009 issue of QST. Hams who work at least 25 /140 stations can earn an attractive certificate; this certificate can be endorsed in increments of 25 QSOs, up to 100 <http://www.arrl.org/news/stories/2009/08/17/11025/?nc=1>.

Maxim was no stranger to technology. He entered the Massachusetts Institute of Technology (Class of 1886) and graduated at the tender age of 16. Through the activities of his son Hiram Hamilton Maxim, TOM became interested in Amateur Radio. In 1908, he filed for a patent for a firearms silencer <http://www.google.com/patents/about?id=dWJ-AAAAEBAJ>; the patent was granted the following year. Maxim used this technology to make silencers for guns, motor exhausts, safety valves and air releases. In all, Maxim received 59 patents, most of them in the field of mechanical engineering.

In 1928, Maxim, along with other dignitaries of the day -- including Thomas Edison -- attended a party at the home of George Eastman, the founder of Kodak. TOM was an avid film buff and was even involved in the early days of motion pictures. Check out this video (available on YouTube) of a dapper Maxim at Eastman's party <http://www.youtube.com/watch?v=osqjdVZDxCg>.

"I hope everyone enjoys our Special Event honoring Hiram Percy Maxim," said ARRL Chief Executive Officer David Sumner, K1ZZ. "I know if TOM was alive today, he would be on the air, having a ball!" Maxim, together with Clarence Tuska, founded the ARRL in 1914. Maxim served as President of the ARRL from its inception until his death from complications stemming from a throat infection in 1936. -- Thanks to Howie Lash, AE0KU, for bringing the YouTube clip to our attention

==> SEPTEMBER IS NATIONAL PREPAREDNESS MONTH

Once again this year, ARRL is a coalition member of the National Preparedness Month. This event is an annual nationwide effort held each September to encourage Americans to take simple steps to prepare for emergencies in their homes, businesses and schools.

National Preparedness Month 2009 is sponsored by the US Department of Homeland Security. The goal is to increase public awareness about the importance of preparing for emergencies and to encourage individuals to take action. Throughout September and the months surrounding it, Homeland Security will work together with a wide variety of organizations, including local, state and federal government agencies

and the private sector, to highlight the importance of family and business emergency preparedness, as well as to promote individual involvement through events and activities across the nation.

More information can be found online <http://www.ready.gov>. You are encouraged to consider this year's ARRL Simulated Emergency Test and all preparations as well as post exercise evaluations as a demonstration of your readiness and Amateur Radio's readiness. Be an active participant in SET, and join others nationwide in National Preparedness Month.

==>SOLAR UPDATE

Tad "The Sun burns crimson bright" Cook, K7RA, this week reports: This week we saw another one of those fast-disappearing sunspots -- it lasted just two days, over the last day of August and the first of September. No other sunspots were observed during the month of August. Sunspot numbers for August 27-September 2 were 0, 0, 0, 0, 12, 12 and 0 with a mean of 3.4. The 10.7 cm flux was 67.7, 67.9, 68, 67.2, 68.3, 69.1 and 68.2 with a mean of 68.1. The estimated planetary A indices were 5, 2, 2, 19, 5, 4 and 3 with a mean of 5.7. The estimated mid-latitude A indices were 4, 2, 2, 12, 5, 2 and 2 with a mean of 4.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Shel Silverstein's "Where the Sidewalk Ends" <http://www.poemhunter.com/poem/where-the-sidewalk-ends>.

==>IN BRIEF:

* This Week on the Radio: This week, the All Asia Contest and Colorado QSO Party are on September 5-6. The Tennessee QSO Party is September 6-7. Next week is the ARRL September VHF QSO Party September 12-14. There are two NCCC Sprints this week -- one on September 11 and another on September 12. The WAE DX Contest (SSB), the Arkansas QSO Party and the FISTS Get Your Feet Wet Weekend are September 12-13. The North American Sprint (CW) and the SKCC Weekend Sprint are both September 13. The NAQCC Straight Key/Bug Sprint is September 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, September 20, 2009, for these online course sessions beginning on Friday, October 2, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference;

Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Labor Day: ARRL Headquarters will be closed in observance of Labor Day on Monday, September 7. There will be no W1AW bulletin or code practice transmissions that day. ARRL Headquarters will reopen Tuesday, September 8 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* Allen Baker, KG4JJH, Wins August QST Cover Plaque Award: The winner of the QST Cover Plaque Award for August is Allen Baker, KG4JJH, for his article "A 10 Meter Moxon Beam." Congratulations, Allen! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the September issue by Wednesday, September 30.

* W1AW Earns TPA #306: On September 1 -- after W1AW Station Manager Joe Carcia, NJ1Q, made contact #149 (CW) and #150 (RTTY) with Mark Stull, AB8WV, of Parkersburg, West Virginia -- W1AW received Triple Play Award #306 on September 2. "Finally, after eight months, W1AW can now boast the ARRL's newest award, the TPA," Carcia said. "What makes this so very cool is that we received this award on Hiram Percy Maxim's 140th birthday." The Triple Play Award is earned by hams who, after January 1, 2009, achieve Worked All States on three modes -- CW, SSB and Digital -- and upload their logs via Logbook of The World. Find out more about the Triple Play Award on the ARRL Web site <http://www.arrl.org/news/stories/2008/12/05/10490/>.

* Manufacturer of Texas Bug Catcher Antenna to Cease Operations: After October 31, 2009, GLA Systems -- the manufacturer of the Texas Bug Catcher antennas <http://www.texasbugcatcher.com/> -- will cease taking orders for new antennas; according to their Web site, all orders received before that date will be filled. "Effective November 1, only orders for items that are in stock at the time will be accepted. Effective December 31, 2009, the toll free line, 1-800-588-2841, will be

discontinued." No reason was given for the closure, but on GLA's Web site, owner Henry Allen, K5BUG, said. "It has been a fun 30 years, but it is time to hang it up. I would like to thank everyone who has made this experience possible."

* Den Connors, KD2S (SK): The first president of Tucson Amateur Packet Radio (TAPR) <http://www.tapr.org/> Den Connors, KD2S, of Pepperell, Massachusetts, passed away September 3 from lymphoma. He was 58. Connors, an ARRL Life Member, conducted the first amateur packet radio contact with all-American hardware and software, using the Tucson Amateur Packet Radio Terminal Node Controller (TNC) with Lyle Johnson, WA7GXD (now KK7P), at 9:12 PM (PST) on June 25, 1982. The tests were conducted at 146.55 MHz, with both stations sending plain-text ASCII messages. "Den was instrumental in the early PACSAT work, and as TAPR's first president, led that organization from a local club he co-founded into an international organization," Johnson said in an e-mail. "His was a very cheerful, positive, can-do influence."

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during

registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I've found a schematic and found that the power transformer puked and die
d,
so I've ordered a new transformer from Yaesu.

The old transformer, model KT-28-A is an "open frame" style with numbered

solder terminals.

Current production transformers, model KT-28-E-3, don't have numbered sol
der
terminals, but rather colored wire outputs (unfortunately not labeled).

Does someone have a recent G-1000DXA (or G-800DXA) who wouldn't mind lift
ing
the cover to tell me the wire colors of:

1) 110V primary
2) 28V secondary to the PS board (bottom board)
3) 16V secondary to the CNTL-Unit board (top board)

Thanks!

Amateur Radio Newsline(tm) Report 1674 - September 11 2009

Ladies and gentlemen, with some thank you's to those who support these newscasts, here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ

--

In the month of September 2008 we heard from regular contributors Joseph Bartzi, Jr., KC8DKF of Columbus, OH; William Walters, WA2IBM in San Jose and Stephen Perluss and the South Orange Amateur Radio Association in Mission Viejo.

Via PayPal there was Christopher Johns- Brewton, AL; Harry Bump and the Lebanon Valley Society of Radio Amateurs in Richland, PA and Barry Youmans and the Silvercreek Amateur Radio Association, W8WKY in Rittman, OH.

In October we heard from Pete Ostopchuk, N9SFX and Elkhart Electronics in Osceola, IN. Via PayPal there were Martin Falk and Erik Fuller, KE5VBO

Remember that these newscasts don't just spontaneously erupt- they require us going and getting the news. That requires internet and telephone service, and for some reason, the service providers have very little humor when it comes to pay for their services. To help us keep these humorless people otherwise happy, please write to us at the Support Fund address given at the end of this newscast, or use our easy PayPal link on our website, arnewsline.org.

Thank you. I'm Andy Jarema, N6TCQ, at our (cough, cough) smoky studios here in Los Angeles.

--

Andy will be back with us in the near future with more than-you's to those who have contributed to the support fund. (ARNewsline(tm) Support Fund)

**

Now, Amateur Radio Newsline report number 1674 with a release date of Friday, September 11, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio assists as Hurricane Jimena hits Baja California, a ham looses his home in a California brushfire, South Africa's latest ham radio satellite is made ready for launch and the

International Amateur Radio Union says its time to fight back against spectrum intruders using the Morse code. Find out the details on Amateur Radio Newsline(tm) report number 1674 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO VS HURRICANE JIMENA

Ham radio has become the main communication artery into and out of portions of Baja California, Mexico. This, after hurricane Jimena, packing winds approaching 145 miles hour came ashore after first hitting the tip of Baja California Mexico. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Until now most hams have never heard of the Sonrisa Net. It meets daily at 13:30 UTC on 3.968 MHz. But in recent days this net has become the communications backbone out of parts of Baja California that were ravaged by Hurricane Jimena.

According to David Stein, KE6ENI, its Geary Ritchie, WB6PKH, of Danville, California, who operates on the Sonrisa Net that has been one of the principal information conduits into and out of the storm ravaged area. Among the reports that he received on Thursday September 3rd and Friday September 4th from hams in Baja was that the main long bridge north of Santa Rosalia was down. So were several of the new bridges between Mulegï¿½ and Santa Rosalia. Also that there was major damage to the old Marina at Santa Rosalia, but no loss of boats and more important there was no loss of life.

Reports out of San Carlos are that several boats sank in the San Carlos harbor. Meantime, as of 8 am Pacific on Friday the 4th there was no electrical power in the towns of Loreto, Mulegï¿½, San Carlos and Santa Rosalia. Some cellular telephones were working though the towers were thought to be on emergency power.

As of the 5th there is still no power water or phone in the Mulegï¿½ area and Bahia de Conception. WB6KPH also confirmed that health and welfare traffic is being passed using amateur radio phone and digital modes to those back in the U.S. as well as those up and down the Baja Peninsula.

Obviously this information will be several days old by the time many of you hear it. As with any emergency, the situation in the wake of Hurricane Jimena is constantly changing and we will have more on these rescue radio efforts in an upcoming Amateur Radio Newsline report.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Marcia Meyer, KI6INK, aboard her boat in Puerto Escondido near Loreto, was net control. She's been helping to connect people and allowed those on boats and on land in the U.S. and others stretched across Baja to connect with each other in an orderly manner. (Information supplied by David Stein, KE6ENI, via QRZ.com)

**

RESCUE RADIO: N6MGM HOME LOST IN SOCAL ARSON BRUSH FIRE

The Station Fire still burning in the hills North of Los Angeles has claimed the home of Mark Moore, N6MGM. Terry Graves, K7FE, an editor at QRZ dot com says that he spoke to Moore on Monday, September 7th. Moore who works at Ham Radio Outlet in Burbank California wanted everyone know that he, his wife Amanda, K6MDY, their children and pets are all in good health. They are however emotionally devastated because the fire consumed the home, it's belongings and memories collected over many years. Moore's amateur radio station was also lost.

As of Monday, September 7th the Station Fire had destroyed 157,220 acres or about 230 square miles. The fire, already the largest on record in Los Angeles County, is reported to be about 50% contained but is not expected to be fully under control until September 15th at the earliest. In addition to the two firefighters who died on August 30th when their truck fell into a canyon during the blaze, nine firefighters have been injured in the Station fire which investigators say was caused by arson.

Through Terry Graves and QRZ dot com, Moore express his appreciation to all for your support and best wishes. He says that the family is fine and have a roof over its heads. He asks everyone to please focus their thoughts and prayers to those that lost everything and have no home to go to anymore. He adds to also please remember the two firefighters we lost in the firestorm. (K7FE via QRZ.com)

**

HAM RADIO IN SPACE: SUMBANDILASAT A GO FOR SEPTEMBER 15 LAUNCH

South Africa's SumbandilaSat is still on track for September 15th launch. In an interview with South Africa AMSAT, Johan Erasmus, a systems engineer with SunSpace at the launch site in Kazakhstan, said that the satellite had traveled well and that all systems performed according to specification during the testing phase.

--

Erasmus: "We've been busy since our arrival here, first to check out the satellite to make sure that it survived the journey fine. We have been checking the test results with the ones that we made before shipping and they all checked out fine. So we didn't have a y unexpected problems with the satellite itself."

--

Erasmus says that the beacon, parrot repeater and transponder were tested from a distance. He said that RF levels measured on the money and that everyone was delighted with the results. You can hear the entire interview with Johan Erasmus on line at www.amsatsa.org.za (Amateur Radio Mirror International)

**

HAM RADIO IN SPACE: SWISSCUBE MAY LAUNCH SEPT 21

And the HB9AFO SwissCube web page reports that ham radio satellite may be launched on September 21st. SwissCube is one of four amateur radio satellites that will be launched from India on an PSL-VC14 booster. More information on this hamsat is on line at tinyurl.com/SwissCube. (Southgate)

**

RADIO LAW: IARU SAYS TO MORSE INTRUDERS ON 40 METERS AWAY

A new way to fight intruders on 40 meters. Jam them with C-W.

The International Amateur Radio Union is encouraging amateurs to get on the air and use CW on the 7 MHz band. This is because Portuguese fishermen are abusing 7,000.4kHz using USB every morning between 07.00 and 09.00 UTC and later.

The fishermen are located off the North of Portugal. The IARU says that hams should use this frequency for CW traffic as much as they can. (Southgate, others)

HONORING A FRIEND: WALTER CRONKITE KB2GSD REMEMBERED

A memorial service for former CBS newsman Walter Cronkite, KB2GSD, took place on Wednesday morning, September 9th in Avery Fisher Hall at Lincoln Center in New York City. Among those present to speak at the service were President Barack Obama and former president Bill Clinton. The program also included presentations by Cronkite's son Chip and astronaut Buzz Aldrin.

Walter Cronkite anchored the CBS Evening News for 19 years from 1962 to 1981. During that time he became known as the most trusted man in America. His legacy in the world of amateur radio are the two videos he hosted for the American Radio Relay League. These are "Amateur

Radio Today" and "The ARRL Goes to Washington."

As previously reported, Walter Cronkite, KB2GSD, died on July 17th from complications to cerebrovascular disease. He was 92 years old. (ARNerwsline(tm) from published reports)

**

ENFORCEMENT: HAM EXPLAINS WHY HES QUITTING EMMCOMM AT WORK

A ham who posted on an Internet website that he had assisted in an emergency communications drill at work has come forward to explain why he was contacted about his action by FCC ham radio rules enforcer Laura Smith. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

In his posting to the QRZ.com website, Jeffery Casselberry, W0WLS, says that last July he volunteered to take part in a state sanctioned communication drill which was backed by the Missouri Hospital Association. At that time he was the only licensed amateur in the facility so he said yes.

According to Casselberry this drill took place during business hours while he was on the clock. He explained that he had built the amateur station for the hospital and with it the facility better than most in communicating locally and to the state capital.

W0WLS went on to say that he was so thrilled about the drills success that what he made what he terms as the mistake of posting his excitement on the QRZ website. Someone who read it decided to cut and paste his comments and send them off to the FCC. As a result, W0WLS says that he received an informal email from the FCC's Smith acknowledging his violation and requesting a response.

Casselberry says that he responded to Smith and explained in detail the events of his alleged violation. Smith responded with the following e-mail which reads as follows and we quote:

"Jeff: Again, just so we are clear, Section 97.113 (a)(3) of the Commission's rules specifically states that "no amateur station shall transmit: communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer." This means that if you are an employee of the hospital you may not operate the amateur equipment on their behalf even after hours or while you are on a break. The operation of the amateur equipment must be conducted strictly by volunteers." -- end quote.

Casselberry went on to say that he does not want to become a poster child for some emergency communications cause on QRZ.com. He says that he is done with this type of ham radio activity and it will never happen again. He's even gone so far as to tell his employer that he is done with this type of radio activity and will take no further part in it's emergency communications program.

W0WLS ends by noting that he is a hobbyist and don't need this sort of turmoil in my life. As such, he will make no further comments on this issue.

I'm Norm Seeley, KI7UP, in Scottsdale, Arizona, reporting for the Amateur Radio Newsline.

--

**

RESCUE RADIO: ARRL SECTION EMERGENCY TEST OCTOBER 3 - 4

The 2009 ARRL Simulated Emergency Test or SET takes place the weekend of October 3rd and 4th. SET is an ARRL Field Organization event that will actively involve members of the Amateur Radio Emergency Service, the Radio Amateur Civil Emergency Service, the ARRL National Traffic System and many other ham radio related emergency response groups. More information on this years Simulated Emergency Test is on line at the ARRL website. You can find the exact U-R-L is http://www.arrl.org/FandES/field/setguide.html (ARRL)

**

RESCUE RADIO: COWICHAN VALLY HAMS INVITED TO NEW EMERGENCY CORPS

Canada dot com reports that the Cowichan Valley Regional District in the province of British Columbia is looking to an alliance with local ham radio operators to assist in times of disaster. To that end, the District and the Cowichan Valley Amateur Radio Society are hosting two information sessions this month for amateur radio operators willing to be part of a regional emergency communications team.

Meetings were scheduled at for the mornings of September 5th and the 19th. Sybille Sanderson is the Districts public safety education coordinator. She says the idea is to find out what we do in emergency communications, the kind of training we're going to be offering and the kinds of places where radio amateurs could help.

The Cowichan Valley is a region around the Cowichan River and Cowichan Lake on Vancouver Island, in British Columbia. Those hams volunteering could help at the neighborhood level and emergency centers in the event of a flood, earthquake, a massive power outage or other catastrophic event. (Canada.com)

**

RADIO EDUCATION: RAC ASKED TO HELP FIND ELMER HAMS

The Army Cadet League of Ontario, Canada is considering the establishment of a Royal Canadian Army Cadet radio network based on amateur radio technology. Dubbed 'ACORN', for 'Army Cadet Ontario Radio Network', the aim is to support optional training and

certification of Army Cadets as licensed Amateur Radio operators throughout Ontario.

Radio Amateurs of Canada has been asked to facilitate this project by identifying hams who live in the various pilot areas and who have the interest, time and qualifications to mentor and provide instruction to young would-be hams. Amateurs will also be needed to assist in setting up and managing amateur radio stations.

Any interested Canadian radio amateur residing in a pilot areas is asked to contact Rod Hardman, VE3RHF by e-mail to rod (dot) hardman (at) gmail (dot) com. Military experience would be helpful but is not a requirement. (RAC)

**

RADIO VANDALISM: ELF CLAIMS TO HAVE TOPPELED TWO RADIO TOWERS IN WASHINGTON

A radical group calling itself the Earth Liberation Front is claiming responsibility for toppling two radio station towers in Snohomish County Washington early Friday morning, September 4th. The towers, owned by station KRKO were felled using a stolen machine called an excavator. A sign left at the scene said the Earth Liberation Front was responsible.

The two towers have been at the center of controversy for several years. There are four towers currently at the location and there have been plans to build two more. Opponents of the expansion claim that radio waves can harm people and wildlife. More recently, nearby residents said that signals interfering with home phone and intercom lines have increased since KRKO recently boosted its broadcasting power.

The station is still broadcasting on a backup transmitter and antenna. It says that it is going to offer a reward for information leading to the arrest and conviction of those responsible for this criminal act. (Published reports)

**

COMMUNICATIONS TECHNOLOGY: OALKAND CENTER FLIGHT COMS GO OUT

Air traffic controllers at a major control center in California say they were forced to use their personal cellular telephones to guide dozens of planes. This, when the aircraft direction communications system briefly went out on Wednesday, August 26th.

The communications outage affected about half of the roughly 80 controllers on duty at the Oakland Center in Fremont. Gone for several minutes were both radio and telephone communications. According to news reports the controllers said they used personal mobile phones to contact other controllers to relay flight plan information to airplanes in Western region.

The Federal Aviation Administration issued a statement saying that at no time were any planes were in danger during the 15-minute outage and that only five flights were delayed. (Published Reports)

**

THE SOCIAL SCENE: PEORIA SUPEFEST 2009 ON SEPTEMBER 19 - 20

The Peoria Superfest 2009 will be held September 19th and 20th at the Exposition Gardens in Peoria Illinois. The event will feature a giant outdoor flea market with both new and used equipment, numerous technical forums, and over $2000 in prizes. More information is on line at www.peoriasuperfest.com (Superfest)

CHANGING OF THE GUARD: FAMED BROADCASTER JIM WHITE KM0X - SK

Famed St. Louis radio personality Jim White, KM0X, has passed away. According to his close friend Bob Heil, K9EID, Jim died on Wednesday, September 2nd of complications to surgery. White had entered the hospital for an operation to remove his spleen. Bob says the surgery went well but several hours later a blood clot took Jim life.

Jim White was a true legend on the St. Louis airwaves. He spent most of his broadcast career at KMOX radio where for 30 years he was known as "The Big Bumper." According to Bob Heil, White gained the name 'Big Bumper' because he always started off his late night show by saying -- quote -- I am one of the things that go bump in the night. And while at KMOX the Arbitron service placed White's nightly show in the number one spot holding down a 33 point rating for all of those years.

In addition to his own show, for 25 years, White, who previously held the call W0NJB, and Bob Heil did the 'High Tech Heil' segments on Wednesday nights. And for many years Jim wanted the KMOX call on his license plates. But there was one person who stood in the way. That is until the Vanity Call Sign program came along:

--

K9EID: "The General Manager at KMOX never wanted anyone to have the KMOX license plate so each year he would purchase the plate and put it in a file. It never showed up on anyone's car. When Jim got the KM0X vanity call he ordered the plate. Missouri does not put the slash through the zero so Jim had KMOX on his license. He always thought that

was a very cool thing and we always got a laugh out of it."

--

Bob tells Newsline that he misses Jim very much. He says that the two of them were not only close friends but that they had this great on-air rapport and started in 1977. They spent their airtime having a lot of fun telling the listeners in the 44 states covered by the stations 50,0000 watt signal about these new hi-tech "toys' coming to the consumer marketplace. And at least once a month they would do a segments about amateur radio that resulted in a lot of call ins from hams. Bob says that after Jim retired and moved to Orange, Alabama, the two of them kept in contact on 75 meter SSB.

Jim White, KM0X, is survived by his wife Pat, two daughters and four grandchildren. A memorial service was to be held Tuesday, September 8th at St. Andrew by the Sea Church in Gulf Shores, Alabama. Contributions in Jim Whites name may be made to the Salvation Army in St. Louis or the Christian Service Center in Gulf Shores. (K9EID, STLToday, ARNewsline(tm))

**

THE CHANGING OF THE GUARD: DATA PIONEER DEN CONNORD, K2DS - SK

And the changing of the guard in ham radio continues. This with word that amateur radio data and space communications pioneer Dennis T. "Den" Connors, KD2S, passed away September 3rd at St. Joseph's Hospital in Nashua, New Hampshire, from Hodgkins Lymphoma.

Den Conners was the first president of Tuscon Amateur Packet Radio overseeing the groups transition from a local Tucson , Arizona-based club into the multi-national TAPR organization. He was a major force in the adoption of AX.25 as the amateur packet protocol standard.

Under his leadership, TAPR introduced the TNC-1 and then later the TNC-2 Terminal Node Controllers. These units are credited with introducing the world of digital text communications to the ham radio masses. Connors also worked with AMSAT North America's Tom Clark, K3IO, to define an amateur store-and-forward packet radio satellites. This concept eventually morphed into the AO16, IO-26, AO-27, and MO-30 Microsats..

A resident of Pepperell, Massachusetts, Den Conners was only age 58. In lieu of flowers, memorial contributions may be made in his memory to the Community Church Memorial Fund, Post Office Box 320, Pepperell, Massachusetts, 01463 or to the National Marrow Donor Program at www.marrow.org. (ANS)

**

HAM RADIO IN SPACE: FO-29 RECOVERY EFFORT CONTINUES

Recovery efforts continue for the Fuji Oscar FO-29 ham radio satellite that as reported last week went silent during the week of August 24th. The latest word from JE9PEL is that some partial CW telemetry from FO-29 was received by PY5LF during the orbit 64384. Then the birds transmitter shut down once again.

JE9PEL says that at the present time the ground control team continues to analyze telemetry. Also, there are continuing attempts to restore the satellite to full operation each time it flies over Japan. The latest information on the satellite recovery effort can be found on line at www.ne.jp/asahi/hamradio/je9pel/fo29rest.htm (ANS)

**

HAM RADIO IN SPACE: D-STAR THROUGH A HAM RADIO SATELLITE

Ever wonder what a D-Star digital voice might sound like from space? Here's the answer. Take a listen.

--

D-Star audio from space. Hear it in the MP3 version of this weeks newscast download them at www.arnewsline.org

--

That's Luc Leblanc, VE2DWE, who has made available a recording of his calling CQ using the D-Star digital audio through the AO-27.ham radio satellite. And while a bit mechanical sounding its among the cleanest and clearest audio ever relayed through a ham radio satellite.

Luc says that the uplink was on 436.797 MHz and the downlink audio was recorded on 145.850 MHz. The entire recording can be heard at Luc's website. Its in cyberspace at www.qsl.net/ve2dwe/ (VE2DWE)

**

WORLDBEAT: UK CEASES MANUFACTURE OF TV RECEIVERS

The production of television receivers marked made in the United Kingdom has ended. On Thursday, August 22nd the final TV rolled off the production line at Toshiba's factory in Plymouth, England marking an end to the manufacture of a technology the UK invented.

In the UK, John Logie Baird is the man credited with inventing the television receiver. He demonstrated his first television set to the world in 1926. His Baird Corporation was the world's only recognized TV manufacturer at the end of the 1920s, with their Televisor Model B being the first mass-produced, commercially available set.

In the United States the work of Baird is little known. Here the credit as to who was the inventor of modern television really comes down to two different people in two different places both working on the same problem at about the same time. They were Vladimir Zworykin, a Russian-born American inventor working for Westinghouse and later RCA, and Philo Farnsworth, a privately backed inventor from the state

of Utah. The duplicity of work eventually lead to a court battle that with patent priority status ruled in favor of Farnsworth in 1939. You can read the full BBC news report at http://news.bbc.co.uk/1/hi/technology/8222421.stm (Telegraph OnLine, BBC, Wikipedia.com, others)

**

DX

In DX, LZ2HM, will be active slash 5B from Cyprus through September 15th. Activity will be on the HF bands plus 6 and 2 meters He will be active as C4I on SSB in the Worked All Europe DX Contest on September 12th and 13th. QSL to LZ2HM using information on QRZ.com.

7Q7HB is again in Malawi for a period of up to 3 months. He is going to be active primarily on the Digital modes and CW. QSL direct only to G0IAS with sufficient funds for return cards. This station does not use the bureau nor any electronic QSL service. Just old fashioned paper cards only.

DL2MDU, will be active portable CT8 from the Island of Sao Miguel from September 13th to the 26th. His operation will be on all HF bands. QSL via his home callsign, by the bureau or electronically using Logbook to the World.

Members of Spain's Ondarroa Group will be active as EE2W from Ondarroa City during the CQWW DX CW Contest from November 28th to the 29th as a Multi-Multi entry. QSL via EB2BXL.

W6IZT, will be on the air stroke F S from St. Martin Island through September 13th. Activity is 40 through 6 meters using CW, SSB and RTTY. QSL via N7XG, direct, by the bureau or Logbook to the World.

Lastly, WB5ZAM, will once again be active from St. Lucia as J68WI between September 28th and October 11th. Modes SSB and CW. QSL via WB5ZAM.

(Above information from various DX news services)

**

THAT FINAL ITEM: SEARCHING FOR WALDO THE ROBOT

Lastly, scientists along Florida's Gulf Coast are trying to find a radio controlled underwater robot that has mysteriously vanished. Jerry Gaul, KE7GGV, has the details:

--

Scientists at Mote Marine Laboratory have lost a bright yellow submersible research robot somewhere in the Gulf waters off Venice, Fliorida.

The sea going remote control research device from laboratory in Sarasota has been missing since Monday, August 31st. Scientists aren't sure what happened to the robot, which is nicknamed Waldo. Some think that it might have sprung a leak or suffered a malfunction and sunk. Others believe that It also could be on the surface, but its communication beacon or E-L-T has malfunctioned and that it cannot signal its location.

Waldo the sea going robot is 6-foot-long, weighs about 115 pounds, has short wings midway up its cylindrical body and cost about $100,000. He was also equipped with a detector to find a toxic algae bloom called red tide that was valued at another $30,000.

If you live along the Gulf Coast and see something bright yellow strange floating off shore, that could be the missing robot.

For the Amateur Radio Newsline, Im Jerry Gaule, KE7GGV.

--

If you find Waldo or even hear his radio signal you may be eligible for Mote Marine Laboratory's no-questions-asked reward. Their contact number is area code 941-388-4441. Ask for extension 271. (ScienceOnLine, Daily-Tech, others)

==> NATIONAL SAFETY COUNCIL RESPONDS TO ARRL: NO EVIDENCE OF
"SIGNIFICANT CRASH RISKS" WHILE OPERATING MOBILE

ARRL President Joel Harrison, W5ZN, wrote a letter to National Safety
Council (NSC) President Janet Froetscher in July expressing the ARRL's
concerns that Amateur Radio not become an unintended victim of the
growing public debate over what to do about distracted drivers
<http://www.arrl.org/news/files/NSC_Letter7-30-09.pdf>. Froetscher has
now replied, saying the NSC does not support bans or prohibitions on the
```

use of Amateur Radios while driving
<http://www.arrl.org/news/files/NSC_Response_to_ARRL.pdf>.

Noting that there is significant evidence that talking on cell phones while driving poses crash risk four times that of other drivers, Froetscher observed that the NSC position calling for bans on the use of cell phones while driving is grounded in science. "We are not aware of evidence that using Amateur Radios while driving has significant crash risks," Froetscher wrote in her August 24 letter. "We also have no evidence that using two-way radios while driving poses significant crash risks. Until such time as compelling, peer-reviewed scientific research is presented that denotes significant risks associated with the use of Amateur Radios, two-way radios or other communication devices, the NSC does not support legislative bans or prohibition on their use."

Froetscher said that while "the specific risk of radio use while driving is unmeasured and likely does not approach that of cell phones, there indeed is some elevated risk to the drivers, their passengers and the public associated with 650,000 Amateur Radio operators who may not, at one time or another, not concentrate fully on their driving." She points out that the "best safety practice is to have one's full attention on their driving, their hands on the wheel and their eyes on the road. Drivers who engage in any activity that impairs any of these constitutes an increased risk."

ARRL Chief Executive Officer David Sumner, K1ZZ, said the ARRL "appreciates NSC President and CEO Janet Froetscher's clear statement that the NSC does not support legislative bans or prohibitions on the use of Amateur Radio while driving. We applaud the NSC for taking positions that are grounded in science. At the same time, all radio amateurs should heed her call to concentrate fully on driving while behind the wheel. It is possible to operate a motor vehicle safely while using Amateur Radio, but if it becomes a distraction we owe it those with whom we share the road, as well as to our passengers, to put safety first."

On January 30, 2009, the ARRL Executive Committee adopted the ARRL's Policy Statement on Mobile Amateur Radio Operation
<http://www.arrl.org/govrelations/MobileAmateurRadioPolicyStatement.pdf> that states "Amateur Radio mobile operation is ubiquitous, and Amateur Radio emergency and public service communications, and other organized Amateur Radio communications activities and networks necessitate operation of equipment while some licensees are driving motor vehicles. Two-way radio use is dissimilar from full-duplex cellular telephone communications because the operator spends little time actually transmitting; the time spent listening is more similar to, and arguably less distracting than, listening to a broadcast radio, CD or MP3 player. There are no distinctions to be made between or among Amateur Radio, public safety land mobile radio, private land mobile radio or citizen's radio in terms of driver distraction. All are distinguishable from mobile cellular telephone communications in this respect. Nevertheless,

ARRL encourages licensees to conduct Amateur communications from motor vehicles in a manner that does not detract from the safe and attentive operation of a motor vehicle at all times."

In his letter, Harrison explained to Froetscher that Amateur Radio operators provide essential emergency communications when regular communications channels are disrupted by disaster: "Through formal agreements with federal agencies, such as the National Weather Service, FEMA and private relief organizations, the Amateur Radio volunteers protect lives using their own equipment without compensation. The ability of hams to communicate and help protect the lives of those in danger would be strictly hindered if the federal, state and local governments to not ensure that Amateur Radio operators can continue the use of their mobile radios while on the road."

Froetscher replied that she "appreciate[s] your focus of Amateur Radio for emergency communications during disasters. I encourage ARRL to adopt best practices for the safe operation of vehicles that confines use of Amateur Radios while driving only to disaster emergencies."

The Policy Statement asserts that the ARRL "is aware of no evidence that [mobile] operation contributes to driver inattention. Quite the contrary: Radio amateurs are public service-minded individuals who utilize their radio-equipped motor vehicles to assist others, and they are focused on driving in the execution of that function."

==> AMATEURS WITH GENERAL CLASS LICENSES TO BE GRANTED RECIPROCAL LICENSES IN SOME CEPT COUNTRIES

On Thursday, September 10, the Federal Communications Commission released a new Public Notice implementing changes in CEPT reciprocal operating arrangements for US citizens who hold an FCC-issued General, Advanced or Amateur Extra class Amateur Radio licenses. DA-09-2031 continues to allows US licensees "to utilize temporarily an amateur station in a European Conference of Postal and Telecommunications Administrations (CEPT) <http://www.cept.org/> country that has implemented certain recommendations with respect to the United States," subject to the regulations in that country and implements recent changes in the agreement <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-2031A1.pdf>.

When an Amateur Radio operator with US citizenship holds an Advanced or Amateur Extra Class license, they continue to be granted CEPT Radio Amateur License privileges in accordance with CEPT Recommendation T/R 61-01 (as amended) <http://www.erodocdb.dk/docs/doc98/Official/word/TR6101%20off%20140905.doc>. There is no change in reciprocity for those license classes. What has changed is that US citizens holding a General class license -- who had lost all CEPT reciprocal privileges in 2008 -- are now granted CEPT Novice Radio Amateur License privileges in accordance with ECC Recommendation (05)06 (as amended) <http://www.erodocdb.dk/docs/doc98/Official/word/Rec0506.doc>.

The Public Notice states that while operating an amateur station in a CEPT country, the person "must have in his or her possession a copy of this Public Notice, proof of US citizenship and evidence of an FCC-issued Amateur Radio license. These documents must be shown to proper authorities upon request." The Public Notice can be found online on the FCC's Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-2031A1.pdf>.

According to ARRL Regulatory Information Manager Dan Henderson, N1ND, the changes in the CEPT reciprocity are a two-part result of changes made by the European Communications Office (ECO) in February 2008 when they re-examined US license class equivalency in comparison to their HAREC examination contest. "The result of that review was full CEPT reciprocity was only granted to US Amateur Extra and Advanced class licensees, leaving US General and Technician class operators without CEPT reciprocal privileges." The new public notice now reflects that change.

"In order to re-obtain at least some limited privileges under CEPT for those class licensees, the ARRL approached the FCC, asking that the US consider accepting ECC Recommendation (05)06" Henderson continued. "Reciprocal agreements between the US and other countries are actually diplomatic arrangements and come about through the agreements through the State Department. In the winter of 2008/2009, the FCC followed up on our request and contacted the US Department of State, asking that the US formally approach the ECO with a request to become party to the recommendation."

At its meeting in late spring 2009, Henderson said that the ECO working group that handles issues pertaining to Amateur Radio accepted the US request to join ECC Recommendation (05)06, and authorized US General Class licensees to operate under that recommendation's terms. It did not extend those privileges to US Technician class licensees.

Henderson stated that it is important to note two things about ECC Recommendation (05)06: "First, not all European countries have implemented this recommendation. Therefore, a US General class operator does not have reciprocal privileges in many countries, including popular US travel destinations like Italy, the UK or France. Second, as with any reciprocal operation, the band frequencies and privileges are those allowed by your host country -- they are not the frequencies and privileges extended by your FCC license. Travelers need to make sure they are familiar with the authorized privileges for the CEPT Novice Radio Amateur License if operating using ECC Recommendation (05)06 or T/R 61-01."

CEPT countries participating in CEPT Recommendation T/R 61-01 as of September 10, 2009 include Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark (including Greenland and the Faroe Islands), Estonia, Finland, France (including Corsica, Guadeloupe, French Guyana, Martinique, St Bartholomew, St Pierre and Miquelon, St Martin, Reunion and its Dependencies, Mayotte, French Antarctica, French Polynesia and Clipperton, New Caledonia, and Wallis

and Futuna), Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Monaco, Netherlands, Netherlands Antilles, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, Ukraine and the United Kingdom(including Northern Ireland, the Channel Islands and the Isle of Man).

CEPT countries participating in ECC Recommendation (05)06 as of September 10, 2009 are Belgium, Denmark (including Greenland and the Faroe Islands), Germany, Iceland, Liechtenstein, Luxembourg, Netherlands, Portugal, Romania, Slovak Republic, Slovenia and Switzerland.

==> IARU, ARRL OFFICIALS ATTEND HAM FAIR, GAREC IN JAPAN

ARRL Chief Executive Officer David Sumner, K1ZZ, attended Ham Fair in Tokyo, Japan <http://www.jarl.or.jp/English/4_Library/A-4-6_ham-fair/ham-fair.htm>, August 22-23, at the invitation of Japan Amateur Radio League (JARL) President Shozo Hara, JA1AN. "Ham Fair is by far the largest event of its kind in Asia. It is generally regarded as one of the 'Big Three' internationally, the other two being Dayton and Friedrichshafen," Sumner said. "It is held at Big Sight, a very large and modern exhibition facility on Tokyo Bay. Most attendees come by train or subway." According to JARL, more than 31,000 people attended the two-day event, with more than 20,000 coming on the first day. The 2009 Global Amateur Radio Emergency Conference (GAREC) was held in conjunction with the event <http://www.rientola.fi/oh3ag/garec/index.html>.

Sumner said that IARU President Tim Ellam, VE6SH, was able to schedule a business trip to Tokyo to coincide with Ham Fair: "On Friday, IARU Region 3 Secretary Jay Oka, JA1TRC, and JARL staff member Mitsu Sugawara, JN1LQH, gave Tim and me a tour of JARL Headquarters. ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, was already spending his second day at JARL HQ helping to check DXCC applications." Patton said he received more than 260 DXCC applications while in Japan.

On Saturday morning, Sumner and Ellam were invited to participate in the ribbon-cutting ceremony that marks the beginning of Ham Fair. "This is a rather elaborately staged event," Sumner recounted, "complete with white gloves, golden scissors and a bank of photographers. After the ceremony, and as thousands of patient attendees streamed into the exhibit area, Mr Hara led a group of us to the convention Special Event station 8J1A, where he made the first QSO. Then he led us to visit some of the commercial exhibitors." Sumner said he had the opportunity to operate 8J1A on 20 meter CW for 25 minutes. "The station had multiple operating positions and was quite busy throughout the show," he said.

On Sunday afternoon, Patton shared his ideas for rejuvenating college and university club stations as a means of reaching prospective hams. "This was well received by the Japanese hams in attendance," Sumner said. Yoshi Tsutsumi, JE2EHP/K1HP, provided interpretation.

On Monday, Sumner, Ellam and Patton attended GAREC-09; there were about 30 participants from 14 countries at the conference. Former IARU Region 3 Secretary Keigo Komuro, JA1KAB, chaired the meeting. "I was asked to chair the Statement Committee that was responsible for producing the GAREC Statement <http://www.rientola.fi/oh3ag/garec/index.html>, summarizing the conclusions and recommendations of the conference," Sumner said. "IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS, who did not attend this year's GAREC, had provided a draft as a starting point, and it was only necessary to tailor it to what we actually talked about."

Ellam returned to Canada on Monday afternoon, and Sumner and Patton stayed through the end of the conference on Tuesday afternoon and flew home on Wednesday. Sumner thanked his Japanese hosts, saying, "We are grateful for the extraordinary hospitality extended to us by JARL."

==> DELEGATES DESCEND ON TOKYO FOR GAREC 09

Officials from the IARU and all three IARU regions, national IARU Member-Societies and specialized Amateur Radio emergency communications groups from around the globe gathered in Tokyo on August 24-25 for the Fifth Global Amateur Radio Emergency Communications Conference (GAREC 2009) <http://www.rientola.fi/oh3ag/garec/index.html>. Hosted by the Japan Amateur Radio League, GAREC was held in conjunction with Ham Fair. More than 30 participants considered the statements from past GAREC conferences -- GAREC 05 (Tampere, Finland), GAREC 06 (Tampere, Finland), GAREC 07 (Huntsville, Alabama, USA) and GAREC 08 (Friedrichshafen, Germany) -- discussing the progress made on the implementation of the recommendations, and looking at recent experiences from exercises and actual emergency operations.

While GAREC is not a decision-making body, delegates made note of the relationships between the Amateur Service and organizations that are engaged in public protection and disaster relief, in particular the formal agreements and understandings that exist between the IARU and the United Nations, the International Telecommunication Union (ITU) <http://www.itu.int/>, and the International Federation of Red Cross and Red Crescent Societies (IFRC) <http://www.ifrc.org/>. They also looked at reports on recent emergency communications operations, specifically the earthquake disaster relief operations in Japan in 1995, China in 2008 and Italy in 2009, as well as the 2009 Australian bushfires. Delegates also took into account the reports on Global SETs, Center of Activity Frequencies, Automatic Link Establishment (ALE) <http://www.arrl.org/tis/info/ale.html> and emergency communications across international borders.

GAREC delegates requested that the ITU "continue to support the activities of IARU in facilitating the role of the Amateur Radio Service in emergency communications by fully implementing the provisions of Radio Regulations (RR) Article 25 <http://www.iaru.org/rel030703att2.html> as revised by the World Radiocommunication Conference (WRC-03, Geneva 2003) through the appropriate mechanisms of its Telecommunication Development Bureau and

to support national Administrations in such implementation." The part of Article 25 concerning Emergency Communications states: "Amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction" (RR 25.3), and "Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief" (RR 25.9A).

GAREC also wants the ITU to "continue to study the possibilities for the introduction of an International Amateur Radio License facilitating the work of Amateur Radio Service in international assistance and related training activities."

GAREC appealed to all of the IARU Member-Societies, as well as specialized emergency communications groups, to do the following:

* To establish close working relationships between the National IARU Member-Society and independent specialized Amateur Radio emergency communications groups in the respective countries, as well as to cooperate internationally.
* To request their national regulatory authorities implement the modifications to Article 25 of the Radio Regulations, particularly the regulations governing third-party traffic during emergencies and during training for emergency operations.
* To provide training in emergency communications to as many amateurs as possible in their respective countries, with particular emphasis on personal and logistical preparedness, psychological aspects of entering a disaster area, familiarity with the civil protection system in their country, communications techniques of particular value in emergencies and remembering that the skills developed in the amateur service can be of great benefit to disaster relief organizations in maintaining and operating their own telecommunications networks.
* Whenever emergency communications are being conducted on frequencies that propagate internationally, to use any available real-time communications channels, including but not limited to e-mail bulletins, Web sites, social networking and DX clusters to draw the attention of the largest possible number of Amateur Radio operators to ongoing emergency communications, in order to avoid interference with emergency traffic.
* To use their contacts with national regulatory authorities to encourage the accession to and implementation of the "Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Relief Operations" <http://www.itu.int/ITU-D/emergencytelecoms/doc/tampere/S-CONF-ICET-2001-PDF-M07.pdf>. To date, 37 countries have adopted Tampere <http://www.reliefweb.int/telecoms/tampere/signatories.html>.
* To support the work of the IARU on an international Emergency Communications Handbook and to provide copies of existing agreements with institutional partners in emergency response, as well as copies of

emergency communication guidelines, manuals and checklists developed for national or local use as inputs to this work.
* To work toward the implementation of Memoranda of Understanding established between the IARU and ITU, IFRC, and the United Nations by seeking cooperation with the respective national institutions and organizations in their country.
* To continuously improve their awareness of the mission, vision and values of served agencies.
* To represent themselves as a human and technical resource able and willing to investigate the communication requirements of served agencies, offer recommendations when asked, and facilitate emergency communications when required.

GAREC called on the IARU to encourage its national IARU Member-Societies to "actively support the mission of Amateur Radio as an emergency communications resource." In the official GAREC Statement, delegates also stated that they would like to see the IARU support the following: The implementation of Article 25, the ongoing work toward an International Amateur Radio License, and the work and publication of the IARU Emergency Communications Handbook.

With respect to governments and telecommunication administrations, the conference would like these bodies to encourage joint training activities and exercises of Amateur Radio emergency communications groups and institutional providers of emergency response. Delegates recommend that GAREC conferences should continue to be held in locations throughout the world, maintaining the character of GAREC as an informal meeting among representatives of IARU Member-Societies and of Amateur Radio emergency communications groups, "serving as a forum for the exchange of experience and as an advisory body for the work on emergency communications of the IARU."

==> LOOK FOR THE OCTOBER ISSUE OF QST IN YOUR MAILBOX

The October issue of QST -- our second annual Radiosport issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs, with a special focus on Amateur Radio contesting. From product reviews to experiments to public service, the upcoming issue of QST has something for just about everyone.

Kevin Kaufhold, W9GKA, takes a look at the highs and lows of the very high frequencies in his article "The Past, Present and Future of VHF Contesting." Scott Straw, KB4KBS/5, proves that everything is indeed bigger in Texas as he recounts his visit in "Multiop, Texas Style." And if you ever thought you needed to be a "big gun" to win wood in a contest, check out "How to Win the ARRL Sweepstakes with 11 QSOs" by John Kanode, N4MM.

In addition to the articles featuring contesting, ARRL Contributing Editor H. Ward Silver, N0AX, introduces QST readers to "The ARRL Handbook for Radio Communications, 2010 Edition." The 87th edition of this must-have book for radio amateurs has more than 1250 pages; of its

32 chapters, 16 have been completely revised or are altogether new, and another 12 have been updated. The 2010 Handbook features 70 percent new or updated material, including 50 percent new illustrations. The ARRL 2010 Handbook will be available for purchase from the ARRL Online Store beginning October 1.

ARRL Contest Branch Manager Sean Kutzko, KX9X, looks at VHF contesting, with a special focus on roving, in "This Month in Contesting." With so many amateurs living with deed restrictions, in apartments or dealing with other factors that prevent them from installing outdoor antennas, today's amateur needs to be a bit creative. If you can't operate from home, Kutzko suggests taking your station -- and your contest enjoyment -- on the road.

ARRL News Editor S. Khrystyne Keane, K1SFA, describes the events and decisions from the July ARRL Board of Directors meeting, and profiles the eight hams on whom the Board bestowed awards for 2008-2009.

If you're in the market for a new rig, be sure to check out October's Product Review: QST Assistant Editor Steve Sant Andrea, AG1YK, gives his take on FlexRadio Systems' FLEX-3000 software defined HF/50 MHz transceiver. In his review, Sant Andrea says "The FLEX-3000 is a compact software defined radio (SDR) in the mid-range price class. It can be used at home or paired with a notebook computer for operation on the go. Although it gives up some features compared to the FLEX-5000A, it doesn't give up much performance."

Of course, there are the usual columns that you expect in the October QST: "Hints & Kinks," "The Doctor Is IN," "How's DX," "Eclectic Technology," "World Above 50 MHz," "Hamspeak" and more. Look for your October issue to arrive soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please visit the ARRL Web page <http://www.arrl.org/join>.

==> GOVERNOR'S $250,000 GRANT TO AMATEUR RADIO GOES ONLINE AS OREGON HAMS INSTALL NEW WINLINK SYSTEM

This month, Oregon ARES members will complete the state-wide installation of Winlink <http://www.winlink.org/>, thanks to a $250,000 grant from Governor Ted Kulongoski. In 2007, the governor was impressed by the hams' ability to handle emergency communications when severe winter storms wreaked havoc on Oregon's North Coast and flooded the City of Vernonia, knocking out 911 services, Internet and phone service for an extended period of time <http://www.arrl.org/news/stories/2007/12/05/100/>. The Oregon Office of Emergency Management said that during the storms, the radio operators were "tireless in their efforts to keep the systems connected." When even state police had difficulty reaching some of their own troops, ham radio worked, setting up networks so emergency officials could communicate and relaying lists of supplies needed in stricken areas.

"I'm going to tell you who the heroes were from the very beginning of this...the ham radio operators," the governor said at the time. "These people just came in and actually provided a tremendous communication link to us." Because of the service rendered by Amateur Radio operators in providing communications support, the governor allocated funds for the installation of a Winlink system to integrate Amateur Radio with the Internet.

The equipment will be installed in the Emergency Operating Center in each of Oregon's 36 counties. Once the monies were distributed, ARES members researched and purchased the equipment that would be needed, formalized and signed contracts between the state, counties and ARES, and allocated space to install the antennas and equipment within each EOC. The project is scheduled to be completed in time for the 2009 ARRL Simulated Emergency Test (SET) scheduled for October 3-4 <http://www.arrl.org/FandES/field/setguide.html>.

"Using Winlink equipment and other amateur equipment already in place at the EOCs, ARES teams will have to quickly create a communications network, in some instances without depending on other infrastructure such as telephones or Internet," said ARRL Oregon Section Public Information Coordinator Steve Sanders, KE7JSS. "Many will not use commercial electric power. Despite these limitations, the ARES teams should not only be able to quickly pass local messages, but also communicate with other regions of the country. The ability to pass information in and out of disaster areas is crucial to the effectiveness of emergency responders."

When Oregon's State Office of Emergency Management was activated on December 3, 2007 <http://www.arrl.org/news/stories/2007/12/13/101/>, hams over the course of the next four days used Winlink to pass message traffic. "The Winlink system performed perfectly, and the ARES team at the OEM was able to pass approximately 200 messages into and out of the State of Oregon Emergency Operations Center," said Marion County ARES Emergency Coordinator Dean Davis, N7XG. "The only mode of communications for several Oregon counties for the first two days of the storm was the Winlink system."

==>SOLAR UPDATE

Tad "Who loves to peer up at the morning Sun" Cook, K7RA, this week reports: No new sunspot activity this week, and no emerging sunspots are visible on the far side of the Sun. Sunspot region 1025 (or 11025) that appeared over August 31 and September 1 faded more than a week ago, and the area in which it appeared has just rotated over the Sun's western limb. Sunspot numbers for September 3-9 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. The 10.7 cm flux was 68.6, 68.4, 68.5, 69.2, 68.8, 68.9 and 69.2 with a mean of 68.8. The estimated planetary A indices were 4, 5, 2, 3, 3, 2 and 1 with a mean of 2.9. The estimated mid-latitude A indices were 4, 4, 2, 2, 3, 2 and 3 with a mean of 2.9. The average daily solar flux for this week was up slightly, just 0.7 points, to 68.8. Geomagnetic A indices were quieter, with last week's average daily planetary and mid-latitude A index at 5.7 and 4.1

respectively, while both numbers dropped to 2.9 for this week. The planetary A index is projected to be 5 for today through September 14, then 8 for September 15-18. Solar flux is expected to be 69 for today and tomorrow, then 68 for September 13-19. Geophysical Institute Prague predicts quiet conditions for September 11-12, quiet to unsettled on September 13, 15 and 17 and unsettled on September 14 and 16. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Keats' "On Leigh Hunt's Poem, The Story of Rimini" <http://www.litscape.com/author/John_Keats/On_Leigh_Hunts_Poem_The_Story_of_Rimini.html>.

==>IN BRIEF:

* This Week on the Radio: This week, look for the ARRL September VHF QSO Party September 12-14. There are two NCCC Sprints this week -- one on September 11 and another on September 12. The WAE DX Contest (SSB), the Arkansas QSO Party and the FISTS Get Your Feet Wet Weekend are September 12-13. The North American Sprint (CW) and the SKCC Weekend Sprint are both September 13. The NAQCC Straight Key/Bug Sprint is September 17. Next week is the ARRL 10 GHz and Up Contest on September 19-20 (local time). Look for two more NCCC Sprints this week, one each on September 18 and 19. The Feld Hell Sprint is September 19. The South Carolina QSO Party, QRP Afield, the Washington State Salmon Run, the QCWA Fall QSO Party and the Scandinavian Activity Contest (CW) are all September 19-20. The North American Sprint (SSB) is September 20. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint (local time) are September 21. The SKCC Sprint is September 23. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, September 20, 2009, for these online course sessions beginning on Friday, October 2, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the

course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* HR 2160 Gains Three More Cosponsors: On September 10, three more Congressmen -- Geoff Davis (R-KY-4), Bill Posey (R-FL-15) and Michael Turner (R-OH-3) -- pledged their support for HR 2160 <http://www.thomas.gov/cgi-bin/query/z?c111:H.R.2160:>, The Amateur Radio Emergency Communications Enhancement Act of 2009, bringing the total number of cosponsors to 24, including original sponsor Sheila Jackson-Lee (D-TX-18) <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1>. HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), John Boozman (R-AR-3), Madeleine Bordallo (D-Guam), Bob Filner (D-CA-51), Bart Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey (D-NY-22), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Zoe Lofgren (D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Charlie Melancon (D-LA-3), Dennis Moore (D-KS-3), Bennie Thompson (D-MS-2), Peter Welch (D-VT), David Wu (D-OR-1) and Don Young (R-AK). Visit the ARRL Web site for information on how to encourage your Congressional representative to sponsor HR 2160 <http://www.arrl.org/news/stories/2009/05/12/10818>.

* Faster Than a Speeding Pigeon?: In South Africa, an information technology company proved that it was faster for them to transmit data with a carrier pigeon than to send it using Telkom, the country's leading Internet service provider. Internet speed and connectivity in Africa's largest economy are poor due to a shortage of bandwidth and its high cost. Local news agency SAPA reported that on September 9, an 11 month old pigeon named Winston took 68 minutes to fly the 50 miles from Unlimited IT's offices near Pietermaritzburg to the coastal city of Durban with a data card strapped to his leg. Including downloading, the transfer took two hours, six minutes and 57 seconds -- the time it took for only four percent of the data to be transferred using a Telkom line. SAPA said Unlimited IT performed the stunt after becoming frustrated with slow internet transmission times. The company has 11 call centers around the country and regularly sends data to its other branches. Internet speed is expected to improve once a new 11,000 mile underwater fiber optic cable linking southern and East Africa to other networks becomes operational before South Africa hosts the soccer World Cup next year.

* FCC Chairman Announces Enforcement Bureau Chief: Federal Communications Commission Chairman Julius Genachowski announced on September 9 that he has appointed P. Michele Ellison as Chief of the

Enforcement Bureau. Ellison will take the helm of the Enforcement Bureau starting on September 28, 2009. "Protecting and empowering consumers through effective and timely enforcement of the Commission's rules and policies is a top priority for the FCC," said Chairman Genachowski. "Michele is a talented leader with vast communications experience and sound legal judgment, and I look forward to working with her in her new capacity."

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

My old shack/office/development computer needs to be replaced.

My ham applications are WriteLog, Logger32, microHAM Router, and tQSL (LoTW).

Are there any showstoppers if I buy something with Vista Home Premium installed, and upgrade to Windows 7 in the future. (No, I'm not interested in retrograding to XP).

Check with the authors of your ham apps to see if they will upgrade
them to Win 7, and if so, when. It sometimes takes a while for apps
to be upgraded.

All of the reviews I've seen about Windows 7 say that it is much
better that Vista.

Excellent advice. Never select a comptuer or OS for an app(s)
before confirming that they will operate there. Win7 is available
in pre-release ("RC-1") for the purposes of testing hardware and
software compatibility. My local PC shoppe hands out (official!)
discs out for free. Of course they will stop running next spring,
after which you should have paid for the license if you want to use
it.

Note that the requirements for the newer operating systems (post-
XP) are significantly higher for application authors, so don't be
too surprised if some favorite apps take longer to make the upgrade.
Also not unusual for developers to just throw in the towel at the
sight of the newer requirements. One of the major reasons for the
continued brisk sales of XP ("retrograde" or not :-) MS shot
themselves in the foot with Vista and Win7 is supposed to be better
at running in "backwards compatible" mode.

> All of the reviews I've seen about Windows 7 say that it is much
> better that Vista.

Indeed, sales of XP continue as if Vista never happened.
Microsoft may be finally able to discontinue XP after users
are convinced that Win7 is decent (assuming, hoping...)

420. rec.radio.amateur.moderated Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2009-09-15 06:00:04 UTC

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

- A list of News Service Providers maintained by the Big-8 Management Board:

http://www.big-8.org/dokuwiki/doku.php?id=faqs:news_providers&s=news%20service%20providers

I have a brisk business downgrading to XP just because of its speed,
stability and backward compatibility.

422. Amateur Radio Newsline(tm) Report 1675 - September 18 2009

Amateur Radio Newsline(tm) Report 1675 - September 18 2009

Amateur Radio Newsline report number 1675 with a release date of Friday, September 18, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. A Dutch telecommunications regulator may have created a confrontation between ham radio in space and ham radio on the ground. We have the details. Also, a leader in emergency communications says the FCC appears open to suggestions on how to solve the problem of hams working for served agencies to keep their nets on the air, Oregon hams use grant monies to establish a state wide Winlink communications system and NOAA says that Solar Cycle 24 may never get above 90. Find out the details on Amateur Radio Newsline(tm) report number 1675 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: DUTCH GOVERNMENT TRYING TO FORCE D-STAR REPEATERS INTO HAM SATELLITE BAND

A confrontation between amateur satellite users and terrestrial users of D-Star repeaters appears to be looming on the other side of the Atlantic. This because one European telecommunications regulator has decided to make it happen. Norm Seeley, KI7UP, is here with the details:

--

A confrontation between amateur satellite users and terrestrial users of D-Star repeaters appears to be looming on the European horizon. This, because the telecommunications regulator in the Netherlands is creating a war-like scenario between the two ham radio interests so that it can proceed with one of its pet technological projects.

Information provided to Amsat-North America indicates what the ham radio space agency calls a growing threat to frequencies allocated and used by the Amateur Satellite Service. This is because the Dutch government has decided to reallocate 439.500 MHz and upward to the Differential Global Positioning Service. And to accomplish this goal it has decided to move the output frequency subband of that nations terrestrial D-Star repeaters from 439 to 440 MHz down to 437 to 438 MHz. This re-allocation would place digital repeater signals right in the downlink band of the Amateur Satellite Service.

Nor are Dutch telecommunications regulators listening to anyone's complaints about the proposed reallocation. Protests from Dutch amateur radio operators, amateur clubs and even telecommunications regulators in nearby countries are falling on what amounts to deaf bureaucratic ears. The regulator is still planning on this spectrum re-allocation to favor Differential G-P-S.

As we go to air Dutch telecommunications regulator has halted amateur D-Star repeater licensing until the frequency shift can be made. Impact on European satellite operations would be immediate. A ripple effect on world wide ham radio satellite communications would at least in theory be inevitable. So might be formal complaints to the International Telecommunications Union from spectrum regulators in neighboring nations.

>From Scottsdale, Arizona, I'm Norm Seeley, KI7UP, reporting for the Amateur Radio Newsline.

--

Even more ominous is the potential for the door to be opened for future infringement on satellite operations in other countries. This is because in many parts of the world portions of the 70cm band is allocated ham radio operators as secondary users. (Amsat-NA, PE1HZG, Southgate)

**

EMCOMM VS PECUNIARY INTEREST: WB6NOA REPORTS THE FALLOUT

Ham radio educator and emergency communications expert Gordon West, WB6NOA, is weighing in on the growing controversy that is pitting proponents of providing ham radio communications while on the job versus the FCC position that any communications by any ham who is at work, off work, or even on a lunch break and being paid is illegal. The problem says West is that the FCC deems as not legal is for paid personnel conducting a ham radio net. This he says is driving away all forms of amateur radio volunteers from public service and he has thrown his political weight in with those who are calling for the FCC to continue to work with the ham community as the two work together to find a solution. Bill Pasternak, WA6ITF, has more:

--

According to Gordon West, WB6NOA, the sky is literally beginning to fall. And its falling in on amateur radio participation in emergency communications activities.

In an e-mail to Amateur Radio Newsline, West notes that in recent days he has heard directly from a growing number of hams who were associated with emergency service operations. Hams who are simply walking away from the hobby and from emergency communications work within it. To quote WB6NOA:

"Today , I had calls from a Red Cross chapter indicating they may no longer participate or encourage American Red Cross ham radio training nets . A Red Cross staff member who is a ham, says he is out .

"Another call from a fire department ham who just formed a ham radio disaster communications team. He says he is over and out working with ham volunteers over the air .

"Ans a CERT City coordinator, also a ham, has called it quits for over the air disaster drills on 2 meter simplex."

West notes that as with emergency communicators with ARES and RACES, there is usually a ham or two on staff of various agencies that other ham volunteers work with on the air. He says that all radio amateurs fully understand the rules on pecuniary interest, but without hams embedded in agency staffs who operate in drills and disaster preparation, that ham radio has no one to serve.

In addition to being an acclaimed amateur radio instructor, Gordon West, WB6NOA, is an ARRL District Emergency Coordinator. He is also active with his Red Cross chapter and runs a daily preparedness net on 40 meters. And now he is asking the FCC for its opinion on how volunteers can best work with fellow hams who may be on staff with their local agency and who are wanting to legally run nets for disaster relief training and preparedness.

West adds that he is hoping that the FCC rules enforcer Laura Smith will continue to weigh the many comments from served agencies on this important subject. He points out that both Smith and FCC rules man Bill Cross, W3TN, responded to his initial e-mail within minutes of it being sent. He says that to him this is an indication that the regulatory agency's door is open for constructive comments.

WB6NOA ends by offering his own expertise to the FCC in crafting a solution to the current dilemma. He also quotes section 97.1(a) of the Commissions own rules. A rule which not only defines the reason ham radio exists but recognizes and specifically spells out the value of the amateur service to the public. This, as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

For the Amateur Radio Newsline, Im Bill Pasternak, WA6ITF, in the Amateur Radio Newsline studio in Los Angeles.

--

Gordon West says that this bru-ha-ha has just undone all that hams have been trying to do to find a purpose, with their local County or City emergency services. He adds that this controversy has likely set back the cause of ham radio emergency preparedness, growth, and cooperation between volunteers and the various agencies that they serve. (ARNewsline(tm))

**

PUBLIC SERVICE: SOUTH AFRICAN HAMNET ASSISTS THE WALK AGAINST CRIME

Ham radio recently played a part in a South African Walk Against Crime. The event was organized by Edenvale SAPS and Mumba Security in conjunction with the amateur radio group Hamnet.

ZR6DAN, ZU6TAN, and ZS6SKY, handled all the communications at the event. ZS6ZS, was in contact with them from a base station for back up communications in the event it was needed. The event is organized to test the readiness of the members and the ability to deploy and activate mobile and field stations while under pressure. This, in preparation for future events. (Southgate)

RESCUE RADIO: GRANT MONEY BRINGS WINLINK SYSTEM TO OREGON

A follow up to the story on a grant of $250,000 made a year and a half ago to the Amateur Radio Emergency Service in Oregon by Governor Ted Kulongoski. As a result, Oregon ARES members are on the verge of completing the state-wide installation of a Winlink ham radio emergency messaging system.

According to the ARRL, the story goes back to 2007. That's when governor Kulongoski impressed by the ability of radio amateurs to handle emergency communications when severe winter storms wreaked havoc on Oregon's North Coast. The city of Vernonia was flooded. The 911 emergency response services along with the Internet and phone service was inoperable for an extended period of time.

Because of the service rendered by Amateur Radio operators in providing communications support, the governor allocated funds for the installation of a ham radio digital communications system. One that would integrate Amateur Radio with the Internet.

Winlink was chosen over any other digital messaging system because of its performance during the severe weather two years ago. In fact it was Winlink that was the only mode of communications for several Oregon counties for the first two days of the storm. The project is scheduled to be completed in time for the 2009 ARRL Simulated Emergency Test scheduled for October 3rd and 4th. (ARRL)

**

PUBLIC SERVICE: HAMS NEEDED FOR OREGON'S EAGLE CAP EXTREME DOG RACE

Still in Oregon, that sates Eagle Cap Extreme Sled Dog Race in need of ham radio volunteers from January 13th to the 16th 2010. This, to provide communications support for the event.

About 40 to 50 radio amateurs will be needed to provide checkpoint and course safety coverage using 2 meters and a dedicated repeater for the event. The race begins at Wallowa State Park and ends at the Ferguson Ski Area and is a qualifying event for both the Alaskan Iditarod and Canadian Yukon Quest events.

Hams who enjoy performing public service work outdoors in the winter should contact Clyde Raymer, Jr., KL0CW, by e-mail to president (at) eaglecapextreme (dot) com. More on the race and the part played by volunteer radio amateurs is on-line at www.eaglecapextreme.com/amateurradio.php (Via E-Mail)

**

RESCUE RADIO: SOME SOCAL REPEATER SITES MAY NOT BE REACHABLE THIS WINTER

Hams with repeaters atop several Southern California hilltops may not be able to reach them this winter if repairs are needed. This, the result of the aftermath of a massive wildfire which is still only 85 percent contained.

Michael Mcintyre is a District Ranger who oversees the Angeles National Forest. In a letter to all permit holders Mcintyre writes that as a result of the Station Fire much of the District has been burned with complete mountain sides reduced to ash and charred remains of trees. The Angeles National Forest remains closed south and east of California State Route 14 and Route 138 until further notice.

Mcintyre says that individuals or organizations holding special uses permits for sanctioned activities within the forest are exempt from this closure. However, weather forecasters predict that Southern California will receive heavy rain this fall. This he says may result in landslides, flooding, and road washouts. Numerous roads would be closed and many communication systems and utilities across the forest might be non operational.

Mcintyre says that now is the time for lessees to organize carpools by coordinating tenant needs and planning helicopter access for when access roads are washed out. He adds that it is prudent to make back up plans with your neighbors to ensure your long term access where sanctioned activities are necessary.

While Mcintyre does not address the needs of ham radio repeater owners, its well known that a good number of wide coverage systems operate from such hilltops as Mt. Disappointment, Mt. Lukens and of coarse Mt. Wilson. And if the prediction of heavy rain later this year is correct, if a repeater goes off the air due to some failure, it may have to stay off unless its owner has the money to pay for a chopper ride up to the site. (CGC)

**

RADIO VANDALISM: TWO MORE RADIO TOWERS COME DOWN

Two more broadcast radio towers have been felled. Thais, since radicals in the Pacific Northwest toppled two towers owned by KRKO in Everett Washington as we reported last week.

The first involves WEAB in Allentown, Pennsylvania. Radio World says that the Federal Bureau of Investigation is trying to find out who cut the guy wires of the stations 350-foot tower causing it to fall to the ground. The Clear Channel tower is one of five in the same location of Whitehall Township. Authorities as saying no one was injured and no other property was damaged in the incident. The station operates at 790 kHz, went on the air in 1949. Its on the air with its remaining towers.

There's no mystery to why the 400 foot tower for of WTJV AM in Deland, Florida fell. A local newspaper says that truck full of high school students snagged one of the guy wires on its bumper after a high school football game. No one was injured, even though the tower and a power line fell. The station operate on 1490 kHz serves the Daytona Beach area. (RW, others)

ENFORCEMENT: UNLICENSED BROADCASTER DINGED $10000

The FCC has ordered Texas resident Radhames Severino to pay a $10,000 fine. This for allegedly operating of an unlicensed radio transmitter on the frequency 101.5 MHz in the Houston area. Newsline's Bruce, Tennant, K6PZW, has the details:

--

In its order affirming the forfeiture the FCC noted that on May 26th the Commission's Houston Resident Agent Office of the Enforcement Bureau had issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Severino for the alleged offense. To date, Severino has not filed a response to the order.

This case dates back to On October 23 and 25, 2006. That's when the FCC responded to a complaint about an unlicensed radio station in the Houston area. An agent from the Commission's Houston Office T-hunted the signal on 101.5 MHz to a building in the Houston area. On October 31, 2006, an agent from the Houston Office inspected the radio station located in suites K-M of the building, which was labeled as the home of the Iglesia Misionera Evangelistica Elohim church. The agent determined that Severino leased these suites, was responsible for the station, and was the pastor for the church.

On November 7, 2006, the Houston Office sent a formal Notice of Unlicensed Operation to Severino at his residence. The notice warned him that operation of an unlicensed radio station violated Section 301 of the Act and directed him to cease all unlicensed operations

immediately. The letter also outlined the potential penalties for such a violation,.

But the FCC warning to Severino apparently went unheeded. On January 30, March 12, and October 15, 2008, agents from the Houston Office, again T-hunted the signal on 101.5 MHz to Severino leased suites. This in turn lead to the issuance of a $10,000 Notice of Apparent Liability to Severino to which he never responded. As a result, Severino was given the customary 30 days to pay or to file an appeal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

This 30 day period has no passed but the FCC has not said if the fine was paid or is still outstanding. (FCC)

**

ENFORCEMENT: FCC ISSUES $19000 EAS VIOLATION FINE

The Federal Communications Commission fined Opp Educational Broadcasting Foundation, licensee of WJIF FM in Alabama, a $19,000. This, for violations of the rules governing a stations responsibility to the community it serves in time of emergency under the Emergency Alert or EAS system. The alleged violations include failing to maintain operable E-A-S equipment, not conducting required EAS tests and not providing certain information to Enforcement Bureau questions.

This case goes back to 2008 when the FCC responded to a complaint alleging WJIF did not take part in E-A-S drills and had never transmitted an EAS test. In its investigation the FCC specifically asked the station to provide copies of station E-A-S procedures and logs recording EAS test transmissions. The FCC followed up in March and warned WJIF that not responding appropriately could lead to enforcement action.

In its December 2008 response, the WJIF management did not directly answer the questions, except to state in general terms that WJIF had participated in EAS in the past. However it also noted that EAS gear was broken and the station intended to fix it as soon as possible. (FCC)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO LAW: NSC SAYS OPERATING TWO WAY MOBILE IS SAFE

The National Safety Council says that operating mobile does not appear to increase the risk of having an accident.

In response to a request from the ARRL, National Safety Council President Janet Froetscher wrote back that the group has no evidence that using two-way radios while driving poses significant crash risks. She said that until such time as compelling, peer-reviewed scientific research is presented that denotes significant risks associated with the use of amateur radios, two-way radios or other communication devices that her organization does not support legislative bans or prohibition on their use.

The ARRL had written to the National Safety Council out of concern over the numerous state and city laws being enacted to ban all but hands free cellphone and stop all texting by the general public. The fear has been that some of these laws are so broadly worded that they might be interpreted by law enforcement or courts as a ban on all forms of vehicular communications.

While Froetscher comments do not carry the power of law, they will be an essential tool that hams can use to obtain exclusions from proposed mobile communications bans by cities or states. This is because the National Safety Council's findings carry a lot of weight with lawmakers at all levels of government. (ARRL)

**

NAMES IN THE NEWS: ELLISON NAMED CHIEF OF FCC ENFORCEMENT BUREAU

New FCC Chairman Julius Genachowski has announced the appointment of P. Michele Ellison as Chief of the Enforcement Bureau effective September 28th. Ellison is currently Deputy General Counsel of the Enforcement Bureau. According to an FCC press release she most recently served as Acting General Counsel of the FCC. Her appointment will likely have little impact on rules enforcement in amateur radio which was recently handed over to Laura Smith. (FCC)

**

WHATS IN A NAME: CAD AND ASTATIC REBRAND AS CAD AUDIO

Some say what's in a name? A lot if you are CAD Professional Microphones and Astatic Commercial Audio Products which are re-branding as C-A-D Audio.

While the name CAD Professional Microphones may not be one familiar to hams, the Astatic brand has its roots in amateur radio. The company was established in 1931 by two radio engineers dedicated to the development of a static-free, or "anti static," microphone.

Over the years the company evolved into Astatic Commercial Audio products. Perhaps its most famous Astatic branded product was the lollypop looking D-104 crystal microphone that was considered the gold standard for two way radio in the 1950', 60's and through the mid-1970's. That D-104 was discontinued from production about a decade ago. The name change for the Solon, Ohio, company became effective on September 1st. (Via E-Mail)

**

WHATS IN A NAME: RAC SAYS HDBOC NOW THE LF/MF/HFBPC

And another what's in a name? How about the Board of Directors of Radio Amateurs of Canada approving a motion to change the name of its High Frequency or HF Band Planning Committee to the Low Frequency, Medium Frequency and High Frequency Band Planning Committee.

Radio Amateurs of Canada says that the change name better reflects the range of frequencies that the committee is responsible for. Jim Fisher, VE1JF, who is the Committee Chair indicates that the work the committee members are doing will not change much as they were already including those bands in their ongoing reviews.

And thankfully, Radio Amateurs of Canada has come up with an acronym for the newly renamed group. They call it the LF/MF/HFBPC. (RAC)

**

HAM BUSINESS: RF CONCEPTS LLC BUYS ALPHA RADIO PRODUCTS

RF Concepts, LLC, has acquired the assets of Alpha Radio Products and will manufacture the world famous amplifiers and other Alpha Radio products. Michael Seedman, AA6DY, is the Chairman RFConcepts, LLC. He says that the Alpha 9500 and 8410 amplifiers, the Model 2100 Dummy Load/Wattmeter combo and line of 4500 Wattmeters will continue to be manufactured and available. Also the new company will honor existing customer commitments, including warranties, customer and technical support, and repairs. It will also keep an extensive parts inventories to support the more than 10,000 Alpha amplifiers in the market. (RFConcepts, LLC)

**

HAM HAPPENINGS: TAPR-ARRL DCC SEPT 25 - 27 IN CHICAGO

The joint ARRL and TAPR Digital Communications Conference will be held on September 25th to the 27th, The event takes place in the northwest suburbs of Chicago at the Elk Grove Village Holiday Inn near O'Hare airport with a free hotel shuttle bus.

The Digital Communications Conference features 2 full days of Technical forums that includes such topics as Digital Amateur Television, the use of digital Communications at the Marine Corps Marathon and the recently reported Universal Ham Radio Text Messaging initiative as proposed by Bob Bruninga, WB4APR.

If you can't be there in person you can follow activities on Twitter at twitter dot org slash taprdigital. More on the conference is on line at www.tapr.org. (WB9QZB)

**

FUTURE PROPAGATION: NOAA PREDICTS A SOLAR MAX OF ONLY 90

The U.S. Dept. of Commerce Space Weather Prediction Center has issued a prediction that the next Solar maximum will take place in May 2013 with a predicted sunspot count of just 90. This prediction follows on from other gloomy forecasts from various sources.

However, it must be remembered that scientists knows next to nothing about the suns behavior. Data from solar observing satellites goes back barely 3 decades and visual recordings of sunspot data only extends over a few centuries. Either way, this latest prediction can be seen at the website found at www.swpc.noaa.gov/ftpdir/weekly/Predict.txt (NOAA)

**

HAM RADIO IN SPACE: 4 MICROSATS TO LAUNCH SEPT 23

Turning to ham radio in space, the ISIS Launch Services weblog says a l date of September 23rd is currently likely for the Indian PSLV-C14 launcher that will carry 4 Amateur Radio CubeSats into orbit. These tiny birds include SwissCube, BeeSat and two others. More information is at blog.isilaunch.com. (Southgate)

**

ON THE AIR: COMMEMORATING PIERRE CURIE

On the air, keep an ear open for the fascinating call TM150RPC. Its on the air to commemorate the 150th anniversary of the birth of physician and Nobel Prize laureate Pierre Curie.

For those of you not aware, Pierre Curie was a French physicist, a pioneer in crystallography, magnetism, piezoelectricity and radioactivity. In 1903 he received the Nobel Prize in Physics with his wife, Maria Skï¿½odowska-Curie, and Henri Becquerel, in recognition of the extraordinary services they have rendered by their joint researches on the radiation phenomena discovered by Becquerel. That discovery is more commonly known as the X-Ray.

You can listen out for TM150RP-C on all bands and modes. QSL's go via F5KAZ. (OPDX)

**

DX

In D-X, word that Members of the Russian Robinson Club and the R-Quad Antenna Company have put together a DXpedition project to activate the rarest Islands on the Air references in Vietnam. Operators mentioned

are RA3NAN, RK3FA, RZ3EM and UA6BGB. They will be in Vietnam between September 24th and October 2nd. For more details and updates, please visit xv6rrc.com.

And lastly, M0OVL will be on the air slash P on September 25th and 26th from Inner Farne, He is restricted to just 4 hours of operations each day between 1000 and 1400UTC and is also dependent on weather conditions. More information and QSL routing is at www dot m-zero-o-v-l dot co dot uk.

(Above from various DX news sources)

<k1sfa@arrl.org>
============================================================

==> CHANGES IN STORE FOR THE ARRL LETTER

After asking for feedback from ARRL Letter subscribers and reviewing
surveys sent to ARRL members, we are changing the way you receive The
ARRL Letter. Starting in two weeks -- October 1 -- The ARRL Letter will
be available to subscribers in an HTML formatted version. Of course,
those members who do not wish to receive the HTML version can click on a
link to view the Letter on the ARRL Web site. In addition, The ARRL
```

Letter will be distributed on Thursdays beginning September 24.

According to ARRL News Editor S. Khrystyne Keane, K1SFA, this new format will allow for more graphics and pictures, as well as occasional articles that feature the technical side of Amateur Radio. We will also be running portions of popular QST features, such as "The Doctor Is IN" and "Hints & Kinks."

"I am very excited about presenting The ARRL Letter in a completely new format," Keane said. "Not only will we be able to add features such as pictures and video, but by offering the Letter in HTML, readers will be able to navigate directly to those stories they are most interested in. The ARRL already offers two other newsletters -- The ARRL Contest Update and The ARRL ARES E-Letter -- in an HTML version. We have received a lot of positive feedback on these two newsletters."

The ARRL Letter first appeared in 1981 as a print publication, available by subscription from the League. In 1991 -- following the technology of the day -- it moved from being a print publication to being published electronically and sent via e-mail as a free service to ARRL members. "Now, once again, we at the ARRL are following technology's path and publishing The ARRL Letter in a new way, moving from plain text to a graphically pleasing interface," Keane explained.

We think you will enjoy this new format, and we welcome your comments. Tell us what you like -- and don't like -- by sending an e-mail to Keane <k1sfa@arrl.org>, with "ARRL Letter Feedback" in the subject line.

==> NEW PRODUCT REVIEW TESTS TO BEGIN IN OCTOBER QST

When you peruse the October issue of QST, you may notice a few extra lines in the Product Review data. "Here at the ARRL Lab, we strive to make our test procedures relevant to current technology and to new features common on today's transceivers," said ARRL Test Engineer Bob Allison, WB1GCM. "We continue to research ways to improve our testing and to develop new tests that will benefit our members. I hope you will find these new measurements useful in evaluating and comparing transceivers."

* Receiver Sensitivity (MDS) at 137 and 505 kHz
Several countries now give amateurs permission to operate at and around 137 and 505 kHz. In the US, there is activity on 495 to 510 kHz by more than 20 stations around the country operating under the ARRL sponsored WD2XSH experimental license. In addition, there are other Part 15 experimental licensees operating in this range. The WD2XSH stations are on the air regularly, gathering propagation data. They are always looking for signal reports.

Allison said that with many of today's transceivers and a suitable antenna, you can listen for these experimental stations and submit reception reports via the Web site: "The new Product Review tests will help identify transceivers suitable for use on these frequencies. With equipment built over the last 25 years ago or so, I've noticed a wide

variety of available sensitivity, from terrible to quite good. Many receivers tune to 137 and 505 kHz; not all are proficient at receiving signals there. For you 'lowfers,' this measurement is for you."

* Spectral Sensitivity
Spectral sensitivity is the weakest signal that can be "seen" on a visual display of spectrum above and below the operating frequency. Often called a spectrum scope or panadapter, this feature is included on many mid-range and high-end transceivers. "This data represents the level, in dBm, at which the operator can see a signal poke up out of the display noise floor," Allison explained. "Although the measurement is somewhat subjective, it works out to be about 3 dB above the noise floor at the bottom of the display when the scope is adjusted to show 100 kHz of spectrum. With software-defined receivers (SDRs), such as the FLEX-3000, the sample rate is set to the highest setting."

* Audio Output THD at 1 V RMS
Allison said that one of the ARRL Technical Advisors posed the question, "Who ever listens to their receiver at full volume?" Allison explained that audio output power and THD (total harmonic distortion) at the specified load impedances as specified by the manufacturer have been tested and reported. "Generally, the specification is at or near the maximum audio output the receiver is capable of," he said. "If severe hearing loss isn't an issue, we normally listen with the volume control set to around the 9 o'clock to 11 o'clock position on most transceivers and not with the control cranked to maximum."

Allison explained that distortion at normal listening levels is an important factor, especially when you are listening for an extended period of time: "High levels of distortion can make signals more difficult to understand and add to fatigue. We'll continue to measure and report how audio output power and THD compare to manufacturers' specifications, but we have added a new test intended to show distortion at more typical volume levels."

After testing several radios for comfort, Allison picked 1 V RMS as an output level for the new test. "It's an easy figure to remember," he said. "We will now also report THD at this level. Note that this test will appear with the next transceiver reviewed because the FLEX-3000 has only a low-level audio output and is dependent on external, user-supplied devices to amplify the audio to normal listening levels."

Look for these new tests beginning with October's QST Product Review featuring the FLEX-3000.

==> NOMINATIONS NOW BEING ACCEPTED FOR THE GEORGE HART DISTINGUISHED SERVICE AWARD

At its July 2009 meeting, the ARRL Board of Directors established the George Hart Distinguished Service Award to be given to an ARRL member whose service to the League's Field Organization is of the most exemplary nature. The Distinguished Service Award is named in honor of

George Hart, W1NJM, long-time Communications Manager at ARRL Headquarters and chief developer of the National Traffic System (NTS) <http://www.emergency-radio.org/what_nts.pdf>. Upon learning that the ARRL Board of Directors had established this award named after him, Hart called his namesake award "a great honor."

Selection criteria include:
* Operating record with the National Traffic System; or
* Participation within the Amateur Radio Emergency Service (ARES); or
* Station appointments and/or leadership positions held within the ARRL Field Organization.

Nominations for the George Hart Distinguished Service Award shall be accepted from anyone and shall be submitted to the Membership and Volunteer Programs Manager at ARRL HQ by November 1. Nominations should document as thoroughly as possible the nominee's lifetime activities and achievements within the Field Organization. It is expected that nominated candidates will have 15 or more years of distinguished service. The Programs and Services Committee will serve as the Review Committee, with the Board of Directors making the final determination at its Annual Meeting in January. Recipients will be given an engraved plaque and cover letter and will be profiled in QST.

Nominations for the George Hart Distinguished Service Award, including any related supporting material and letters of recommendation, may be e-mailed to ARRL Headquarters to the attention of ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N <nn1n@arrl.org>, or to ARRL Field and Public Service Team Supervisor Steve Ewald, WV1X <wv1x@arrl.org>. Nominations and supporting materials must be received no later than November 1, 2009 to be considered.

==> PART 2 OF THE 10 GHZ AND UP CONTEST IS THIS WEEKEND

This weekend brings the second leg of the 2009 ARRL 10 GHz and Up Contest <http://www.arrl.org/contests/rules/2009/10-GHz.html>. If you enjoy the technical side of Amateur Radio and being on the cutting edge, this weekend gives you a perfect chance to explore the microwave portion of the radio spectrum!
The contest period starts at 6 AM (local time) Saturday, running until midnight (local time) Sunday. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, QSO points are awarded based on the distance of a QSO. "Operating from several locations during the contest period is not only allowed, it's even encouraged," he said. "Most people use SSB, although some CW is used, too. Power levels are relatively low compared to HF; most stations run several hundred milliwatts. A station running a few watts is considered a 'Big Gun.' Antennas are usually dishes, like those used for receiving satellite TV."

Kutzko explained that many QSOs are completed on the microwave bands by bouncing signals off of other objects, such as mountains, buildings and even raindrops! You can also get lucky and catch a good tropospheric opening, he said, explaining that in the 2007 contest, a ham on the West

Coast made a QSO of 907.2 miles on 10 GHz between his location in California and Mexico.

"If you have a person in your area that is interested in the microwave bands, ask if you can tag along and observe," Kutzko advised. "If you live in an area that has a microwave club -- such as the North Texas Microwave Society, the North East Weak Signal Group, the Mt Airy VHF Club and several others -- find out what their members are doing for the contest. Elmering is a big part of the microwave groups, and they are only too happy to introduce you to their fun."

Logs for the 2009 ARRL 10 GHz and Up Contest can be e-mailed <10GHz@arrl.org>. Paper logs should be sent to ARRL 10 GHz and Up Contest, 225 Main St, Newington, CT 06111. All logs must be postmarked no later than 2359 UTC Tuesday, October 20.

==> SMITHSONIAN CURATOR TO SPEAK AT AMSAT-NA BANQUET

Dr Martin Collins, a curator in the Space History Division at the Smithsonian Institution's National Air and Space Museum in Washington <http://www.nasm.si.edu/>, will be the featured speaker at the AMSAT-NA Symposium banquet on Saturday, October 10, at the Four Points Sheraton Hotel at Baltimore-Washington International Airport <http://www.amsat.org/amsat-new/symposium/2009/index.php>. The title of his presentation will be "Making the Space Age: The First 50 Years."

Dr Collins curates the National Air and Space Museum's civilian applications satellites collection that includes weather, remote sensing and communications satellites and related technologies. He has contributed to a series of Museum exhibits and was primary author of the exhibition catalog "Space Race: The US-USSR Competition to Reach the Moon" <http://www.amazon.com/Space-Race-U-S-U-S-S-R-Competition-Reach/dp/0764909053>.

On the occasion of the 50th Anniversary of Sputnik, he was editor of the book "After Sputnik: 50 Years of the Space Age" <http://www.amazon.com/After-Sputnik-Years-Space-Age/dp/0060897813> that included text and photos on the history of Project OSCAR. He was instrumental in arranging the display of OSCAR 1 at the National Air and Space Museum's Udvar-Hazy Center, along with the Naval Academy's PCSat Amateur Radio satellite. He also arranged the acquisition of AMSAT's MicroSat mechanical test model, just in time for AMSAT's 35th Anniversary Annual Meeting.

The Saturday evening banquet is one of the highlights of this year's 40th anniversary symposium, October 9-11 <http://www.amsat.org/amsat-new/symposium/2009/index.php>.

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters,

such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplarian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Gave temperate sweets to that well-wooing Sun" Cook, K7RA, this week reports: Sunspot numbers for September 10 through 16 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 69.3, 69.3, 69, 69.1, 69, 69.2 and 68.8 with a mean of 69.1. The estimated planetary A indices were 2, 4, 4, 6, 5, 5 and 6 with a mean of 4.6. The estimated mid-latitude A indices were 2, 2, 1, 4, 4, 4 and 5 with a mean of 3.1. Thursday's prediction shows solar flux values at 70 beginning tomorrow, September 19, and continuing through September 24, then rising to 72 September 25-28. We haven't reported a weekly solar flux average above 70 in this bulletin since May 19, and prior to that there were only four more weeks above 70 in 2009. These predictions are from NOAA and the US Air Force, who also predict a planetary A index of 8 for September 18, and only 5 from September 19 to more than a month after. Geophysical Institute Prague also predicts nothing but quiet geomagnetic conditions for September 18-24.. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Keats' "Endymion" <http://www.bartleby.com/126/32.html>.

==>IN BRIEF:

* This Week on the Radio: This week, the ARRL 10 GHz and Up Contest is September 19-20 (local time). Look for two NCCC Sprints this week, one each on September 18 and 19. The Feld Hell Sprint is September 19. The South Carolina QSO Party, QRP Afield, the Washington State Salmon Run, the QCWA Fall QSO Party and the Scandinavian Activity Contest (CW) are all September 19-20. The North American Sprint (SSB) is September 20. The Run for the Bacon QRP Contest and the 144 MHz Fall Sprint (local time) are September 21. The SKCC Sprint is September 23. Next week, look for another NCCC Sprint on September 25. The Texas QSO Party, the CQ

Worldwide DX Contest (RTTY) and Scandinavian Activity Contest (SSB) are all September 26-27. QRP Homebrewer Sprint is September 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 25, 2009, for these online course sessions beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL/TAPR Digital Communication Conference Next Weekend: ARRL and the Tucson Amateur Packet Radio Group (TAPR) <http://www.tapr.org/> will jointly host the 28th Annual Digital Communications Conference (DCC) September 25-27 in Chicago <http://www.tapr.org/dcc.html>. The DCC has something for everyone from those new to digital modes to those experienced with digital communications including technical and introductory forums. According to DCC Co-host Mark Thompson, WB9QZB, one of the highlights of this year's DCC will be Bob Bruninga, WB4APR, presenting "Universal Ham Radio Text Messaging." The Saturday night banquet speaker will be Bill Brown, WB8ELK, a pioneer in flying balloons with payloads including Amateur Radio digital communication technologies. Brown is the publisher and editor of Amateur Television Quarterly magazine. ARRL Technical Relations Manager Brennan Price, N4QX, will be on hand to discuss the upcoming World Radiocommunications Conference in his talk "WRC-12 Agenda Item 1.19: Shaping the International Regulatory Framework for Software Defined and Cognitive Radio Systems." QEX Editor Larry Wolfgang, WR1B <http://www.arrl.org/qex>, and ARRL Central Division Director Dick Isely, W9GIG, will also be in attendance. The 2009 DCC forum and speaker schedule is available online <http://www.tapr.org/pdf/DCC_2009_Schedule_Preliminary2009-09-16.pdf>.

TAPR provides leadership and resources to radio amateurs for the purpose of advancing the radio art and is a research and development oriented group offering kits, assembled products and publications related to the intersection of Amateur Radio and digital technology.

* Don't Forget to Send Your /140 QSLs!: For seven days -- September 2-9 -- the ARRL celebrated the 140th anniversary of the birth of Hiram Percy Maxim, the League's co-founder and first president <http://www.arrl.org/news/stories/2009/08/17/11025/?nc=1>. The highlight of the week-long celebration was an on-the-air Special Event where eligible amateurs could add /140 to their call signs, and amateurs who had more than 25 QSOs (with endorsements in increments of 25, up to 100) with /140 stations would receive an attractive award certificate. W1AW Station Manager Joe Carcia, NJ1Q, reports that so far, more than 200 applications for the certificate have been received, with more arriving at ARRL HQ every day. "Here at W1AW, the Hiram Percy Maxim Memorial Station, we signed more than 700 QSOs with the /140 Special Event suffix," Carcia said. "This is a great way to remember 'The Old Man,' and I know that if he were alive today, he would have been on the air, enjoying all that Amateur Radio has to offer today's ham." It's not too late to apply for your award certificate -- all requests must be postmarked by October 9, 2009. Paper logs, along with a $5 fee, should be sent to HPM/140 Celebration, ARRL, 225 Main St, Newington, CT 06111.

* Alpha Radio Products Now RF Concepts: On September 15, Michael Seedman, AA6DY, announced that his company, RF Concepts <http://www.rfconcepts.com/>, had purchased Boulder, Colorado-based Alpha Radio Products <http://www.alpharadioproducts.com/>. Seedman explained in a press release <http://www.rfconcepts.com/dear_alpha_customers.asp> that when he contacted Alpha to purchase a new amplifier, he was "disappointed to learn that I would not receive it for months." He was told that as each amplifier is made by hand, there was not enough shelf inventory to send a new one right away. Working with Alpha Products president Molly Hardman, W0MOM, "we created a way to capitalize the company in order to put amplifiers in inventory for immediate availability. Customers will no longer have to wait weeks or months to add an Alpha product to their station." Seedman said that RF Concepts "will focus on shipping our backlog of Alpha amplifiers and building sufficient product to ship from stock. We will honor our existing customer commitments -- including warranties, customer and technical support and repairs -- and keep our extensive parts inventories to support the more than 10,000 Alpha amplifiers in the market." Hardman will be staying on as Vice President of Sales for RF Concepts.

* South African Amateur Radio Payload Reaches Orbit: After several delays, South Africa's SumbandilaSat satellite <http://www.amsatsa.org.za/SZASAT.htm> finally blasted to orbit aboard a Soyuz rocket from the Baikonur Cosmodrome in Kazakhstan on September 16 <http://www.russianspaceweb.com/baikonur.html>. The main payload is a multi-spectral imager, but the satellite also carries an Amateur Radio

component consisting of a 2 meter/70 cm FM repeater. After SumbandilaSat is fully commissioned, the repeater will be activated with an uplink at 145.880 MHz and a downlink at 435.350 MHz; there will also be a voice beacon at 435.300 MHz. The transponder mode will be controlled by a CTCSS tone on the uplink frequency. The CTCSS tone frequencies have yet to be announced. SumbandilaSat was sponsored by the Department of Science and Technology and was built at SunSpace <http://www.sunspace.co.za/> in cooperation with the Stellenbosch University <http://www.sun.ac.za/>. In addition to the SA-AMSAT amateur module, the satellite carries Stellenbosch University's radiation experiment and software defined radio (SDR) project, an experiment from Nelson Mandela Metropolitan University and a VLF radio module from the University of KwaZulu-Natal.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify

membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Why not try Linux..? It's free and there are plenty of useful Amateur Radio applications. Not sure if any match what you specify above but worth a look maybe..?

Linux and XP are not options.

This computer will need to "triple" as my ham radio machine, home office machine, and also developing/debugging new Windows applications.

73, de Hans, K0HB

Dual Boot XP/Vista is doable but it is a whole lot easier to do starting
with XP first. There are tutorials on this. I have often found dual
booting to be a good way to continue using software while finding
compatibility solutions. I realize some of the new hardware has problem
s
with that.

I dual-boot WinXP and Linux. Don't often run up XP except if I need to
use the occasional bit of software that won't run under Wine.

If you go that route, it's easiest to start with XP, install Vista, and
then put Linux in last. Don't forget to plan your disk usage in advance:
XP and Vista can share the same "data" drive, but remember that Linux is
only able to _read_ from NTFS partitions, so you might want to choose
FAT32 for drives that will be shared between Windows and Linux.

HTH.

73,

Bill W1AC

That's strange, I seem to be able to read/write to all the NTFS disks on my system from within Linux. I have Linux on a separate HDD on my main desktop machine and there are also 3 NAS drives on the network, all are accessible from both my Linux machines.

Changes followed by "|".

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

==> PREPARATIONS UNDERWAY FOR WRC-12

Approximately 200 participants came together in an ITU preliminary
meeting that ended September 16 in Geneva, Switzerland to help African
countries prepare for the 2012 World Radiocommunication Conference
(WRC-12)
<http://www.itu.int/ITU-R/index.asp?category=conferences&rlink=wrc-12%C3
%83%C2%A2%C3%82%C5%92%C3%82%C2%A9=en>. The six regional
telecommunications organizations -- APT (Asia-Pacific), ASMG (Arab
States), ATU (Africa), CEPT (Europe), CITEL (the Americas) and RCC
(independent states of the former Soviet Union) -- were represented at
the meeting. This meeting was part of a series of ongoing international
and regional preparatory meetings to allow government and industry to
```

address the far-reaching and complex agenda of the WRC-12. ARRL Technical Relations Specialist Jonathan Siverling, WB3ERA, and IARU Region 1 Vice President Tafa Diop, 6W1KI, were among the participants.

WRC-12, which will be held in Geneva from January 23-February 17, 2012, will review the international treaty that governs radiocommunications -- the ITU Radio Regulations <http://www.itu.int/publ/R-REG-RR-2008/en>. The conference will be preceded by the Radiocommunication Assembly (RA-12), also to be held in Geneva, January 16-20, 2012.

The agenda for WRC-12, developed by the delegates at the last WRC in Geneva in 2007 (WRC-07), was formally adopted by the ITU Council in 2008. There are 25 agenda items addressing potential new or revised spectrum allocations to existing services. A key objective is the review of the international regulatory framework applicable to radiocommunications. This review should reflect the convergence of some radio services arising from the development of next-generation networks (NGN) <http://en.wikipedia.org/wiki/Next_Generation_Networking>, as well as new radio applications and technologies. Of most interest to amateurs is agenda item 1.23, "to consider an allocation of about 15 kHz in parts of the band 415-526.5 kHz to the amateur service on a secondary basis, taking into account the need to protect existing services."

"This agenda item is the highest item on my long term priority list," said ARRL Technical Relations Manager Brennan Price, N4QX. "We are fortunate that this upcoming WRC presents an opportunity for a new secondary allocation in the medium waves. While the outcome is far from certain, our experience in other bands -- most notably 30 meters -- indicates Amateur Radio's compatibility with certain other services as a secondary user."

According to the ITU, WRC-12 will focus on appropriate spectrum sharing mechanisms to make the best use of the digital dividend in the UHF and other frequency bands, providing new opportunities for radiocommunication services. It will also identify the spectrum requirements to increase security for both maritime and aeronautical transport services. Additional spectrum resources will also be identified for scientific and other radiocommunication services, specifically related to the environment, meteorology and climatology, as well as disaster prediction, mitigation and relief. Along with the introduction of more efficient digital services requiring less power consumption, WRC-12 will be a milestone to meet ITU's commitment to achieve climate neutrality with the use of Information and Communications Technologies (ICTs) <http://en.wikipedia.org/wiki/Information_and_communication_technologies> as effective tools to combat climate change and its effects.

Along with IARU volunteers worldwide, Price and Siverling are monitoring developments on a number of other agenda items that could affect Amateur Radio if they take unanticipated turns, including:
* Agenda item 1.14, considering requirements for and implementation of the radiolocation service (radar) between 30-300 MHz.

* Agenda item 1.15, considering possible allocations between 3-50 MHz for oceanographic radar applications.
* Agenda item 1.19, considering regulatory measures to enable software-defined and cognitive radio systems.
* Agenda item 1.22, examining the effect of emissions from short-range devices.

"Oceanographic radar is perhaps our biggest defensive issue," Price said. "Fortunately, its proponents have acknowledged that sharing with Amateur Radio would be problematic."

The ITU preparatory meetings ahead of WRC-12 provide an opportunity to exchange information and views on the ongoing studies regarding WRC-12 agenda items, as well as on the common proposals and positions of the regional groups and other organizations. The discussions in this meeting addressed all WRC-12 agenda items and identified those deserving special consideration for African countries, including the sensitive issue related to the operation of security systems for ships and ports and the shared use of the planned digital TV spectrum by other services.

The Director of ITU's Radiocommunication Bureau Valery Timofeev noted that the agenda for WRC-12 was likely to be as complex as the previous World Radiocommunication Conference held in 2007. "We need to continue the trend toward increasing the number of common and coordinated proposals," he explained. "This process, which highlights the great spirit of international cooperation and consensus building at ITU, has proved to be increasingly successful in the WRC process." Timofeev added that the level of participation at the meeting indicated the importance of the WRC process "to improve regulatory procedures, to provide frequency and orbit resources for new technologies and to strengthen the technical framework for the operation of services."

Recognizing that WRC-12 is an important event for the future of information and communication technologies, ITU Secretary-General Hamadoun Toure, HB9EHT, said the forthcoming conference will be a landmark in achieving ITU's connectivity targets: "WRC-12 will be held only three years ahead of 2015 -- the target date to connect all villages, towns and cities, universities and schools in the world and to achieve the United Nations Millennium Development Goals (MDGs) <http://www.un.org/millenniumgoals/>. If there is any chance to meet these goals, we must rely on ICTs -- omnipresent tools with profound implications for all economic sectors -- to accelerate the process and bridge the digital divide." -- Thanks to the ITU for some information

==> CHANGES IN STORE FOR THE ARRL LETTER

After asking for feedback from ARRL Letter subscribers and reviewing surveys sent to ARRL members, we are changing the way you receive The ARRL Letter. Starting next week -- October 1 -- The ARRL Letter will be available to subscribers in an HTML formatted version. Each message will contain both an HTML and a plain-text version of the Letter, and the recipient's mail program can choose which version to display. For our

members who prefer a plain-text version of the Letter, there will be simple instructions on the ARRL Letter Web page that describe how to view the plain-text version in some of the more common mail programs.

According to ARRL News Editor S. Khrystyne Keane, K1SFA, this new format will allow for more graphics and pictures, as well as occasional articles that feature the technical side of Amateur Radio. We will also be running portions of popular QST features, such as "The Doctor Is IN" and "Hints & Kinks."

"I am very excited about presenting The ARRL Letter in a completely new format," Keane said. "Not only will we be able to add features such as pictures and video, but by offering the Letter in HTML, readers will be able to navigate directly to those stories they are most interested in. The ARRL already offers two other newsletters -- The ARRL Contest Update and The ARRL ARES E-Letter -- in an HTML version. We have received a lot of positive feedback on these two newsletters."

The ARRL Letter first appeared in 1981 as a print publication, available by subscription from the League. In 1991 -- following the technology of the day -- it moved from being a print publication to being published electronically and sent via e-mail as a free service to ARRL members. "Now, once again, we at the ARRL are following technology's path and publishing The ARRL Letter in a new way, moving from plain text to a graphically pleasing interface," Keane explained.

We think you will enjoy this new format, and we welcome your comments. Tell us what you like -- and don't like -- by sending an e-mail to Keane <k1sfa@arrl.org>, with "ARRL Letter Feedback" in the subject line.

==> ARRL: A PROUD HISTORY OF DEFENDING AMATEURS' RIGHTS

The fall operating season is just around the corner. Whether it's because radio conditions improve or just because attention returns to indoor pursuits as the days get shorter, on-the-air activity always picks up at this time of the year.

Do you operate on 40 meters? "If you haven't been on the band lately, you're in for a real treat!" said ARRL Chief Executive Officer David Sumner, K1ZZ. "Years of patient effort by the ARRL and by our sister members of the International Amateur Radio Union (IARU) have paid off. The band is more useful now than it's been in more than 70 years. When you think of 40 meters, you probably think of interference from foreign broadcasters. Here in the Americas, amateurs always have had access to 7,000-7,300 kHz - but we had to tolerate broadcasters in the rest of the world in the upper two-thirds of the band."

Sumner said he can recall the "futility" he felt as a 13-year-old Novice, "trying to make myself heard through the racket with just two crystal-controlled transmitting frequencies to choose from. I remember taking the crystal holders apart and putting pencil lead on the crystals in a vain attempt to slip in between the broadcasting behemoths." At the 2003 World Radiocommunication Conference (WRC-03) -- 40 years later --

he had the privilege of being present in Geneva when it was agreed that amateurs had made the case for a wider worldwide amateur band, free of broadcasting interference." For the first time in the history of radio communication, an HF broadcasting allocation would be shifted in order to accommodate the needs of another radio service -- the Amateur Radio Service!
Sumner called the WRC-03 decision "very gratifying," but said an important question remained: Would the broadcasters really move? "The International Telecommunication Union has no enforcement authority," he explained, "and operation in contravention of the international Radio Regulations is not exactly unknown. In fact, the transition turned out to be quite dramatic. On the last weekend of March, on Friday evening 7,100-7,200 kHz was full of broadcasters as usual -- but as the new seasonal broadcasting schedule took effect on Saturday night the band cleared of all but a few. For the very first time our overseas friends could hear us on 40 meter phone without having to breach the wall of broadcasters! Over the past six months the situation has continued to improve as more broadcasters have complied with the WRC-03 decision. Nighttime operation above 7,200 kHz remains a challenge, but it's not an exaggeration to say that 40 meters is like a whole new band."

Sumner explained that moving hundreds of broadcast transmitters in dozens of countries out of a band didn't just happen: "It took years of patient effort by a global team of volunteers and ARRL professionals, working through the IARU, to overcome objections and marshal the necessary support. It was an expensive undertaking, and it never could have been accomplished without the voluntary contributions - above and beyond their basic dues - of thousands of ARRL members."

Even as we celebrate our reborn 40 meter band, Sumner said that we, as amateurs, must remember that it takes hard work just to hang onto what we have. "As much as we like to pursue new and improved ham bands, most of our effort must go toward frequency defense," he said. "Every day, new uses of the radio spectrum are being conceived. Each one competes for spectrum access with incumbent radio services, including ours. Not only must we defend our allocations against well-heeled backers of licensed services, we must also try to prevent the pollution of the radio spectrum by unlicensed devices. The fight goes on in Washington, Geneva and around the globe -- and there's no end in sight."

Decisions for WRC-12 are being made now that will determine how many administrations -- including the United States - will support a new secondary allocation to the Amateur Service at 500 kHz, and whether proposals for allocations to oceanographic radars will threaten some of our existing HF bands. "We are hard at work meeting these challenges, but we need your help," Sumner said, in asking for support for the ARRL Spectrum Defense Fund. "Members' past response helped us to keep commercial satellites out of the 144 and 420 MHz bands, to gain access to frequencies around 5 MHz, and to win our court challenge of the FCC's flawed Broadband over Power Lines (BPL) rules. New challenges keep cropping up. Currently we are working to ensure that new short-range

medical devices do not impact our ability to use our UHF and microwave bands."

To help in the ARRL's ongoing mission to protect our valuable spectrum, please visit the Spectrum Defense area on the ARRL Web site <https://www.arrl.org/forms/fdefense/>. You can also reach ARRL Chief Development Officer Mary Hobart, K1MMH, at 860-594-0397 or via e-mail <k1mmh@arrl.org>. Special gifts are being offered for contributions, including a mug and pin. More details on thank you gifts can be found on the donation form for the Spectrum Defense Fund.

==> CALL FOR NOMINATIONS: THE ARRL'S BILL LEONARD, W2SKE PROFESSIONAL MEDIA AWARD

Since 1999 when Jeff Holland -- former city editor for "The Enquirer-Journal" in Monroe, North Carolina -- was named the first winner of the Bill Leonard, W2SKE Professional Media Award, there has been only one award given out each year. The award -- honoring the late Bill Leonard, a former president of CBS News -- recognizes a professional journalist whose outstanding coverage best reflects the enjoyment, importance and public service value of the Amateur Radio Service.

"At the time, printed newspapers were still a main news source," said ARRL Media and Public Relations Manager Allen Pitts, W1AGP. "Now there is the Internet, a host of blogs and news sites, audio and video streaming, cell phone alerts and many more news outlets still in development. The world of media and news reporting has been caught in the rip-currents of technology and it's causing the overnight erosion of old models while creating new opportunities."

Pitts remembers when it once was a major accomplishment for an Amateur Radio Public Information Officer (PIO) to get a few column inches in ink. "Now, the same positive PR outcomes can be achieved by placement on community Web sites and inclusion in blogs," he explained. "In the meantime, video capabilities have become available to almost anyone with a cell phone and ever more media outlets are incorporating video clips into their product."

The ARRL Public Relations Committee recognized that one award, looking at only one medium, was no longer the best fit to the current realities of PR, and the best way to update the Leonard Award was to solicit input from the very professionals who worked in this new media arena. With a subcommittee of nationally recognized reporters and media managers, they looked not only at the award itself, but also at ways to make it a catalyst for even more coverage of Amateur Radio topics in the future. Their recommendations were presented to the ARRL Board of Directors this past July. To address both current and coming news modalities, the award was split into three areas:
* Audio formats -- primarily something you listen to
* Visual formats -- primarily something you watch
* Print and Text formats -- primarily something you read

Each of the three categories will have an honorarium of $250 for the best selection within that category, but the PRC can also exercise discretion to withhold an award within a category in any given year based on the quality and content of submissions, Pitts explained.

"Many news outlets have strict rules against reporters receiving any cash or other material prizes from outside sources," he said. "What may be a 'prize' to one person could be seen as 'kickback' to another. So the Leonard honorariums will no longer go to the recipients, but rather to Internal Revenue Service 501[c](3) recognized non-profit organizations of the recipients' choosing. The three recipients will still receive personalized plaques. In this way the recipient can donate the $250 to their favorite charity (or even back to the ARRL). This avoids burdening nominated reporters with any ethics issues."

Complete information on the Bill Leonard Award, including entry and selection criteria, can be found in the November 2009 issue of QST.

==> NEWLY ELECTED SECTION MANAGERS CONVERGE ON NEWINGTON

This weekend, 12 Section Managers who are new -- or returning after a long absence -- to their post are in Newington for an orientation. The primary purposes of the Workshop sessions are to share ideas and to provide basic administrative, management, leadership and motivational training.

"The Section Manager Workshop is an orientation and training event for new Section Managers that have come on board within the last year or so," said Supervisor of the ARRL Field Organization Team Steve Ewald, WV1X. "ARRL has conducted this training each year at HQ for the past several years, and it has been well received by past participants. The Membership and Volunteer Programs Department Staff and its Field Organization Team are the lead coordinators of the event. We also cover the responsibilities and functions of the Section Manager's position, and the SMs are able to visit with ARRL Headquarters staff members and learn more about the many programs that ARRL supports. The Workshop sessions are presented by several ARRL Headquarter staff members who are experts in their respective areas."

Arkansas Section Manager J.M. Rowe, N5XFW; Eastern Massachusetts Section Manager Mike Neilsen, W1MPN; Georgia Section Manager Gene Clark, W4AYK; Iowa Section Manager Tom Brehmer, N0LOH; Los Angeles Section Manager David Greenhut, N6HD; New York City-Long Island Section Manager Mike Lisenco, N2YBB; North Texas Section Manager Jay Urish, W5GM; Oklahoma Section Manager Dean Fekan, KL7MA; San Joaquin Valley Section Manager Dan Pruitt, AE6SX; Southern New Jersey Section Manager George Strayline, W2GSS; South Texas Section Manager Lee Cooper, W5LHC, and Wyoming Section Manager Garth Crowe, N7XKT, are in attendance.

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the

ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, just to name a few.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Him whose strenuous tongue can burst Joy's grape against his palate fine" Cook, K7RA, this week reports: Two large sunspots, 1026 and 1027, both emerged in the past few days. We could see them in advance of their appearance while they formed on the side of the sun previously unseen from earth, via the NASA STEREO mission, mentioned in last week's bulletin. These spots, emerging on the autumnal equinox, should enhance HF propagation, and expect them to increase in size as they move into the most geoeffective position over the next couple of days. We will discuss this more in the Solar Update, available on the ARRL Web site on Friday, September 25. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by John Keats' "Ode on Melancholy" <http://www.bartleby.com/101/628.html>.

==>IN BRIEF:

* This Week on the Radio: Next week, look for the NCCC Sprint on September 25. The Texas QSO Party, the CQ Worldwide DX Contest (RTTY) and Scandinavian Activity Contest (SSB) are all September 26-27. QRP Homebrewer Sprint is September 28, and the Fall 222 MHz Sprint is September 29. Next week, the California QSO Party and the Oceana DX Contest are October 3-4. The Fall 432 MHz Sprint is October 7. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, October 25, 2009, for these online course sessions

beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Welcome USTTI Students: Next month -- October 12-16 -- the ARRL will welcome students from various countries from all over the world who want to learn how to administer and regulate Amateur Radio programs in their home countries. This course, offered by the United States Telecommunications Training Institute (USTTI) <http://ustti.org/>, will help participants create, administer and foster an Amateur Radio Service in their countries. Designed for those in developing countries who regulate and manage their country's Amateur Radio Service, this course will help participants learn just who radio amateurs are. ARRL staff instructors will help course participants discover the ever-expanding universe of Amateur Radio communication. They will explain why Amateur Radio operators -- upwards of three million individuals in virtually every country of the world -- have earned licenses to operate stations in the Service and why they are recognized, both by their governments and internationally, as a valuable voluntary telecommunications resource. Course participants will also discover how a telecommunications administration can bring the benefits of a healthy Amateur Service to its nation. Now in its 27th year, USTTI is a nonprofit venture involving leading US-based communications and information technology corporations and leaders of the federal government cooperating to provide tuition-free management, policy and technical training for talented professionals from the developing world. This is the 25th year the ARRL has participated in the program.

* More CubeSats in Orbit: Early Thursday morning (UTC), an Indian PSLV-C14 rocket carried the Oceansat-2 satellite <http://en.wikipedia.org/wiki/Oceansat-2> to orbit, along with four CubeSats and two RubinSats. The RubinSats are 8 kg research modules that will remain attached to the PSLV-C14 booster. CubeSats are very small satellites, typically only a few inches on each side. As they are a relatively inexpensive research spacecraft, they've become increasingly popular with university science programs. A number of CubeSats use

Amateur Radio frequencies to downlink telemetry, as is the case with this latest group. Early reports indicate that all of the CubeSats are active. You can check out the frequencies and modes of the four satellites on the ARRL Web site <http://www.arrl.org/news/stories/2009/09/23/11090/?nc=1>.

==========
The ARRL Letter is published Thursdays, 50 times each year, by the American Radio Relay League: ARRL -- the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Thursday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1676 - September 25 2009

WITH NEWSLINE: SOME WORDS OF THANKS

The following is a Q-S-T. Ladies and gentlemen, with some thank you's to those who support these newscasts, here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ

--

In November 2008 we heard from the Great South Bay ARC, W2GSB, of West Babylon, NY and Samuel Parnes, KI6OAA of Beverly Hills, CA.

Via PayPal there were W0CE and K0MSP of Midwest Broadcast Engineering and Ronald Hashiro, AH6RH in Hawaii.

In December we heard via PayPal we heard from John Leonard, W9JBL in De Kalb, IL; Joseph Kratky with the Hamfesters Radio Club 2 meter net W9AA and Chuck Harding, who relays Newsline for the Livermore ARC in the bay area on their Monday evening net.

Our volunteer staff who puts these newscasts together thank all of these people who helped bring these newscasts to you, and you can do the same by writing to us at the Newsline Support address given at the end of this newscast, or by going to our website at arnewsline.org.

I'm Andy Jarema, N6TCQ, and we thank you for listening.

--

Andy will be back with us in the near future with more thank-you's to those who have contributed to the support fund. (ARNewsline Support Fund)

**

Now, Amateur Radio Newsline report number 1676 with a release date of Friday, September 25th, 2009 to follow in 5-4-3-2-1. South Africa's long awaited ham radio satellite is in space, a Cycle 24 Sunspot makes an appearance, the Dutch National ham radio society says that D-Star repeaters will not be in the ham satellite subband, a popular DX award program turns 75 and color coding comes to a favorite on-line research tool. Find out the details on Amateur Radio Newsline(tm) report number 1676 coming your way right now.

HAM RADIO IN SPACE: SUMBANDILA SAT NOW IN ORBIT

South Africa's SumbandilaSat is on orbit. Bill Pasternak, WA6ITF, has the details:

--

The third time was a charm. This as SumbandilaSat was successfully launched at 17:55:09 Central African Time on Thursday, September 17. This after the launch had to be postponed twice due to weather and technical problems with the booster that carried it into space.

After attaining orbit the satellite was released from the rocket while over the Antarctic. 10 minutes later it was accessed by the ground station at the Stellenbosch University when the first command was sent to wake up the bird. Despite the low elevation orbit of less than 10 degrees SumbandilaSat responded well by returning its first telemetry.

An intensive period of payload qualification period will now follow during which each system of SumbandilaSat will be tested. This is expected to take up to 3 months after which the command will shift to the CSIR's Satellite Application Center north of Pretoria and eventually opened for general use.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, saying congratulations to the hams of South Africa on their hew satellite -- SumbandilaSat.

--

Launched along with SumbandilaSat was the Meteor M-N1 satellite Late reports indicate that it may be transmitting on 435.365 MHz. Details on this new bird are
http://planet.iitp.ru/english/spacecraft/meteor-m-n1_eng.htm
(SA-AMSAT, Southgate)

PROPAGATION BULLETIN: NEW CYCLE 24 SPOT ON THE FACE OF THE SUN

Some good news from the big circular disk in the daytime sky. Spaceweather reports that Sunspot 1026 emerged on Sunday, September 20th U-T-C to break a string of 19 consecutive spotless days.

Sunspot 1026 is described as being about as wide as the diameter of the Earth. This makes it an easy target for backyard solar telescopes. The Solar and Heliospheric Observatory has measured the spot's magnetic polarity and identified it as a member of new Solar Cycle 24.

Could this be a harbinger of more to come? Spaceweather says its apparently is. So stay tuned and keep your radio tuned in.
(Spaceweather)

**

BREAKING DX NEWS: GLORIOSO ISLAND IS ON THE AIR

Some breaking news in the world of DX. This, with word that the Glorioso Island FT5GA DXpedition team is now active. Operation is reported on all of the high frequency bands using CW, SSB and RTTY but most stateside stations report that signals are very weak.

The team reportedly had some antenna problems at first due to windy weather conditions and later a faulty contact on a WARC band Spiderbeam. That was repaired and indications are that all three stations are now on the air.

Operations will last until October 5th per the FT5GA web page. Its in cyberspace at http://glorieuses2008.free.fr and we will have more DX related items near the end of this weeks newscast. (Glorioso Island DX Team)

RESTRUCTURING FOLLOW-UP: ANOTHER VIEW ON THE DUTCH GOVERNMENT - D-STAR REPEATERS AND THE HAM SATELLITE BAND

A follow-up and also a different story regarding the D-Star repeater subband reallocation in the Netherlands. This time its from Abraham van den Berg, P-B-Zero-A-O-K who is VERON's VHF manager. Norm Seeley, KI7UP, has been following the story and has the latest:

--

VERON PRON Veer On

For those unaware, the VERON is the Dutch national IARU society much like the ARRL is in the national society in the United States. And Abraham van den Berg, PB0AOK, disputes the report by Amsat North America and PE1HZG that the Dutch telecommunications administration is thinking about operating D-Star repeaters in the 437 to 438 MHz band.

Van den Berg says that at this time the amateur service in the Netherlands and neighboring countries suffers from harmful interference caused by the implementation of the Radiolocation service in the 438 to 440 MHz band. And says PB0AOK, for that reason, use of D-Star repeaters with output frequencies in the upper 2 MHz part of the Region 1 70cm band has been hampered.

To solve this problem, recently the Dutch D-Star community came up with a proposal to plan the output frequencies of D-Star repeaters just below 438 MHz and has asked VERON to support this proposal. But says van den Berg, the VERON has decided not to do so/ This, due to incompatibility between the amateur service and amateur-satellite service. Moreover, says PBAOK, the proposal deviates significantly from the IARU Region 1 band plan.

According to PB0AOK, the VERON has made an alternative proposition. This, to amend the Dutch national frequency plan in such a way that it fully complies with article 5 RR of the the European Common Allocation table, as well as the IARU Region 1 band plan.

So now it's a wait and see game between the Dutch national society and that nations telecommunications regulators.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

More on this issue in upcoming Amateur Radio Newsline reports.

RADIO POLITICS: HAM RADIO PREPARES FOR WRC 2012

Ham radio is getting ready for the next major World Radiocommunications conference slated for Geneva, Switzerland from January 23 to February 17, 2012. To get ready, Approximately 200 participants came together in an ITU preliminary meeting that ended September 16 in Geneva. ARRL Technical Relations Specialist Jonathan Siverling, WB3ERA, and IARU Region 1 Vice President Tafa Diop, 6W1KI, were among the participants. Also present were the power players representing the six regional telecommunications organizations including CITEL from the Americas. This meeting was part of a series of ongoing international and regional preparatory meetings to allow government and industry to address the far-reaching and complex agenda of WRC 12. (ARRL, Southgate, others)

**

WORLDBEAT: US GENERALS GIVEN CEPT NOVICE PRIVILEGES IN SOME NATIONS

Radio amateurs with United States General Class licenses to get reciprocal licenses in some CEPT countries, but with limited privileges.

On Thursday, September 10, the Federal Communications Commission released a new Public Notice implementing changes in the European Conference of Postal and Telecommunications Administrations or CEPT reciprocal operating arrangements for US citizens who hold a United States General, Advanced or Amateur Extra class Amateur Radio licenses. While nothing has been altered in regard to Advanced or Extra class licensees, there is good news for those holding the General. US citizens holding a General class license who had lost all CEPT reciprocal privileges in 2008 have now been granted CEPT Novice Radio Amateur License.

But according to the ARRL's Dan Henderson, this is not an across the board permit. Henderson says that it is important to note two things about the agreement. First is that not all European countries have implemented this recommendation. Therefore, a US General class operator does not have reciprocal privileges in many countries, including popular US travel destinations like Italy, the UK or France.

Second, as with any reciprocal operation, the band frequencies and privileges are those allowed by the host country and not the

frequencies and privileges extended by your FCC license while in the United States or its possessions. Therefore, travelers need to make sure they are familiar with the authorized privileges for the CEPT Novice Radio Amateur License in the nation in which they plan to operate. (ARRL, Southgate, others)

CQ MAGAZINE ANNOUNCES 75th ANNIVERSARY WAZ AWARD

In celebration of the 75th anniversary of its Worked All Zones or W-A-Z award program, CQ magazine is announcing a limited-term "Diamond Jubilee W-A-Z award. A special certificate will be issued to amateurs who make contacts in all 40 CQ Zones of the World between November 1, 2009 and December 31, 2010. Certificates will be numbered but there will be no endorsements. Confirmations will not be required. However, it is expected that applicants will continue to uphold amateur radio's long-standing tradition of honesty and self-regulation. Standard WAZ application fees will apply. Complete details on the Diamond Jubilee WAZ Award will be in the October 2009 issue of CQ, and are posted on the CQ website at www.cq-amateur-radio.com. (CQ)

**

COMMUNICATIONS LAW: FCC PROPOSES REGULATING INTERNET CONNECTIVITY SPEED

Its not exactly amateur radio but it will affect hams who use the Internet for such applications as Echolink, IRLP, and other VoIP communications. This as the head of the FCC plans to propose new rules that would prohibit Internet service providers from interfering with the free flow of information and certain applications over their networks. Amateur Radio Newsline's Fred Vobbe, W8HDU, follows happenings at the FCC and has this report:

--

The head of the FCC plans to propose new rules that would prohibit Internet service providers from interfering with the free flow of information and certain applications over their networks, an official at the agency said Saturday.

The Federal Communications Commission chairman, Julius Genachowski, will announce the proposed rules in a speech Monday at the Brookings Institution, a Washington think tank, the official said on condition of anonymity because news of the announcement had not been released.

The proposals would uphold a pledge Barack Obama made during the presidential campaign to support Internet neutrality -- the equal treatment of Internet traffic. That would bar Internet service providers such as Verizon Communications Inc., Comcast Corp. or AT&T Inc., from slowing or blocking certain services or content flowing through their vast networks.

Without strict rules ensuring Net neutrality, consumer watchdogs fear the communications companies could interfere with the transmission of content, such as TV shows delivered over the Internet, that compete with services the ISPs offer, like cable television.

Internet providers have opposed regulations that would inhibit the way they control their networks, arguing they need to be able to make sure applications that consume a lot of bandwidth don't slow Internet access to other users.

"This is about whether I can turn off my cable TV and watch TV over the Internet," said Dave Burstein, editor of the DSL Prime broadband industry newsletter. "Comcast cares about this because they don't want people to turn off their cable TV."

I'm Fred Vobbe, W8HDU, for Amateur Radio Newsline.

--

Many of you may recall that the FCC adopted four principles on Internet policy in 2005. Burstein thinks the FCC probably will adopt a fifth principle on nondiscrimination as part of the expected new rules. (FCC, W8HDU)

**

ENFORCEMENT: FCC TO CONTINUE CBS SUPER BOWL EXPOSURE CASE

The FCC says it wants to further investigate whether CBS' indecency violation in the Janet Jackson Super Bowl costume malfunction was willful. In a brief recently filed to the Third Circuit Appeals Court he FCC contends that the evidence in this case strongly suggests that CBS had access to video delay technology at the time of the 2004 Super Bowl incident. The FCC asked the court to remand the decision back to the Commission so it could investigate further its assertion that the violation was "willful."

The Third Circuit, in reversing the FCC's fine against the broadcast, said the evidence that delay technology was available at the time was scant. The FCC disagrees and wants the chance to determine whether CBS was reckless not to use video delay technology for this broadcast. (B & C)

**

RADIO LAW: FCC TO REASSESS PARENTAL CONTROL OF TELE-VIEWING

The Federal Communications Commission is about to open a reassessment of the V-chip and of family-friendly programming. This to determine if it is possible to have a single-content ratings system that can apply to movies, video games, TV and cellular telephones. The study may also look at ways to ensure that once a TV show or movie is rated, data is readily available whether the program subsequently is viewed on TV, cable, a phone or a computer.

Back in 1996 Congress required TV set makers to include the V-Chip in TVs. This Integrated Circuit technology allows parents and other televiewers the ability to set their TV receivers to screen out shows whose ratings didn't meet their personal standards.

Critics argue that the technology needs updating with a system that can now offer more information, and is less confusing. This is because motion pictures, TV programs and music each use different ratings systems and because some TV programs are rated inconsistently between networks. On the other side the TV networks, cable industry and the National Association of Broadcasters, argue that the current V-Chip system works well giving adult television viewers the ability to lock out material that they do not want their family members to watch. However, studies have found that relatively few American families actually use the V-Chip to control their youngsters viewing habits. (WRAP OnLine, others)

**

NAMES IN THE NEWS: VHF QRP AT QRPACIFICON ON OCTOBER 10

Some names in the news. First up is James Duffey, KK6MC. He says that he will be giving a talk on "VHF and UHF Operating and Contesting for the Beginner and QRPer." This, on October 10th at the NorCal QRP group's annual forum QRPacificon. The venue is the Crowne Plaza Hotel in Milpitas, California. More is on the at http://www.norcalqrp.org/pacificon09.htm (KK6MC)

**

VE4HAY RE-ELECTED RAC MIDWEST DIRECTOR

And congratulations to Derek Hay, VE4HAY, of Winnipeg who has been re-elected as the Midwest Region Director of Radio Amateurs of Canada. Hey ran unopposed and was declared re-elected on September 16th. (RAC)

**

WITH NEWSLINE: NEWSLINE ARCHIVE AT YAHOOGROUPS

Every now and again we receive an e-mail or phone call asking if we keep an on-line archive of old newscasts. The fact is that we used to have one on our website but as the newscast expanded to its present 26

minute length we needed the bandwidth and storage space to accommodate our audio service. So, about 1999 the on-line archive went away.

There are several radio clubs and groups that do have many of our older newscasts in audio form and a search using Google will bring up many of them. And if its only the newscast text that you require then you need only log onto groups dot yahoo dot com slash group slash arnewsline slash messages. There you will find the text of all of our newscasts going back to January 26, 2001. We really do not maintain it as an archive specific but rather its an artifact of the Yahoogroups on-line service. Then again, its free with the only caveat being that you need to join the ARNewsline Yahoogroup to access it which by the way also is free of charge.

As to an audio archive? As we said, some older newscasts can also be found with a Google search at some private websites, but none prior to the mid-1990's. All of those live only on reels of tape or cassettes in a cabinet in our office. With now some 33 years of them, its doubtful you will ever find anything prior to 1996 or thereabouts on-line. (ARNewsline)

**

FUNNY TECHNOLOGY: PIGEON BEATS INTERNET IN AFRICA

A South African information technology company claims that it has proven it was faster for them to transmit data with a carrier pigeon than to send it using the country's leading internet service provider Telkom.

The local news agency SAPA reported the 11-month-old pigeon named Winston took one hour and eight minutes to fly the 50 miles from Unlimited IT's offices to the coastal city of Durban with a data card was strapped to his leg. Including downloading, the transfer took two hours, six minutes and 57 seconds. That's the same time it took for only four percent of the data to be transferred using a Telkom line.

SAPA said Unlimited IT performed the stunt after becoming frustrated with slow internet transmission times. Internet speed and connectivity in Africa is poor because of a bandwidth shortage and also expensive for what service does exist. (Telecom News)

**

WORLDBEAT: AUSTRALIAN CB MOUNTAIN RADIO CHALLENGE

And while we rarely report on 11 meter events here's one where it is legal to make DX contacts and its even an organized happening. The reason is that its in Australia where it seems that the CB rules permit this kind of activity.

The Mountain Radio Challenge is the CB Radio event in question. It began around 1980 with CB'ers in the North Eastern Suburbs of Melbourne who would find mountains to camp on for the night and see what

distances could be achieved on the 27 MHz band using ground wave. The concept was that anyone could talk skip interstate or overseas, but to talk long distance without skip was a challenge.

The Mountain Radio Challenge continues to be held each year on Australian High Frequency CB Channel Ch 27. That translates into 27.275MHz on upper sideband. There's also FM activity on the Australian UHF CB Calling frequency of 477.075MHz. More information on the Mountain Radio Challenge is on the web at www.mrc.cat.net.au (WIA News, VK-VHF List)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO VS THE NET: FACEBOOK TO ADD VIVOX TWO WAY CALLING

Another challenge for radio hobbyists. This with word that the social networking site Facebook is adopting a third-party application that will permit voice contacts that will rival anything possible over the airwaves.

The new technology is not being offered from Vivox. This is Boston based company that provides the integrated voice service for virtual worlds like Second Life and EVE Online, and which already has more than 15 million users worldwide.

Once adopted, the service will allow Facebook users to have conversations with anyone on their friends list just by downloading a Vivox's plug-in. But once installed, the service works almost seamlessly with Facebook, and is intended for everything from one-to-one chat to large group discussions.

Vivox also plans to offer free dial-in numbers that will allow anyone to call into an existing conversation, much as is possible today with call-in phone conferences. This will allow even non-Facebook users will be able to participate.

Kind of like what hams do on the air all the time, minus the radio and antenna. (RW)

**

EMERGING TECHNOLOGY: NEW 3-D IMAGING IN THE UK

Researchers at The University of Nottingham have a new weapon in their arsenal of tools to push back the boundaries of science, engineering, and archaeology. Called the Nanotom, it is described the most advanced 3D X-ray micro Computed Tomography scanner in the world. The Nanotom is expected to help researchers in a wide variety of scientific disciplines to literally see through solids. The machine will make previously difficult investigation much easier as it allows researchers to probe inside objects without having to break into them. (Science Daily)

**

HAM RADIO IN SPACE: ASTRONAUTS TRAIN WITH TERRESTRIAL SCHOOL CONTACTS

Astronauts Timothy Creamer, KC5WKI and Soichi Noguchi, KD5TVP recently participated in Amateur Radio on the International Space Station training sessions. On Wednesday, September 9th the pair spoke with children from the Ralph McCall School in Alberta, Canada.

The training sessions are terrestrial-based amateur radio contacts using equivalent equipment to that which the astronauts will find on the International Space Station. Contact audio was available on the Internet Radio Linking Project. (ANS)

**

RADIO IN SPACE: GIANT HF ANTENNA HEARS SIGNALS FROM THE FINAL FRONTIER

Scientists from the National Research Lab's Space Science and Remote Sensing Divisions, working with researchers from the University of New Mexico and the National Radio Astronomy Observatory in Socorro, New Mexico have seen their first scientific results from the Long Wavelength Demonstrator Array or LWDA antenna system. The group lead by Dr. Jake Hartman utilized radio emissions from the approximately 300 year-old Cassiopeia A supernova remnant to establish baseline measurements for the array.

The Cassiopeia A supernova remnant located in the astronomical constellation Cassiopeia is considered to be one of the largest and most active astronomical radio sources in the sky. The measurements were obtained during field tests and calibration of two prototype antennas for the much larger Long Wavelength Array which will eventually consist of nearly 13,000 similar dipole antennas. Once completed, the full size array will provide an entirely new view of the sky in the radio frequency range of 20 to 80 MHz. Until now this has been one of the least explored regions of the electromagnetic spectrum in radio astronomy. (ScienceOnLine)

**

WORLDBEAT: SOUTH AFRICA UPDATING REPEATER DATA

South Africa is bringing its repeater information database up to date. It began the process on Saturday, September 19th at the repeater frequency planning meeting where Zed-S-4-P-R agreed to undertake

establishing a committee aimed at bringing all of that nations repeater data up to date.

As part of that process, all clubs and repeater coordinators in South Africa are requested to bring the details currently on the South Africa Radio League website up-to-date before September 30th. On the 30th the repeater pages will be removed and a process will be started to correlate frequencies and data with licenses. The South African Radio League says that more details will be made available on how the process will develop after these first steps have been completed. (SARL)

**

ON THE AIR: KL50 CELEBRATES ALASKA DAY OCTOBER 18 -19

On the air, listen out on October 18th and 19th for the call KL5O. It will be on the air celebrating as a special events station in celebration of the 2009 Alaska Day. Operation will be on 160 through 10 meters, including the WARC bands using phone, CW and RTTY. Operation will be scheduled to facilitate working North American stations, though all stations worldwide are encouraged to participate. Also, Alaska state QSO credit for the ARRL Year of the QSO Party award starts with the KL5O special event. QSL's will be available via Logbook to the World and eQSL as well as traditional cards. More information is on the web at www.kl5o.com. (Press release)

**

ON THE AIR: GB70GB CELEBRATES THE GREAT BADDOW ON OCTOBER 3

GB70GB is a Special Special Event callsign taking to the air on Saturday October 3rd. This to celebrate the 70th anniversary of the opening of the Research Center at Great Baddow. That was originally Marconi's Research Laboratories; and later on home to famous staff including Spycatcher author Peter Wright and later to Hovercraft inventor Chris Cockrell. More details of HF operation and its frequencies will be announced closer to the event at www.g0mwt.org.uk (Chelmsford Amateur Radio Society)

**

THE CONTEST CORNER: SCANDINIVIAN ACTIVITY CW SEPT 10 - 20

In contest news, the 51st Scandinavian Activity Contest CW leg takes place on between 1200 UTC on September 19th and 1200 UTC on the 20th. In use will be 80, 40 20, 15 and 10 meters with the contest exchange being a signal report and serial number. Details can be found on-line at www.qrq.se/sac.

And the European P-S-K Club invites amateurs all over the world to participate in the CIS DX QPSK63 Contest. Its also on September 19th and 20th and is strictly a QPSK63 contest now with no other modes are allowed. The maximum output power is 100 watts. All the information can be found at www.cisdx.srars.org. (Southgate)

**

DX

In DX, HA0NAR will be heading to western Africa in early 2010. He plans to be there at the end of January through the end of February with operation from Senegal as 6W stroke HA0NAR and Guinea-Bissau using the call J5NAR. More details on this one are promised in the near future.

And AA8YH is returning to Tunisia on November 16th for 5 weeks. He plans to be active on CW on the weekends from 3V8SS and is willing to accept skeds from "QRP" stations, either CW or SSB. They can contact him via his E-mail address listed on QRZ.com.

VK2CCC will be on the air from Vanuatu with a yet to be announced callsign from October 30th to November 5th. Activity will be "part time", but mainly on 160 and 80 meters CW. QSL via VK2CC, either via the bureau or direct.

G7COD, will once again be active as 8Q7AK from Embudu Island between October 12th and the 25th. His operation will be on 80 through 12 meters including the WARC bands. QSL via his home call.

And reports indicate that Lionel, F5PSA, is active as TJ3SL from the Cameroon. His length of stay is unknown at this time but he's reportedly on 20 through 10 meters using SSB. QSL via his home callsign as well.

Lastly, AA3B, will once again be active from Antigua as V26K between November 26th and December 1st. This will be an all CW operation on the contest HF bands only. Please QSL via AA3B.

(Above from various DXC news sources)

THAT FINAL ITEM: WIKIPEDIA TO COLOR CODE TEXT

And finally this week, if you have ever wondered if something you read on the World Wide Web is accurate, one popular website is about to help in that area. Burt Hicks has more:

--

Anyone who has used the Internet is familiar with the free, open-access on-line encyclopedia called Wikipedia dot com. Starting this fall an optional feature on Wikipedia called "WikiTrust" will color code every word of the on-line encyclopedia based on the reliability of its author and the length of time it has persisted on the page.

WikiTrust assigns a color code to newly edited text using an algorithm that calculates author reputation from the lifespan of their past contributions. It's based on the concept that the longer information persists on the page, the more accurate it's likely to be. Text from questionable sources starts out with a bright orange background, while

text from trusted authors gets a lighter shade. As more people view and edit the new text, it gradually gains more "trust" and turns from orange to what's normal for a given page.

More than 60 million people visit Wikipedia each month to searching its 12 million pages in 260 languages. But despite its popularity, Wikipedia has long suffered criticism from those who say it's not reliable. Critics say that because anyone can contribute, the site is subject to vandalism, bias and misinformation. And as all edits are anonymous, there's no easy way to separate credible information from fake content created by vandals. The operators of Wikipedia hope that WikiTrust will counter those who find fault with the on-line reference source. --

No date yet for when Wiki Trust will be available on-line. (The Wiki Follower Online News)

Some software devs also didn't move with increased security
requirements. Microsoft finally started to clamp down in Windows
Vista. In my opinion long overdue. And Vista got blamed for this.
These standards predate Windows 2000.

For example

1) requiring that folks run their apps as administrators

1) software devs running as a regular user to locate all such
problems.

2) installing apps to \Program Files is obviously fine but put all
your data files in the users Application Data

3) Installing the software in it's own folder on the root of C drive
with a mixture of exes, dlls and data files shouldn't be done either.

Tony (software developer)

The number of hardware and software products that got left by
the wayside by Vista is unprecedented in MS Windows history.
That is one of the BIG reasons for the continued popularity of XP.

No argument at all. I'm both a software developer AND someone
who owns/maintains ~100 windows systems in semi-public use in
several classrooms, so I see it from both ends.

I'm just saying that MS finally raised the bar and enforced it this time
(for better or for worse) and lots of programmers and hardware
vendors made the decision that the cost/benefit ratio was no longer
in their favor. Just saying.

Some game companies figured out that sophisticated users were able to use the "limited user" boundary as a lever to pry open copy-protection features, and therefore demanded that their software run only in Administrator accounts.

Professional system administrators actually welcomed the change, since it meant that their lusers couldn't play games with company property, and that ID-ten-T problems went down proportionately. ;-)

Welcome to the HTML ARRL Letter

The ARRL Letter <http://www.arrl.org/arrlletter/audio/> has been
distributed via e-mail since January 1996, when the Internet was young
and full of possibilities. One of those possibilities -- our weekly
digest of Amateur Radio news -- has not changed all that much in
13-plus years. Until now.

The conversion to HTML is part of the effort to make all ARRL
e-publications more attractive and easier to read -- and more 21st
century.

In response to what ARRL members have told us, we have expanded the
scope of The ARRL Letter. You'll find more of a variety of news and
information -- the news, some enhanced technical content and other
features we think you'll enjoy.

For those who prefer to receive The ARRL Letter in text format, that
option remains available.
```

Please let us know what you think of The ARRL Letter by sending ARRL News Editor and ARRL Letter author S. Khrystyne Keane, K1SFA, an e-mail <k1sfa@arrl.org>. -- Joel P. Kleinman, N1BKE, Managing Editor, QST

==> + REGULATORY: ARRL BOARD ADOPTS GUIDELINES AND RECOMMENDATIONS ON THE APPROPRIATE USE OF AMATEUR RADIO

On Friday, September 25, the ARRL Board of Directors adopted guidelines on the appropriate use of Amateur Radio on behalf of commercial, non-profit and government entities, as well as recommendations for additional steps to be taken by the ARRL to educate radio amateurs and others on how to prepare and train for public service and emergency communications while complying with the current FCC Rules.

At its meeting in July 2009, the ARRL Board created an ad-hoc committee to study the issue and prepare suggested guidelines. The committee submitted its report to the ARRL Executive Committee, which reviewed and revised the document. After additional discussion among Board members by electronic mail and teleconference, the Executive Committee submitted the document to the Board for formal adoption.

Entitled The Commercialization of Amateur Radio: The Rules, The Risks, The Issues <http://www.arrl.org/news/files/ARRL_AppropriateUseGuidelines.pdf>, the document offers guidelines to assist radio amateurs and anyone wishing to utilize the capabilities of Amateur Radio in understanding the FCC Rules that prohibit communications in which the amateur has a pecuniary interest, including communications on behalf of an employer. While the FCC Rules in this regard have not changed in many years, there has been increasing discussion of the issue as growing numbers of employers and non-amateur organizations recognize the value of Amateur Radio as an emergency communications resource and encourage their employees to obtain amateur licenses. Also included are guidelines for evaluating the appropriateness of Amateur Radio volunteers providing communications services to commercial enterprises and other entities for which other communications systems are available.

"The guidelines are not intended to be the last word on the subject, and surely will not be," observed ARRL First Vice President Kay Craigie, N3KN, and chair of the ad-hoc committee. "The report includes several recommendations for additional steps that the ARRL needs to take to help amateurs and the organizations we serve to better understand the Rules and to ensure that what we do to prepare to be of service in emergencies is consistent with the current Rules."

==> + OPERATING: THE 2010 ARRL HANDBOOK: OUR BIGGEST -- AND BEST -- EVER!
With more than 60 authors and reviewers contributing over 70 percent of new or completely revised content, The 2010 ARRL Handbook for Radio Communications <http://www.arrl.org/catalog/?item=NO-HB2010#top> is the biggest Handbook ever. Since it was first published in 1926, the Handbook has been a mainstay for the radio electronics experimenter. A core resource for radio amateurs, hobbyists, engineers and scientists,

the Handbook is the single most authoritative reference on practical communications topics. It is both reference book and tutorial, woven together with practical applications and solutions. The 2010 Handbook -- the 87th edition -- is a useful introduction to radio communication, and featuring the most current material on electronics and Amateur Radio.

<http://www.arrl.org/catalog/?item=NO-HB2010#top> For 2010, The ARRL Handbook for Radio Communications -- with more than 1250 pages -- has been reorganized into five major sections, making it easier than ever to find exactly what you are searching for: Fundamental Theory, Practical Design and Principles, Antenna Systems and Radio Propagation, Equipment Construction and Maintenance, and Station Assembly and Management. "Each chapter has been designed to be either an 'encyclopedia' (providing descriptive overviews of current practices and technology) or 'practical handbook' (focusing on techniques, designs and projects)," Handbook Co-editor H. Ward Silver, N0AX, explained. "In either case, Co-editor Mark Wilson, K1RO, and I tried to ensure that there was enough introductory material to get the newcomer started, as well as plenty of in-depth discussion the experienced amateur will expect." For a closer look inside the 2010 Handbook, click here <http://www.arrl.org/news/stories/2009/09/30/11102/>.

==> + PUBLIC SERVICE: NOMINATIONS NOW BEING ACCEPTED FOR 2009 ARRL HUMANITARIAN AWARD

Nominations are open for the 2009 ARRL International Humanitarian Award <http://www.arrl.org/FandES/field/awards/humanitarian.html>. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster. To learn more about the ARRL International Humanitarian Award, including submission criteria, click here <http://www.arrl.org/news/stories/2009/09/28/11098/?nc=1>.

Product Review: The ICOM IC-7600 HF and 6 Meter Transceiver

<http://www.youtube.com/watch?v=R6N2jgzlbIk> Get a "first look" at the ICOM IC-7600 HF and 6 meter transceiver! Featured in the November 2009 QST Product Review, this rig -- reviewed by NCJ Managing Editor Rick Lindquist, WW3DE (ex-N1RL), and shown in this video <http://www.youtube.com/watch?v=R6N2jgzlbIk> by ARRL Test Engineer Bob Allison, WB1GCM -- represents an integration of ICOM's popular PROIII and the IC-7700/7800 transceivers, both in style, features and capability. Check it out!
==> + PUBLIC SERVICE: HAM APPOINTED CHIEF OF ARMY MARS

On September 25, veteran Army communicator Jim Griffin, KE7LJA, became Chief of the Army Military Affiliate Radio System (MARS <http://www.netcom.army.mil/mars/>). Major General Susan Lawrence,

Commanding General of the 9th Signal Command (Army), named Griffin to succeed Stuart Carter; Carter has held the Chief's post since December 2006. MARS, the Defense Department-sponsored organization of Amateur Radio operators who volunteer for communications support in emergencies, is a component of the 9th SC(A). As a uniformed member of the Signal Corps and subsequently a civil servant, Griffin has amassed 52 years in government service. Before Friday's appointment, he served for two years as Deputy Chief of Army MARS, tasked with the responsibility for construction of its new gateway communications station at Fort Huachuca, Arizona. For more information, click here <http://www.arrl.org/news/stories/2009/09/26/11093/?nc=1>.

==> + OPERATING: INTERNATIONAL REPLY COUPONS (IRCS): OUT WITH THE OLD, IN WITH THE NEW

<http://www.upu.int/news_centre/2008/en/2008-08-08_irc.shtml>It is now time to start dumping your old International Reply Coupons (IRCs). The "Beijing Model No 2 <http://www.dailydx.com/images/IRC-2007-100.jpg>" must be redeemed before December 31, 2009. The new IRC -- the Nairobi Model IRC <http://www.dailydx.com/images/2008-08-08_irc.jpg> -- has been available in the US since September 10 and elsewhere since July; the price is $2.10 each in the US. The Nairobi Model is due to expire in 2013. For more information, click here <http://www.arrl.org/news/stories/2009/09/30/11103/?nc=1>. Thanks to The Daily DX <http://www.dailydx.com/> for the information.

==> + ON THE AIR: 4U1UN CELEBRATES UN GENERAL ASSEMBLY WITH SPECIAL EVENT

To celebrate the 64th General Assembly of the United Nations <http://www.un.org/ga/>, 4U1UN <http://www.qrz.com/callsign.html?callsign=4u1un> -- the Amateur Radio station at the UN -- began operating as 4U64UN <http://www.qrz.com/callsign.html?callsign=4U64UN> on September 22. According to The Daily DX <http://www.dailydx.com/>, 4U64UN will be on the air for 64 days on all bands and modes. QSL via Logbook of The World (LoTW <http://www.arrl.org/lotw>) or direct to Herbert Aeby, HB9BOU. Logs will be uploaded to LoTW once the event is over. QSL cards will be mailed out starting in December 2009.

+ "Hints and Kinks"

Do you have an idea or a simple project that has improved your operating? Maybe you've taken something commonly found around the home and developed a ham radio use for it? Why not share your hints with fellow hams in "Hints and Kinks," a monthly column in QST <http://www.arrl.org/qst>. If we publish your hint, you will receive $20. Send your hints via e-mail <h&k@arrl.org> or to ARRL Headquarters, Attn: "Hints and Kinks," 225 Main St, Newington, CT 06111. Please include your name, call sign, complete mailing address, daytime telephone number and e-mail address.

==> SOLAR UPDATE

Tad "Much have I travell'd in the realms of gold <http://englishhistory.net/keats/poetry/chapmanshomer.html>" Cook, K7RA, this week reports: Sunspot 1026 has faded and 1027 is about to disappear over the Sun's western horizon. The strange thing is that 1027 is still visible as a bright magnetic disturbance when viewed on the STEREO Web site <http://stereo.gsfc.nasa.gov>, but it apparently isn't still visible as a sunspot. The equinox, significant sunspot activity and low geomagnetic indices made for good conditions this week. The 3-month moving average of sunspot numbers -- now including September's data -- is the same as last month's 3-month average, made up from sunspot numbers from June through August. It seems that both June and September had identical average sunspot numbers, so for the last reading, the June data was dropped and the September data was added, and the same 3-month average of 4.0 is the result! We will discuss this more in the Solar Update, available on the ARRL Web site on Friday, October 2. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' On First Looking into Chapman's Homer.

==> THIS WEEK ON THE RADIO

This week, the California QSO Party and the Oceania DX

<http://www.arrl.org/contests/> Contest are October 3-4. The Fall 432 MHz Sprint is October 7. Next week, the ARRL EME Contest is October 10-11. There's an NCCC Sprint October 9 and the YLRL DX/NA YL Anniversary Contest is October 9-11. The 10-10 International 10-10 Day Sprint and the FISTS Fall Sprint are both October 10. On October 10-11, check out the Pennsylvania QSO Party, the Arizona QSO Party and the Oceania DX Contest (CW). The North American Sprint (RTTY), the SKCC Weekend Sprint and the UBA ON Contest (SSB) are October 11. The NAQCC Straight Key/Bug Sprint is October 14. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

ARRL Continuing Education Course Registration

Registration remains open through Sunday, October 25, 2009, for these online course sessions beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education

Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

When I first glanced at this, I thought that it was going to be another promotional piece expounding emergency services. But I figured I'd go to the pdf, and was pleasantly surprised. The ARRL has got this one absolutely right.

The emergency comms people had at some point gotten the wrong idea about amateur participation in emergencies, and were applying their structure to the process. Many of the issues that were pointed out in the pdf file were experienced first hand by myself and others: the "Everything we do is by definition an emergency, so if we're operating, it's an emergency and you have to relinquish your communication devices to us". We don't really need licenses, since what we are doing is emergency work". And thanks, it's been great, but since our employees all have technician licenses now, we don't need you any more - but we still have to have your repeater.". That isn't conjecture - that's from actual conversations (the last was paraphrased - it was more like "Once we have all our guys licensed, we won't have to bother you guys any more)

The success of amateur radio in recent emergency situations has been a great thing, but many of the groups we have worked with have misunderstood the cause for that success. We have been a big help because of the non-organized aspect of our operations, and the lack of structure inherent in our hobby. The groups we are working with are by necessity highly structured, and everything has a process and hierarchy imposed on it.

What has happened is that after seeing the communications success that we have had, those in the services that we have helped have come to the conclusion that if we can only have some of that structure imposed on us, we will just become better. That is where some of the friction started to develop. Having to give the Red Cross our financial information, nor was the "Unpaid Volunteer" position where part of the Amateur's duties would be sweeping the floor or taking out the trash.

So Kudos to the ARRL for seeing the issues brought up as the EC folks started to press a little to hard on the service.

I really don't think this issue is related to structure or a desire to impose it on hams. I think it's a case of Emergency Managers and other responders noticing that ham radio is a valuable resource and trying to take advantage of it. One of the reasons that they're inclined to bypass working with local radio clubs is the issue you cite -- hams insist on being communicators and bristle at any suggestion that they might have to perform any other function during an operation or bow to any authority other than their own.

It's certainly possible to forge a solid relationship between organized hams and local emergency management; there are many examples. But there are also cases in which the hams have become so elitist that the people who are paid to do the planning conclude that they must figure out how to take advantage of the technology without having to deal with the local hams. I'm not implying that this makes it somehow right, but we've brought some of this on ourselves.

And by the way, you've never given the Red Cross any financial information. I presume that you're referring to the flap about background checks, and while there was indeed an issue with the wording on the web site, and there's blame to be assigned on both sides, the Red Cross has never had the slightest bit of interest in your financial information. Whether you've been convicted of a crime, yes. But not how much money you make.

> So Kudos to the ARRL for seeing the issues brought up as the EC folks
> started to press a little to hard on the service.

I agree that the ARRL deserves credit for recognizing a potentially huge issue and providing guidance on how to react to it. For example, I continue to be distressed when I see cases in which people are required to obtain a ham radio license as a condition of employment. While this may in a few cases result in new hams entering the hobby, there is an associated risk that, in my opinion, more than offsets the tiny influx of new hams.

Sometimes success does not breed more success.

>how much money you make.

The actual release form that amateur radio volunteers were asked to sign
included consent for credit checks and mode of living checks, in
addition to criminal background checks. The ARRL was concerned enough
about this to release a position statement cautioning its members to be
careful what they sign:

http://www.arrl.org/announce/ARRL-ARC-bg-check.html

Also, it's generally considered very good advice that one should never
rely merely on vague oral assurances by any party, even the Red Cross,
that contradict the terms of the actual written contract. In the event
of any dispute, it is virtually certain that the terms of the actual
written contract are what will determine the resolution.

If the Red Cross never had any intention of investigating the financial
background of its volunteers, why did it announce a change of policy
(see footnote [1] in the link above)?

If the Red Cross presently has no intention of investigating the
financial background of its volunteers, it should have no problem
updating the written consent form that volunteers are asked to sign.

Let me emphasize that I do not believe that the Red Cross has ulterior
motives or is a dishonorable organization. Rather, that I think that
this matter was badly handled, and volunteers should hesitate to sign
sweeping consent forms that could in principle be used to hand over
significant amounts of private personal information without clearly
defined scopes and purposes stated in writing, as well as credible
expectations that the personal information would be handled with
appropriate security and privacy safeguards.

Paul, just let me say that we are both correct on this issue.

Yes, the release form on the web site was unduly broad.

Yes, it's a good idea to beware of what you sign.

And no, the Red Cross did not get financial information, and has no interest in that aspect, in spite of what it said on the release form that people were asked to agree to on the web site.

The whole thing was an unfortunate series of badly handled communications and personality conflicts between individuals that resulted in significant damage to the relationship between ARRL and the Red Cross. This damage is effectively permanent and a real shame.

> take advantage of it.

Of course. I think that in many cases, problems have arisen when in
the process of taking advantage, toes have been stepped on. It's like
a guest coming into your house and demanding that you repaint the
walls and install new tile. Aside from the analogies. I have always
held that the amateur radio comms work because they don't have much
structure. That being said, it's what they do and understand.

> One of the reasons that they're inclined to
> bypass working with local radio clubs is the issue you cite -- hams

But that is what we are there to do - communicate. Emergency
Communication outfits presumably have people who clean up and fix the
toilets during non-emergency times, I hope. And of course we bow to
authority. But if the authority is telling me to clean the commodes,
I'll do it, and then that will be the last time I volunteer.

> local hams. I'm not implying that this makes it somehow right, but
> we've brought some of this on ourselves.

The problem is that there are several facets of Ham radio. In our own
area. We were told that we would have to give up our repeater during
emergency operations.

The Ham who spent over 10 thousand dollars putting together a repeater system that could catch a 300 mw HT from anywhere in our mountainous county bristled indeed. For you see, we wee told what we were going to do. I don't think that he is being elitist, and I know that there is no chance at all that he will build another. And not one of the Emergency Comm Hams has the technical ability to do anything like it.

And that is what I think is a big part of the issue. We have people who are coming on a bit strong. Those meetings we had resembled a visit from the local government declaring eminent domain. You can't do that with amateur volunteers who are sometimes investing a lot of their own personal money and resources. They are volunteers. There are Hams who are inherently very interested in emcomm, and they should form the core of the ARS involvement. But until we get past the idea that Emergency workers don't need licenses, or that they can't use their Ham radios as a back channel, and that they really shouldn't get too heavy handed about using expensive resources that they are guests on, we can avoid a lot of unneeded strife. And the emergency workers are guests on our repeaters. Just like I'm a guest on our local repeater.

Not how much money I make, but how I spend it. The ARRL certainly seemed to have a concern about that, and as for blame, I think it is prudent to question something that you read. If it was a typo, it was good to get it cleared up. If not, well we should know, I think. I had read of the financial checks before, and the issue was that people who had close contact with victims might steal money from them.

Steve

You write as if you have inside knowledge about what went on but it is plain you are not willing to share it. I will therefore have to go with the motto "by there fruit you shall know them." The Red Cross asked for permission to do checks on the finances and mode of living of it's volunteers, including the volunteers of other organizations that work with them which would include the Amateur Radio Emergency Service (ARES), and a lot of ARES folks balked. The Red Cross then said it was only conducting criminal background checks. The contractor who is performing the background investigations then changed the form that was being used to one that continues to give permission for the contractor to conduct Mode of Living checks on those that sign but is not worded as forthrightly as the form that raised the issue in the first place but only a lawyer is likely to be able to discern that fact. In spite of those facts you take the position that the American Radio Relay League is partly responsible for the tension that causes. I don't get it. What ARRL acts or omissions justify your taking that position. Do you believe it was wrong for the ARRL to warn it's membership about the consequences of signing that form? Do you think it is wrong of the League to point out that the new form continues to give permission for a type of background check that the Red Cross has stated it is not doing? Do

you think that the Red Cross is entirely blameless in failing to supervise it's contractors interactions with Red Cross and Assisting Agency volunteers? Let me put the question more generally. What should the League have done differently? What could we as ARES volunteers do to continue to be of service without inviting an invasion of our privacy by this private firm that is in the business of gathering and selling information about individuals to anyone that they lawfully can. I have read elsewhere that a persons reputation can be visualized as a feather stuffed pillow. Some information can have the same effect as taking that pillow up to the top of a high rise building, ripping it open, and throwing it up in a strong wind. Mind you the information need not be true or even substantially true to make the damage impossible to ever repair. In fact a statement by a single malicious or damnably careless utterance one of the persons that the contractor interviews could make your life a living hell. By signing the form you have undoubtedly agreed to hold the contractor harmless for the misstatements or outright lies they are told by others. Why would I or anyone else knowingly agree to that possibility.

==> + REGULATORY: COUNTERPART BILL TO HR 2160 INTRODUCED IN SENATE

On Tuesday, October 6, Senator Joe Lieberman (ID-CT), along with
Senator Susan Collins (R-ME), introduced Senate Bill 1755
<http://www.arrl.org/news/files/SenateBill1755.pdf>, The Amateur Radio
Emergency Communications Enhancement Act of 2009. Similar to HR 2160
<http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&doc
id=f:h2160ih.txt.pdf>
-- also called The Amateur Radio Emergency Communications Enhancement
Act of 2009 -- that was introduced
```

<http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1> this past April by Representative Sheila Jackson-Lee (D-TX-18), the bill, if passed, would direct the Department of Homeland Security (DHS <http://www.dhs.gov/index.shtm>) to undertake a study on emergency communications. S 1755 points out that "There is a strong Federal interest in the effective performance of Amateur Radio Service stations, and that performance must be given -- (A) support at all levels of government; and (B) protection against unreasonable regulation and impediments to the provision of the valuable communications provided by such stations."

"We are delighted to have the sponsorship of both the Chairman and the Ranking Member of the Homeland Security and Governmental Affairs Committee <http://hsgac.senate.gov/public/>, and especially to have the support of Senator Lieberman from the ARRL's home state," said ARRL Chief Executive Officer David Sumner, K1ZZ. "The bill could not have a better pedigree. Click here <http://www.arrl.org/news/stories/2009/10/07/11127/?nc=1> for more information on S 1755."

==> + FCC ENFORCEMENT: FCC FINES CALIFORNIA FIRM $4000 FOR OPERATING ON AMATEUR FREQUENCIES

On September 28, the FCC issued a Notice of Apparent Liability for Forfeiture (NAL) to a California firm that the Commission maintains was using amateur frequencies to conduct business. According to the Commission, Shimmick Construction Company, Inc/Obayashi Corporation, Joint Venture ("Shimmick-Obayashi") -- licensees of stations WQER756, WQEN793, WQJI360 and WQKG818 -- apparently repeatedly violated Section 1.903(a) of the Commission's Rules "by failing to operate only in accordance with the rules applicable to their particular service as set forth in the Commission's Rules and with a valid authorization granted by the Commission." Click here <http://www.arrl.org/news/stories/2009/10/06/11124/?nc=1> for more information.

==> EVENTS: ARRL GEARS UP FOR FOURTH ANNUAL ON-LINE AUCTION

The Fourth Annual ARRL On-Line Auction begins its preview week on Thursday, October 15. With more than 160 items up for bid -- and more being added every day -- this event promises to have something for just about everyone. The auction kicks off Thursday, October 22 and runs through Thursday, October 29 on the ARRL Web site. Proceeds from the auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as create instructional materials. Click here <http://www.arrl.org/news/stories/2009/10/06/11125/?nc=1> to discover just what the ARRL Auction has in store for 2009.

==> + ARRL PUBLICATIONS: LOOK FOR THE NOVEMBER ISSUE OF QST IN YOUR MAILBOX

The November issue of QST <http://www.arrl.org/qst> is jam-packed with all sorts of news and information today's Amateur Radio operator needs. >From product reviews to construction projects to public service, the upcoming issue of QST has something for just about everyone.

A. Robert Patzlaff, W9JQT, takes a look at "The Rockless, a VFO Controlled Low Power Transceiver." In this article, Patzlaff builds on the Rock-Mite -- profiled in the April 2003 issue of QST <http://p1k.arrl.org/cgi-bin/topdf.cg?id=103934&pub=qst> -- and modifies this basic CW transceiver to work with a variable frequency oscillator. Jean-Yves Morin, VE2MHZ, presents a "Removable Car Window Antenna with Cross Over Connector." Make your go-kit ready to go for any vehicle with this no-holes mounting arrangement.

With the cold wind blowing on the long winter nights this past January, Poul-Erik Karlshoj, OZ4UN, got to wondering about the LDE <http://en.wikipedia.org/wiki/LDE>s he encountered while QSOing with a Spanish amateur. Read about his experience in "Observation of Long Delayed Echoes on 80 Meters." ARRL Education Project Coordinator Mark Spencer, WA8SME, describes the newest program in the Teachers Institute on Wireless Technology in his article, "The 2009 Teachers Institute Introduces Advanced Satellite Workshop."

ARRL Contest Branch Manager Sean Kutzko, KX9X, in his column "This Month in Contesting," discusses the "crown jewel" of W/VE contesting -- the ARRL November Sweepstakes! And now that the 2009-2010 Contest Season is in full swing, catch up on all the upcoming contest activity with this month's "Contest Corral."

If you read last week's ARRL Letter <http://www.arrl.org/arrlletter/index.html?issue=2009-10-01>, you saw the video <http://www.youtube.com/watch?v=R6N2jgzlbIk> featuring ARRL Test Engineer Bob Allison, WB1GCM introduce the ICOM IC-7600 HF and 6 meter transceiver. Now is your chance to get up close and personal with this rig. NCJ <http://www.arrl.org/ncj> Managing Editor Rick Lindquist, WW3DE (ex-N1RL), reviews the 7600, calling it "a superb synthesis of ICOM's popular PROIII and the IC-7700/7800 transceivers, both in styles, features and capability. Another winner!" Allison also provides an update to October's Product Review, the FlexRadio FLEX-3000.

Of course, the November issue includes the variety of columns you know and love: "Happenings," "Hints & Kinks," "The Doctor Is IN," "How's DX," "Eclectic Technology," "World Above 50 MHz," "Hamspeak" and more. Look for your November issue to arrive soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership <http://www.arrl.org/join>. To join or renew your ARRL membership, please visit the ARRL Web page <http://www.arrl.org/join>.

==> + INTERNATIONAL: OLDEST NATIONAL AMATEUR RADIO SOCIETY MARKS 100TH ANNIVERSARY

In 2010, the Wireless Institute of Australia (WIA) -- the oldest national Amateur Radio society -- will celebrate its 100th anniversary. On March 11, 1910, the WIA had its beginnings when a group of wireless pioneers gathered at the Hotel Australia, Martin Place in Sydney. These early hams wanted to protect their interests and rights against what they considered to be harsh treatment by authorities -- and a high license fee. Chairman of the founding meeting, George Taylor, proposed "the formation of an institution amongst experimenters and enthusiasts in wireless for their mutual benefit." From that meeting, the Institute of Wireless Telegraphy of Australia -- later, the WIA -- was formed. Since its founding, the WIA has continued to protect and enhance the privileges of radio amateurs and to promote Amateur Radio in Australia and beyond. Click here <http://www.arrl.org/news/stories/2009/10/06/11121/?nc=1> for more information on the WIA's centennial celebration.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature is a concise monthly update of some of the things ARRL is doing on behalf of its members. This installment <http://www.arrl.org/news/features/2009/10/02/11109/?nc=1> covers the month of September.

==> DID YOU KNOW?

Did you know that the K3LR Multi-Multi Team <http://www.k3lr.com/> consumes more than 200 cups of coffee during a 48 hour contest?

==> + ARRL FIELD ORGANIZATION: 2009 SECTION MANAGERS WORKSHOP: A LEARNING EXPERIENCE

The Annual Section Manager (SM) Workshop -- held September 25-27 --

afforded 12 newly elected SMs (including three who began their first terms of office October 1) to visit ARRL Headquarters. During the extended weekend gathering, participants not only got to meet many Headquarters staff members, but also learned some of the ins and outs of how to be effective Section leaders and administrators. The primary purposes of the Workshop sessions were to share ideas and to provide basic administrative, management, leadership and motivational training. Click here <http://www.arrl.org/news/stories/2009/10/05/11119/?nc=1> for more information on the 2009 ARRL Section Managers workshop.

==> + AMATEUR RADIO AND SCOUTING: SCOUTING JAMBOREE ON THE AIR (JOTA)

<http://www.youtube.com/watch?v=OQIHdml8inU> October 17 and 18 will mark the 52nd worldwide Scouting Jamboree on the Air (JOTA). Held the third full weekend in October each year, this is the premier operating event for Amateur Radio and Scouting around the world. Click here <http://www.arrl.org/news/stories/2009/10/07/11122/> to join QEX Editor and Staff Liaison to the ARRL Ad Hoc Committee on Scouting Larry Wolfgang, WR1B, to find out ways to interest youth in Amateur Radio.

==> SOLAR UPDATE

Tad "Like the bright spots that move about the Sun <http://www.bartleby.com/126/12.html>" Cook, K7RA, this week reports: Sweet memories of the 11-day run of sunspots toward the end of last month are fading, and so far, the days of zero sunspots are at six, with the last sunspot seen on October 1. A peek at the latest STEREO images <http://stereo.gsfc.nasa.gov/> shows two active areas in our Sun's southern hemisphere beyond our direct view, but it is hard to tell if these will emerge as sunspots when they appear over the eastern limb. A rough guess has the first one possibly emerging around October 10, with the second around a week later. Currently, the solar flux forecast shows flux values lower then 70 through October 15, then around 72 during the two-week period from October 16-30. The same NOAA/USAF forecast predicts the same very quiet geomagnetic conditions that we've seen for some time, with planetary A index around 5. Two very small increases are predicted for October 11-12 -- with an A index of 7 -- and October 24-25, with the A index at 8. Average sunspot numbers for the week dropped 15.3 points below the September 24-30 period, and the average daily solar flux for the week declined 2.2 points to 70.5. We'll also go over some e-mail about propagation via ground fog -- mentioned in last week's bulletin -- in the Solar Update, available on the ARRL Web site on Friday, October 9. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' To My Brother George <http://www.bartleby.com/126/12.html>.

==> THIS WEEK ON THE RADIO

This week, the ARRL EME Contest <http://www.arrl.org/contests/rules/2009/eme.html> is October 10-11. There's an NCCC Sprint October 9 and the YLRL DX/NA YL Anniversary Contest is October 9-11. The 10-10 International 10-10 Day Sprint and the FISTS Fall Sprint are both October 10. On October 10-11, check out the Pennsylvania QSO Party, the Arizona QSO Party and the Oceania DX Contest (CW). The North American Sprint (RTTY), the SKCC Weekend Sprint and the UBA ON Contest (SSB) are October 11. The NAQCC Straight Key/Bug Sprint is October 14. Next week, look for the ARRL School Club Roundup <http://www.arrl.org/SCR/> October 19-23. There's another NCCC Sprint October 16. The Iowa QSO Party, the Feld Hell Sprint and the Microwave Fall Sprint are October 17. On October 17-18, check out the New York QSO Party, JARTS WW RTTY Contest, the Stew Perry Topband Challenge, the Worked All Germany Contest and the W/VE Islands QSO Party. The Illinois QSO Party is October 18-19 and the Run for the Bacon QRP Contest is October 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + ARRL RECOGNIZES: PAUL DANZER, N1II, WINS SEPTEMBER QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for September is Paul Danzer, N1II, for his article "A Simple Transformer to Measure Your Antenna Current." Congratulations, Paul! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the October issue by Saturday, October 31.

==> OPERATING: HAMS FACE NEW RULES ON ONTARIO ROADWAYS

The Ministry of Transportation in Ontario, Canada announced on September 30 that Bill 118 <http://www.ontla.on.ca/bills/bills-files/39_Parliament/Session1/b118ra.pdf> concerning distracted driving will take effect on October 26, 2009. According to Radio Amateurs of Canada (RAC <http://www.rac.ca/>) Vice President for Public Relations Peter West, VE3HG, the new law makes it illegal for drivers to talk, text, type, dial or e-mail using handheld cell phones and other handheld communications and entertainment devices. Following a three-month period that begins October 26 where the focus will be on educating drivers, police will start issuing tickets on February 1, 2010 <http://news.ontario.ca/mto/en/2009/09/ban-on-hand-held-devices-starts-in-october.html>.
"All two-way radios in all vehicles -- with the exception of emergency responding vehicles -- must be hands-free in three years' time," he posted on the RAC's blog <http://racblog.wordpress.com/2009/09/30/new-rules-on-ontario-roadways/>.
"This news comes from the official government staffer who has been in communications with Radio Amateurs of Canada over the last year. At the end of the three-year exemption, all commercial, CB and Amateur Radio equipment used in moving vehicles by the vehicle operator must be hands-free in operation."

==> OPERATING: WEBINAR ON REMOTE CONTROL OPERATING PLANNED

With the growing limits imposed on hams due to antenna restrictions, interest is growing in operating amateur stations by remote control. With that in mind, Bob Arnold, N2JEU, one of the pioneers of Internet remote station control, is organizing an Internet-based live conference, or webinar, on the topic. The conference would feature a guest panel comprised of amateurs currently involved in remote operations, both at the operating and software levels. Interested hams could listen to the live audio stream and could ask questions via "text chat." Since he is presently organizing resources for this online event, Arnold is looking for feedback on what topics listeners would like to see addressed. He is also looking for information from people currently operating online remote stations. There is still room on the guest panel for additional participants. Authors of software that make remote operation possible are also asked to respond. If you would like

to participate either as a guest or a listener, please contact Arnold via e-mail <n2jeu@ralabs.com> or visit this Web site <http://www.n2jeu.net/> for any additional information on the conference as it becomes available.

==> OPERATING: ANGOLA OPERATION APPROVED FOR DXCC CREDIT

ARRL DXCC Manager Bill Moore, NC1L, reports that the current Angola operation -- D2QMN -- has been approved for DXCC credit. "If you had cards that were recently rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk and you will be placed on the list for update," Moore said.

==> + AMATEUR RADIO IN SPACE: ASTRONAUT FERNANDO "FRANK" CALDEIRO, KE4RFI (SK)

NASA Astronaut Fernando "Frank" Caldeiro, KE4RFI, passed away on October 3 after a more than two year battle with a brain tumor. He was 51. Caldeiro was a member of the Astronaut Class of 1996 and most recently was assigned to the WB-57 High Altitude Research Program within the Aircraft Operations Division at Ellington Field in Houston. In that role, he directed the integration and conducted the operation of high-altitude atmospheric research experiments carried on board the NASA WB-57 aircraft. "Frank was a valued member of the astronaut corps and the Flight Crew Operations team," said NASA's Director of Flight Crew Operations Brent Jett. "He provided a wealth of experience and made significant contributions to the success of both the WB-57 project and the space shuttle program. He will be missed by all those who knew him at NASA. Our hearts go out to his family." Caldeiro was born in Buenos Aires, Argentina, but he considered New York City and Merritt Island, Florida, to be his hometowns. He is survived by his wife, the former Donna Marie Emero of Huntington Beach, California, and two daughters.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

<http://www.arrl.org/cep/student/>Registration remains open through Sunday, October 25, 2009, for these online course sessions beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1678 - October 9 2009

Amateur Radio Newsline report number 1678 with a release date of
Friday, October 9th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The rare call 4U1UN will come back on the
air for one week only this month with an all star cast at the mics and
keys. Also, ham radio assists in the wake of the Sumatra earthquake,
hams are safe on American Samoa following a Tsunami, a California
concrete hauling company faces a fine for operating in the two meter
ham band and a popular hamfest returns after an absence of 13 years.
Find out the details on Amateur Radio Newsline(tm) report number 1678
coming your way right now.

(Billboard Cart Here)

**

RADIO CELEBRATION: 4U1UN ACTIVITY WEEK FROM NYC

4U1UN, the United Nations Headquarters station in New York City will
make a rare appearance on the air from October 19th to the 25th .
This, with an all star line-up of top gun DX'ers and contester's at the
controls of the famed station. Amateur Radio Newsline's Norm Seeley,
KI7UP, has the details:

--

The list of operators reads like a whose who in the worlds of
contesting and DX'ing. Names like Marti Laine, OH2BH, from
Finland,.Roger Western, G3SXW from the U-K. Kaz Watanabe, JK3GAD from
Japan and Gene Schumat, UA9AB, from Asiatic Russia, to mention only a
few. In all there will be about two dozen of the best of the best
bringing 4U1UN to life in celebration of 4U1UN Activity Week.

For those not aware, 4U1UN may be geographically located on Manhattan's
East side but as far as ham radio is concerned it is considered a DXCC
entity unto itself. It became rather rare after 911 when new security
measures were put in place. As a result its not often that 4U1UN takes
to the airwaves. In fact it has to be a special event such as this to
bring the station on. This is one of those rare occasions but as the
operators note security access to the building is heavily restricted.
None the less, the team says that it will do its best to make this rare
station available to all.

As to an operating schedule. Its going to be restricted to 12"00 to 04:00 UTC each day. That translates into 8 a.m. to midnight Eastern Daylight Time. All-night activity is planned for Friday the 23rd and Saturday the 24th of October. The 24th is United Nations Day.

Logs for 4U1UN will be uploaded to Logbook to the World after the operation is completed. All QSL requests go via HB9BOU.

And I'm Norm Seeley, KI7UP, in Scottsdale, Arizona, reporting for the Amateur Radio Newsline.

--

In addition to the commemorative 4U1UN operation several of the team members will participate in the CQ World-Wide SSB Contest. They will be entering in the Two Transmitter or M2 category.

And this final note. Keep an ear open for the callsign 4U64UN to be active until mid-November. It will be on to celebrate the 64th annual UN General Assembly.

(NQ2G / LA5IIA, OH2BN, Southgate)

**

BREAKING DX NEWS: MIDWAY ISLAND COMES ON THE AIR

And some late breaking DX news. A multi-national team of 18 operators will activate Midway Island at about the time this newscast goes on the air and is expected to continue through October 19th. They are signing K4M and will operate from Sand Island.

The U.S. Fish & Wildlife Service has authorized this amateur radio operation from this rare U.S. entity for only a 10 day period. This is the first amateur radio activity from Midway in almost 10 years. Midway Island ranks number 24 world-wide and number 13 in Europe on the DX Magazine's "Most Wanted List".

We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

RADIO LAW: SENATE BILL INTRODUCED TO STUDY HAM RADIO EMCOMM

A companion bill to the Amateur Radio Emergency Communications Enhancement Act of 2009 was introduced in the U.S. Senate on Tuesday, October 6 by Connecticut Democrat Joe Lieberman and Maine Republican Susan Collins.

Titled Senate Bill 1755, it carries the same name as the House measure introduced this past April by Representative Sheila Jackson-Lee. The bill, if passed, would direct the Department of Homeland Security to undertake a study on emergency communications with an emphasis on the role that ham radio operators play.

S 1755 points out that "There is a strong Federal interest in the effective performance of Amateur Radio Service stations, and that performance must be given support at all levels of government; and protection against unreasonable regulation and impediments to the provision of the valuable communications provided by such stations.

Introduction of S 1755 is the result of many months of groundwork laid by the American Radio Relay League and appears to be directly based on the basis and purpose of the service. This as outlined in Section 97.1 of the FCC rules. (ARRL)

**

RESCUE RADIO: HAMS HELP IN THE AFTERMATH OF WEST SUMATRA QUAKE

A number of amateur radio stations are reportedly assisting in the aftermath of the earthquake in Western Sumatra. According to information supplied to the Southgate news, station YB5ZA is located in the Governor's office of West Sumatra province, and is operational in support of the disaster management command post. Its said to be are operating on 7.0650 MHz on 40 meters as well as on 145.500 MHz FM simplex. YB5ZA is reportedly also supporting a 2 meter repeater on the 146.260 in and 146.860 MHz out channel pair.

Another station involved in relief efforts is YB5ZDD. It is on the air using 7.065 MHz on SSB from the airport in Padang City. Lastly, YB1TY has established an iQSO gateway via iqso.orari.net to handle messaging related to disaster relief. All of these operations and possibly others are expected to be operational for some time. (Southgate, Various)

**

RESCUE RADIO: HAMS SURVIVE KH8 TSUNAMI

And some good news about several hams living on American Samoa. Lee Wical, KH6BZF, in Hawaii has informed the Ohio Penn DX Newsletter that American Samoa Amateur Radio Association President Larry Gandy, AH8LG, his wife Uti, KH8FO and their family are safe and sound. This, after the tsunami that hit a week ago.

Larry is currently on solar power as the island power is spotty at best. Also, his shop in Pago Pago harbor did sustain some damage.

KH6BZF adds that KH8AA is reportedly safe as well. (KH6BZF)

**

RESTRUCTIRING: CANADIAN HAMS TO SHARE WITH MILITARY SYSTEM ON 70 CM

Industry Canada has informed Radio Amateurs of Canada that it has authorized the Department of National Defense to use a digital system called Enhanced Position Location Reporting System or EPLRS in the 430 to 450 MHz shared 70 centimeter band. The EPLRS system consists of mobile, fixed, transportable and airborne stations that use 5 MHz-wide

spread spectrum channels to provide strategic telemetry information for military platforms.

This authorization is on a no-protection, non-interference basis, which means that no new restrictions will be imposed on Canadian amateur operations in this band as a result. Industry Canada says that there is a slight chance of minor interference to amateur radio systems. Typically in the form of a minor audible clicking noise. If Canadian amateurs encounter such interference, they are requested to report it by e-mail to Radio Amateurs of Canada at regulatory at rac dot ca. The information reported should include the geographical location, date, time, frequency and mode being used by the amateur station, and a description of the interference. (RAC)

**

RADIO RULES: ONTARIO CANADA ENACTS HANDFREE RULES THAT WILL IMPACT HAMS

If you are a ham living in the Canadian Province of Ontario, or planning to visit, listen up. On Wednesday, September 30th the Ontario Ministry of Transportation in announced that Bill 118 that bans several distractions while operating a motor vehicle in the Province will take effect on October 26, 2009.

According to Radio Amateurs of Canada, the new law makes it a violation for drivers to talk, text, type, dial or e-mail using handheld cell phones or any other handheld communications or entertainment devices. Following a three-month educational period police will start issuing tickets on February 1, 2010.

The new law does directly impact ham radio mobile operations although not immediately. Posting to the Radio Amateurs of Canada blog page, Vice President for Public Relations Peter West, VE3HG, noted that all two-way radios in all vehicles must be hands-free in three years time. The only permanent exception is for emergency response vehicles. At the end of the three-year interim exemption, all commercial, CB and Amateur Radio equipment used in moving vehicles by the vehicle operator must be set up for hands-free operation. (RAC)

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N6ME repeater serving Fullerton California.

(5 sec pause here)

**

ENFORCEMENT: CALIFORNIA STATION FINED $5000 FOR AIRING WRONG EAS

The FCC has proposed a $5000 fine against a California religious broadcaster who inadvertently sent out the wrong message during a designated test. This, even though the station is a volunteer in the EAS program. Bruce Tennant, K6PZW, has the details:

--

The Notice of Apparent Liability for Forfeiture was issued to Calvary Chapel of Costa Mesa, Inc., licensee of FM radio station KWVE in San Clemente, California. KWVE is a Local Primary or LP station designated to initiate the transmission of Emergency Activation System tests and alerts in several counties.

On October 19, 2008 the Commission's Enforcement Bureau says that it received a complaint alleging that KWVE transmitted commercial programming and an advertisement as part of an EAS test message. This in turn caused the programming and advertisement to be retransmitted by other broadcast stations and cable systems in the area.

On August 27, 2009, the FCC Spectrum Enforcement Division issued a letter of inquiry to the Calvary Chapel directing it to respond to the allegations against station KWVE. On September 9th Calvary Chapel did so and admitted that the incident had occurred. It called it a simple mistake caused by an employee who intended to run a scheduled weekly EAS test instead ran an unscheduled Required Monthly Test or RMT instead. It also admitted that the board operator failed to transmit the End of Message or EOM code and the message advising that the test had been concluded. Calvary Chapel categorized the incident as solely an operator error and did not constitute a willful or repeated violation under the of the Commissions Rules

But the FCC disagrees. It says KWVE is charged with the responsibility of knowing and complying with the terms of its authorization, of the Communications Act and the FCC Rules. This includes the required procedures for conducting EAS tests. Moreover, the Commission has long held that licensees are responsible for the acts and omission of their employees and independent contractors. As such it has consistently refused to excuse licensees from forfeiture penalties where the actions of employees or independent contractors have resulted in violations.

Calvary Chapel of Costa Mesa was given the usual 30 days to pay the fine or to file an appeal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

But that's not where this enforcement case ends. The CGC Communicator newsletter notes that a number of prominent people in the EAS community have stepped forward with plans to tell the FCC that they believe that the fine is inappropriate. These experts note that In short they note that Local Primary stations volunteer their services to the nation, and

some of them are beginning to ask if its worth the added responsibility of being an Local Primary if they, too, will be subject to fines for occasional slip-ups. (FCC, CGC)

**

ENFORCEMENT: A CONCRETE FINE FOR OPERATING IN THE 2M HAM BAND

A California firm has been issued a proposed $4000 fine for operating on amateur radio frequencies. This as the FCC issues a Notice of Apparent Liability for Forfeiture to the Shimmick Construction Company Inc. after being caught operating a dispatch service in the 2 meter band.

In late May the FCC's Los Angeles office received several complaints that a Yorba Linda, California, concrete delivery company was operating numerous mobile stations in on 146.025 MHz. On May 26th, an agent used direction finding gear to locate the source of the transmissions that were not identified by call sign.

On May 27th the agent visited the site and spoke with the supervisor of the on-site concrete plant. The supervisor allowed the agent to inspect several of the handheld radios in use at the site where it was found that a number of portable transceivers were programmed to 146.025 MHz.

In its follow-up investigation the FCC determined that the two companies had formed the joint venture called Shimmick-Obayashi -- Shimmick Construction Inc and Obayashi Corporation and that both were Commission licensees. However none of these licenses permitted operation in any ham radio band. As a result, a proposed $4000 has been issued to the twin companies which has the usual 30 days to pay or to file an appeal. (FCC)

**

THE SOCIAL SCENE: THE NEW ORLEANS HAMFEST IS BACK

A popular hamfest that's been missing in action for several years has made a triumphant return. The place is New Orleans and Don Wilbanks, AE5DW, was there;

--

Saturday, October 3rd saw the return of something New Orleans radio amateurs had not experienced in 13 years& a New Orleans hamfest. The last New Orleans hamfest was held in November of 1996 and, for many reasons, didn't return until 2009.

By all accounts, the hams of the Crescent City were ready and the fest was an unqualified sucess. Keith Barnes, W5KB, president of the Jefferson Amateur Radio Club who, in association with the Delta DX Association and the New Orleans Amateur Radio Club sponsored the event, says there were many positive comments about all aspects of the fest

from the venue, hotel location and venders. Keith says it takes countless hours to put on the 8 hour party, but with the help of area hams it all went smoothly. Other area clubs pitched in as well. The Ozone ARC lent their prize drum and the Amateur Radio Disaster Services of Louisiana (SELCOM) provided their 146.86 repeater for talk-in.

Icom and MFJ were there showing their latest toys as well as several venders from surrounding states.

The idea of resurrecting the hamfest began several years ago by one the original committee members of the original New Orleans Hamfest which was called AMACOM, the New Orleans Ham and Computer Festival.

Seldon Ohlsson W5LMR had often brought up reprising the fest and for whatever reason it was not done. After moving back into the Jefferson Amateur Radio Club House this last January, after having renovated it post Katrina, (Katrina's flood waters destroyed everything that the club had owned) the idea of resurrecting and co-sponsoring a Hamfest for New Orleans was brought up again. The membership said yes. It was a sometimes bumpy road, but on Saturday, October 3, the dream was realized.

Sadly, W5LMR became a silent key a few years ago. While he didn't live to see his dream realized, I know he was there in spirit and would have been the first to pitch in and help.

I was there and I had a great time! Here's to many more hamfests in the great city of New Orleans!

>From 50 miles up the road in Picayune , Mississippi, Don Wilbanks, AE5DW for the Amateur Radio Newsline.

--

The bottom line. Hams in the New Orleans area were happy to see this hamfest return. (AE5DW)

**

PUBLIC SERVICE: D-STAR REPLACES PACKET AT MEDTRONIC MARATHON

D-Star text messaging has now replaced packet radio in the Minneapolis and Sait Paul, Minnesota, Medtronic Twin Cities Marathon. This after another flawless operation with the new mode in 2009.

According to the amateur radio team supporting the event, five Icom D-Star RP-1D access points installed on Twin Cities building rooftops have proven to be 100% reliable. This included the unusually warm 2007 race where more than 50 runners were sent to area hospitals.

Team member Erik Westgard, NY9D, say that Packet radio's low data rate, complexity of the character mode interface, and user training issues have put that aging mode on the back burner. Westhgard noted that using D-Star messaging means that any available operator can use

the groups web based missing runner application. This means that they can be helping family members far more quickly.

In 2010 look for an expansion of D-Star in this event. This, as the support team hopes to begin phasing in D-Star digital voice. This they say will allow the concurrent use of low speed data messaging as well as voice contacts. (WB9QZB)

**

PUBLIC SERVICE: EDUCATIONAL CONTACT USES D-STAR INTERNATIONAL LINK

D-Star has been used for a transatlantic hookup between students in two schools separated by about 8000 miles. This as pupils at St. Marys Catholic School in Kent in the United Kingdom got the chance to speak with their counterparts at St, Marys Catholic School in Temple, Texas via a D-Star based ham radio link-up.

The contact took place on Tuesday, October 5th. The students at both schools had prepared questions to ask each other. This included such diverse subjects as sports, television, classroom subjects and culture. They were also treated to presentations at before the contact to learn more about what amateur radio is.

Brian Joyner, G8ZYZ, and Catherine Block, M1CVF, handled the duties in the United Kingdom using the services of the GB7FK D-Star repeater in Kent. Steve Bosshard, NU5D, and the Temple Amateur Radio took care of the technology in the Lone Star State.

Reports are that the session went flawlessly and that both sides are looking forward to the next one. (M1CMN, Southgate)

**

PUBLIC SERVICE: HAM RADIO ASSISTS THE HEAD OF THE CHARLES REGATTA

Ham radio will be providing communications for the Head of the Charles Regatta that takes place the weekend of October 16th to the 18th.

The Head of the Charles Regatta, also known as HOCR or HOTC, is a rowing race held each October on the Charles River, which separates Boston and Cambridge, Massachusetts. It is the largest 2-day regatta in the world, with more than 8,000 athletes rowing in some 1750 boats in 56 events. It also attracts about 300,000 spectators throughout Regatta weekend.

To make the event safe and successful, ham radio volunteers from around the area will be using the 145.430 Belmont and 146.820 Brookline repeaters to support the Red Cross Aid Stations. The Red Cross Health and Safety Committee will have at least eight rescue boats on the river and six aid locations on the shore.

The Head of the Charles Regatta is run by an office of 3 and approximately 1,500 volunteers. The regatta is hosted by Cambridge

Boat Club, a rowing and social club founded in 1909 that is headquartered on the Cambridge side of the river. Since 1998, the Head of the Charles Regatta's Charity Program has generated over $650,000 for its official charities, which include Access Sport America, Cambridge Community Foundation, and Community Rowing. (KC1US, Wikipedia)

SPECIAL ANNOUNCEMENT: WB6MMH MAKES ARNEWSLINE AVAILABLE ON ECHOLINK AND IRLP

If you are on EchoLink or own use repeater that's tied to the world using IRLP there is a new service. One that will permit you to listen to these weeks newscasts just by connecting to the appropriate Echolink or IRLP node.

This new service is the work of longtime friend Skip Hansen, WB6YMH, of Rancho Palos Verdes, California. According to him, if you would like to hear the current weeks Newsline report on your repeater or link it's really easy if you are on EchoLink or IRLP.

Skip says that on EchoLink just connect to the Newsline conference, node number 6397 or dial the word news on the DTMF pad. On IRLP connect to experimental node 0016 providing that access to "experimental nodes" have been enabled by the node operator. Once you do either, the server will play the news in 2 minute chunks with 10 second pauses between them to reset timeout timers and give you an opportunity to disconnect simplex nodes. Audio is stopped during the pauses so no content is lost.

Our thanks to Skip Hansen, WB6YMH, for providing this value added service. One that will permit many hams to listen to Newsline whenever they want and wherever they might be. (ARNewsline(tm))

**

NAMES IN THE NEWS: THREE SHARE NOBEL PRIZE FOR PHYSICS

The Royal Swedish Academy of Sciences has decided to share the 2009 Nobel Prize in Physics. One half will go to Charles K. Kao of Standard Telecommunication Laboratories, Harlow, in the UK, and Chinese University of Hong Kong for groundbreaking achievements concerning the

transmission of light in fibers for optical communication. The other half is being jointly awarded to Willard S. Boyle and George E. Smith, Bell Laboratories, Murray Hill, NJ, in the USA. This, for the invention of an imaging semiconductor circuit known as the CCD sensor.

In 1966, Charles Kao made a discovery that led to a breakthrough in fiber optics. He carefully calculated how to transmit light over long distances via optical glass fibers. With a fiber of purest glass it would be possible to transmit light signals over 100 kilometers, compared to only 20 meters for the fibers available in the 1960s. Kao's enthusiasm inspired other researchers to share his vision of the future potential of fiber optics. The first optical fiber was successfully fabricated just four years later, in 1970.

Meantime, in 1969 Willard Boyle and George Smith invented the first successful imaging technology using a digital sensor that they called the Charge-Coupled Device or CCD. CCD technology makes use of the photoelectric effect, as theorized by Albert Einstein and for which he was awarded the 1921 Nobel Prize. By this effect, light is transformed into electric signals. For Boyle and Smith the challenge when designing an image sensor was to gather and read out the signals in a large number of image points, pixels, in a short time. They were successful and because of this the CCD has become the digital camera's eye.

This discovery revolutionized photography, as light could now be captured electronically instead of on film . CCD technology is also used in many medical applications, including imaging the inside of the human body for both diagnostics and for microsurgery. (Adapted from Nobel Foundation release)

**

RADIO ON THE NET: QRZ.COM NOW HAS ELECTRONIC QSLING INFO

The giant QRZ dot com callsign website has expanded its callsign database. This, with added fields that take into account the emergence of electronic confirmations of on the air contacts as well as those hams who only use cards sent via the mail.

The newly added fields are Mail QSL that indicates whether this person will QSL by Postal Mail, eQSL says that a ham is using eQSL.cc, LOTW indicates whether this person uses LOTW. Another new field is IOTA which permits the insertion of an Islands on the Air designator.

Fred Lloyd, AA7BQ, who owns and manages QR.com notes that these are all user supplied items. That means if the item appears in the listing then the record reflects the member's choice. Otherwise, nothing is shown for these items. Lloyd adds that these new fields are also transmitted in the QRZ XML Logbook Data stream. For more info about logbook data, see the QRZ.com XML page. (QRZ)

**

EMERGING TECHNOLOGY: WI-FI SECURITY PAINT

The BBC News reports that researchers have created a special kind of paint which can block out wireless signals. The paint reportedly contains an aluminum-iron oxide which the inventor claims to resonates at the same frequency as wi-fi meaning the airborne data is absorbed and blocked.

Developed at the University of Tokyo, the paint could cost as little as $10 per kilogram. I t means security conscious wireless users could block their neighbors from being able to access their home network without having to set up encryption. Another possible use would be in restaurants and theaters where use of cellphones and text messaging devices has become an annoyance to others.

While paints blocking lower frequencies have been available for some time, this is the first technology to absorb frequencies transmitting in the 100 GHz range.

You can read the full BBC News story 'Anti-wi-fi paint offers security' at http://news.bbc.co.uk/1/hi/technology/8279549.stm (BBC)

**

NAMES IN THE NEWS: APPLE PASSES TWO BILLION APS DOWNLOADS

Apple Inc. says that more than 2 billion applications have been downloaded from its App Store. This, marking a milestone for the company's year-old business.

According to Apple, more than 85,000 applications are available to 50 million iPhone and iPod Touch customers worldwide. Apple also notes that more than 125,000 software designers are registered in its iPhone Developer Program. (Apple)

**

HAM RADIO IN SPACE: AMSAT-NA SUPPORTS JOTA WITH AO-51

Turning to ham radio space related news, word from AMSAT-North America says that it is supporting the 52nd Jamboree on the Air Scouting event by dedicating AO-51 operation to it.

On October 17th and 18th the AO-51 the QRP repeater will be set to crossband FM mode and allocated for the scouts to use. The mode change should occur at 00:00 UTC on the 17th and run for approximately 48 hours.

The frequencies to be used for the Jamboree weekend will be 145.880 FM uplink, and 435.150 FM Downlink. No tone access is required. All satellite users are requested to give priority to Jamboree stations and to hold QSO's with them. (KO4MA)

**

DX

In DX, word from our longtime friend John Abbruscato, W5JON, that he will be operating from the hilltop QTH overlooking the Caribbean Sea, and Marigot Bay, St. Lucia from October 20th to the 30th. He will use the call J68JA on 160 through 6 meters using an Icom IC-7000, KL-400 Amplifier into multi-band dipoles on the High Frequency bands and a 3 Element yagi on 6. The dates include the Includes CQ World Wide SSB Contest. QSL to W5JON.

A German team will operate from the Radio Club Station of Tunisian Scouts using a special callsign 3V3S between November 23rd and December 2nd. The team will install and use a Spiderbeam and verticals. Once the DXpedition has concluded the antennas will be donated to the 3V8SS club station. QSL via DL9USA. More is on-line at www.3V3S.tk.

Brian, ND3F, will be active from Barbados as 8P9SS between November 22nd and December 2nd. His operation will probably be on all bands, and he will also be in the CQWW DX CW Contest on November 28th and -29th as a Single-Op/All-Band/Low-Power entry. QSL via Logbook to the World or direct to ND3F.

K9NW will be active from Botswana as A25NW between November 23rd and December 1st. His operation is expected to include His operation is also expected to include the CQWW DX CW Contest. QSL via his home callsign as listed on QRZ.com.

F5PTM will be active from Afghanistan through December as T6YA . Listen out for him on 40, 30, 20 and 17 meters on CW only. QSL via F5OGL.

DL9USA,will be active from Comino Island between October 15th and the 22nd. Bands and modes of his activity were not provided. QSL via his home callsign.

Lastly JA1FJJ, will be active from Bhutan as A52FJJ through October 20th. Operations will be on 80 through 10 meters using SSB, RTTY and PSK31. He plans to use 500 watts into a G5RV antenna. QSL via his home callsign, direct or by the Bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE LONGEST CW MESSAGE EVER

And finally this week, an answer to the question of what was the longest Morse code message ever sent. With the answer, here's Amateur Radio Newsline's Burt Hicks, has the details:

--

The longest Morse message ever sent took place on October 26, 1864. That's when then Governor of the Territory of Nevada, James W. Nye, ordered that a telegram be sent to President Abraham Lincoln that contained the entire text of the Nevada State Constitution.

According to historians, the job of sending such a long telegram at the height of the Civil War was a challenge. This was because there was no direct wirline link from Carson City to Washington, DC. So telegrapher James H. Guild worked seven hours to transmit the message to Salt Lake City, where it was resent to Chicago, then Philadelphia, and finally to the War Department's telegraph Office in Washington. There, two days later, where a 175-page transcription was made.

The final page shows a total 16,543word count and cost $4313.27 to send. In todays dollarettes that would be $59,229 to pay for the one-way the transmission. Three days after receiving this telegram and in accordance with an Act of Congress, President Lincoln proclaimed that Nevada was admitted into the Union.

This 175-page transcription is now in the holdings of the National Archives and is on display in an exhibition entitled "BIG!" That exhibit celebrates the 75th anniversary of the National Archives by featuring big records, big events and of coarse some very big ideas.

For the Amateur Radio Newsline, I'm Burt Hicks, in Los Angeles.

--

The exhibition runs through January 3, 2010 in Washington, DC. It will then be sent out on a national tour. (News release)

447. Constant carrier on 14.0MHz; real or local artifact?

Newsgroup: rec.radio.amateur.moderated
Date: 2009-10-09 15:20:55 UTC
From: Bert Hyman <bert@iphouse.com>
Message-ID: <Xns9C9F693961BE2VeebleFetzer@188.40.43.213>
Source record: 1757

For the past week or so, I've been hearing a constant carrier on
14.0MHz, as exactly on frequency as my rig can determine.

It varies in strength through the day, changes strength when I switch
between my R5 vertical and 40 meter dipole, and disappears when I switch
out the antennas.

Even though nothing new has been introduced into the house, I went
through the exercise of unplugging or turning things off, but the signal
remains.

Anybody else hearing it, or is it something local?

--

Your signal strength variations argue against it, but is there a
possibility that your calibrator is turned on?

I've always been interrested in what's inside other Amateur's shacks.
And I don't think we've ever done that here.

So whatchya got?

My Home station is an Icom IC-761. I'm controlling it with a PC
running Ham Radio Deluxe, and DM-780. I have two antennas, one is a
Butternut HF-6V, and the other is a ladder line fed dipole, 96 feet
total, and I'm tuning with a MFJ 993 auto tuner. Key is a Bencher
Paddle.

For VHF, I'm using a Kenwood 241 and pushing the signal out with a J-
pole.

In the Car, I'm running a Kenwood TS480SAT into a homebrew Bug catcher
(except for the coil) For VHF/UHF I use a Kenwood D-700 to a 5/8th
wave antenna. For aprs in the car, I use a laptop running AprsPoint
and MapPoint, and connect the GPS unit through the computer.

Bert-

I've heard it here in Florida.

I wonder if it could have anything to do with a common local oscillator
in an HD Radio or Television? I don't hear as much noise on 3.579545
any more. However, I have a clock with a battery-backup circuit that
divides 3.57940 down to 60 Hz, and it comes in loud and clear!

Mike, what's the height of your dipole, and what bands do you successfully work with it? In my new qth I have room for a 90' dipole, and wondered if I can work 75/80 with it. I may be able to get one end up about 50' or higher, the other end 31' (if I buy a certain telescoping mast). I know that's pretty low for 75/80, but what the heck.

Bert,

Not imagination. From my Plymouth station it bears about 315 degrees, and from my Lake Vermilion station it seems southerly, but inconsistent. Measurements taken Friday from Vermilion, and Saturday and Sunday from Plymouth.

What's the azimuth from your station?

Hi Howard,

Right around 50 feet high.
It's almost straight, with just enough droop to keep it in one piece when the winds blow. I do work 75 and 80 meters with it, actually much better than I had expected. One year during NAQP, I was working California stations right after I tuned the setup, After about an hour, I looked at the SWR meter and saw that I had forgot to increase the power after tuning. It wasn't just that I was operating QRP, it was that I didn't notice it. I called, they heard.

It tunes all the bands from 80 to 10 - past 20 meters it is very broad tuning. I've tuned it on 160 meters, but not had the intestinal fortitude to operate it there. Probably would work after a fashion, just not very well.

Well, let's see....

The main rig is a homebrew 80/40/20 CW transceiver of my own design, built in the early 1990s and still going strong. It consists of a 12 tube single conversion receiver, an external 1 tube audio amp for driving a speaker, a 2 tube transceive adapter that converts the receiver VFO to the transmit frequency, and a 3 tube transmitter section that ends up in a pair of 807s. There are two power supplies, one for the low-level stages (one rectifier, two VR tubes) and one for the transmitter section (four rectifiers, four VR tubes, one time-delay relay and three control relays). The receiver has two cascaded 8 pole crystal filters and an LC audio filter, and the VFO is built around the capacitor from a BC-221. There is also a homebrew Universal Transmatch which has an internal SWR bridge and permits selection of different rigs and antennas.

The entire assembly is known as the Southgate Type 7. Only a few crystals and the solder for it were bought new, everything else was NOS, used, or recovered from old gear.

The antenna system is a homebrew 80/40 W3DZZ-inspired inverted V which uses N4UU-style coax-cable-on-PVC traps. Center at about 37 feet, ends at about 12-15 feet. Fed with RG-8X, no balun. Adjusted for near-unity SWR on 3540 and 7040, less than 3:1 on 20.

I have five Morse Code keys: four Vibroplex bugs (two Original Standard, one Lightning Bug, one Champion) and a WW2 J-37.

The clock is a Telechron mechanical digital clock made from the parts of several junkers. The speaker box, op desk, equipment shelves and almost all shack/shop furniture are homebrew. The chair was found alongside a dumpster.

There is currently no shack computer but one is being assembled from the parts of discarded PCs. It will run Win98SE and be used mostly for contest logging.

Also have an Elecraft K2 which is hooked up and used occasionally (built it from a kit in 2001) and a Heath HW-2036 (built from a kit in 1977) a BC-342N used for general coverage ($2 back in the mid-1980s) and an LM-20 frequency meter.

Several predecessors of the Type 7 are in storage as backups. Others were dismantled years ago for the parts.

There's also the library, the shop, and the parts inventory, but you didn't ask about those.

73 de Jim, N2EY

I love ladder-fed dipoles. They're dead simple, make the best use of whatever space you have, and work remarkably well. I had especially good luck with them when I used to work Field Day.

And yes, you can use them on 160. Not the greatest antenna, but I don't work 160 enough to justify a separate antenna and "good enough" is fine.

I use an R6000 Vertical and random length wire with a MFJ-949E tuner
for HF with a Kenwood TS450SAT.

For VHF I use a small ground plane with a Kenwood TM-261.
Both are wide open for Mars operations.

CW,USB,LSB,AM,WIN-PSK
Had a tower and tri band beams @ 50' and a 1500 watt amplifier but I'm
to old to climb so I gave them to a young ham.

I think that the only thing of interest in my shack is my old Heathkit
GC-1005 digital clock, which has been in more-or-less continuous use
since I built it in 1973, when I lived in New Jersey and held the call
W2HIR.

Otherwise, there's a TenTec Omni 7, a Cushcraft R5 on the roof and a 40m
dipole in the back yard.

Thanks Mike - sounds good and encouraging. I need to get one of those push up fiberglass poles -- either the 43' or 31' version -- to support the other end of one version of a proposed 90' dipole. Maybe I'll do that next spring. In the meantime I'm going to try a random wire (about 100' long) with the far end thrown over as high a branch as I can reach... or find someone with a bow and arrow to do it. For 80 and 40 it'll complement my little MFJ Hi-Q Loop I use for 10 - 30 meters. The rig's an IC-735 and an AEA Transmatch. I'm almost ready to assemble the station now that I've moved back to 2-land.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

- A list of News Service Providers maintained by the Big-8 Management Board:

==> + THREE KILLED WHILE ERECTING ANTENNA

At approximately 8:40 PM on October 12, a man, woman and their 15 year
old son were killed while trying to erect a 50 foot vertical antenna at
the home of the man's mother, Barbara Tenn, KJ4KFF, in Palm Bay,
Florida. The deceased were not licensed amateurs. According to police
reports, Melville Braham, 55, Anna Braham, 49, and their 15 year old
son Anthony were putting up an antenna -- Tenn's second -- at night
when they lost control of the antenna and it crashed into nearby
overhead power lines. The impact sent 13,000 volts of electricity
through the pole that the three were holding. A family friend, a 17
year old boy, was on the roof at the time of the accident. He and the
couple's daughter, who was in the house at the time, were not injured.
Click here <http://www.arrl.org/news/stories/2009/10/13/11135/?nc=1>
for more information.
```

==> + PUBLIC SERVICE: HAM PROVIDES RESCUE SUPPORT AT UTAH MARATHON

While not as well known as the Boston and New York City Marathons, Utah's St George Marathon <http://www.stgeorgemarathon.com/> draws more than 7000 runners to the town of St George -- located 300 miles south of Salt Lake City, near the Utah-Arizona-Nevada border -- each year. The race, now in its 33rd year, uses shuttle vans equipped with Amateur Radio operators and medical personnel to provide any help and support needed along its course. On October 3 -- race day -- Brian Plumb, KE7HNW, was driving Shuttle #3, with Kathy Hutchinson, a nurse at a local hospital, by his side. Click here <http://www.arrl.org/news/stories/2009/10/15/11141/?nc=1> for more information.

==> + OPERATING: TEAM LEADERS SELECTED FOR WRTC 2010

After a grueling selection process, the organizers of the 2010 World Radiosport Team Championships (WRTC <http://www.wrtc2010.ru/>) have selected team leaders representing all six continents. Of the 76 applications submitted, 44 were selected as Team Leaders; these Team Leaders will now choose a partner. WRTC, held every few years, takes place during the IARU HF World Championships, July 10-11. In 2010, WRTC will be held just outside Moscow. Click here <http://www.arrl.org/news/stories/2009/10/13/11133/?nc=1> for more information.

==> OPERATING: GET READY FOR JOTA THIS WEEKEND!

<http://www.youtube.com/watch?v=OQIHdml8inU> When Scouts want to meet young people from another country, they usually think of attending a quadrennial World Jamboree. But each year, more than 400,000 Scouts and Guides "get together" over the airwaves for the annual Jamboree-on-the-Air (JOTA). This year, JOTA celebrates its 52nd anniversary. JOTA follows a 48 hour schedule beginning at 0000 local time on Saturday, October 17, continuing through 2400 local time on Sunday, October 18. Click here <http://www.arrl.org/news/stories/2009/10/15/11142/?nc=1> for more information, including suggested frequencies, satellite operations, available resources and more.

==> + OPERATING: AFTER FALSE STARTS, MIDWAY ISLAND DXPEDITION OFF TO GOOD BEGINNING

After the airplane scheduled to take the K4M DXpedition team from Honolulu to Midway Island developed engine trouble, there was doubt as to if the team would even make it to the island. But Murphy didn't get in the way -- mechanics found the necessary parts to get the plane in the air safely. After a four hour flight, the team arrived on Midway at 0700 UTC on Monday, October 12 to start operations. Originally scheduled to be on-the-air for 10 days (beginning October 9), the team might not be able to extend their time on the island, due to US Fish and Wildlife Service (USFWS) regulations. Click here <http://www.arrl.org/news/stories/2009/10/13/11137/?nc=1> for more

information.

==> + OPERATING: HAMS ON-THE-AIR TO SUPPORT NATIONAL WILDLIFE REFUGE WEEK

The KP1-5 Project -- organizers of the 2009 Desecheo Island DXpedition -- is pleased to announce that Amateur Radio operators will be operating in observance of the 2009 National Wildlife Refuge Week, on the air October 10-18. This event features scores of festivals and special events that help connect people with nature at the country's 547 National Wildlife Refuges. Click here <http://www.arrl.org/news/stories/2009/10/14/11139/?nc=1> for more information.

==> + OPERATING: ARRL DXCC DESK APPROVES FT5GA OPERATION

ARRL DXCC Manager Bill Moore, NC1L, reports that the FT5GA operation on Glorioso Island <http://glorieuses2008.free.fr/index-e.htm> -- September 14-October 8, 2009 -- has been approved for DXCC credit. Until this operation, Glorioso sat at number 4 on DX Magazine <http://www.dxpub.com/>'s Most Wanted list; five operators operating for 23 days made more than 50,000 QSOs to make this rare one available.

==> HINTS & KINKS : ALTOIDS TIMES TWO

Sam Green, W0PCE, of St Louis, Missouri, has a different take on those ubiquitous Altoids tins:

Many of us mount compact circuits in cases that previously contained mint candies. My friend Matt, W0XEU, suggested packaging more complex circuits in multiple Altoids tins by mounting them back to back, a simple yet elegant idea.

I built this circuit in a "double-wide" arrangement because I needed somewhere to put the

batteries. This offered the added advantage of providing a means to filter bench power during development and testing so I wouldn't leak ambient RF signals into the main compartment with its very sensitive circuitry. I simply drill a hole near each corner to screw the boxes together. If you are careful with the placement of the holes you can even turn the arrangement around later to reverse the way the covers open. Otherwise, plan ahead. I feed power between compartments via a threaded coaxial feed-through EMI <http://www.mouser.com/tusonix>(electromagnetic interference) filter <http://www.tusonix.com/filters.html>, with additional bypass capacitors for this very sensitive application. The threaded filter

serves in place of one of the screws that hold the cases together. I use conductive adhesive-backed copper tape <http://parts.digikey.com/1/parts/1376464-tape-copper-foil-1-x-18yds-1245-x-1.html> as a gasket to minimize leakage into the shielded compartment that

contains the sensitive circuitry.

You can extend this method to additional compartments where you might want many stages of gain and you need to isolate and control the coupling between them. This is a very simple and effective way to prototype more complex circuits before you have to worry about customizing the packaging. Matt and I hope you will find this method useful. -- 73, Sam Green, W0PCE, 10951 Pem Road, St Louis, MO 63146, w0pce@arrl.net

==> + DID YOU KNOW? THE WOUFF HONG

Every amateur should know and tremble at the history and origins of this fearsome instrument for the punishment of amateurs who cultivate bad operating habits and who nourish and culture their meaner instincts on the air. The Wouff Hong <http://www.arrl.org/tis/info/history.html#hong> was invented -- or at any rate, discovered -- by "The Old Man" himself, just as amateurs were getting back on the air after World War I. The Old Man (who later turned out to be Hiram Percy Maxim, W1AW, co-founder and first President of ARRL) first heard the Wouff Hong described amid the howls and garble of interference as he tuned across a band filled with signals that exemplified all the rotten operating practices then available to amateurs (considering the state of the art as they knew it). As The Old Man heard it, the Wouff Hong was being used on some hapless offender so effectively that he investigated. After further effort, "T.O.M." was able to locate and identify a Wouff Hong. The Old Man never prescribed the exact manner in which the Wouff Hong was to be used, but amateurs need only a little imagination to surmise how painful punishments were inflicted on those who stoop to liddish behavior on the air. The Original Wouff Hong is on display at ARRL Headquarters. Find out more about this dreaded instrument of torture here <http://www.arrl.org/tis/info/history.html#hong>.

==> AMATEUR RADIO IN SPACE : COLUMBUS ANTENNAS TO TAKE TO THE SKIES

<http://www.youtube.com/watch?v=1efXlL75dvA> In February 2008, the new Columbus module -- built by the European Space Agency (ESA) -- was attached to the International Space Station (ISS). When ESA first announced its intentions for the module a number of years ago, the ARISS International team began planning how to get ham radio integrated. While ESA's blueprints were being drawn, hams made serious inquiries and gave presentations, eventually winning approval to have antenna feed-through connectors added to the module. ARRL ARISS Program Manager Rosalie White, K1STO, discusses the latest developments <http://www.arrl.org/news/features/2009/10/05/11110/?nc=1>.

==> + EVENTS: DAYTON HAMVENTION CREW READIES FOR 2010 SHOW

Organizers of the 2010 Dayton Hamvention <http://www.hamvention.org/>Â® -- May 14-16 -- are gearing up for one of the largest Amateur Radio gatherings in the world. According to Hamvention Assistant General

Chair Michael Kalter, W8CI, a new online program for taking and tracking online orders has been implemented and all volunteer committee chairs and assistants are in place. Kalter said that the theme of the 2010 Hamvention is Amateur Radio Clubs Worldwide: The Lifeline. "We all recognize how much Amateur Radio clubs and organizations contribute to the service, Kalter said. "We all see this in how clubs pull together in disasters, Field Day, contests, working with youth, teaching classes and sponsoring hamfests; in parts of the world, the club truly is the communication link to the world." Kalter said that Hamvention organizers are asking hams to submit photos of your Amateur Radio club and the activities that the club participates in. "We would like to use some of these on the front and back cover of the Hamvention program for 2010," he said. "We are also looking for stories of interest from your club.".

==> THIS WEEK ON THE RADIO:

This week, look for the School Club Roundup <http://www.arrl.org/SCR/> October 19-23. There's an NCCC Sprint October 16. The Iowa QSO Party, the Feld Hell Sprint and the Microwave Fall Sprint are October 17. On October 17-18, check out the New York QSO Party, JARTS WW RTTY Contest, the Stew Perry Topband Challenge, the Worked All Germany Contest and the W/VE Islands QSO Party. The Illinois QSO Party is October 18-19 and the Run for the Bacon QRP Contest is October 19. Next week, you'll find another NCCC Sprint on October 23. The CQ Worldwide DX Contest (SSB), the CW and Digital runnings of the10-10 International Fall Contest, and the 50 MHz Fall Sprint are October 24-25. The SKCC Sprint is October 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL PUBLICATIONS : CHECK OUT THE NOVEMBER/DECEMBER ISSUE OF QEX

The November/December issue of QEX <http://www.arrl.org/qex> is coming soon, and it is full of theoretical and practical technical articles that you don't want to miss. Click here <http://www.arrl.org/news/stories/2009/10/14/11138/?nc=1> to discover what's inside this upcoming issue. QEX is edited by Larry Wolfgang, WR1B <lwolfgang@arrl.org>, and is published bimonthly.

==> THE ARRL LETTER : HTML VS PLAIN TEXT

Many people have asked how they can continue to read The ARRL Letter in a plain text format. ARRL IT Department Manager Jon Bloom, KE3Z, has provided instructions <http://www.arrl.org/arrlletter/about.html#plaintext> to do just that. According to Bloom, most e-mail reading programs provide some means of

accessing the plain-text version if you want it. Unfortunately, we are not able to send out plain text versions (like the ones prior to October 1) of The ARRL Letter. If you like the look of HTML (including pictures and videos), but do not want to receive the Letter in HTML format, you can access current and archived editions via the ARRL Web site <http://www.arrl.org/arrlletter/>.

==> TAPR ELECTS NEW OFFICERS

At the recent ARRL and TAPR Digital Communications Conference (DCC <http://www.arrl.org/?artid=9182>) in Chicago, the TAPR <http://www.tapr.org/> Board of Directors of selected a new slate of officers and named Dr David Toth, VE3GYQ, President Emeritus of TAPR. Dr Toth served as TAPR President from 2005-2009 and as a member of the Board from 1987-1993 and 2004 to present. The new TAPR officers are: Steve Bible, N7HPR, President; Scott Cowling, WA2DFI, Vice President; Tom Holmes, N8ZM, Treasurer; and Stan Horzepa, WA1LOU, Secretary. TAPR recently elected three new members to their Board of Directors: Scott Cowling, WA2DFI; John Koster, W9DDD, and Mark Thompson, WB9QZB. -- Thanks to Stan Horzepa, WA1LOU, for the information

==> SILENT KEY: MATHIAS BJERRANG, LA5NM/JW5NM (SK)

Noted DXer Mathias Bjerrang, LA5NM/JW5NM, passed away October 11. He was 67. While in Svalbard, Norway, Bjerrang slipped and fell while walking, hitting his head and was later found Sunday morning, cold and unable to speak. He was brought inside where he later stopped breathing; he was unable to be resuscitated and died. A native of Norway, Bjerrang went on many cold weather DXpeditions, including the North and South Poles. Many times, he provided the sought-after double multiplier of Zone 40 and Svalbard in contests. Bjerrang earned WAS <http://www.arrl.org/awards/was/> as JW5NM and DXCC <http://www.arrl.org/awards/dxcc/> as both JW5NM and LA5NM; he was previously on the DXCC Honor Roll as JW5NM. Thanks to The Daily DX <http://www.dailydx.com/> for some information

==> ORGANIZATIONAL: ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than just The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update <http://www.arrl.org/contests/update/> (a bi-weekly contest newsletter), the ARES E-Letter <http://www.arrl.org/FandES/field/ares-el/> (sent monthly, containing public service and emergency communications news), the ARRL Club News, the ARRL Instructor/Teacher E-Letter and the VE Newsletter, to name a few. You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when

their membership and license are due to expire. Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

<http://www.arrl.org/cep/student/>Registration remains open through Sunday, October 25, 2009, for these online course sessions beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cep@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1679 - October 16 2009

Amateur Radio Newsline report number 1679 with a release date of Friday, October 16th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. A family looses its lives trying to help a ham put up an antenna, Australia unveils a free Electromagnetic safety calculator that covers the VHF and UHF ham bands, Midway Island finally makes it on the air and D-Star goes to new heights and then jumps out. Find out what we mean on Amateur Radio Newsline(tm) report number 1679 coming your way right now.

RADIO SAFETY: THREE ELECTROCUTED INSTALLING HAM ANTENNA IN FLORIDA

Three people trying to help a Florida ham by installing an antenna for her have been electrocuted in a bizarre accident that happened after dark. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

A mother, father and their 15-year-old son died on Monday, October 12th. This, after being electrocuted while attempting to erect a ham radio antenna.

The Palm Bay Florida Police Department identified the victims as Melville Braham, 55, Anna Braham, 49, and their 15 year old son Anthony. None were licensed radio amateurs but they appeared to have been assisting an area ham with an antenna installation.

Authorities say the family was attempting to raise the antenna mast when they lost control and it struck an overhead power line. It made contact with the overhead wiring and sent 13,000 volts down through the antenna mast the three were holding,

When paramedics arrived, they found all three on the ground not breathing. Rescue crews immediately tried to resuscitate them. Anna Braham was pronounced dead at the scene. The father and son were taken to a local hospital, where they were later pronounced dead.

Florida Power & Light Co. crews also responded to the scene. They shut off power in the area while authorities collected evidence and documented the scene.

According to news reports, Anthony Barham attended Southwest Middle School. Grief counselors were available at the school on Tuesday October 13th to help students deal with the tragic loss of their friend.

Federal Communications Commission records do not show that any of the victims were licensed amateur radio amateurs. They do, however, show a license issued to a Barbara V. Tenn, KJ4KFF, at the address where the electrocutions occurred.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

This appears to be yet another case of those trying to put up an antenna not realizing the potential danger of nearby overhead high tension electric distribution, and the fact that these wires are all but invisible at night. (Published news reports)

**

RADIO SAFETY: NEW EMI CALCULATOR AVAILABLE FROM THE ACMA

Australia's Swinburne University, together with EM Software and Systems, has developed an online tool that will allow users to calculate exclusion zones around antennas where radiation levels exceed safety standard limits.

Commissioned by the Australian Communications and Media Authority, the exclusion zone calculator will allow people to conduct safety assessments of transmitting antennas, such as those found on boats, four wheel drives, at fixed station locations and even communication networks operating in the VHF and UHF spectrum. This includes ham bands from 2 meters on up through 2.4 GHz.

To calculate the zone, all users need to do is enter the antenna type, transmitter power, antenna gain and frequency band into the online tool. Click your mouse and the program will automatically calculate the safe distance around the antenna in metric distance.

The ACMA has also produced a booklet entitled Human Exposure to Radiofrequency Electromagnetic Radiation Information for Licensees of Radio-Communications Transmitters. Both the on-line tool and a booklet that explains EME health exposure can be found at www.acma.gov.au. (ACMA)

**

HAM RADIO IN SPACE: AMSAT-NA ANNOUNCES NEW FM CUBESAT

AMSAT North America says that its once again headed back into space. This time with a brand new cubesat that will be like no other before it.

During the board meeting held Oct. 8 in conjunction with the Annual Space Symposium the AMSAT Board of Directors adopted the Engineering Task Force recommendation that low-cost launch options be pursued immediately. This means that the AMSAT engineering team will develop a 1U CubeSat design effective immediately.

The new AMSAT CubeSat's initial capability is planned to add to the popular low-earth orbit FM transponder fleet allowing hams to continue to use their existing handheld and portable antenna systems. Such a satellite also continues the accessible entry path for new satellite operators to get started.

Meantime, word that the flight version of ARISSat-1 replacement for SuitSat 2 has been developed to be adaptable into the CubeSat model. This will allow a modular approach to mission design using proven subsystems and components.

The ARISSat-1 mission planned in 2010 and will be the initial flight test of AMSAT's modular satellite. According to Tony Monteiro, AA2TX, who is AMSAT North America's Vice-President of Engineering, this approach to building flight hardware gets AMSAT back up in space with new satellites by leveraging the skills and technology it has today.

AMSAT says that there's another reason for this fast track approach. This is because the existing FM satellites are starting to show their age. (AMSAT, N3TL)

**

BREAKING DX NEWS: MIDWAY ISLAND TEAM FINALLY ARRIVES ON THE ISLAND

It took a few more days than planned but the Midway Island DXpedition has finally arrived and is on the air. The K4M team was supposed to be on the island on Friday, October 9th, but an oil line leak in one of the engines of the Grumman Gulfstream 1 turbo-prop aircraft chartered to carry them from Hawaii to Midway kept them on the ground an extra two days.

The team arrived safely on Midway Atoll at 07:00 UTC on Monday morning October 12th. At daybreak they began assembling their antennas to put the stations on air.

As reported last week, the multi-national team of 18 operators will activate Midway Island through October 19th. The U.S. Fish & Wildlife Service had authorized this amateur radio operation from this rare U.S. entity for only a 10 day period beginning on the 9th but has told the team that no extension can be granted due to the migratory schedule of the islands indigenous bird population.

This is the first amateur radio activity from Midway in almost 10 years. Midway Island ranks number 24 world-wide and number 13 in Europe on the DX Magazine's "Most Wanted List".

We will have more DX news later on in this weeks Amateur Radio Newsline report. (K4M Press Release)

**

DX FOLLOW-UP: GLORIOSO DX TEAM REACHES 50000 QSO'S

The FT5GA Glorioso Island operation is now QRT and the operators are happy that the goal of 50,000 QSOs' was reached. This by the crew of five hams with two and sometimes three stations on the air.

The operation was forced to end operations on October 7th. This was a day earlier than expected due to the military flight schedule.

According to their Web page, they have made a total of 50,427 QSOs with 15,250 unique callsigns. Of these some 24,235 were on CW, 21,080 on SSB and 5,112 scored the path using RTTY.

The QSL Manager for this operation is Didier Senmartin, F5OGL. And we will have more DX related news later on in this weeks Amateur Radio Newsline report. (Southgate)

**

PUBLIC SERVICE: HAM RADIO AND THE CHICAGO MARATHON

Ham radio helped make the recent Bank of America Chicago Marathon an overwhelming success. The race took place on Sunday, October 11th with about 75 hams helping to coordinate the event while providing a safety web to oversee the almost 35,000 runners.

Coordinating the ham radio aspect of the event was Jerry Martin, KC9BDA, of Beech Park, Illinois. He assembled a team that came from ARES. RACES, SATERN, the local American Red Cross chapters and many other local clubs. The hams set up two- separate networks covering medical emergencies and logistics. They also manned 21 aid and medical stations while maintaining liaison with other volunteer groups and the National Weather Service.

The communications effort began in the wee hours of the morning and lasted until the final runner crossed the finish line. Hams mainly used dual band handhelds backed up by portable battery operated high power stations to communicate over the 26.2 mile course. Several repeaters donated their services and were held on stand-by in case they were needed

The winner of the men's competition was Kenya's Sammy Wanjiru, with a total time of 2 hours, 5 minutes and 41 seconds. The women's first place went to Liliya Shobukhova of Russia. She completed the course in 2 hours, 25 minutes and 56 seconds. There were also separate competitions for handcycle and wheelchair entries as well.

All of the ham radio operators who volunteered to provide communications were required to have previous experience in public service events. (WB9QZB, others)

**

PUBLIC SERVICE: THE ISTANBUL MARATHON

Chicago is not the only place that ham radio is involved in a marathon event. Members of the TRAC Istanbul Branch will activate their new club station using the special callsign TC1IEM between October 16th to the 18th. This to assist and commemorate the 2009 Istanbul Eurasia Marathon.

The Istanbul Eurasia Marathon is the only race of its type that starts in Asia and ends in Europe. All of the commemorative operations will take place on the high frequency bands. More on the race is on-line at www.istanbulmarathon.org (Southgate)

ENFORCEMENT: HOW THE SOCAL 2 METER CEMENT JAMMER WAS FOUND

A follow-up to last week's story of the proposed $4000 FCC fine that was levied against the Shimmick Construction Company and Obayashi Corporation for illegally operating in the amateur two-meter band. This was an excellent example of the close cooperation that now exists between the Los Angeles area FCC office and hams in the Official Observer and Amateur Auxiliary program. Amateur Radio Newsline's Joe Moell, K0OV, has the rest of the story in this report:

--

It all started in late April, when hams in central and northern Orange County began hearing conversations on 146.025 MHz, the output of K6SOA/R, which is owned by the South Orange Amateur Radio Association or SOARA. The transmissions were clearly for business and appeared to be related to construction work. SOARA has regular hidden transmitter hunts, so some of the club members were already equipped to go into action to find the source. Two of them, Richard Saunders, K6RBS and Richard Clark, N6UZS, reported strong signals in the cities of Orange and Costa Mesa. However, the strength and direction of bearings were not the same from one day to the next.

Other transmitter hunters and members of the Official Observer corps soon joined in. The search wasn't simple because the activity wasn't daily and it was sporadic on the days when it occurred. Next came reports of strong signals in Anaheim and Yorba Linda. Between the cuss words, the T-hunters heard conversations suggesting that they were listening to the handi-talkies of a concrete supplier at various job sites around the county.

On May 21, Dan Welch W6DFW, the Orange Section Official Observer Coordinator, hit pay dirt at a construction site of the Diemer Filtration Plant in Yorba Linda. His photos and recordings went to the FCC and within a week, the interference was gone. It should be noted that the concrete supply firm had obtained its handi-talkies from a commercial two-way radio supplier, which had mistakenly programmed them to transmit and receive on 146.025 MHz instead of 156.025 MHz. With no frequency readout and with tone squelch operational in their receivers, the concrete workers could not hear the SOARA repeater and had no idea that they were using an Amateur Radio frequency. Nevertheless, as the licensee for the radios, Shimmick-Obayashi got the Notice of Apparent Liability for Forfeiture and will have to either appeal it, pay the fine, or try to get their radio supplier to do so.

>From southern California, where our regular T-hunts keep us ready to find intruders to our bands at a moment's notice, this is Joe Moell K0OV for Amateur Radio Newsline.

--

The ham radio community in southern California developed a close working rapport with the local FCC office several years ago during the investigation into the activities of convicted jammer Jack Gerritsen. >From this latest quick enforcement action one might speculate that the relationship appears to be cast in concrete. (K0OV, ARNewsline(tm))

**

ENFORCEMENT: UNLICENSED UK BROADCASTER GETS BANNED FROM ROOFTOPS

The British may have stumbled on a unique solution to keep pirate broadcasters off the air. Don't let them have outdoor antennas. Don Carlson, KQ6FM, has more:

--

An unlicensed broadcaster has been banned from every roof top in London, England. This, after he pleaded guilty to installing pirate radio equipment on a tower in the city.

According to a report on UK telecommunications regulator Ofcom website, Kieran O'Sullivan received the anti-social behavior order following a successful prosecution by the regulatory agency. He also received an 18 week custodial sentence suspended for 12 months, a three month curfew, a ï¿½1,200 fine, and had his radio equipment seized.

Ofcom worked with Camden Council and police to secure the prosecution following complaints from residents about Freeze FM operating from estates in Hampstead. Neighbors had complained about pirate radio operators using roof tops to install equipment, which caused a nuisance to residents and damaged property.

And I'm Don Carlson, KQ6FM, in Reno.

--

You can read the full Ofcom report
http://www.ofcom.org.uk/consumer/2009/09/pirate-radio-rooftop-ban/
(Ofcom, BBC, others)

**

RADIO LAW: NEW ON-LINE FEDERAL REGISTER LAUNCHED

The Federal Register online version is now in an easier-to-read format at Data.gov. Now in XML format it is it easier to transport data from a Web site and store it, manipulate it or customize it elsewhere.

The Federal Register is published by the Office of the Federal Register. It in turn is a part of the National Archives and Records Administration and is updated Monday through Friday except on federal holidays.

The register went online in 1994 and is the official publication for rules, proposed rules and notices of federal agencies and organizations. It also provides executive orders and other presidential documents. (RW)

**

HAMVENTION 2010: AMATEUR RADIO CLUBS WORLDWIDE: THE LIFELINE

"Amateur Radio Clubs Worldwide: The Lifeline" will be the theme of the 2010 Dayton Hamvention slated for next May 14th to the 16th at the Hara Arena in Dayton, Ohio. According to Asst. General Chairman Michael Kalter, W8CI, we all recognize how much amateur radio clubs and organizations contribute to the service. This is especially true in the way clubs pull together in disasters, field days, contests, working with youth, teaching classes, and sponsoring hamfests. And says Kalter there are parts of the world where a ham radio club truly is the communication link to the world.

In order to help celebrate the world of radio clubs, Hamvention planners are asking for pictures from radio clubs around the world that it can use on the front and back cover of the Hamvention 2010 program magazine. It is also looking for stories of interest from interesting radio clubs as well.

In other Hamvention related news, Kalter says that all of our volunteer committee chairs and their assistants are in place for 2010 and have been meeting to make this the best Hamvention you have ever attended. He also notes that the organizations new online program for taking and tracking orders is up and running. He notes that many hours have been spent since he close of Hamvention 2009 to make all of these necessary improvements. The site can be accessed at www.hamvention.org so you have the chance to make your 2010 plans early. (Dayton Hamventionï¿½)

**

HAM HAPPENINGS: HAM RADIO CRUISE NIGHT IN VIRGINIA IN MAY 2010

Many of you are familiar with cruise-in events at restaurants, drive-ins, shopping centers or other venues. That's where participants bring their cars, trucks and motorcycles to display and compete for awards.

Ham radio operators are also proud of the time and effort invested in transportable stations and one radio club feels its time for them to show off as well. The Albemarle Amateur Radio Club in Central Virginia will sponsor the first Virginia Ham Radio Cruise-In from 10 a.m. until 4 p.m Eastern time on Saturday, May 1st, 2010. And like automotive buffs, this will be a chance for hams to meet, greet and show off their mobile and portable gear.

If it sounds like fun to you can get more information from Jim Crosby, K4JEC. His e-mail address is jecrosby at comast dot net (K4JEC)

**

NAMES IN THE NEWS: K7CR STEPS DOWN AS CHAIRMAN OF SBE EAS COMMITTEE

Some names in the news. First up is well known Washington state amateur and repeater coordination pioneer Clay Freinwald, K7CR. He is stepping down from the board of the Society of Broadcast Engineers due to term limits and is also leaving his post as chairman of the SBE's EAS Committee for the same reason.

Freinwald, who holds an Extra Class license and was instrumental in the formation of the Western Washington Amateur Relay Association is identified as closely as anyone in the broadcast industry with the EAS. He is a past recipient of Radio World Magazine's Excellence in Engineering Award and has served on the SBE board and chaired the EAS committee for a decade.

K7CR says that he will continue working with the committee under the new chairman, Ralph Beaver. Beaver operates a company known as Media Alert based in Tampa, Florida. (RW)

**

NAMES IN THE NEWS: UK FILM MAKER TO WORK WITH RADIO CLUBS

And UK filmmaker Esther Johnson is planning to use three different amateur radio clubs based in the London area. This, to set up a radio station during an exhibition of her work on 23rd, 24th and 25th October. The stations will accompany Johnson's 16mm film Tune In that she produced in 2006, and which focuses on amateur radio. Johnson will also be exhibiting photography of radio enthusiasts alongside her film work. Further information on Tune In can be found at www.blanchepictures.com/films/tunein.htm. (RSGB)

**

NAMES IN THE NEWS: G5RV LAST LOGBOOK SAVED IN EBAY AUCTION

And the final log/book of one of the UK's best-known radio amateurs has been saved for posterity.

The late Louis Varney, G5RV, was one of the founder members of the Chelmsford Amateur Radio Society in 1936. When Chelmsford club member Duncan Munro, M0KGK, spotted that G5RV's last ever logbook was being auctioned on e-bay the club decided to buy it.

M0KGK did the bidding and despite fierce competition managed to secure the logbook in the last eight seconds of auction. The logbook shows that G5RV's final QSO's were on January 11 2000 with G0WGP and Chelmsford club President Harry Heap, G5HF. Ironically, the entry appeared on page 73 of the logbook. Varney was, of course using a G5RV antenna that he designed for those final contacts (M5AKA, Southgate)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: KEN JOHNSON, W6FU - S.K.

The changing of the guard in amateur radio continues. This with word that Ken Johnson, W6FU, died of cancer on October 2.

Together with Don Wilson, K6RKE, Johnson founded educational FM station KPCS which later became KPCC. He also taught broadcasting classes at Pasadena City College for many years and also served as trustee of the college's W6BAB Amateur Radio station,.

Ken then traveled with the Los Angeles Dodgers, engineering their remote broadcasts for KWKW. Working with Jaime Jarrin, he saw four World Series Championships and collected countless stories.

A memorial service was to be held at 11 a.m. on Saturday, October 10th at the Assumption of the Blessed Virgin Mary Catholic Church in Pasadena. Ken Johnson, W6FU was age 89. (CGC, N6LL)

**

WORLDBEAT: WIA TURNS 100 IN 2010

The Wireless Institute of Australia turns 100 next year, making it the world's oldest national radio society. Now, its President, Michael Owen, VK3KI, says he wants the world-wide amateur radio community to join in the celebration. A commemorative QSL card will be issued for contacts with special events station VK100WIA between May and October of 2010. A limited edition operating award, called the WIA Centenary

Award is also to be available with two contacts with VK100WIA are required under its rules. Details of the centenary program can be found on the WIA website at www.wia.org.au. (WIA)

**

WORLDBEAT: D-STAR NOW REPRESENTED ON RSGB'S EMERGING TECHNOLOGY COMMITTEE

D-Star will now be represented on the Radio Society of Great Britain's Emerging Technology Committee. According to the RSGB announcement, as D-Star and digital voice communication continues to grow, it has become apparent that there is ever-increasing reliance on the Trust Servers that comprise the network infrastructure.

The administration of this network within the UK is carried out by the UKIT team who came together voluntarily to take on this vital role. The RSGB says that it wants to build upon the excellent work done by the team by giving it a more permanent structure. Following discussions at the recent UK National Hamfest, it has been agreed that they will become part of the Emerging Technology Committee. G7LWT will represent the UKIT on the committee while the other members will work on a corresponding basis. (RSGB, Southgate)

**

EMERGING TECHNOLOGY: KEYBOARDS THAT LEAK YOUR DATA

And if you think that the letters and numbers you type on your computers keyboard are secure because you have a good firewall, you might want to guess again. While your on-line connection might keep you invisible to others on the net, your keyboard could be sharing your data with anyone in range of your PC. Frank Lusa, VK2FJL, reports:

--

Audio report only Hear it by downloading this weeks MP3 version of the newscast at www.arnewsline.org.

--

One solution is to try shielding your keyboard cable if you are worried about information leaks. (WIA News)

**

CONTEST CORNER: THE NY QSO PARTY IS BACK

In contest news, its been away for a quarter of a century but the Rochester DX Association says that the New York QSO Party is back. The 2009 edition will take place on Saturday, October 17th, starting at 1800 UTC and running for the next 12 hours. For rules, county maps and log submissions take your web browser to www.NYQP.org (Via E-Mail)

**

DX

In DX, HA0HW reports that a group has begun a year long operation from different Hungarian National Parks. The first of these operating events took place from the Hortobï¿½gy National Park from October 12th to the 18th using the callsign HG0WFF. Their QSL manager is HA0HW but cards sent via the bureau are OK.

And a team headed by G3KHZ will be in Papua New Guinea from October 22nd through the 9th of November. Activity will be on 160 through 15 meters using CW, SSB and RTTY. Full details and QSL routing is on the web at www.425dxn.org.

DO1BEN and DO1IQ will be active portable PD from Texel Island between October 16th and the 22nd. Activity will be on the HF bands, propagation permitting. QSL via their home callsigns with the Bureau preferred.

A Dutch team plans to be active from Benin through the 30th of October. Check their website at www.benin2009.com for more information.

Lastly, JE2EHP, will be active as 4X stroke K1HP from Tel Aviv and Jerusalem Israel between October 29th and November 5th. His operation will be on all the High Frequency bands plus 6 meters, using CW, SSB and RTTY. QSL is via the bureau to JE2EHP.

(Above from various DX news sources)

**

THAT FINAL ITEM: D-STAR REACHES NEW HEIGHTS

And finally this week the story of a ham who has taken D-Star to a new height. New height as in 13,000 feet in the sky. Bill Pasternak, WA6ITF, has the details:

--

According to his posting on the D-Star Reflector, on Saturday October 10 Mark Meltzer, AF6IM, of Palo Alto California went sky-diving and brought along an Icom IC 91AD D-Star enabled handie talkie.

Meltzer says that on his first jump he opened his chute at about 13,000 feet and worked numerous 2 meter analog FM simplex contacts. He also held a couple of analog FM QSOs on 1.2 GHz through the W6CYX and W6LRW linked repeater system on 1282.225.

At about 8000 ft he decided to try D-Star but heard only a garbled R2D2 sounding reply. At the time Mark says that he was flying his canopy away from Mt. Diablo which placed my body between the repeater and the IC 91AD's antenna. So he turned towards Mt. Diablo and the distortion went away and he was able to work Rick Mc Cusker, WF6O, in Sacramento clearly through the machine.

AF6IM notes that he was also carrying analog APRS gear that not only reported GPS derived data that not only included his altitude heading

and speed but also his blood oxygen level and pulse rate. He also thanks WF6O for being the other half of the D-Star parachute mobile contact and especially to Tim Barrett, K6BIV for making it all possible with his D-Star repeater system.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF in the newsroom near Los Angeles and wondering why anyone would want to jump out of a perfectly good airplane.

--

The jump took place at Byron, California which is a favorite area for sky diving. Byron, California is also home to the somewhat well-known and historical Byron Hot Springs. This is a now-abandoned resort which was a retreat that attracted many movie stars and famous athletes in the early 1900s. More information and telemetry data on AF6IM's accomplishment is on line at www.parachutemobile.org D-Star Reflector)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73 and we thank you for listening.

For our local ARES/RACES group, this is going to complicate our drill planning. Our RACES Radio Officer is employed by the County Emergency Management Dept. More red tape.

Dick AC7EL

Does this bear on your situation?

The FCC.s Report and Order, FCC 06-149, 21 FCC Rcd.11643,
released October 10, 2006, clarifies the rules for employees by
stating that ��Section 97.113 does not prohibit amateur radio
operators who are emergency personnel engaged in disaster relief
from using the amateur service bands while on paid duty status.
These individuals are not receiving compensation for
transmitting amateur service communications; rather, they are
receiving compensation for services related to their disaster
relief duties and in their capacities as emergency personnel.��

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Not really.

The October 10, 2006 R&O applies only in actual emergencies. The 2009
Public Notice reiterates that position, but adds that they cannot use
ham bands for drills without special waivers.

In the Yahoo group "Amateur Radio", I saw this posted:

Amateur Radio Newsline(tm) Report 1680 - October 23 2009

Amateur Radio Newsline report number 1680 with a release date of Friday, October 23rd, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC issues a public notice on ham radio operators being paid by entities holding emergency training drills as the ARRL plans a web seminar on the topic of pecuniary interest in amateur radio. Also, South Africa's Sumbandillasat comes on the air, the I-A-R-U Administrative Council meets down under and a truly rare on for S-W-L's. Find out the details on Amateur Radio Newsline(tm) report number 1680 coming your way right now.

RADIO LAW: FCC ISSUES PUBLIC NOTICE ON AMATEUR SERVICE COMMUNICATIONS DURING GOVERNMENT DISASTER DRILLS

The FCC appears to be offering a kind of limited legal olive branch to government entities in need of ham radio operators to perform emergency communications during drills. This, while the ham is on the clock for an employer who might be sponsoring or involved in the event. Amateur Radio Newsline's Don Carlson, KQ6FM, takers a look at what the FCC has to say:

--

In its October 20th public notice, the FCC begins by reiterating that transmissions by amateur stations participating in government disaster drills must comply with all applicable Amateur Service rules. It agrees that the value of the amateur service to the public is that of a voluntary noncommercial communications service, particularly with respect to providing emergency communications is one of the underlying principles of the amateur service. At the same time the agency is adamant that the Amateur Service is not an emergency radio service unto itself.

Rather, says the regulatory agency, ham radio is a voluntary, non-commercial communication service. It is authorized for the purpose of self-training, intercommunication and technical investigations. This, as carried out by licensed persons interested in radio technique solely with a personal aim and without pecuniary interest. In other words, nobody involved in the use of ham radio on the air can directly or indirectly profit from it.

The FCC then goes on to say that state and local government public safety agencies occasionally conduct emergency preparedness or disaster drills that include amateur operations. Some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have expressed interest in having their employees who are amateur station operators participate in these drills by transmitting messages on the entity's behalf. The Commission's Rules, however, specifically prohibit amateur stations from transmitting communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer.

But here is where that olive branch of sorts comes in. The FCC release goes on to say that given the public interest in facilitating government-sponsored emergency preparedness and disaster drills, that the FCC will take this opportunity to provide a clear process for requesting a waiver, and provide the information that it required in order for it to consider granting such a request. And this is what the FCC says has to be done.

First, you the ham radio operator cannot request the waiver. Only the government agency or entity that you work for can do that. In other words, waiver requests should be submitted to the Wireless Telecommunications Bureau by the government entity conducting the drill, and must provide the following information:

First, when and where the drill will take place. Second, the identification of the amateur licensees expected to transmit amateur communications on behalf of their employers. Third is the identification of the employers on whose behalf the hams will be transmitting and lastly, a brief description of the drill.

The FCC emphasizes that the filing of a waiver request does not excuse compliance with the rules while that request is pending. Rather that the waiver must be requested prior to the drill, and employees may not transmit amateur communications on their employer's behalf unless the waiver request has been granted.

So what does this mean for Joe Ham whose employer wants him to take part in an emergency drill. If we interpret this correctly, it the employer is part of a city, state or federal agency and, if the FCC feels that the drill is important enough to issue a waiver, then those hams can take part. But only after the waiver has been issued and only during the time period that its grant is in force.

On the other hand, if Joe Ham works for some commercial organization that' s not eligible to obtain a waiver, then its best to say no, rather than to put his license on the line.

Lastly, the FCC notes that in an actual emergency, the Commission's Rules provide that an amateur station may use any means of radio-communication at its disposal to provide essential communication needs in connection with the immediate safety of human life and the

immediate protection of property when normal communication systems are not available. In those circumstances says the FCC, a rule waiver is not necessary.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

The FCC release says that for further information regarding matters discussed in this Public Notice, to please contact William T. Cross of the Wireless Telecommunications Bureau. The best way is by email to william dot cross at fcc dot gov. You can download and read the entire notice at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-2259A1.pdf (FCC)

RADIO LAW: ARRL TO HOLD WEB SEMINAR ON PECUNIARY INTEREST IN HAM RADIO

Meantime, ARRL General Counsel Christopher D. Imlay, W3KD, and ARRL Regulatory Information Manager Dan Henderson N1ND, will present a web-based conference. This, to discuss the issues behind, and the reasoning for the League's recent report titled The Commercialization of Amateur Radio: The Rules, The Risks. That's the ARRL's position paper on pecuniary interest as it relates to the United States Amateur Radio Service.

The session will take place on Wednesday, October 28th beginning at 9 PM Eastern Daylight Time. According to ARRL Atlantic Division Director Bill Edgar, N3LLR, who is the sessions sponsor, all amateurs need to be aware of these issues.

The on-line gathering is available at no cost and is open to all amateurs. To register for this interactive web based meeting, go to https://www1.gotomeeting.com/register/326759760 (ARRL)

HAM RADIO IN SPACE: SUMBANDILLSAT IS ON THE AIR

The first contacts have been made using the newly launched SumbandilaSat ham radio payloads and it sounded like this:

--

Satellite QSO audio. Hear it by downloading this weeks MP3 audio newscast at www.arnewsline.org

--

According to the official mission blog, at 07:48 UTC during the first morning pass of Sunday, October 18th, controllers activated the voice beacon on 435.350 MHz. They then switched on the transponder with is uplink is on 145.880 MHz with a downlink 435.350 MHz.

Later in the day, during the first evening pass at 19:13 UTC, several radio amateurs were heard operating through the satellite transponder. Thankfully, controllers had the foresight to preserve the moment for posterity:

--

Satellite QSO audio. Hear it by downloading this weeks MP3 audio newscast at www.arnewsline.org

--

It was a moment of triumph for everyone who worked for years to design, build and launch Sumbandillasat. You can hear more of these initial and QSO's through this new South African ham radio satellite at http://previews.matogen.com/sunspace/assets/galleries/sounds/Sumbandila-Firs tActivePass-Recording-2009-10-18.mp3 (SA-AMSAT)

**

RESCUE RADIO: SUMATRA BOUND HAM IS ON THE SATS

A ham involved in rescue radio is on his way to help earthquake ravaged Sumatra and is on the air via the ham radio satellites.

Jim Clary, ND9M, who also holds the call VQ9JC is presently deployed on a Navy ship heading for Sumatra on a humanitarian mission. This, to deliver fresh water for the victims of the recent earthquakes there.

While enroute he has been active on the ham radio satellites using a Yaesu FT897 as a transmitter and an FT817 for a receiver. The antenna is an using an Arrow and hes using a battery from an uninteruptabe power supply or U-P-S to power the station operating from the Helicopter Pad on the ship. Clary says there isn't much activity in the Indian Ocean but he is working VU's and E21's and handing out rare water grids as he whiles away the time until the ship reaches Sumatra. (ANS)

BREAKING NEWS: C6APR CONTEST TEAM KILLED IN PLANE CRASH

I'm Bill Pasternak, WA6ITF with sad news that the C6APR contest team has been killed in an aviation accident on their way to to the Bahamas to operate the CQ World Wide DX contest.

Peter Radding, W2GJ, Ed Steeble, K3IXD, Randy Hargenrader, K4QO and Dallas Carter, W3PP, lost their lives the morning of Wednesday, October 21st. This, when the twin engine Piper Aztec they were traveling on crashed shortly after takeoff from Summerville Airport in rural South Carolina. The operators were on their way to Crooked Island, Bahamas, for the annual operating event.

We will have more on this tragic story next week. (Various sources)

**

RADIO POLITICS: IARU AC MEETS DOWN-UNDER

The Administrative Council of the International Amateur Radio Union held its annual meeting in Christchurch, New Zealand on October 17th and 18th. Numerous points were agreed upon. Each will have a profound effect on the future of the world-wide amateur radio service. Amateur Radio Newsline's Jim Meachen, ZL2BHF, takes a look at a few of them;

--

We won't go into the minute details, but among the most important items was the review of a strategic plan for the development of support for amateur radio frequency allocations was reviewed for the period through 2012. The principal focus is on preparations for the 2012 World Radiocommunication Conference with an eye at getting a new amateur allocation in the vicinity of 500 kHz.

Another important point was adoption of a policy statement explaining the status of the Global Amateur Radio Emergency Communications Conference or GAREC. This, with respect to the International Amateur Radio Union. According to the meeting report, the Global Amateur Radio Emergency Communications Conference functions as an informal meeting of I-A-R-U member-societies and of amateur radio emergency groups within or outside of the respective national IARU member-society. The gathering serves as a forum for the exchange of experience and as an advisory body for the emergency communications work of the IARU.

And still in the area of emergency communications, the Administrative Council noted that the three I-A-R-U regions have reached consensus on three global Center of Activity frequencies for use in the event of emergencies. These frequencies are 14.300, 18.160 and 21.360 MHz.

As a result of failure to fulfill their obligations under the IARU Constitution, the rights of several I-A-R-U member-societies were placed temporarily in abeyance. These societies represent hams in Bolivia, Ecuador, Guyana, Nicaragua, Paraguay, and Suriname.

Last but by no means least, the theme of "Amateur Radio: Combining communication experience with modern digital techniques" has selected for the next World Amateur Radio Day. Tats slated for April 18, 2010.

For the Amateur Radio Newsline, I'm Jim Merachen, ZL2BHF, In Auckland, New Zealand, reporting for the Amateur radio Newsline.

--

The next scheduled in-person meeting of the International Amateur Radio Union Administrative Council will be held in El Salvador in conjunction with the I-A-R-U Region 2 Conference. That takes place in October 2010. (IARU)

**

INTRUDER WATCH: SSB INTRUDERS ON 14.002 MHZ

If something sounds strange on 20 meter SSB where there should only be Morse, then you have likely stumbled across what appears to be a African pirate radio net. According to Region One Inthruder Watch, this group of likely unlicensed operators can be found every morning from 6:00 to 09:00 U-T-C on 14.002.2 MHz using upper sideband. They converse in what's described as an unknown tribal language they operate like a phone line. Beam headings taken from Germany place the operation at about 180 degrees and possibly putting the operation in central Africa or Angola. No calls have been heard and only names are being used to identify. (NZART, WIA News)

**

ON THE AIR: CANADA'S HAM COMMUNITY TO COMMEMORATE THE 2010 WINTER OLYMPICS

Ham radio will be a part of the 2010 Olympics. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

The upcoming Olympic games in Canada will be celebrated on the ham bands. This with word that members of the Vancouver Olympics Amateur Radio Group will be activating three special event stations to promote and commemorate the Vancouver Winter Olympic and Paralympic Games to be held in February and March of 2010.

The special activity is already under way and will continue through March 2010. Operations will be on all bands and modes with the first station VG7V on the air from October 1st through November 30th. Then comes VG7W from December 1st of this year through January 31st of 2010. The final call will be VG7G taking to the airwaves on February 1st and continuing through March 31st 2010.

The Vancouver Olympics Amateur Radio Group says that it will be consolidating all contacts and intends to post them electronically to the ARRL's Logbook to the World. In addition, commemorative paper QSL cards for those who want them will be available at the conclusion of the events in April 2010. Cards received via the QSL Bureau will be returned the same way.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In addition to the commemorative operation radio amateurs will also be handling many of the logistics for the games. Word is that most of this will be short range communications on the 1.3 meter or 220 MHz band using FM and numerous local repeaters. (OPDX)

**

RADIO LAW: SOME IRC'S ABOUT TO EXPIRE

Hams who use International Reply Coupons, or IRC's, in the QSL exchange process are advised to check the expiry dates of their current stock. This is because one batch is due to expire on December 31st. Those are the ones that you need to use up quickly before their value is gone. (GB2RS)

**

ENFORCEMENT: FCC CRITICIZED OVER KWVE FINE BY 50 STATE BROADCAST ASSN'S

Turning to enforcement news, word that fifty state broadcast associations have signed onto a letter of protest to the Federal Communications Commission about a proposed $5,000 fine against KWVE FM, of San Clemente, California. This, for an EAS mistake by a station staffer.

As reported here on Newsline a few weeks ago, the case goes back about a year. That's when Calvary Chapel station KWVE transmitted an unauthorized Required Monthly Test of the Emergency Alert System. The FCC received a complaint in October 2008 that the station transmitted commercial programming and an ad as part of the test message, which were then re-transmitted by other stations and cable systems in the daisy chain. In response to a letter of Inquiry, the station told the commission one of its employees had intended to run a scheduled weekly EAS test, but ran the unscheduled RMT instead. Also, that the employee failed to transmit the End of Message code.

But in its decision last month, the FCC said KWVE's actions affected other stations. Also, the transmission of EAS tones that are followed by a broadcast that is not part of an EAS test or actual emergency information, whether intentional or accidental, compromises the integrity of the EAS system. The FCC called KWVE's action was willful and that's why it proposed a $5,000 fine.

Now, in their letter protesting the FCC's action against KWVE, the broadcast associations reminded the commission that the station is a volunteer Local Primary One or LP-1. As such, they are concerned that if the commission imposes a substantial fine against an LP-1 for a mistake, it would deter current LP-1's as well as current Primary Entry Point stations from continuing to participate voluntarily in EAS. The broadcast associations also fear the fine would also have a chilling effect preventing new stations from serving as LP-1's or Primary Entry

Point stations.

The associations signing the letter represent radio and television stations in all 50 states as well as stations in the District of Columbia and Puerto Rico. In the letter they ask that the agency either set aside the fine or simply admonish the station. (CGC, RW, others)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ENFORCEMENT: CBS SAYS FCC VIOLATING ITS CIVIL RIGHTS IN SUPERBOWL CASE

And talk about a novel defense to an FCC accusation of a major broadcast violation. It looks as if CBS might just have come up with one as we hear from Newsline's Jim Davis, W2JKD:

--

CBS Incorporated says that the FCC is violating its constitutional rights in hounding the broadcaster in regard to what's become known as the Superbowl Janet Jackson wardrobe malfunction.. In a Friday filing, October 2nd before the U.S. Third Circuit Court of Appeals, CBS said the FCC has an Ahab-like obsession with the Super Bowl case, comparing the commission to the mad sea captain in Moby-Dick.

CBS lawyers say that this obsession poses an important question. They ask how many years can the FCC prolong a broadcast indecency probe of an un-scripted and unintended event that lasted nine-sixteenths of one second?

CBS says the FCC's obsessive zeal in pursuing the Super Bowl case and the attendant chill on broadcast speech show why First Amendment scrutiny by the court may not just be appropriate, but also necessary. The network also contends in the filing that the notorious wardrobe malfunction was orchestrated by Jackson and duet partner Justin Timberlake without the network's knowledge.

For the Amateur Radio Newsline, I'm Jim Davis, W2JKD

--

As previously reported, in September the FCC asked the court to look into whether CBS was reckless when it chose not to use video delay technology for the broadcast. The agency contends that even the fleeting exposure of an entertainers breast that was broadcast over the

airwaves breast violated FCC indecency regulations. (RW)

**

D-STAR NEWS: NEW 23 CM DIASCUSSON GROUP FORMED

A new Internet based reflector group has been created to discuss the use of D-STAR Digital Voice and High-Speed Data on the 1.2 GHz band . Called D-STAR_23cm, the group discussions center around the use of the Icom ID-1 mobile, IC-9100 transceiver, RP-1V and RP-2V digital voice repeaters and all aspects of 23 centimeter data and voice communications using D-Star technology. The group can be joined groups dot yahoo dot com slash D-Star_23 cm (WB9QZB)

**

EMERGING TECHNOLOGY: FLEXABLE SATELLITE ANTENNAS

Flexible antennas attached to your clothing may work better for GPS or other personal satellite communication reception. That's according to the European Space Agency, as reported by TV Technology's Doug Lung. Firefighters or other emergency personnel may benefit from this technology, according to officials involved in this testing. (Todays Technology)

**

HAM RADIO IN SPACE: IRAN MAY PUT SATELLITE IN THE HAM SATELLITE BANDS

Turning to ham radio space relayed news, there is a possibility that Iran's Mesbah-2 satellite, slated for launch early 2010, could operate on frequencies allocated to the Amateur Satellite Service.

An on-line report at astronautix.com says that the original Mesbah satellite, lost in a 2005 launch failure, was to have operated on Amateur Satellite Service frequencies. Now its being reported that Iran's Minister of Communications and Information Technology, Reza Taqipour, has said that the replacement Mesbah satellite has successfully completed pre-launch tests and is now ready for liftoff early next year.

Most observers think that there will be little difference between the transponder set-up between the lost Mesbah satellite on the new replacement bird. More is at www.astronautix.com/craft/mesbah2.htm (Southgate)

**

WORLDBEAT: AUSTRALIA'S WIA NEWS NOW ON TWITTER The Wireless Institute of Australia national news service is now on Twitter. As many of you know, the WIA is the national society for Radio Amateurs in Australia. It joins the growing number of ham radio organizations making use of this service. You can find WIA National News on Twitter at twitter dot com slash VK1WIA. (WIA) ** WORLDBEAT: ARNEWSLINE ON FACEBOOK Also,

remember that Amateur Radio Newsline has created a news discussion page on the Facebook social networking service. You must be a Facebook member to access it. Just go to www dot facebook dot com, join the service, use the search feature to find the Amateur Radio Newsline page and then become a friend of it. We hope to see you there. (ARNewsline(tm))

**

WORLDBEAT: SWEDNS SAQ ON THE AR OCTOBER AND DECEMBER

The historic Alexanderson alternator transmitter located at Grimton, Sweden, will next take to the airwaves on October 24th at 09:00 UTC and again on December 24th at 08:00 UTC.

This museum station is operated by volunteers on special days throughout the year. It transmits CW on the frequency of 17.2kHz signing the call SAQ. If nothing else, the station is well worth listening out for because its C-W is a musical sound and is very unique.

No reports required and no QSL cards are given for the October transmission but QSLs are available for the Christmas Eve transmission. For more information check out www.alexander.n.se. (press release)

**

DX

In DX, word that the ARRL's DXCC desk has approved the recent FT5GA operation from Glorioso Island has been approved for DXCC credit. Ther operation that began on September 14th and ran through October 8th netted more than 50,000 QSO's. Until this operation, Glorioso was number 4 on DX Magazine's Most Wanted list. DL2FAG will be active from Niue and Samoa from October 19th to November 7th. He will operate as ZK2DL from Niue and from 17th to 30th November from Samoa. He plans to operate mainly RTTY, PSK and SSB on 10-80. QSL via his home call.

A German team is on the air on their 26th DXpedition to Lichtenstein where they are operating as HB0 slash HB9AON from Triesenberg. They will be there through October 30th and are active on the. The QSL manager is DJ2YE.

KL7JR reports that plans are underway for the activation of Jacquot Island before and during ARRL's December 11th to the 13th Ten Meter Contest. Listen out for VY1RST to concentrate on 10 meters for the contest and 14.260 for non-contest activities. QSL via KL7JR at his callbook address.

G4OHX, will be active as 5R8HX from Madagascar between this December 28th and January 3rd of 2010. Activity will be mainly CW. QSL via his home callsign, direct only.

Lastly, G7COD will be operational from Embudu Island in Kaafu Atoll the Maldives, until October 25th. He's using the call 8Q7AK on SSB and CW on the 80 through 10 meter bands including WARC frequencies. QSL as directed on the air.

Above from various DX news sources.

**

THAT FINAL ITEM: RADIO ST HELENA DAY - NOVEMBER 14th

And finally this week, if you like to listen out for rare shortwave stations then this is for you. Once again, Amateur Radio Newsline's Jim Davis, W2JKD:

--

Radio St. Helena Day will be on Saturday 14th of November 2009. This rare station is located on the Island of St Helena which lies in the South Atlantic off the coast of Angola.

The station normally provides a local radio service to the island and has a range of about 100 km. But once a year it broadcasts internationally on Shortwave at 11.092.5 MHz on upper sideband with its famed Party On-The-Air program.

This years operation will begin at 20:00 UTC and conclude at 01:00 UTC with the last 90 minutes beaming toward North America, Central America and the Caribbean. A special QSL card will be available to confirm reception reports.

To get a QSL from Radio St. Helena, you must send a written and verifiable reception report by Air Mail and include sufficient return postage to Radio St. Helena, P.O. Box 93, Jamestown, St. Helena, STHL 1ZZ, South Atlantic Ocean. Mark your envelope via Air Mail via United Kingdom & Ascension For those not aware, Saint Helena was named after St Helena of Constantinople.

For the Amateur Radio Newsline, I'm Jim Davis, W2JKD.

--

And less we forget, E mail reports will be not be verified and off air recordings cannot not be returned. At least that's what the press release says. (Press release)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at

www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Fred Vobbe, W8HDU, saying 73 and we thank you for listening.

==> + REGULATORY: FCC ISSUES PUBLIC NOTICE ON AMATEUR SERVICE
COMMUNICATION DURING GOVERNMENT DISASTER DRILLS

On October 20, 2009, the FCC released a Public Notice clarifying the
Commission's rules relating to the use of Amateur Radio by licensed
amateurs participating in drills and exercises on behalf of their
employers. Entitled Amateur Service Communications During Government
Disaster Drills, the Public Notice addresses participation by paid
employees of organizations taking part in drills.

The Public Notice -- DA 09-2259
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-2259A1.pdf> --
affirms that the Commission's rules "specifically prohibit amateur
stations from transmitting communications 'in which the station
licensee or control operator has a pecuniary interest, including
```

communications on behalf of an employer.'" ARRL Regulatory Information Manager Dan Henderson, N1ND, said that "This Public Notice is intended to clarify a difficult issue. A wide range of unofficial -- and frankly some incorrect -- interpretations have been offered on this topic in various public forums recently. DA 09-2259 is the official FCC notice on this issue. Though issued jointly by the Wireless Telecommunications Bureau (WTB <http://wireless.fcc.gov/>), the Enforcement Bureau (EB <http://www.fcc.gov/eb/>) and the Public Safety and Homeland Security Bureau (PSHSB <http://www.fcc.gov/pshs/>) under delegated authority from the Commission, the Notice makes it clear that WTB is the Bureau at the FCC with jurisdiction over the Amateur Radio Service rules and their interpretation."

The Public Notice states that, in order to facilitate participation by employees who wish to engage in government-sponsored drills and emergency exercises on behalf of their employers, a waiver can be requested from the WTB by the government agency sponsoring the drill or exercise (and not by the individual who wishes to participate in the drill or exercise). The government entity conducting the drill must include in its waiver application the following information:

- When and where the drill will take place,
- Identification of the amateur licensees expected to transmit amateur communications on behalf of their employer,
- Identification of the employer(s) on whose behalf the amateur(s) will be transmitting, and
- A brief description of the drill.

"It should be noted," Henderson said, "that the waiver request must be filed and acted upon in advance of the drill. The waiver must be actually granted by the Commission before the amateurs participate in the drill. It is not enough to apply -- the waiver must be granted first."

Henderson added that the Public Notice also emphasizes that in an actual emergency, the Part 97 rules "provide that an amateur station may use any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and the immediate protection of property when normal communications systems are not available." In those specific circumstances, the rule waiver is not necessary.

Government entities requesting a waiver for their emergency/disaster drill should submit a written request addressing the factors listed above to Wireless Telecommunications Bureau, 445 12th St SW, Washington, DC 20554, Attn: Scot Stone.

A waiver is needed only for those licensees transmitting messages on behalf of their employer during the State and local government public safety agency's "occasionally conducted emergency preparedness or disaster drills test or drill." This may, after analysis, turn out to be very few licenses or, by rearranging functions of participants, a

waiver may not be needed. The Commission has also emphasized that only governmental agencies may apply for a waiver.

In September, the ARRL released guidelines <http://www.arrl.org/news/stories/2009/09/25/11094/?nc=1> that address numerous aspects of the issue of business communications in the Amateur Service.

==> + REGULATORY : ARRL GENERAL COUNSEL, REGULATORY INFORMATION MANAGER TO PRESENT WEBINAR

<https://www1.gotomeeting.com/register/326759760> ARRL General Counsel Chris Imlay, W3KD, and ARRL Regulatory Information Manager Dan Henderson N1ND, will present a webinar beginning at 9 PM EDT on Wednesday, October 28. This session will discuss the issues behind, and the reasoning for, the ARRL's recent report, The Commercialization of Amateur Radio: The Rules, The Risks, The Issues <http://www.arrl.org/news/files/ARRL_AppropriateUseGuidelines.pdf>. <http://www.arrl.org/news/files/ARRL_AppropriateUseGuidelines.pdf>According to webinar sponsor and host ARRL Atlantic Division Director Bill Edgar, N3LLR, all amateurs need to be aware of these issues. The webinar, available at no cost, is open to all amateurs. Please click here <https://www1.gotomeeting.com/register/326759760> to register for this informative interactive Internet meeting.

==> + FOUR RADIO AMATEURS KILLED IN PLANE CRASH EN ROUTE TO CQWW PHONE CONTEST

Just after take-off -- around 6:30 AM on Wednesday, October 21 -- a twin-engine plane carrying four Amateur Radio operators crashed into the woods, only 250 yards off the end of the runway in Jedburg, South Carolina, about 20 miles northwest of Charleston. The plane -- piloted and owned by Peter Radding, W2GJ -- carried Ed Steeble, K3IXD, Dallas Carter, W3PP, and Randy Hargenrader, K4QO. The four men were on their way to the Bahamas to operate in this weekend's CQ World Wide Phone Contest as C6APR, competing in the Multi/2 category. Radding, of North Charleston, South Carolina, was 69; Steeble, of Summerville, South Carolina was 68; Carter, of Laurel, Delaware, was 67 and Hargenrader, also of Summerville, was 55. All were ARRL members; Radding and Steeble were Life Members. Click here <http://www.arrl.org/news/stories/2009/10/21/11157/?nc=1> for more information.

Robert Biss, W8ZA, of Harpers Ferry, West Virginia, accompanied Steeble, Carter, Radding and Hargenrader to the Bahamas for the 2008 running of the CQWW SSB Contest. Click here <http://www.arrl.org/news/features/2009/10/22/11158/?nc=1> for Biss' remembrances of his four friends.

==> + ADVOCACY: HR 2160 GAINS MORE COSPONSORS

As of October 14, five more Congressional Representatives -- Tom Latham (R-IA-4), Dana Rohrabacher (R-CA-46), Scott Garrett (R-NJ-5), Candice

Miller (R-MI-10) and John Olver (D-MA-1) -- pledged their support for
HR 2160
<http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&doc
id=f:h2160ih.txt.pdf>,
The Amateur Radio Emergency Communications Enhancement Act of 2009,
bringing the total number of cosponsors to 30, including original
sponsor Sheila Jackson-Lee
<http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1> (D-TX-18). HR
2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri
(D-NY-24), Roscoe Bartlett (R-MD-6), John Boozman (R-AR-3), Madeleine
Bordallo (D-Guam), Geoff Davis (R-KY-4), Bob Filner (D-CA-51), Bart
Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey (D-NY-22),
Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Zoe Lofgren
(D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11),
Charlie Melancon (D-LA-3), Dennis Moore (D-KS-3), Bill Posey (R-FL-15),
Bennie Thompson (D-MS-2), Michael Turner (R-OH-3), Peter Welch (D-VT),
David Wu (D-OR-1) and Don Young (R-AK). Click here
<http://www.arrl.org/news/stories/2009/05/12/10818> for information on
how to encourage your Congressional representative to sponsor HR 2160.

==> + INTERNATIONAL: IARU ADMINISTRATIVE COUNCIL ADOPTS PRELIMINARY
WRC-12 POSITIONS

The Administrative Council (AC) of the International Amateur Radio
Union (IARU <http://www.iaru.org/>) held its annual meeting on October
17-18, 2009 in Christchurch, New Zealand and took 16 actions. Attending
the Christchurch meeting were IARU President Tim Ellam, VE6SH/G4HUA;
Vice President Ole Garpestad, LA2RR; Secretary Rod Stafford, W6ROD;
regional representatives Hans Blondeel Timmerman, PB2T; Dennis Green,
ZS4BS; Ramon Santoyo, XE1KK; Daniel Lamoureux, VE2KA; Michael Owen,
VK3KI; Shizuo Endo, JE1MUI; Peter Lake, ZL2AZ, and recording secretary
David Sumner, K1ZZ. The next scheduled in-person meeting of the AC will
be held in the vicinity of San Salvador, El Salvador in conjunction
with the Region 2 Conference in October 2010. The officers will
investigate holding a Web-based "virtual meeting" early in 2010. Click
here <http://www.arrl.org/news/stories/2009/10/20/11149/?nc=1> for more
information.

==> DID YOU KNOW? WWV AND WWVH

Today, most amateurs know that radio stations WWV and WWVH broadcast
time and frequency information 24 hours a day, seven days a week to
millions of listeners worldwide. Administered by the National Institute
of Standards and Technology (NIST), WWV is located in Fort Collins,
Colorado, about 60 miles north of Denver; WWVH is located on the Island
of Kauai, Hawaii on a 30 acre site near Kekaha at Kokole Point. Both
stations broadcast information that includes time announcements,
standard time intervals, standard frequencies, UT1 time corrections, a
BCD time code, geophysical alerts, marine storm warnings and Global
Positioning System (GPS) status reports. Most hams today think of WWV
and WWVH as "time stations." According to QST Editor Steve Ford,

WB8IMY, that's only half-true: they are really time and frequency stations. "The time signals that you hear are regulated by an atomic clock that uses the oscillations of Cesium atoms as its standard -- 9,162,361,770 oscillations equal 1 second," wrote Ford in the June 1994 issue of QST. Click here <http://www.arrl.org/news/stories/2009/10/21/11155/?nc=1> to discover this part of Amateur Radio history.

==> INTERNATIONAL : IARU OFFICIALS ATTEND REGION 3 CONFERENCE IN NEW ZEALAND

Hosted by the New Zealand Association of Radio Transmitters (NZART), officials from the International Amateur Radio Union (IARU) attended the IARU Region 3 14th Triennial Conference on October12-16, in Christchurch, New Zealand. Joel Harrison, W5ZN, ARRL President, represented the ARRL and ARRL Chief Executive Officer and former IARU Secretary David Sumner, K1ZZ, was also in attendance. Click here <http://www.arrl.org/news/stories/2009/10/18/11147/?nc=1> for more information

==> + INTERNATIONAL: ARRL HQ HOSTS AMATEUR RADIO COURSE FOR USTTI PARTICIPANTS

<http://www.youtube.com/watch?v=6ImJ7LTUeg0> Students from Ghana, Mauritius, the Philippines, Sri Lanka and Zambia attended the United States Telecommunications Training Institute (USTTI) Amateur Radio Administration Course (ARAC) at ARRL Headquarters October 12-16. ARRL Technical Relations Manager Brennan Price, N4QX, coordinated the session and led the course. "The curriculum covered a wide variety of Amateur Radio topics and concerns, including licensing, spectrum requirements, disaster communications and antenna requirements," Price said. The curriculum also covered the ITU and its regulations, as well as the process leading to the next World Radiocommunication Conference 2012 (WRC-12). Click here <http://www.arrl.org/news/stories/2009/10/22/11154/?nc=1> for more information.

==> + HISTORICAL: UNIVERSITY RESEARCHERS NEED YOUR HELP AS THEY STUDY EARLY AMATEUR STATION LOGS

Researchers at the University of Wisconsin and Miami University of Ohio are seeking copies of amateur station logs from 1913-1927 in hopes they may offer insights into the relationship between individuals' work and leisure activities, technology, and their social networks. "Early hams laid the foundation for today's use of technology for communications and entertainment," said Director of Engineering and Operations for Wisconsin Public Radio Steve Johnston, WD8DAS. "Many operators did not work in a technical field, but pursued Amateur Radio as a hobby for its own sake. This is a true success story about how a pastime can develop into an entirely new commercial and social phenomenon." Click here <http://www.arrl.org/news/stories/2009/10/21/11153/?nc=1> for more

information on how you can help out with this study.

==> SOLAR UPDATE

Tad "Dance, and Provencal song, and sunburnt mirth <http://englishhistory.net/keats/poetry/odetoanightingale.html>" Cook, K7RA, this week reports: Sunspot group 1028 emerged for only a few hours on Tuesday. This is another one of those phantom spots that briefly appears, only to vanish, teasing us with hints of an increase in activity that never seems to come. Along with the quiet Sun, we are still seeing extremely quiet geomagnetic indices, a nice upside to the lack of solar activity. Solar flux until the end of this month is expected to be around 72. The average solar flux for this week was 70.6, up 0.7 points from 69.9 the week before. Look for more information in the Solar Update, available on the ARRL Web site on Friday, October 23. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Ode to a Nightingale <http://englishhistory.net/keats/poetry/odetoanightingale.html>.

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/contests/> This week, look for an NCCC Sprint on October 23. The CQ Worldwide DX Contest (SSB), the CW and Digital runnings of the 10-10 International Fall Contest and the 50 MHz Fall Sprint are October 24-25. The SKCC Sprint is October 28. Next week, look for more runnings of the NCCC Sprint on October 30 and November 5. The High Speed Club CW Contest is November 1 and the ARS Spartan Sprint is November 3. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + AMATEUR RADIO IN SPACE: SUMBANDILASAT NOW OSCAR 67

The South African Amateur Radio satellite SumbandilaSat <http://www.arrl.org/?artid=9183> has been officially designated SumbandilaSat-OSCAR 67, or simply OSCAR 67. Last weekend, the satellite was successfully activated and tested with a number of contacts made through its transponder, but it is not yet open for routine use. The satellite was launched from the Baikonur Cosmodrome <http://www.russianspaceweb.com/baikonur.html> in Kazakhstan on September 17. The main payload is a multi-spectral imager, but the satellite also carries an Amateur Radio component consisting of a 2 meter/70 cm FM repeater. After SumbandilaSat is fully commissioned, the repeater will be activated with an uplink at 145.880 MHz and a downlink at 435.350 MHz; there will also be a voice beacon at 435.300 MHz. The transponder mode will be controlled by a CTCSS tone on the uplink

frequency. SumbandilaSat was sponsored by the Department of Science and Technology and was built at SunSpace <http://www.sunspace.co.za/> in cooperation with the Stellenbosch University <http://www.sun.ac.za/>. In addition to the SA-AMSAT amateur module, the satellite carries Stellenbosch University' s radiation experiment and software defined radio (SDR) project, an experiment from Nelson Mandela Metropolitan University and a VLF radio module from the University of KwaZulu-Natal.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, October 25, 2009, for these online course sessions beginning on Friday, November 6, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

473. IARU Announces ï¿½GlobalSET 2009

Newsgroup: rec.radio.amateur.moderated
Date: 2009-10-27 19:44:07 UTC
From: helmsman@wowway.com
Message-ID: <7mfee5to0plp1uldpopfieq2ht1vp3dvi3@4ax.com>
Source record: 1783

IARU Announces ï¿½GlobalSET 2009ï¿½

On Saturday November 14, 2009, from 1800 to 2200 UTC, the
International Amateur Radio Union will activate ï¿½GlobalSET 2009ï¿½, a
Global Simulated Emergency Test that encourages Hams to pass simulated
emergency traffic using standard National Traffic System format.

The Radio Amateurs of Canada, a member society of IARU Region 2,
encourages all Canadian Radio Amateurs having an interest in emergency
communications to participate.

Rules and a list of participating stations may be found at
http://www.iaru-r1.org. Search under the heading, ï¿½Emergency
Communicationsï¿½, working group.

This is great opportunity for RAC members to observe and practice
important traffic passing skills that are so important to the
fundamentals of the Amateur Radio Emergency Service.

Those Amateurs planning to participate are requested to register with
the RAC Vice President for Field Services as soon as possible by
emailing vo1dtm@hotmail.com .

Doug Mercer VO1DTM (RAC CEC)

Vice President Field Services

Radio Amateurs of Canada Inc.

Source record: 1784

I currently have at home an HF-6V for Low and WARC and 6 meter Bands.
On a 9ft Glenn Martin Roof tower on my 1 story house I have an A-4S. No
VHF/UHF antennas as of yet. My rig is an ICOM 746pro, powered by a
Astron PS-35. I also rig control with my homebuild computer. For digi
modes I have a SIGNALINK USB. Software I use DXKeeper for Logging etc.
MIXW with MIX2DXLabs software for digi modes (the MIX2DX translates
straight to DXKEEPER and logs the QSO when I save it to Mixw's log. On
occasion I use DM780 just to use the superbrowser.

In the truck just a Yeasu FT-1500. Not much repeater activity around
here so it mostly stays quiet.

In my 5th wheel I take the 746pro and use the Icom PS25 power supply I
keep in the trailer. Antenna is either a Pro-Am whip on a ladder mount
or will be a cushcraft 4BTV that I am figuring how to mount.

Not much else. Just having fun for 32 years and counting.

Scott W7PSK

==> + OPERATING: CHANGES FOR THE 2009 NOVEMBER SWEEPSTAKES

Next month, amateurs throughout the US and Canada will take part in the
longest-running domestic contest, the 76th ARRL November Sweepstakes.
Since 1930, this tradition in Amateur Radio has brought out all kinds
of amateurs -- from seasoned contest veterans to neophytes, from
long-time traffic handlers to operators new to HF. The CW running of
Sweepstakes takes place next weekend, November 7-9, while the SSB
weekend is November 21-23. Each event runs from 2100 UTC Saturday until
0300 UTC Monday. All entrants may operate 24 out of the 30 hours. Click
here <http://www.arrl.org/news/stories/2009/10/28/11166/?nc=1> for more
information, including changes to the log submission deadline.

==> + PUBLIC SERVICE: FCC ISSUES FIRST WAIVER FOR GOVERNMENT-SPONSORED
DISASTER DRILL
```

On October 27, the FCC's Wireless Telecommunications Bureau (WTB) granted the first waiver that allows amateurs who participate in a government-sponsored emergency preparedness and disaster drill to communicate on behalf of their employers during the drill. The waiver request was made on behalf of the Commonwealth of Kentucky. That state conducted a full-scale exercise on Wednesday, October 28, 2009 from 8 AM-5 PM (EDT) to test their emergency response to the possible release of chemical agents at Blue Grass Army Depot, located near Richmond, Kentucky. Click here <http://www.arrl.org/news/stories/2009/10/28/11165/?nc=1> for more information.

==> + PUBLIC SERVICE: SANTA CRUZ COUNTY HAMS CALLED TO ASSIST DURING WILDFIRES

Almost 20 years to the day since the Loma Prieta Earthquake shook California's Bay Area, a wildfire was burning through Santa Cruz County (approximately 75 miles south of San Francisco) just miles from the epicenter of the quake that caused part of the Bay Bridge to collapse. Just as Amateur Radio operators responded to calls for assistance for the earthquake, 20 years later on October 25, they responded when needed for a 485 acre wildfire. Click here <http://www.arrl.org/news/stories/2009/10/29/11168/?nc=1> for more information.

==> + THE DOCTOR IS IN: ANTENNAS FOR DOMESTIC CONTESTS

By ARRL News Editor S. Khrystyne Keane, K1SFA

Just the other day, the Doctor and I got to talking about ARRL Sweepstakes <http://www.arrl.org/contests/rules/2009/novss.html>. I showed him my crystal mug and whisk broom from last year's Sweepstakes running (the W1AW team did quite well), and he showed me what kind of antennas I should look into for domestic contests. Being more of a DX RTTY contester, I really don't know much about the domestic side of things. I dabbled in the February NAQP RTTY Contest <http://www.ncjweb.com/naqprules.php> last year from K1TTT <http://www.k1ttt.net> -- and will do so again in 2010 -- so I made sure to listen attentively. Here is what the good Doctor had to say:

<http://www.arrl.org/news/files/DoctorARRL_Letter102909Figure1.pdf>
Each contest brings its own special requirements to the antenna designer. While many popular contests focus on communications outside North America and require the ability to send signals to all points of the compass, Sweepstakes is different, with a need to cover just the US and Canada. That means generally shorter range contacts and contacts in a limited range of directions, depending on station location.

In addition, points are gathered based on individual contacts multiplied by ARRL Sections. Thus, it is desirable to have the capability to reach all 80 sections on at least one band that will have propagation available. ARRL Contest Manager Sean Kutzko, KX9X, notes that many a contest superstation's secret weapon for Sweepstakes is a

40 meter dipole up between 25-30 feet. He says 40 meters is the Sweepstakes "money band" -- you can get close-in contacts during daylight and rake in the distant Sections when the band goes long in the evening hours. He said he had never put in a serious effort at Sweepstakes without a low dipole for 40, no matter how much aluminum he had up in the air.

<http://www.arrl.org/news/files/DoctorARRL_Letter102909Figure2.pdf>
Another great solution is a multiband Yagi that can be pointed towards the areas with the best propagation. If possible, have it relatively low -- perhaps at a half-wave length above ground -- to be able to cover the close-in stations, as well as those at the continent's far edge. Obviously, from the Central US or Canada, distances tend to be shorter than they are from the coasts with stations near the edges better able to make use of higher antennas. If you have the ability to try different heights, by all means try lowering your antenna from the optimum height for transcontinental contacts and see what works best for you.

If you're like me and don't have rotatable HF arrays available, all is not lost. First you need to figure out what azimuths you need to cover and then try to match those to fit your location. From my Connecticut location, I would want to cover from the direction toward old friend Don, WT1I, in Ocala, Florida (bearing 214Â°) up to Mark, KL7TQ, my old Army buddy in Eagle River, Alaska (322Â°).

There are many ways to compute the bearing to a station. The easy way out is to just use www.qrz.com <http://www.qrz.com/>. If your listing includes your latitude and longitude, bringing up another station and "looking at the details" will provide you with the bearing to their station. If you don't know anyone at the edges of the desired coverage area, just put a city name in the "Name Search" function and pick one that comes up. It doesn't get much easier -- or, if you must, you can use spherical trigonometry.

<http://www.arrl.org/news/files/DoctorARRL_Letter102909Figure3A.pdf>
Using my station as an example, the range of bearings I want to cover requires a beamwidth of 322Â° minus 214Â°, or 108Â°. A half-wave dipole at a height of half a wave length has a -3 dB beamwidth of 87Â° (see Figure 1). At a width of 108Â° it's only down to -4.6 dB from the peak. That's pretty close, and might be good if I had a lot of distant stations behind me, as in Central US or Canada, but I don't.

If I were to put a wire reflector, 5 percent longer than the original dipole, 6 feet behind it (for 20 meters), I would have an easy to deploy 2-element Yagi with the pattern shown in Figure 2. To make it resonate in mid band, I need to trim about 4 inches from each end of the now driven element and I'm good to go. Note what I have -- a bit more gain in front, a lot less in the back, but still plenty of signal toward northern New England. My signal at the edges of my coverage area is now stronger than the dipole's -3 dB points.

If I don't have many stations to my rear, an additional 1 dB of forward gain can be achieved at the expense of rearward signals (see Figure 3) and a higher SWR by shortening the reflector a few inches -- about 2.5 percent over the driven element should do the trick. This may be worthwhile if you are right at a corner of the country. For more bands, just use parallel elements and multiple reflectors. See the article <http://www.arrl.org/tis/info/pdf/0111035.pdf> by Marcus Hansen, VE7CA, to get the idea. Azimuth plots represented in Figures 1, 2 and 3 represent the output from the EZNEC antenna modeling software <http://www.eznec.com/> by Roy Lewallen, W7EL.

Thanks Doctor! Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST <http://www.arrl.org/qst>, the official journal of the ARRL.

==> + DID YOU KNOW?: ARRL SWEEPSTAKES

The ARRL November Sweepstakes was once called "The January Contest." First held in 1930, the first running of what we know of today as ARRL Sweepstakes, last two weeks. J. F. Feely, W1ADW, of Danbury, Connecticut, came in first place with 153 contacts in 43 Sections, giving him a score of 13,158 points. Click here <http://www.arrl.org/news/stories/2009/10/29/11170/?nc=1> for more information on this event, now in its 76th running.

==> + PRODUCT REVIEW: A "SNEAK PEEK" AT DECEMBER QST

<http://www.youtube.com/watch?v=IX6f6SktdLA> ARRL Test Engineer Bob Allison, WB1GCM, offers ARRL Letter readers a "sneak peek <http://www.youtube.com/watch?v=IX6f6SktdLA>" at the two items featured in the Product Review column of the December 2009 issue of QST. Get up close and personal with the ICOM IC-80AD dual band handheld transceiver, reviewed by QST Editor Steve Ford, WB8IMY, and the Ten-Tec 715 RF speech processor, reviewed by Allison. Check it out!

==> SOLAR UPDATE

In for Tad "Tall chestnuts keep away the Sun and moon <http://englishhistory.net/keats/poetry/songoftheindianmaid.html>" Cook, K7RA, Steve Nichols, G0KYA, of Wymondham in Norfolk, England, gave us this report: What a week for sunspots! This was a huge surprise -- and a wonderful event for the CQ World Wide SSB DX Contest last weekend, with many stations reporting excellent HF DX, even on 10 and 15 meters. Many Southern California hams, including K6GEP, were surprised to work Romanian station YO4ATW on 10 meters in the contest. It helped that YO4ATW was operating with a tri-band beam atop a 10-story building! Look for more information in the Solar Update, available on the ARRL Web site on Friday, October 30. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad

Cookism" brought to you by John Keats' Song of the Indian Maid <http://englishhistory.net/keats/poetry/songoftheindianmaid.html>.

==> + ORGANIZATIONAL: ARRL PRESIDENT JOEL HARRISON, W5ZN, NOT TO SEEK REELECTION

After serving two terms as ARRL President, Joel Harrison, W5ZN, has decided not to seek reelection when his current term expires January 16, 2010. Harrison began his ARRL career as a volunteer ARRL elected official in 1983 when he became the Section Manager in the League's Arkansas Section. Subsequently, he has served as Delta Division Director and Vice President. In 2000, he was elected First Vice President; he was elected President in 2006.

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/contests/> This week, look for runnings of the NCCC Sprint on October 30 and November 5. The High Speed Club CW Contest is November 1 and the ARS Spartan Sprint is November 3. Next week, the CW portion of the ARRL Sweepstakes <http://www.arrl.org/contests/rules/2009/novss.html> is November 7-9 and the ARRL EME Competition <http://www.arrl.org/contests/rules/2009/eme.html> is November 7-8. There is another running of an NCCC Sprint on November 6. The Ukrainian DX Contest is November 7-8. The North America Collegiate ARC Championship (CW) is November 7-9. The SKCC Weekend Sprint is November 8. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> DO YOU KNOW?: A TRIVIA QUESTION FOR OUR READERS

The ARRL Sweepstakes has a long and proud history. At one point, The Philippines was a multiplier in the Sweepstakes, as was Cuba (as part of the West Indies Section). In what year did The Philippines cease to be a multiplier in Sweepstakes? When did the West Indies Section cease to be a multiplier? If you know the answer to both these questions, send one e-mail <k1sfa@arrl.org> with both answers (incomplete entries will be discarded) to ARRL News Editor S. Khrystyne Keane, K1SFA. Each entry that has both answers correct will be put into a hat and one winner will be selected to win their choice of a desktop <http://www.arrl.org/catalog/?item=1318> or pocket <http://www.arrl.org/catalog/?item=1288> edition of the 2009/2010 ARRL Repeater Directory. Good luck!

==> SILENT KEYS

Former Hudson Division Director Paul Vydareny, WB2VUK (SK): Paul Vydareny, WB2VUK, of Tarrytown, New York, passed away Thursday, October

22, from a brain aneurism. He was 65. An ARRL Life Member and member of the ARRL's A-1 Operator Club <http://www.arrl.org/awards/a1-op/>, Vydareny served as Director of the ARRL's Hudson Division from January-September 1996. Vydareny had a long record of volunteer service with the ARRL: Prior to becoming Director, he served as Section Manager of the Eastern New York Section from 1980-1996 and as Vice Director from 1987-1996 (Vice Directors were once allowed to serve simultaneously as Section Managers). Vydareny -- who was elevated from Vice Director to Director when then-Director Steve Mendelsohn, W2ML (ex-WA2DHF), was elected ARRL First Vice President -- resigned as Director in 1996, citing job and church obligations as preventing him from doing what he considered "a proper job of fulfilling his duties as Director."

Former San Diego Section Manager Paul Thompson, N6PC (SK):Paul Thompson, N6PC (ex-W6SRS), of San Diego, California, passed away Wednesday, October 21. He was 69. According to his cousin Michelle Harvey, Thompson was taking antennas off his roof on Monday, October 19, when he slipped and fell, sustaining fatal injuries. Thompson, a longtime QCWA <http://www.qcwa.org/> member, served as Section Manager of the ARRL San Diego Section from January 1971-October 1973.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, November 22, 2009, for these online course sessions beginning on Friday, December 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

==> FEEDBACK

In last week's ARRL Letter <http://www.arrl.org/arrlletter/index.html?issue=2009-10-22>, we reported that Randy Hargenrader, K4QO (SK), accompanied his friends and fellow hams Ed Steeble, K3IXD/C6AXD (SK), Dallas Carter, W3PP (SK), and Pete Radding, W2GJ/C6APR (SK), and Bob Biss, W8ZA, to the Bahamas for the 2008 CQWW SSB Contest. In fact, Hargenrader was not on that trip. We apologize for the error.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1681 - October 30 2009

Note: This weeks newscast runs 35 minutes and 16 seconds and contains three ID breaks. Newscast begins right now.

Amateur Radio Newsline report number 1681 with a release date of Friday, October 30th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Sweden says no to radio pollution from B-P-L, a new South African ham satellite gets is Oscar designation, three hams file a petition to make all emergency communications legal and the biggest yearly ham radio public service event takes place in New York City a few hours after this weeks newscast goes to air. Find out the details on Amateur Radio Newsline(tm) report number 1681 coming your way right now.

THE BPL WAR: A BIG WIN IN SWEDEN

We begin this week with news that one European nation is saying no to interference caused by Broadband over Powerline Internet access. Bill Pasternak, WA6ITF, is in the studio with more:

--

Telecommunications regulators in Sweden have withdrawn certain Broadband over Powerline or Powerline Transmission Internet access equipment from the public marketplace. A recent C-E-P-T Electronic Communications Committee report notes that the Swedish regulator ordered the sale of such gear to cease because some BPL gear pollutes the radio spectrum.

Mention of the Swedish action in withdrawing the equipment appears in the Report from the Working Group Spectrum Engineering Bordeaux, 07 11 September 2009. It gives the reasons behind the decision to impose these latest anti RF interference standards on BPL service in that nation.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

You can read the report in its entirety at

NEWSLINE FOLLOW-UP: MORE ON THE C6APR TRAGEDY

The contesting world is still in shock at the tragic news that four members of the C6APR team perished when their light aircraft crashed soon after take-off in South Carolina the pre dawn hours of Wednesday, October 21st.

Killed when the twin engine Piper Aztec PA-23 plummeted to the ground shortly after takeoff from Summerville Airport in South Carolina were the pilot Peter Radding W2GJ, along with passengers Ed Steeble, K3IXD, Randy Hargenrader K4QO and Dallas Carter W3PP.

According to news reports, Radding had been flying for over 40 years and Hargenrader was also a licensed pilot. All four were on their way Crooked Island in the Bahamas by way of Ft. Pearce, Florida, to operate the CQ World Wide DX Contest when the accident occurred. Crooked Island is a location used on seven previous occasions by the team since 2006.

The National Transportation Safety Board in Washington D.C., is the lead investigating agency. NTSB investigator Shawn Etcher said the plane banked to the left after takeoff. He said that judging by marks found on trees near the wreckage, it appears the plane climbed to an altitude of at least 90 feet before crashing. The crash scene was engulfed in flames when firefighters arrived.

Sixty-six year old Stella Bazzle lives about a half-mile from the crash site. She is quoted as saying that the plane's engines didn't sound right as it passed near her house. She described it as a roaring and grinding sound. Bazzle, then heard what sounded like two explosions, with the first one bigger than the second.

The wreckage was to have been transported to Atlanta, Georgia, for closer examination. Typically, it takes the N-T-S-B between 12 and 18 months to determine the cause of a crash, but a preliminary report is expected out shortly. (Summerville Journal, Charleston Press, others)

HAM RADIO IN SPACE: SUMBANDILASAT DESIGNATED AS SO-67

The recently launched South African SumbandilaSat has now been designated as SO-67. AMSAT's OSCAR Number Coordinator Bill Tynan, W3XO, made the designation shortly after receiving an e-mail from the secretary South Africa AMSAT requesting that an OSCAR number be allocated to the new ham radio bird. .

As previously reported, the amateur radio payload on SumbandilaSat was developed by South Africa AMSAT and incorporated by the University of Stellenbosch into the main payload. The ham radio payload was

officially coordinated through the IARU Satellite Frequency Coordination Panel with an uplink of 145.880 MHz and a downlink of 435.350 MHz.

Late word is that the F-M transponder on SumbandilaSat will be activated for the first time over North America on Saturday October 24 at 19:52 UTC. In this mode SumbandilaSat will uplink on 145.875 MHz and downlink on 435.345 MHz. A CTCSS tone of 233.6 Hz is needed to access this F-M repeater in the sky. (ANS)

**

HAM RADIO IN SPACE: AMSAT REVEALS ITS NEXT GEN CUBESAT

AMSAT will work with a university student engineering team to develop the NextGen Cubesat. Program Manager, Alex Harvilchuck, N3NP, introduced this new program at the recent AMSAT Symposium. That's where he also revealed the program goals. These include an initial analysis of ARISSat-1, analysis of the lessons learned from the renamed SuitSat 2 project and other prior spacecraft. This, to create a building block architecture for future satellites. N3NP says that NextGen will feature an open, modular, evolutionary, and documented design based on this analysis. More on this new bird is at the AMSAT website at www.amsat.org. (ANS)

RADIO LAW: GROUP PROPOSES REVISING 97:111 TO PERMIT UNRESTRICTED HAM RADIO EMCOMM

Meantime, a small group of hams has petitioned the FCC to add a new section to Part 97:111 of the Amateur Service rules. The Amateur Radio Policy Committee has filed a request to the regulatory agency to add a sub-part6 t that rule to permit any ham to participate in emergency training drills, whether or not he or she is in the employ of an entity taking pat in the exercise.

The wording that the group is proposing would permit transmissions necessary for disaster relief or emergency response, including training exercises, planning, drills or tests without regard to whether the amateur operator has related employment. This, where the transmissions are for the exclusive use of amateur radio operators for non-commercial purposes.

The request is signed by three prominent radio amateurs. They are Tom Blackwell, N5GAR, of Dallas, Texas; David Coursey, N5FDL, from Tracy, California, and ham radio educator Gordon West, WB6NOA, of Costa Mesa, California. They say that their petition is presented in what they term as Section 97 point 1 of the FCC rules. 97 point 1 defines FCC licensed amateur operators as part of a voluntary non-commercial communications service, particularly with respect to providing emergency communications.

The petition was accepted by the FCC on October 15th, but so far it has not been assigned a rule making number nor has it been released for public comment. (QRZ.com, others)

RESCUE RADIO: NEW ADVANCES IN EMCOMM FEATURED ON THE BBC

Recent developments in emergency broadband communications is the topic of a BBC interview with Mike Outmesguine KG6NHH. Outmesguine is the president and founder of TransStellar, Inc., a successful technology services company with an emphasis on wireless mobility and energy information systems.

The BBC news item says that KG6NHH has demonstrated an easy way to produce what it calls a "Network Relief Kit." This is described as an ultra portable method of connecting to the internet from almost any location in the world.

The system works by contacting one of three satellites orbiting the earth to get an internet connection. The receiver can then be plugged in, using ethernet cables, to a standard router, VoIP phone or similar devices.

The BBC says that In 2003-2004 the equipment cost some $40,000 . but these days the whole kit, Now, thanks to advances in technology the entire kit can be carried in a back-pack with its cost down to around $3,000 including the solar panel. Connectivity is said to be fast enough to watch videos on YouTube.

You can read the full BBC report at http://news.bbc.co.uk/1/hi/technology/8318156.stm The BBC Digital Planet radio interview with Mike Outmesguine, KG6NHH, is at http://www.bbc.co.uk/programmes/p004l2hz (BBC)

RESCUE RADIO: FEMA SELECTS NEXT GENERATION EAS TESTING LAB

The Federal Emergency Management Agency has selected a site for a lab to test new Emergency Alert System equipment. This as the next step to assure that the equipment fully complies with the new Common Alerting Protocol or CAP system that is still being developed.

FEMA has awarded Eastern Kentucky University a contract to test the next generation of EAS equipment to make sure it conforms with the CAP

protocol developed by the Integrated Public Alert and Warning or IPAWS System. Making equipment available that can receive a Common Alerting Protocol message is the first of several objectives that must be accomplished before FEMA adopts the system. (FEMA)

**

PUBLIC SERVICE: DELTA ARC TO SUPPORT MEMPHIS ST. JUDE MARATHON

The Memphis based Delta Amateur Radio Club will be providing communications support to the upcoming St. Jude Marathon. This December 5th event is sponsored by St. Jude children's' hospital. More information on the marathon is on-line at www.stjudemarathon.org. Information on the club is at www.deltaclub.org. (NF5B)

**

ENFORCEMENT: BANK OF AMERICA VS. THE FCC

It's the FCC versus one of the nations largest banking institutions in a dispute over a satellite earth station. Fred Vobbe, W8HDU, has the details:

--

Even those at the very top can hear the word no from the FCC. Take the giant Bank of America which has been told that it has to apply for a new permit to operate an Earth station because it accidentally let its old license expire.

The story goes like this. On September 10, 2009, Bank of America filed a petition to request reinstatement of its earth station license for call sign E990192, which had expired this past July 20th. Bank of America states that the oversight was inadvertent and due to a new monitoring and maintenance contract. Bank of America further explained that the new contractor has put this earth station into its database to ensure timely renewal filings in the future.

But in its October 9th denial, the FCC said that under its rules a petition for reinstatement of an expired license will be considered only if the petition is filed within 30 days of the license expiration date. It said that Bank of America did not file its petition within this time frame, nor did it ask for a waiver of this rule. So based on this it has denied Bank of America's request for re-instatement of authority for earth station call sign E990192. It also said that if Bank of America seeks regular authority to operate this earth station, it must file an application for a new license for this station.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU.

--

In rendering its decision the FCC did say that the bank can file for a Special Temporary Authority to operate the station that the agency

indicates that it will be granted. (FCC)

NEWSLINE FOLLOW-UP: AMAZON PAYS $150,000 TO SETTLE KINDLE SUIT

Amazon has agreed to pay $150,000 to settle a tort action filed by 17 year old Justin Gawronski. He's the Michigan teen who sued the online retailer after George Orwell's novels "1984" and "Animal Farm" along with his homework were deleted from his Kindle electronic book.

The Orwell novels had been added to the online retailer's site by a company that did not have the rights to sell them. In mid-July, with no notice to customers about the error, Amazon remotely deleted the e-books. Gawronski was adversely affected when the deletion also partially destroyed his homework.

The money, after going to the law firm representing the teen, will be donated to charity. Gawronski had already been compensated for the loss with a $30 gift certificate. (Published news reports)

**

RADIO RESEARCH: OLD LOGS NEEDED T STUDY THE EARLY 20TH CENTURY

Researchers at the University of Wisconsin and Miami University of Ohio are seeking copies of amateur station logs from 1913 through 1927. This, in hopes they may offer insights into the relationship between individuals' work and leisure activities, technology, and their social networks of he era.

Phil Kim is an Assistant Professor at the Wisconsin School of Business. He notes that diaries, letters, QSL cards and station logs can contain valuable insights into the link between an individual's occupation, hobbies and friends.

Kim notes that early in amateur radio history, thousands of ham radio enthusiasts were licensed by the government to comply with the Radio Act of 1912. At that time and due to newly enacted rules, that those early hams began to more carefully document the new communications era.

In an effort to uncover new information about approaches to work and leisure time and the development of social networks, Kim and other researchers are comparing early ham licensing records from the Department of Commerce with detailed information in amateur operators' station logs. If you happen to have an old ham station log from that period that you would like to see included in the study, please contact Steve Johnston, WD8DAS, via e-mail to johnson at wpr dot net. (WD8DAS, QCWA)

**

RADIO EDUCATION: THE COLLEGE AMATEUR RADIO CLUB ASSOCIATION

If you are in college or are preparing to attend, then the new College Amateur Radio Club Association may interest you. The web based organization is described as an attempt to create a community of college students, faculty, and alumni in order to unite the college clubs. According to Bryce Salmi, KB1LQC, the hope is promote amateur radio to college students through which collaborative innovations in technology can be made, and college clubs will retain a more stable membership. The groups home is located in cyberspace at http://www.collegearc.com (KB1LQC)

**

NAMES IN THE NEWS: KB2GSD PERSONAL PAPERS GO TO HIS COLLEGE

The estate of the late Water Cronkite, KB2GSD, has made public. The retired CBS newsman has bequeathed his college alma mater what amounts to a treasure trove of papers and memorabilia chronicling his career.

Cronkite dropped out of the University of Texas at Austin in 1935 as a junior. Instead, he decided to pursue a career in the news business but the broadcasting legend never abandoned his Texas-based educational roots.

According to his last will and testament now on file at Manhattan Surrogate's Court, KB2GSD bequeathed his personal papers to the university. This is really a process that actually started before his death on July 17 but will now end with the release of materials he had held onto at his office and homes in Manhattan and on Martha's Vineyard.

After becoming a television anchor, Cronkite returned often to campus as a lecturer and lent his announcing skills to the university as the narrator of ads that are still used at athletic events and to promote Longhorn accomplishments. (Published reports)

**

NAMES IN THE NEWS: TAPR ELECTS NEW OFFICERS

Tucson Amateur Packet Radio has elected Steve Bible, N7HPR, as it new President. Other leadership positions include Scott Cowling, WA2DFI, as Vice President; Tom Holmes, N8ZM, as Treasurer; and Stan Horzepa, WA1LOU, as Secretary. TAPR also recently elected three new members to their Board of Directors. They are Scott Cowling, WA2DFI; John Koster, W9DDD, and Mark Thompson, WB9QZB.

The election results were made public at the recent ARRL and TAPR Digital Communications Conference in Chicago, Illinois. At the gathering the TAPR Board of Directors of selected named Dr David Toth, VE3GYQ, as President Emeritus of the group. Dr. Toth served as TAPR President from 2005 to 2009 and as a member of the Board from 1987 through 1993 and 2004 to the present. (TAPR)

**

NAMES IN THE NEWS: DL3OAP NEW CHAIR OF DARC EXECUTIVE BOARD

Some names in the news. First over to Germany where Dr. Walter Schlink, DL3OAP has been elected as Chairman of the Deutscher Amateur Radio Club's Executive Board. He succeeds Jochen Hindrichs, DL9KCX. Hindrichs had served as Chairman since May, 2001, but decided not to run for anther term.

Also elected to the Executive Board are Steffen Schï¿½ppe, DL7ATE, Dr. Jï¿½rgen Sturhahn, DL8LE, Martin Kï¿½hler, DL1DCT, and Mitch Wolfson, DJ0QN. Wolfson who is originally from Los Angels California held the call WA6GSN. He still holds a U.S. license and the call K7DX. He's also believed to be the first non German ever elected to this post in the DARC.

The meeting where the election took place was n the city of Bad Lippspringe and took place on October on 24th. (Southgate)

**

NAMES IN THE NEWS: VE4HAY RE-ELECTED RAC MIDWEST DIRECTOR

And congratulations to Derek Hay, VE4HAY, of Winnipeg who has been re-elected as the Midwest Region Director of Radio Amateurs of Canada. Hey ran unopposed and was declared re-elected on September 16th. (RAC)

EMERGING TECHNOLOGY: COMMUNICATIONS IN A SHRIMP'S EYE

>From the technology page comes the story of the remarkable eyes of a marine crustacean could inspire the next generation of DVD, CD players and possibly telecommunications gear. This, according to a new study from the University of Bristol published in Nature Photonics. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest of this fascinating story of communications under the sea:

--

The mantis shrimps used in the study are found on the Great Barrier Reef in Australia and have the most complex vision systems known to science. They can see in twelve colors while humans see in only three. Also, it can distinguish between different forms of polarized light.

Special light-sensitive cells in mantis shrimp eyes act as quarter wave plates which can rotate the plane of the polarization of a light wave as it travels through it. This capability makes it possible for mantis shrimps to convert linearly polarized light to circularly polarized light and vice versa.

Manmade quarter-wave plates perform this essential function in CD and DVD players and in circular polarizing filters for cameras. However, these artificial devices only tend to work well for one color of light while the natural mechanism in the mantis shrimp's eyes works almost perfectly across the whole visible spectrum from near-ultra violet to infra-red.

Dr. Nicholas Roberts is the lead author of the Nature Photonics paper. He says that the work of his team reveals for the first time the unique design and mechanism of the quarter-wave plate in the mantis shrimp's eye. He describes it as exceptional and out performing anything we humans have so far been able to create.

Exactly why the mantis shrimp needs such exquisite sensitivity to circularly polarized light isn't clear. However, polarization vision is used by animals for secret communication that avoids the attention of other animals, especially predators. It could also assist in the finding and catching of prey by improving the clarity of images underwater. If this mechanism in the mantis shrimp provides an evolutionary advantage, it could help scientists create better optical devices in the future using liquid crystals that have been chemically engineered to mimic the properties of the cells in the mantis shrimp's eye.

This would not be the first time humans have looked to the natural world for new ideas. In another bit of research the lobster's compound eye recently inspired the design of an X-ray detector for an astronomical telescope.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, looking at communications technology in the briny deep.

--

This new research into the amazing vision capabilities of the mantis shrimp and how it might one day improve communications in the human world was conducted at the University of Bristol's School of Biological Sciences in collaboration with colleagues the University of Queensland in Australia. (Adapted from Science OnLine)

**

EMERGING TECHNOLOGY: MOBILE AND HANDHELD DTV STANDARD IS APPROVED

A fast-track effort by broadcasters, transmission vendors and consumer electronics manufacturers to create a technical standard for transmitting digital TV signals to cellular telephones and other mobile devices has come to fruition. This, with the Advanced Television

Systems Committee announcing that it has approved a ATSC Mobile Digital television Standard.

The Advanced Television Systems Committee says that the mobile standard formally known as A/153 and also received overwhelming support in balloting by its full membership tallied at midnight on October 15th. The formal approval of the standard, which has been circulating in preliminary form since last November, should pave the way for mobile DTV receivers to hit retail shelves next year.

Development of the standard officially began in May 2007, when the Advanced Television Systems Committee released a request for proposals for a standard for the mobile and hand held telecasting system. It has progressed at record setting pace since then. (RW)

**

EMERGING TECHNOLOGY: ON-STAR USES RADIO TO END PURSUIT

For the first time since it was created, the On-Star highway safety system pioneered by General Motors has been used to bring an end to a high speed pursuit. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

It all took place about two weeks ago when the victim identified as Jose Ruiz, of Lindsay, California, was sitting in his Tahoe in a lighted parking lot about 3 a.m.. This, while his cousin was talking on a cell phone in the passenger seat. Out of the corner of his eye, Ruiz says that he saw a man walking toward him. The man then allegedly pointed a sawed-off shotgun at Ruiz and ordered both men to get out of the Tahoe and empty their pockets. Ruiz's cousin at first refused, but Ruiz told him to obey, knowing that OnStar could find the stolen truck with the built-in global positioning system.

The cousin relented and the man sped off in the truck. Ruiz then ran toward a nearby pay telephone to call police. As luck would have it he spotted a sheriff's deputy on her break who in turn notified the Visalia police. Officers quickly contacted OnStar and got Ruiz's permission to find the vehicle.

Police spotted it a few miles away. As officers made a U-turn to pursue it, the Tahoe sped off at a high speed. At about the same time, police dispatchers told the pursuing officers that OnStar was about to disable the stolen vehicle by radio command. It did, the Tahoe rolled to a halt, and the robber was quickly captured without any injuries except maybe to the alleged robbers pride.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

The bottom line. Technology may soon make it very unattractive to try to steal a car if the thief knows that there is a 1 in 2 chance that he will be caught by radio remote control. (Future Technology)

**

EMERGING TECHNOLOGY: BOSE INTRODUCES WIRELESS STREAMING AUDIO SPEAKER

Audio equipment maker Bose has introduced its new SoundLink wireless music system. This is a one-piece portable speaker system that allows users to play streaming audio from their computer wirelessly in and around the home.

The new SoundLink system was designed as a simple solution for people who listen to sound stored on their computer, but do not necessarily want to be at their computer to hear it. No software or Wi-Fi connection is required. Just plug the included USB key into the computer, select the sound from any Internet source and the audio will stream to the SoundLink system via a long-range wireless link that works through most walls and floors.

The included infrared remote control operates the power and volume. It c an also send transport control commands to most applications, allowing users to skip tracks or play/pause from a distance. More information about this novel product is on-line at www.Bose.com (New Product News)

**

EMERGING TECHNOLOGY: FLO TV TO BE AVAILABLE BY CHRISTMAS

A new form of television will soon be at arms reach. Jim Davis, W2JKD, has the details:

--

Coming in time for Christmas is a wireless handheld TV that will have its own dedicated network. The new FLO TV Personal Television, or PTV, is a live mobile TV service from Qualcomm that is used for AT&T Mobile Television and Verizon's V-Cast.

The PTV will sell for $250, and subscriptions begin at $9 a month. FLO TV isn't saying yet what content it has lined up, but the AT&T and V-Cast products have 15 channels apiece, including CBS Mobile, CNBC, Comedy Central, ESPN Mobile, Fox News Channel, MSNBC, MTV and Nickelodeon.

Plans call for DVR functionality down the road. The big question is just how many people will be willing to pay for a service that supplies programs to a miniscule 2 or 3 inch screen.

I'm Jim Davis, W2JKD

--

The answer as to weather we will some day see a world of humans walking aimlessly down a street with their eyes glued to a tiny screen will be interesting to watch out for. And if it does catch on, then we do mean to watch out! (TV Tech)

**

WORLDBEAT: RADIO SWEDEN TO STOP QSL'ING LISTENER REPORTS

Radio Sweden says that it is discontinuing mailing QSL cards to listeners in response to reception reports. Also, the station will be discontinuing mass mailouts of its program schedules.

According to Media Network, with the start of the new transmission period on October 25th, Radio Sweden will only be publishing its broadcast schedule on the World-Wide-Web. Radio Sweden says that this is a logical consequence of the increasing importance of the Internet as a broadcast platform and because it has stopped broadcasting its own programs in the Swedish language.

The only exception is when the station receives a specific request for a printed version of its schedules Listeners can contact Swedish Radio's Listener Service department with these requests. (Media Network)

HAM HAPPENINGS: ARECIBO OBSERVATORY ON NOVEMBER 1st

And while this is kind of short notice, word that the second activation of station KP4AQ located at the Arecibo Observatory Radio Club will take place on Sunday November 1st. This, to commemorate 46 years of operations of still the single largest radio telescope antenna in the world. The operation will also commemorate the 35th anniversary of the Arecibo Message, which was sent on November 16, 1974,in binary code and transmitted to the globular star cluster M13. Its purpose was for if it to be received by intelligent life and to let them know about our existence. The special event will run from 1300 to 2000 UTC on 20 meters SSB. More information about the Arecibo Message is in cyberspace at at http://en.wikipedia.org/wiki/Arecibo_message (E-mail)

**

HAM HAPPENINGS: NORTH AMERICAN SUMMITS ON THE AIR

This North American Summits on the Air or SOTA activation day is Saturday, November 14th. To celebrate, the four North American Summits on the Air associations are planning a multi-hilltop activation spanning the North American continent. Portable, mountain top stations will be operating from the VE2, W1, W2, and W6 call areas. The operators will be using the extensive spotting and alerting system devised by the SOTA organization. To join in the fun, please visit the www.sota.org.uk to get the latest details. (KI6J)

**

BREAK 3

Running a bit long this week because there's so much news to report, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

DX

In DX, KL7JR reports that plans are underway for the activation of Jacquot Island before and during ARRL's December 11th to the 13th Ten Meter Contest. Listen out for VY1RST to concentrate on 10 meters for the contest and 14.260 for non-contest activities. QSL via KL7JR at his callbook address.

And ZS6TAF, who works in Maputo Mozambique from time to time will be operate mobile using the callsign C91BA. He has a Yaesu 857D and Watson mobile antenna for 80 through 6 meters. QSL via his home callsign.

A team of operators will be on the air from Arturo Prat-Greenwich Island in the South Shetland archipelago between January 10th to the 24th of 2010. Their callsign will be XR9JA. Activity will be on 160-6 meters using CW, SSB,PSK31 and the AO-51 ham radio satellite. QSL via CE5JA.

CT1DRB, is active as T6AG from Afghanistan for the next 6 months. His operation will be CW only.. QSL via EA3GHZ direct.

Lastly, N1EMC and N1IW and will be active as T30KI and T30IW, respectively, from Western Kiribati. This, between November 10th and the 16th. Activity will be on H-F plus 6 meters as conditions permit using SSB and CW. QSL via N1EMC.

(Above from various DX news sources)

THAT FINAL ITEM: PUBLIC SERVICE - HAM RADIO - AND THE ING NYC MARATHON

And finally, its once again time for the biggest annual ham radio public service event found anywhere in the world. The New York City Marathon began in 1970 with 127 runners, a budget of $1,000 and a small group of ARES operators who tried to provide communications. Today, the I-N-G sponsored race has grown to the status of World Class Marathon with over 38,000 runners, two million spectators and a corps of over 400 ham radio volunteers holding it all together.

This years New York City Marathon takes place on Sunday, November 1st. In planning for marathon day there is a coordinated effort between the

New York Road Runners and several New York City agencies. While each agency has its own dedicated communications system, no two have the ability to talk to one another. Enter ham radio.

Since 1976, Steve Mendelsohn, W2ML, has been the volunteer Director of Communications for the New York City Marathon. He says that the hams are the only ones who can communicate with everyone involved:

--

Steve Mendelsohn, W2ML: And the reason we can communicate with everyone involved is not because of the iron, its not because of the radios -- its because of our skills. As technology has advanced and we have brought in the use of cellphones and the use of the Nextel system and trunked radio, time and again, marathon organizers from the original Fred Lebow through his successor Alan Steinfeld, W2TN, to todays New York City Marathon Director Mary Wittenberg all say the same thing: '-you can by any amount of radios with any amount of money, but all the money in the world won't buy the skills the ham radio community has.' "

--

Mendelsohn's words have long been echoed by Paul Ortolano, who is the events director for the New York Road Runners. In a 2007 interview, Ortolano told the Hofstra Chronicle newspaper that amateur radio operators are the key source of communications for the marathon. He said that the marathon cannot happen each year without the dedication of the ham radio community. Ortolano called them the eyes and ears of the event and Mendelsohn is quick to agree:

--

Steve Mendelsohn, W2ML: "The New York Road Runners cannot put staff out there nor can the New York Police put the quantity of staff that we use with over 400 ham radio operators providing eyes -- walking quarter mile segments of the course, patrolling for fallen runners. We have the the hardware. We have the expertise and the New York City Marathon has long said very, very good things about our operation."

--

In addition to his volunteer work with the NYC Marathon, Steve Mendelsohn, W2ML, is a senior engineer at the ABC Television Network in New York. He is the recipient of a Technical Emmy for his part in ABC's special turn of the century telecast titled "2000: Millennium Around the World." And to top it off in 1990 he was named Hamvention Radio Amateur of the Year for his development of the ham radio communications network that keeps the New York City Marathon on track. He became involved with the marathon when its founder, the late Fred Lebow came to a Tri-State Repeater Council meeting looking for an amateur radio expert. Steve said that he didn't exactly volunteer. Rather he was volunteered by the other hams at the repeater coordinators gathering:

--

Steve Mendelsohn, W2ML: "In point of fact, I listened to the late Fred Lebow talk about shutting down the city, running a huge number of people -- I think the original number was about 1300 -- through the streets of the city -- and I turned to the then president of TSARC and I said that this man is out of his mind. I then excused myself to go to the mens room. When I came back the first thing that struck me was listening to Fred talk about how excited he was to work with us and the fact that amateur radio was going to provide a very, very important safety point for the New York City Marathon. I casually sat down, turned to the president and said '-who would volunteer for something like this?' He smiled and said '-the one that was out of the room.' And to this day I have never volunteered."

--

Since then, W2ML has been the New York Marathon Director of Communications. Under his aegis, the ham radio communications network for the event has grown in size to become the largest all volunteer ham radio communications group found anywhere: --

Steve Mendelsohn, W2ML: "We are very fortunate to have a lot of people who really enjoy doing public service. This year we will have over 400 hams -- I think we are up to 406 or 407 at this with the two volunteers we got tonight. They come in from Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Florida, Ohio and we even have a gentleman who comes in from Denver. K2AD comes in from the Denver Marathon to provide a hand.

"Most of us, while we all celebrate ham radio and what it can do for the running public. In fact we have become a very close knit family to the point where there is a group from Columbus, Ohio, that actually rents an RV as part of a three-day weekend, and they drive to New York. They then go into Manhattan and enjoy the city on Friday and Saturday and Sunday morning they do the marathon. Then they drive back to Ohio and that's their idea of a vacation."

--

W2ML is responsible for more than just recruiting ham radio operators. He has to know how to strategically place them in vital positions along the course. Some of these include the start and finish lines, the water trucks, the medical stations, and of coarse the checkpoints throughout the race path.

This year Mendelsohn expects to have volunteer operators from nine different states. Many of these are the same volunteer ham radio operators that placed their own lives on the line to assist following the attack of the World Trade Center in 2001. That act of terrorism also destroyed the ability for police, fire and rescue workers to communicate in lower Manhattan. Jumping in immediately as communications first responders were the regions ham radio operators. They volunteered their time and radio gear as substitute communications

for police, fire and other emergency agencies responding to the disaster area. The hams also served at numerous shelters and at temporary rescue stations as the only available communications. In the process earned the respect ad admiration of city, state and federal level government officials.

Since then many have been back to offering communications for the annual race through the streets of the Big Apple, but because of the lessons that they have learned over the years in service to the New York City Marathon, these hams are prepared to face just about any emergency that might come their way. (ARNewsline(tm))

+ PUBLIC SERVICE: HAM RADIO OPERATORS ASSIST IN CATALINA ISLAND RESCUE

Around 9:45 on the night of October 23, while attending an overnight
event at the Boy Scouts' Camp Emerald Bay on Santa Catalina Island,
Karl Tso, KI6PCW, and his wife, Deborah Ava, KJ6CRZ, of Topanga,
California, decided to climb a hill to check out the view -- and to see
if they could get into the repeater on the island with their handheld
transceivers. As they climbed the hill, the two radio amateurs heard a
sound; Tso turned his high-powered flashlight on the source, only to
discover a man who had fallen 48 feet to the rocks below, bleeding and
severely injured. Read here
<http://www.arrl.org/news/stories/2009/10/31/11174/?nc=1>.

==> + ARRL RECOGNIZES: GEORGE E. SMITH, AA2EJ, WINS NOBEL PRIZE

Around 5:30 on the morning of October 6, George E. Smith, AA2EJ, of
Barnegat, New Jersey, got a phone call that changed his life: He had
just found out he had won the Nobel Prize in Physics for 2009
```

<http://nobelprize.org/nobel_prizes/physics/laureates/2009/index.html>
"for the invention of an imaging semiconductor circuit -- the CCD
sensor
<http://www.wired.com/gadgetlab/2009/10/ccd-inventors-awarded-nobel-prize-40-
years-on/>."
Smith will share the prize money with two other recipients: Charles K.
Kao, of Standard Telecommunication Laboratories in the United Kingdom
and Chinese University of Hong Kong, and Willard S. Boyle, of Bell
Laboratories. Each recipient will receive a diploma
<http://nobelprize.org/nobel_prizes/diplomas/>, a medal
<http://nobelprize.org/nobel_prizes/medals/> and a document confirming
their share of SEK 10 million
<http://nobelprize.org/nobel_prizes/amounts.html> (about $1.4 million);
Kao will receive 50 percent, while Smith and Boyle will each receive 25
percent of the monetary award.

Kao was recognized by the prize committee for his "groundbreaking
achievements concerning the transmission of light in fibers for optical
communication." His discoveries paved the way for optical fiber
technology, used for almost all telephony and data communication today.
Boyle and Smith invented a digital image sensor -- the CCD -- that has
become an electronic eye in almost all areas of photography.

"My wife Janet, AA2EI, and I sailed around the world for 17 years,"
Smith told the ARRL. "While we were on our boat, we used Amateur Radio,
especially in the South Pacific. Janet was the principal radio
operator. With our radio, we could keep track of other boats in the
area. Over in the Southwest Pacific, there are shore stations there
that provide weather forecasts every day on the ham radio. We would
listen for these, as it was such a tremendous help for us as sailors."

The CCD -- invented in about an hour over lunch when Smith and Boyle
worked at New Jersey's Bell Labs -- was, according to Wired Magazine
<http://www.wired.com/gadgetlab/2009/10/ccd-inventors-awarded-nobel-prize-40-
years-on/>,
the first practical way to let a light-sensitive silicon chip store an
image and then digitize it. In short, it is the basis of today's
digital camera. According to Wired, the "most amazing thing about the
invention" is that Boyle and Smith came up with the design so quickly.
With Bell Labs threatening to take the funds from their department and
transfer the money to other research, Boyle had to come up with a
competing semiconductor design. He got together with Smith, and within
an hour, they came up with the idea and sketched it all out on a
blackboard.

"One morning in October, 1969," Boyle wrote on his Web site
<http://www.flickr.com/photos/cstmweb/3884295553/>, "I was challenged
to create a new kind of computer memory. That afternoon, I got together
with George Smith and brainstormed for an hour or so on a new kind of
semiconductor device, drawing a few sketches and equations on a
blackboard. We called it a charge-coupled device: A 'CCD.' When we had

the shops at Bell Labs make up the device, it worked exactly as expected, much to the surprise of our colleagues."

When asked by the ARRL how he felt about winning the Nobel Prize, he exclaimed, "I feel great! Even though there's a lot of nonsense to go through with it, it's worth it and winning it does wonders for your ego. Aside from the initial shock and having to go through piles of mail, e-mail and returning telephone calls, I know that will calm down. As for the long-range future, I'm getting many invitations to give talks. Next year, I've been invited to speak at a major conference in Seoul, South Korea, another in Portland Oregon and another in Switzerland. I've been invited to France to give a talk, China, too. We need to sit down with a calendar and figure it all out. Having a Nobel makes a big dent in your lifestyle."

Smith told the ARRL that he knew the CCD was under consideration for the Nobel Prize, "but we didn't know exactly if, or when, it would happen. Research that wins the Nobel is often done many years beforehand. In my case, this was 40 year old research. The Prize Committee wants to make sure the research has stood the test of time.

"Amateur Radio has always attracted individuals who want to understand and exploit nature's laws," fellow Nobel Laureate Joe Taylor, K1JT, told the ARRL. "These are essential characteristics for first-rate scientists, as well. The 2009 Nobel Prize in Physics honors the invention of an imaging semiconductor circuit -- the CCD sensor used in digital cameras, the Hubble Space Telescope and many other scientific and consumer devices. It was no great surprise to learn that one of the Laureates, George Smith, is also a radio amateur." Taylor was awarded the Nobel Prize in Physics in 1993 <http://nobelprize.org/nobel_prizes/physics/laureates/1993/> "for the discovery of a new type of pulsar, a discovery that has opened up new possibilities for the study of gravitation."

Next month, Smith will travel to Stockholm, Sweden for the award ceremony on December 10. It is certain that his picture will be taken scores of times by the international media, made possible through the technology that he and Boyle pioneered. Click here <http://www.arrl.org/news/stories/2009/11/03/11182/?nc=1> for more information, including how a CCD works.

==> + OPERATING: FALL FREQUENCY MEASURING TEST THIS MONTH

The W1AW Frequency Measuring Test (FMT) has taken several different formats over the past few years. This year, we return to the "classic" FMT -- measuring the frequency of an unmodulated carrier. Accurate frequency measurement is required of all hams for both regulatory compliance -- "stay in the band!" -- and operating convenience, particularly on the new digital modes. The W1AW FMT will run on November 12, 2009 at 0245 UTC (this is Wednesday evening, November 11, 2009 at 9:45 PM EST). It will replace any W1AW bulletin normally scheduled for that time. It is recommended that participants listen to

W1AW's transmissions prior to the event to get an idea of conditions to see which band (or bands) will be best for measurement purposes. Read more here <http://www.arrl.org/news/stories/2009/11/02/11175/?nc=1>.

==> + LOOK FOR THE DECEMBER QST IN YOUR MAILBOX

The December issue of QST <http://www.arrl.org/qst> is jam-packed with all sorts of news and information that today's Amateur Radio operator needs. From product reviews to experiments, from public service to on-the-air activities, the upcoming issue of QST has something for just about everyone. Click here <http://www.arrl.org/news/stories/2009/11/04/11183/?nc=1> to discover what's in store for you in the December issue of QST, the official journal of the ARRL.

==> ADVOCACY: MORE COSPONSORS FOR HR 2160

Earlier this week, two more Congressional Representatives -- Andre Carson (D-IN-7), and C.W. Bill Young (R-FL-10) -- pledged their support for HR 2160 <http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=111_cong_bills&docid=f:h2160ih.txt.pdf>, The Amateur Radio Emergency Communications Enhancement Act of 2009, bringing the total number of cosponsors to 31, including original sponsor Sheila Jackson-Lee <http://www.arrl.org/news/stories/2009/04/30/10792/?nc=1> (D-TX-18). HR 2160 is also sponsored by W. Todd Akin (R-MO-2), Michael Arcuri (D-NY-24), Roscoe Bartlett (R-MD-6), John Boozman (R-AR-3), Madeleine Bordallo (D-Guam), Geoff Davis (R-KY-4), Bob Filner (D-CA-51), Scott Garrett (R-NJ-5), Bart Gordon (D-TN-6), Brett Guthrie (R-KY-02), Maurice Hinchey (D-NY-22), Michael Honda (D-CA-15), Mary Jo Kilroy (D-OH-15), Tom Latham (R-IA-4), Zoe Lofgren (D-CA-16), Blaine Luetkemeyer (R-MO-9), Thaddeus McCotter (R-MI-11), Charlie Melancon (D-LA-3), Candice Miller (R-MI-10), Dennis Moore (D-KS-3), John Olver (D-MA-1), Bill Posey (R-FL-15), Dana Rohrabacher (R-CA-46), Bennie Thompson (D-MS-2), Michael Turner (R-OH-3), Peter Welch (D-VT), David Wu (D-OR-1) and Don Young (R-AK). On the Senate side of Capitol Hill, S 1755 <http://www.arrl.org/news/stories/2009/10/07/11127/?nc=1> -- also called The Amateur Radio Emergency Communications Enhancement Act of 2009 -- cleared the Senate Homeland Security and Governmental Affairs Committee with a favorable recommendation by voice vote. It now proceeds to committee staff to prepare the report for the full Senate. Click here <http://www.arrl.org/news/stories/2009/05/12/10818> for information on how to encourage your Congressional representative to sponsor HR 2160.

==> ARRL RECOGNIZES: THREE AMATEURS INDUCTED INTO CONSUMER ELECTRONICS HALL OF FAME

Earlier this year, the Consumer Electronics Association (CEA) named 13 men -- including three radio amateurs -- to the Consumer Electronics Hall of Fame. The honorees were inducted last month at CEA's Industry

Forum in Phoenix, Arizona. Former ARRL Rocky Mountain Division Director Walt Stinson, W0CP, of Englewood, Colorado; Former ARRL Vice President and Central Division Director R.H.G. Mathews, W9ZN (ex-9ZN) (SK), and Karl Hassel, W9PXW (ex-8AKG) (SK). Read more here <http://www.arrl.org/news/stories/2009/11/02/11177/?nc=1>.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

Compiled by ARRL News Editor S. Khrystyne Keane, K1SFA

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, such as a recent webinar concerning Amateur Radio and pecuniary interests, the Fourth Annual ARRL On-Line Auction, orientation for newly elected Section Managers and more. This installment covers the month of October. Read more here <http://www.arrl.org/news/features/2009/11/02/11179/?nc=1>.

==> + MARS: MARS CUTS RIBBON ON NEW PENTAGON STATION

A military institution designed to provide emergency communications has moved to new quarters in the Pentagon. On October 21, John G. Grimes, the former Assistant Secretary of Defense for Networks and Information Integration, cut the ribbon on the new Military Affiliate Radio System (MARS) station, now located on the fifth floor of the Pentagon. The facility -- manned by the Pentagon Amateur Radio Club (PARC) -- is packed with amateur radios, radiotelephone patches, computers and data links. "This is a great facility, manned totally by volunteers," Grimes told the crowd who came to see the new station. "It's a crucial capability for our country." Read more here <http://www.arrl.org/news/stories/2009/11/03/11180/?nc=1>.

==> NOW YOU KNOW!: HIRAM PERCY MAXIM AND THE W1AW STATION

More than 1000 visitors come to see ARRL and operate W1AW each year. Each visitor has a chance to tour ARRL HQ and meet and talk with staff, and see all that the League does to promote the Amateur Radio Service. When they go over to W1AW, some guests want to know if the station was once the home of Hiram Percy Maxim, cofounder and first President of the ARRL.

In February 1936, when Maxim died of pneumonia on his way back from visiting Lick Observatory <http://www.ucolick.org/> on Mt Hamilton in San Jose, California, the ARRL HQ station -- W1MK -- was located at Brainard Field <http://en.wikipedia.org/wiki/Hartford-Brainard_Airport> in Hartford. In March 1936, the Connecticut River flooded and the building where the station was housed was destroyed by the flood waters. The League's Board of Directors decided that a new station be built on a more suitable site in memory of Maxim. In December 1936, the FCC -- in the first action of its kind -- assigned the call W1AW to ARRL in memoriam. The ARRL purchased a 7 acre site in Newington, about 5 miles southwest of Brainard Field. From the flood until September 1938, W1MK operated from ARRL Headquarters, then on LaSalle Road in

West Hartford. On September 2, 1938 -- what would have been Maxim's 69th birthday -- W1AW, the Hiram Percy Maxim Memorial Station, was dedicated, with the ceremony broadcast across the country by CBS Radio. So, no, the building where W1AW is located was never home to Hiram Percy Maxim; in fact, he never saw it. But even so, we know that his spirit lives on every time we sit down at a radio. Now you know!

==> SOLAR UPDATE

Tad "You may go, with Sun or moon <http://englishhistory.net/keats/poetry/robinhood.html>" Cook, K7RA, reports: The recent sunspot activity has drifted beyond view, but that region returns in the middle of November. The average daily sunspot number for October was 7, the highest in the past 19 months. Coming up this weekend is the ARRL CW Sweepstakes -- there is a possibility of a coronal hole causing unsettled geomagnetic activity, though the past few days have been exceptionally quiet. Look for more information in the Solar Update, available on the ARRL Web site on Friday, November 6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Robin Hood. To a Friend <http://englishhistory.net/keats/poetry/robinhood.html>.

==> + ARRL RECOGNIZES: JOHN E. PORTUNE, W6NBC, WINS OCTOBER QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for October is John E. Portune, W6NBC, for his article "The Quadrifilar Helix as a 2 Meter Base Antenna Station." Congratulations John! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the November issue by Monday, November 30.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=Xm1dTXtT5vg> This week is the ARRL Sweepstakes (CW) <http://www.arrl.org/contests/rules/2009/novss.html> on November 7-8. There is an NCCC Sprint on November 6 and the Ukrainian DX Contest is November 7-8. The North America Collegiate ARC Championship (CW) is November 7-9. The SKCC Weekend Sprint is November 8. Next week, there is another NCCC Sprint on November 13. The Bill Windle QSO Party is November 14. The Worked All Europe DX Contest (RTTY), the Kentucky QSO Party, the JIDX Phone Contest is November 14-15 and the OK/OM DX Contest (CW) are November 14-15. The CQ-WE Contest (SSB, CW and Digital) is November 14-16. The Run for the Bacon QRP Contest is November 16 and the NAQCC Straight Key/Bug Sprint is November 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest

Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> DO YOU KNOW?: A TRIVIA ANSWER FOR OUR READERS

Last week, ARRL News Editor S. Khrystyne Keane, K1SFA, told ARRL Letter readers about the long and proud history of the ARRL Sweepstakes <http://www.arrl.org/news/stories/2009/10/29/11170/?nc=1>, mentioning that at one point, The Philippines was a multiplier in the Sweepstakes, as was Cuba (as part of the West Indies Section). We wondered what years that The Philippines and the West Indies Sections ceased to be multipliers in Sweepstakes. Unfortunately, we didn't receive any correct answers. The Philippines was no longer a Section as of 1946 and in August 1988, two new Sections -- Puerto Rico and US Virgin Islands -- replaced the West Indies Section (Cuba disappeared from the West Indies Section in 1940). Thanks to everyone who sent in answers. Look for another trivia question in a future edition of The ARRL Letter.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, November 22, 2009, for these online course sessions beginning on Friday, December 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1682 - November 6 2009

Amateur Radio Newsline report number 1682 with a release date of Friday, November 6th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Georgia hams are given a $165,000 grant to build a D-Star rescue radio network, two hams help save a life on Catalina Island, the next Global Amateur Radio Emergency Communications Conference will take place in Curacao and two pre-teens come up with a cheap solution to the Digital Reception problem in the USA. Find out the details on Amateur Radio Newsline(tm) report number 1682 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: GEORGIA HAMS GIVEN $165,000 TO BUILD D-STAR RESCUE RADIO NETWORK

Its one of the largest government grants ever given to ham radio emergency communications. This as $165,000 in Federal funding has been secured by Georgia Emergency Management Agency to complete a statewide D-Star based ham radio emergency communications network.. Amateur Radio Newsline's David Black, KB4KCH, has the story of the grant and the all digital rescue radio network that it will create:

--

The network's creation is the result of a dream that started in 2005 according to John Davis, WB4QDX. That's when a vision was born for what amateur radio emergency communications could one day achieve in the state of Georgia. Mark Fehlig, WA6NGC, is the former director of Engineering for the state's Public Broadcasting System. When the opportunity arose to install two amateur radio antennas on each of nine television towers providing statewide coverage, Fehlig jumped into action. Fehlig designated Georgia's Amateur Radio Emergency Service to control the use of those sites for emergency communications. The next task was to figure out the best technology to use at those sites.

Linked FM repeaters and packet were among the modes considered. But radio amateurs were also watching emerging D-Star technology. They recognized it as a state of the art platform providing simultaneous voice and data communications. Knowing that D-star also allows repeaters to be linked on a flexible basis and that it permits simultaneous voice and low speed data along with high speed Internet

connectivity at 1-point-2 Gigahertz...and the decision was made to go D-star for the state's new system.

When the network is finished, radio amateurs will have access to voice and data repeaters on all nine towers across the state, operating on 2 meters, 440 MHz and 1-point-2 Gigahertz. Because those towers are strategically located to provide maximum public television coverage, amateur radio communications will benefit from wide area coverage, as well. Commercial grade inch and 5/8 transmission lines will connect the antennas, which will be between 500 and 600 feet above ground. Georgia's Public Broadcasting Network will provide indoor space for equipment, along with backup power at each site. Internet access will be available, too, thanks to the broadcasting system's DS-3 data network...this means flexible linking of repeaters will be possible using a stock D-Star interface.

The federal money will also pay for 20 dual-band D-star radios to be installed at EMA offices across the state, along with a portable UHF D-Star repeater available for emergency deployment. In addition, three 1-point-2 Gigahertz D-star radios with laptops for sending data and photos from field locations will also be purchased. The money will also be used to build a robust reflector to serve the state's network during emergency conditions and also for general use during non-emergency times. Two of the emergency network's D-star repeaters are already on the air. One is located at Pembroke, Georgia, near Savannah. The second operates from atop Stone Mountain, serving the Atlanta metro area. The complete Georgia D-star amateur radio emergency communications network is expected to be in operation in early 2010.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East bureau in Birmingham, Alabama.

--

The Georgia network will complement other D-Star based emergency communications systems planned or in operation in the neighboring states of Alabama, Florida and South Carolina. Once all are in operation, it will create a regional ham radio emergency capability across the American Southeast. This monetary grant is only second in size to one of $250,000 given by the governor of Oregon in 2007 to that states ham radio first responders. This, to build a Winlink-based state-wide amateur radio emergency communications network. (WB4QDX, Georgia ARES via Southgate)

**

RESCUE RADIO: TWO HAMS CREDITED WITH SAVING A LIFE ON CATALINA ISLAND

Karl Tso, KI6PCW, and wife Deborah Ava, KJ6CRZ, put their ham radio emergency training to use to help rescue an unidentified man after an accident on Catalina Island. This as the recently trained volunteer ham radio operators rescued a man after he fell more than 40 feet onto rocks below.

Tso and Ava are both of Topanga, California which is a Los Angeles suburb and are members of the Topanga Disaster Radio Team. The couple had climbed a hill on Catalina Island to check out a repeater when they saw a 61-year-old man bleeding and moaning.

Tso and Ava had their hand-held radios with them. They used the equipment to make contact with other radio amateurs on the California mainland, who called 911 to report the emergency. Los Angeles County firefighter paramedics responded and the injured man was quickly flown by medevac helicopter to St Mary's Hospital in Long Beach for treatment.

Authorities say that the couple's quick thinking and knowledge of ham radio helped save the injured man's life. The Topanga Disaster Radio Team they work with is a part of the Topanga Coalition for Emergency Preparedness. (Published news reports)

**

RESCUE RADIO: GAREC-2010 TO BE HELD IN OCTOBER 2010 IN CURACAO

GAREC-2010, the next Global Amateur Radio Emergency Communications Conference it will take place next fall in Curacao. The dates will be October 11th and 12th with the theme of the meeting to be "Learning through practicing.. More details of next Octobers gathering will be announced as they become available. Meantime keep an eye on the conference website for updates. The URL is www.rientola.fi/oh3ag/garec (OH1VR)

ON THE AIR: HAMS TO HELP FIGHT AIDS WITH HIV/AIDS AWARENESS THROUGH AMATEUR RADIO OPERATION

Ham radio is joining the world-wide campaign to help find a cure for Acquired Immune Deficiency Syndrome better known by the acronym AIDS. Bruce Tennant, K6PZW, has more:

--

To do its part to conquer this killer disease, a special amateur radio station will be operating at the Joint United Nations Program on HIV/AIDS or UNAIDS headquarters in Geneva, Switzerland. This, from December 1st to the 7th using the special event callsign 4U1AIDS. The operation is part of an invitation from UNAIDS to all peoples globally to observe the "World AIDS Day" and demonstrate global H-I-V awareness.

Begun on December 1st, 1988, the aim of "World AIDS Day" is to raise money, increase awareness, fight prejudice and improve education regarding H-I-V and AIDS. UNAIDS estimates, there are now 33.2 million people living with H-I-V, including 2.5 million children.

Those who hold QSO's with 4U1AIDS on any three bands will awarded a special commemorative World AIDS Day Award certificate. Amateur radio stations that have radio contact with 4U1AIDS on five bands will be

awarded a special commemorative UNAIDS pennant. All contacts will be sent a special 4U1AIDS QSL card.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For further information, please contact with Andrey Fedorov, UNAIDS, 20 Avenue Appia, CH-1211, Geneva 27, Switzerland. More information is on-line at www.DX-World.com/4u1aids (UNAIDS release)

RADIO RULES: CANADA BEGINS ISSUING 500 kHz EXPERIMENTAL LICENSES - FIRST TRANS-ATLANTIC CONTACT MADE

Some good news for our listeners to the North. After months of negotiations between Radio Amateurs of Canada and telecommunications regulator Industry Canada the first two licenses granted to Canadians for experiments at 504 to 509 kHz have been issued. This, in preparation for the 2012 World Radiocommunications Conference.

Jack Leahy, VE1ZZ, has been assigned call sign VX9PSO in the Developmental Service for his experimental transmissions. Joe Craig, VO1NA, has been assigned call sign VX9MRC. Both of these stations have been on the air already, with VX9PSO having been reported at 504.6 kHz and VX9MRC at 507.77 kHz.

And this late news. Finbar O'Connor, EI0CF, in County Donegal ,Ireland reports that he has had a QSO with Joe Craig, VX9MRC. He says that Joe was on 507.77 kHz while he was on 507..056 kHz. The respective reports were, EI0CF heard in Canada at 559 and VX9MRC heard at 529. The mode was CW, using straight Morse keys.

This is the first Ireland to Canada contact on the 500 kHz band. Signal reports to any of the now operational 500 kHz stations can be sent to their call book addresses. Two more authorizations, in Ontario and British Columbia, are expected soon. (Radio Amateurs of Canada, IRTS)

RESTRUCTURING: THAILAND EXPANDS 40 METER HAM ALLOCATION

Thailand's 7 MHz expansion has received a go ahead from that nations telecommunications regulator. John Gagen, W2YR reports that he's just received information from the International Secretary of the Radio Amateur Society of Thailand that the Thai National Telecommunications Council has approved the society's recent request for the expansion of 40 meters. This giving hams in that nation a primary status of 7.0 to 7.2 MHz.

For those not aware, this is the same bandplan that had been approved internationally at the WRC-03 conference and was to be effective March 29 this year, pending approval on a country-by-country basis. For Thailand it happens about the time that this weeks newscast goes to air on Friday, November 6th. (W2YR via OPDX)

ARISS CELEBRATES ITS 500th SCHOOL ROOM CONTACT

The 500th ARISS classroom to space station contact has taken[place. On Tuesday, October 27th, I-S-S Commander Frank De Winne, ON1DWN answered questions from students at the new Copernic Science Center in Warsaw, Poland. This was the 500th school contact since ARISS began operations in 2000.

This was a telebridge contact operated by ARISS ground station of Shayne Lind, VK4KHZ located in Queensland, Australia. At the end of the contact, De Winne thanked Lynd for the many years of providing ARISS telebridge contacts. Lynd in turn shared these thanks with his colleagues of the 11 other telebridge ground stations which cover all five continents. (ARISS)

**

HAM RADIO IN SPACE: STUDENT PAPERS INVITED TO FLY ON ARISSAT 1

Still with ham radio space and educational news, word that the ARISSAT One development team is inviting school students from around the world to submit papers or other visual items that will be flown on that ham radio satellite. Submissions should be in jpg or pdf format such as a paper or a study done on science, technology, engineering, or math. Also accepted will be items such as a drawing of space craft , a schematic, a journal kept on an educational topic, a story, photo or news article about a class doing a hands on educational project.

To take part, the student or teacher should submit the material by e-mail to Dave Jordan's to aa4kn (at) amsat (dot) org and also copied to gaston (dot) bertels (at) skynet (dot) be. They will check that content is appropriate to students and select those to fly on ARISSAT One. The deadline for submissions is on Sunday, November 15th. (ON4WF)

**

ENFORCEMENT: UNLICENSED BROADCASTER HIT WITH $2500 FINE

The FCC has issued a $2500 fine to Frankie Grover of Lakeland, Florida. This for operating an unlicensed transmitter on 87.9 MHz from a location known as the Kingston Lakeside Inn and using the unassigned call letters WGBC FM

According to the FCC, its agents used direction finding to locate the signal. On August 18, 2009, the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Mr. Grover in the amount of $10,000. This, for the apparent willful and repeated violation of Section 301 of the Act.

Grover submitted a response to the NAL. He admitted to operating the station but requested a reduction or cancellation of the proposed forfeiture saying the level of proposed fine would pose a financial hardship. He also provided the FCC with the required financial records to prove his claim. The FCC accepted his evidence and has reduced the fine to $2500 which he was given the customary 30 days to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: IRMA FRAUSTO HAS COMPANY IN THE UK

You probably remember the story of Irma Frausto of Compton, California that we reported on a few weeks ago. Her amplified TV antenna allegedly self-oscillated on 840 MHz and caused interfere to a cell site. The FCC sent her a Citation even though there was nothing in the Commission's write up to suggest that she knew about the self-oscillations or had the wherewithal to eliminate them.

Well now Irma has company. A 12 year old schoolboy in Great Britain by the name of Nickie Chamberlain has been busted because his self-oscillating TV antenna was interfering with air traffic over his home in Linslade, Beds in the UK. The Ofcom engineer ordered the father to dispose of the aerial immediately.

Air traffic controllers first noticed the communication problems on the flight path into London Luton Airport on October 6th .According to Ofcom, pilots coming into land at the airport were loosing contact with the control tower because the faulty antenna preamp was transmitting on the same frequency as the aircraft radios. You can read more at http://tinyurl.com/yhj37ab (CGC, Telegraph.com)

**

RESCUE RADIO: IARU GLOBALSET 2009 ON NOVEMBER 14

Saturday November 14TH, is the date of the International Amateur Radio Union will activate "GlobalSET 2009.", This is a Global Simulated Emergency Test running from 1800 to 2200 UTC that encourages hams world wide to pass simulated emergency traffic using standard National Traffic System format.

This drill is being billed as a great opportunity for all radio amateurs to observe and their practice important traffic passing

skills. These are skills that are deemed fundamental to the role of amateur radio in crisis communications conditions.

Rules and a list of participating stations may be found at www.iaru-r1.org. Search under the heading, Emergency Communications Working Group. (IARU)

**

RADIO LAW: REFARMING TV SPECTRUM FOR BROADBAND

Federal regulators are considering taking back some spectrum from television broadcasters and auctioning it off to wireless companies. This so as to increase the availability of wireless broadband services for the general public.

At this stage, FCC officials are mostly trying to get input from broadcasters and others. The proposal will be released in February of 2010. TV station owners are likely to fight the plan, although the FCC is envisioning paying broadcasters for any airwaves that are repossessed and auctioned away. (FCC)

**

HAM HAPPENINGS: SEVHFS CONFERENCE CALLS FOR PAPERS

The Southeastern VHF Society is calling for the submission of papers and presentations for the upcoming 14th Annual Southeastern VHF Society Conference. The event is slated to be held at Morehead State University in Morehead, Kentucky on April 23rd and 24th of 2010. The deadline for the submission is February 5, For more information please visit www dot sevhfs dot org on the World Wide Web. (K4IDC)

**

NAMES IN THE NEWS: TWO FCC SPECTRUM EXPERTS TO LECTURE DOWN-UNDER.

Some names in the news. The New Zealand Ministry of Economic Development has announced that it will welcome FCC spectrum experts William Sharkey and Mark Bykowsky to lecture down-under. Both are Senior Economists at the FCC Office of Strategic Planning in Washington, D.C.. The two will present a seminar on Current Research in Spectrum Allocation Issues and Auctions. The seminar session is being sponsored by the Ministry and the PING Research Group at Auckland University. (WIA News)

**

NAMES IN THE NEWS: WA6ITF RETIRES FROM FOX TV AFTER 30 YEARS

And from Los Angeles comes word that our own producer Bill Pasternak, WA6ITF, has retired from Fox Television after a career that spanned close to three decades at the networks flagship station KTTV. He started in 1980 as a bench technician maintaining 3/4 inch U-Matic videocassette recorders used by the stations news operation. Over the

years he did just about every job one finds at a television station. He says that the last 12 years working as the engineering contact with the news department have been the ones he has enjoyed the most. There he's not only worked the technical side but also has been on the air several times as an expert on all things electronic and radio communications for news stories reported by Hal Eisner, Phil Schuman and others.

Bill tells Newsline that he's only retired from broadcasting but not from life. He says that he has a number of projects he wants to undertake including the production of a television documentary on a medical researcher and completing the script for a two act stage play. He also will be continuing his V-H-F column in Worldradio Magazine and producing these weekly Amateur Radio Newsline reports. That coupled with a wife, daughter, son-in-law and four very active grandkids will keep Bill a very busy 67 year old boy.

Pictures of his surprise retirement party put on by his many friends at KTTV are on Bill's photo album page on the Facebook Social Networking service. Look for his album under the name Bill Pasternak +titled Saying Goodbye to KTTV after Almost 30 years. (ARNewsline(tm))

**

NAMES IN THE NEWS: ARRL PRESIDENT JOEL HARRISON, W5ZN, NOT TO SEEK REELECTION

Someone else retiring is ARRL President, Joel Harrison, W5ZN. Late last week Harrison announced that he has decided not to seek reelection when his current term expires on January 16, 2010.

Joel Harrison served two terms as ARRL president. He began his ham radio political career in 1983 when he became the Section Manager in the League's Arkansas Section. Subsequently, he has served as Delta Division Director and as an ARRL Vice President. In 2000, he was elected First Vice President. He was elected League President in 2006. (ARRL)

CHANGING OF THE GUARD: FORMER ARRL DIRECTOR PAUL VYDARNEY, WB2VUK - SK

Some sad news to report. Word that former ARRL Director Paul Vydareny, WB2VUK, of Tarrytown, New York, passed away Thursday, October 22, from a brain aneurysm.

Paul Vydareny had a long record of volunteer service with the ARRL. Prior to becoming Director, he served as Section Manager of the Eastern New York Section from 1980 to 1996 and as Vice Director from 1987 to 1996. In those days Vice Directors were once allowed to serve simultaneously as Section Managers.

Vydareny was elevated from Vice Director to Director when then-Director Steve Mendelsohn, W2ML, was elected ARRL First Vice President . But he resigned as Director in September of 1996, citing job and church obligations as preventing him from doing what he considered a proper job of fulfilling his duties as Director.

Paul Vydarney, WB2VUK, was only age 65 when he passed. In his honor every net in the 2009 New York City Marathon was announced as: "This is -- whomever -- at the mic of the WB2VUK Marathon Network." (ARRL, W2ML)

**

HAM RADIO IN SPACE: LUSAT-1 FALLS SILENT

AMSAT-Argentina reports that its LUSAT-1, LO-19 ham radio satellite stopped transmitting CW telemetry on 437.125 MHz on or around October 20th. LU1ESY says that he last received a signal on October 11th after which he noted a drift in the downlink frequency beyond the expected Doppler shift.

AMSAT-Argentina says that it hopes to revive LUSAT to allow it to celebrate its 20 years in space next January 23. It also adds that it welcomes any reception reports of the now out of communications ham radio bird. (AMSAT-Argentina)

**

RADIO HISTORY: THE WORLDS FIRST RADIO STATION

What is the world's first radio station? Although AM radio broadcasts were tested in 1906 and used for voice and music broadcasts up until WW1 it wasn't until 1916 in Wilkinsburg, Pennsylvania when 8XK began regularly scheduled broadcasts. 8XK would receive the first official broadcasting license in 1920 with the call sign KDKA.

But there's more to this story. At 6:00 PM on November 2, 1920 the US presidential election returns were announced from a shack in East Pittsburgh by Leo Rosenberg and KDKA became the world's first commercial radio station. More on this story is at the National Museum of Broadcasting website at the U-R-L found in this weeks printed Newsline report.

**

ON THE AIR: MARCONI NOBEL 100 AWARD.

To celebrate the 100th anniversary of inventor Guglieliamo Marconi receiving the Nobel Prize, a special on the air event from Sweden is planned. The idea is to listen for and work 10 different special event "SI" prefix stations between November 9th and December 10th.

The calls to listen out for are SI0GM, SI1GM, SI2GM, SI3GM, SI4GM, SI5GM, SI6GM and SI7GM. Other Swedish stations may be using the special prefix SI, but only the above stations count. Each anniversary station counts once per band. No endorsements. Logs go to SSA Awards Manager, Bengt Hogkvist, Ostbygatan 24 C, SE-531 37 Lidkoping, Sweden. (SSA AWARDS)

**

ON THE AIR: INTERNATIONAL NAVAL CONTEST DECEMBER 12 - 13

The International Naval Contest 2009 sponsored by Portuguese Navy Hamradio Club takes place starting at 16:00 UTC on Saturday, December 12th and concluding at 15:59 UTC on Sunday the 13th. Modes used are only CW and SSB on 80, 40, 20, 15 and 10 meters. For more information by e-mail please write to inc (dot)contest09 (at) nra (dot) pt

**

DX

In DX, word that DL7VSN is once again heading to Tanzania and will probably be active as 5H1HS, this time from the Kilimanjaro area. He was expected to begin his operations on November 1st but the length of his length of stay was not mentioned. Activity will be 160 through 10 meters using mainly CW and RTTY. If all plans go well he may also get to activate his 5th Islands on the Air group from this DXCC entity for one or two days. DL7VSN says that he will also be in the Serengeti and Tarangire National Park starting November 18th, and hopes to be active from these areas as well. QSL via his home callsign.

G4OHX, will be active as 5R8HX from Madagascar between December 28th and January 3rd of 2010. His operation will be mainly using CW. He will also be active portable ZS5 between January 4th to the 17th. QSL direct only via his home callsign.

If you are looking for a contact with Singapore then listen out for 9V1JP who is a new operator from there and has been active on 20 meters. James says via QRZ.com that he is in a very challenging environment and is trying hard to put out a decent signal on HF. He also says that in the QSL area that he is in the process of designing them, and they should be good and ready to begin sending them out in the spring of 2010.

JK2VOC says that he will be active from BA4TB station in China. This, between November 27th to the 30th including the CQ World Wide DX CW

Contest on November 28th and 29th. QSL via JK2VOC.

Lastly, YV5IAL will be portable CE0 from Easter Island between January 8th and 11th of 2010. This will be a QRP, portable, holiday style operation. Activity will use the PSK31 digital mode on 14070.15 kHz from 2200 to 0100 UTC daily. He may occasionally be on 40, 30 and 15 meters as well. QSL via this operation via his home callsign.

(Above from various DX news sources)

**

THAT FINAL ITEM: KIDS SOLVE THE DTV RECEPTION PROBLEM

And finally this week, if you or someone you know are having reception problems on your new digital television or converter box, the problem is likely with the antenna. Most rabbit ear or loop indoor antennas are insufficient for DTV reception. Unfortunately, a lot of folks are not allowed to put antennas on their roof. With a solution, enter Naiomi and Noah Miller. They are the pre-teen children of FCC O-E-T attorney James Miller. With a little help from dad, the two kids take you on a "Watch Mr. Wizard" like journey into how to homebrew your own indoor D-T-V antenna using the magic of science found in everyday living:

--

Audio here from YouTube.com

--

The antenna that the Miller kids built is based on the Gray-Hoverman Digital TV Antenna design but without the rear reflector. It in turn is rooted on the design of the late Doyt R. Hoverman who created and did the early work on this design long before the days of computer antenna modeling programs. More on this design can be found at www.digitalhome.ca/ota/superantenna. You can see the video of Naiomi and Noah Miller building their home-brew version of it on YouTube at www.youtube.com/watch?v=YaYDtOqpTOI. Trust me when I tell you that it's a few of the best moments you will spend on-line this week. (CGC, Audio courtesy of YouTube.com)

**

NEWSCAST CLOSE

481. Radiomans' weekend

Newsgroup: rec.radio.amateur.moderated
Date: 2009-11-09 23:34:39 UTC
From: KØHB <kzerohb@gmail.com>
Message-ID: <hda8tv$211q$1@adenine.netfront.net>
Source record: 1791

What weekend!

CW Sweepstakes is my "radio high" each fall. This is a Radioman skill contest, not a computer operator skill contest. The long, complex, and unpredictable exchange emphasizes operator skill, and the crowded bands challenge your station design skills.

I was pumped for a week before, and it will take another week for the adrenaline to dissipate!

Only a little over 51 weeks till the next one.

Colleen and I ran up 1,000+ Q's, worked a sweep, and repaired an R4C "on the fly".

Thanks for the Q, Jim.

73, de Hans, K0HB

==> + PUBLIC SERVICE: LATE SEASON TROPICAL STORM IDA COMES CALLING ON
GULF COAST

With only weeks to go before the end of the 2009 hurricane season,
Tropical Storm Ida formed off the coast of Nicaragua, making landfall
as a hurricane in the morning hours of November 5. The storm lost
significant strength as it moved through Nicaragua and Honduras, only
to reemerge in the Caribbean a day later, impacting El Salvador and
Mexico. Ida gained strength, becoming a Category 2 storm with winds
peaking at 105 miles per hour in the Gulf of Mexico. The path for Ida
at this point was clearly toward the Gulf Coast of the US, with a
projected landfall somewhere between Louisiana and the Florida
panhandle. As Ida's path became more focused, Amateur Radio operators
and ARESÂ® groups concentrated on increasing their level of readiness
should there be a need to respond. Read more here
<http://www.arrl.org/news/stories/2009/11/12/11192/?nc=1>.

==> + OPERATING: ARRL SWEEPSTAKES TAKES TO THE PHONE BANDS NEXT WEEKEND
```

The SSB portion of the ARRL November Sweepstakes <http://www.arrl.org/contests/rules/2009/novss.html> -- the premier domestic HF contest -- takes place next weekend, running 2100 UTC Saturday, November 21 to 0300 Monday, November 23 (or 4 PM Saturday to 10 PM Sunday EST). According to ARRL Contest Branch Manager Sean Kutzko, KX9X, the event -- first called "The January Contest <http://www.arrl.org/news/stories/2009/10/29/11170/?nc=1>" -- started back in 1929 as a competition for handling formal traffic messages. "Sweepstakes is one of the oldest traditions in Amateur Radio," Kutzko said. "The contest exchange contains more elements than usual, an homage to traffic-handling. If you have never participated in Sweepstakes, you are really missing out on some serious fun!" Read more here <http://www.arrl.org/news/stories/2009/11/12/11194/?nc=1>.

==> + OPERATING: WRTC 2010 ORGANIZERS ANNOUNCE TEAMS

Last month, after a grueling selection process, the organizers of the 2010 World Radiosport Team Championships (WRTC) selected the 44 team leaders who will compete in the event next year. These 44 team leaders, representing all six continents, have each chosen a partner. The rules state that while the leader's partner may be from a different call sign area, they must be from the same country as the leader. WRTC, held every few years, takes place during the 2010 IARU HF World Championships, July 10-11 and will be held just outside Moscow. Read more here <http://www.arrl.org/news/stories/2009/11/11/11191/?nc=1>.

==> ATLANTIC DIVISION TO HOST WEBINAR

<https://www1.gotomeeting.com/register/333780681> Periodically, the ARRL's Atlantic Division hosts a "webinar" -- an interactive Web-based seminar, designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. On Friday, November 13 at 9 PM EST, Chuck Blocher, PhD, KC2IQV, will present a webinar entitled The Emotional Go Kit: Are You Prepared? "As hams serve as emergency and public service communicators, we prepare our Go Kits and necessary gear to provide essential communications," said webinar sponsor ARRL Atlantic Division Director Bill Edgar, N3LLR. "How prepared are you concerning your emotional wellness during one of these events? This webinar addresses the emotional well-being and preparedness for those Amateur Radio communicators who participate in emergency and public service situations." Please click here <https://www1.gotomeeting.com/register/333780681> to register for this informative, interactive Internet meeting.

==> + AMATEUR RADIO IN SPACE: STS 129 -- STOCKING THE INTERNATIONAL SPACE STATION

Besides taking spare parts to the International Space Station (ISS) this coming Monday, the space shuttle Atlantis (STS-129) will deliver the module antennas for Columbus -- the laboratory built by the European Space Agency (ESA) and host of two Amateur Radio on the International Space Station (ARISS) antennas. "Lou McFadin, W5DID, a member of the AMSAT Board of Directors and a key volunteer for ARISS,

showed the astronauts the best ways for them to safely unpack and assemble the antennas and associated cables once they and the hardware reach the ISS," said ARRL ARISS Program Manager Rosalie White, K1STO. "They reviewed how to maneuver and install the antennas during the spacewalk. Lou also oversaw the re-packing of the antennas and the onboard flight kit that accompanies shipments going to the ISS." Read more here <http://www.arrl.org/news/stories/2009/11/12/11195/?nc=1>.

==> + AMATEUR RADIO IN SPACE: IDAHO SCHOOL INCORPORATES ARISS INTO CURRICULUM

With more than 500 Amateur Radio on the International Space Station (ARISS) contacts conducted, thousands of students have experienced intriguing science and technology lessons -- plus the thrill of speaking with an astronaut who was on the International Space Station (ISS). According to ARRL ARISS Program Manager Rosalie White, K1STO, each school uses the ARISS events in different ways. From school to school, ARISS volunteers see a great range in the types of activities around the event, including integrating the activities into each grade level's curriculum. The lesson in common to all schools includes discussions on what Amateur Radio is, what ARISS is and how the worldwide ARISS Team works together. Click here <http://www.arrl.org/news/stories/2009/11/05/11185/?nc=1> to read about how one elementary school in Idaho integrated Amateur Radio, space -- and more -- into their curriculum.

==> ARRL SAYS "THANK YOU" TO VETERANS

On Wednesday, November 11, Veterans Day -- called Remembrance Day or Armistice Day outside the US -- was celebrated all over the world. Originally a holiday that marked the end of World War I -- the "War to End All Wars" -- has been set aside to honor all who have served their country. It was on November 11, 1918, on the 11th hour of the 11th day of the 11th month, that Germany signed the Armistice, formally ending the hostilities that had been ongoing since 1914.

The ARRL would like to take this opportunity to thank our service veterans. Whether they served on active duty or reserve, during peace time or time of conflict, they served their county with honor. We also would be remiss if we did not remember the families of those veterans who kept the homefires burning bright; without their love and support, our veterans would have indeed been alone.

ARRL Headquarters has its share of service veterans: Contributing Editor Al Brogdon, W1AB (Army); Publications Sales Associate Mark Dzamba, KB1FMY (Air Force); Assistant VEC Manager Perry Green, WY1O (Army); Volunteer Archivist Charles Griffen, W1GYR (Air Force); Technical Editor Joel Hallas, W1ZR (Army); News Editor S. Khrystyne Keane, K1SFA (Coast Guard); DXCC Manager Bill Moore, NC1L (Army); Reprints Specialist Tony Nesta, AA1RZ (Navy); Membership and Volunteer Programs Manager Dave Patton, NN1N (Navy); Technical Relations Specialist Jon Siverling, WB3ERA (Army); Field and Regulatory

Correspondent Chuck Skolaut, K0BOG (Air Force); Education & Technology Program Coordinator Mark Spencer, WA8SME (Air Force), and Archivist Perry Williams, W1UED (Air Force).

Thank you for your service -- your sacrifice and the sacrifice of your fellow service members is not forgotten.

==> NOW YOU KNOW!: US CALL SIGNS NOT ISSUED BY THE FCC

If you're an American ham, chances are that your call sign was issued by the Federal Communications Commission. A "no brainer," right? Well, if you're an American ham who happens to be stationed at Guantanamo Bay or at one of the US bases in the Antarctic, your call sign is not issued by the FCC -- it's issued by the base commander. Guantanamo Bay (or Gitmo as it's commonly called) uses the KG4 prefix, followed by a two-letter suffix; this block is reserved exclusively for American hams at Gitmo. As for Antarctica, the Antarctic Treaty <http://en.wikipedia.org/wiki/Antarctic_Treaty_System>, signed on December 1, 1959 (and entered into force on June 23, 1961), established the legal framework for the management of Antarctica, including allocation of amateur call signs; the National Science Foundation received their block on July 1, 1959. US military hams in Japan and Korea are also issued special call signs:

- KA2AA-KA9ZZ -- reserved for US Army-authorized amateur stations in Japan.
- KC4AAA-KC4AAF -- reserved for the National Science Foundation's use at the South Pole <http://antarcticsun.usap.gov/features/contentHandler.cfm?id=1701>.
- KC4USA-KC4USZ -- reserved for US Navy-authorized amateur stations at their Antarctic bases.
- KG4AA-KG4ZZ -- reserved for US Navy-authorized amateur stations at Guantanamo Bay). <http://members.visi.net/%7Everb/index.html>
- KL9KAA -- KL9KHZ -- reserved for assignment to US personnel stationed in Korea.
- The 40 call signs having the first two letters AF, KF, NF or WF and the letters "EMA" following a numeral are available to the Federal Emergency Management Agency (FEMA).

The FCC once issued call signs to hams who lived in the Caroline Islands and the Marshall Islands. Even though these entities -- former United Nations Trust Territories -- now have their own sovereignty (and DXCC prefixes), the FCC will not issue call signs in the following blocks:

- KC6AA-KC6ZZ -- KC6 was two DXCC entities: The Eastern Caroline Islands and the Western Caroline Islands. The Eastern Carolines became the Federated States of Micronesia (V6) and the Western Carolines became the Republic of Palau (T8).
- KX6AA-KX6ZZ -- the former Marshall Islands, now the Republic of the Marshall Islands (V73).

You can find out more
<http://wireless.fcc.gov/services/index.htm?job=call_signs_3&id=amateur&page=
1#2&ref=>
on the FCC's Web site. Now you know!

==> SOLAR UPDATE

In for Tad "While the wonders of nature exploring
<http://englishhistory.net/keats/poetry/tosomeladies.html>" Cook, K7RA,
reports: Sunspot region 1029 disappeared after October 30, as it began
transiting the Sun's back side. Six days after it was gone, a new
region -- region 1030 -- appeared for several days. By November 8,
region 1030 had faded away and looked like other weak spots we've seen
over the past couple of years, except they appeared for one day with a
sunspot number of 11. Sunspot region 1030 ran for three days with
sunspot numbers of 15, 16 and 11. Then on November 9, the sunspot
region re-emerged, with sunspot numbers of 14, 13 and 11 through
November 11. While 1030 passes over the Sun's western limb, we can
still see sunspot region 1029 transiting the far side of our local
star, now approaching the eastern horizon. None of this observation
would be possible but for the STEREO mission
<http://stereo.gsfc.nasa.gov/>. Old region 1029 appears as a bright
area of magnetic disturbance, and we can't actually determine what the
sunspot number or the total area of the region might be, but it still
appears to have a large and robust magnetic signature. The 45 day Air
Force and NOAA Ap and flux forecast gives us some clue about the dates
it will emerge into view, and when it is most directly facing Earth.
Predicted solar flux is 72 for November 12-13, 73 on November 14-15, 74
on November 16-17, 75 on November 18-21 and 80 for November 22-24.
After that, the forecast shows it declining to 75, 72 and 70. This
suggests it might reach the most geoeffective position, that is, the
position where it is near the Sun's central meridian relative to the
Earth, around November 22-24. Conditions have been good, with continued
weak or missing solar wind, and very quiet geomagnetic indicators. Look
for more information in the Solar Update, available on the ARRL Web
site on Friday, November 13. For more information concerning radio
propagation, visit the ARRL Technical Information Service Propagation
page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad
Cookism" brought to you by John Keats' To Some Ladies
<http://englishhistory.net/keats/poetry/tosomeladies.html>.

==> + INTERNATIONAL: NORWEGIAN AMATEURS RECEIVE NEW PRIVILEGES

On November 6, radio amateurs in Norway were granted privileges
<http://www.lovdata.no/ltavd1/filer/sf-20091105-1340.html> on three new
bands, as well as primary status on the extended 40 meter band and a
frequency extension on 12 meters. According to IARU Vice President Ole
Garpestad, LA2RR, Norwegian amateurs received new secondary user
privileges on 60 meters (5.260-5.410 MHz), the 600 meter band (493-510
kHz) and in five blocks in the 4 meter (70 MHz) band. Amateur Radio
operators in Norway will also enjoy upgraded privileges on 40 meters,
moving from secondary to primary users between 7.100-7.200 MHz and 1000

W output. They have also received a new secondary allocation from 24.740-24.890 MHz in the 12 meter band, expanding upon Norway's existing primary allocation of 24.890-24.990 MHz. Garpestad said that "minor adjustments" were also made in the SHF (3-30 GHz) and EHF (30-300 GHz) portions of the band. "Congratulations to our Norwegian colleagues," said ARRL Chief Executive Officer David Sumner, K1ZZ. "The new domestic allocations in Norway are consistent with the present and future spectrum requirements for the Amateur Service as determined by the IARU Administrative Council. We hope that other administrations will consider taking similar steps."

==> THIS WEEK ON THE RADIO

<http://www.arrl.org/contests> This week, look for an NCCC Sprint on November 13. The Bill Windle QSO Party is November 14. The Worked All Europe DX Contest (RTTY), the Kentucky QSO Party, the JIDX Phone Contest is November 14-15 and the OK/OM DX Contest (CW) are November 14-15. The CQ-WE Contest (SSB, CW and Digital) is November 14-16. The Run for the Bacon QRP Contest is November 16 and the NAQCC Straight Key/Bug Sprint is November 19. Next week, the ARRL Sweepstakes Contest (SSB) <http://www.arrl.org/contests/rules/2009/novss.html> is November 21-23. The Feld Hell Sprint is November 21. The LZ DX Contest is November 21-22 and the NA Collegiate ARC Championship (SSB) is November 21-23. The EU PSK63 QSO Party is November 22. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, November 22, 2009, for these online course sessions beginning on Friday, December 4, 2009: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1683 - November 13 2009

The following is a closed circuit advisory and not necessarily for air.

OK, you all know why I am here. Its almost fall and all the bills from summertime have been mounting up. And, as usual, there is really not very much left in the treasury to pay them.

Its always this way. During June, July and August, people are spending more time away from home. You are out camping or at a ball game. Maybe it's a concert or traveling on vacation. We all do it, but most of you also find a local repeater to listen to this weekly newscast no matter where you go.

Now think of this. Our expenses to bring you the news are the same no matter if you are listening on the road, on an HT or from your hamshack at home. Eventually the bills have got to get paid and that time has come.

Now that everyone back at home and into their fall and winter life schedule, we ask that you take a few moments to send a donation to the Amateur Radio Newsline support fund so that we can keep these newscasts coming your way. Making a contribution is only a mouse click away if you have Pay Pal. Just go to www.arnewsline.org and click on the button at the top of the page marked "Make Donation." Or you can send in a donation to the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio Newsline will be eternally grateful.

Once again that's the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

For the Support Fund, I'm Andy Jarema, N6TCQ. Our newscast follows.

**

The following is a QST. A new record down-under as hams use red light off clouds to cross the Bass Strait. Also, Indonesia announces that it will launch a rescue radio ham satellite, Finland and Norway say yes to 4 meter operation and an unlicensed broadcaster tries a truly unusual defense after being fined. Find out the details on Amateur Radio Newsline(tm) report number 1683 coming your way right now.

(Billboard Cart Here)

**

EMERGING TECHNOLOGY: NEW LED HAM RADIO LIGHT COMMUNICATIONS RECORD SET DOWN-UNDER

A new, non line-of-sight optical communications distance record of 288 km has been set down-under with a one-way transmission between two hams transmitting with Light Emitting Diodes. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

On the night of October 27th, Rex Moncur, VK7MO, and Joe Gelston,VK7JG, assisted by Paul Godden,VK7KPG, set a new one way non line-of-sight optical record of 288 km across Australia's Bass Strait. And they did this using red light scattered of the clouds.

VK7MO was on Mt. Liptrap in South Gippsland listening on his A-P-D based receiver. This while VK7JG and VK7KPG were on Mt. Horror in North-East V-K-7 transmitting with a 3 watt Luxeon LED transmitter. The signals from Mt. Horror were bounced off of some high altitude cirrus clouds estimated to have been at about 20,000 feet.

On the receiving end, the callsigns from Mt. Horror were decoded by VK7MO using a new program called Weak Signal Communicator. Weak Signal Communicator is actually a new front end for the Spectrum Lab audio analyzing application that has was recently created by David Smith,VK3HZ.

The experimenters also tried the WSJT decoding program developed a few years ago by Joe Taylor, K1JT. The sync signal was received at -30dB but unfortunately there were no decodes.

None the less. the possibility of bridging Bass Strait by optical communications using weak signal technology now been proven. A full report will be posted to the Radio and Electronics Association of Southern Tasmania website in the near future.

>From Los Angeles, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline.

--

Only the inquisitive minds of radio amateurs could make a feat like this possible and doing it with relatively inexpensive gear. The U-R-L for the REAST website is http://reast.asn.au/optical.php (VK7TW)

**

HAM RADIO IN SPACE: INDIANOSIA TO LAUNCH RESCUE RADIO HAMSAT

Indonesia is planning a rescue radio ham satellite. Amateur Radio Newsline's Jerry Gaul, KE7GGV, reports:

--

The Bernama dot com on line newspaper reports that the Indonesian Amateur Radio Organization called Orari and the Indonesian National Institute of Aeronautic and Space plan to launch the ham radio bird next year. But so far the president of the Orari has not revealed the satellite's size nor its orbital distance from Earth.

According to the website, the new ham radio bird will be used to expand the nations ham radio communication network to remote districts. It went on to note that the satellite will play a major role in linking land, sea and air communication for rescue radio operations.

The article also noted that ham radio operators from Orari had become the alternative communication tool. This, during disasters like the tsunami in Aceh and the recent earthquake in Padang.

For the Amateur Radio Newsline, I'm Jerry Gaule, KE7GGV, in Albany, Oregon, reporting.

--

You can read the entire story on-line at http://www.bernama.com/bernama/v5/newsgeneral.php?idE31790 (Bernama.com)

**

RESTRUCTUTRING: FINLAND ALLOWS LIMITED 4 METER ACCESS

Amateurs in Finland, as well as the separate DXCC entities of Aaland Island and Market Reef, can now operate in 70.000 to 70.175 MHz and 70.225 to 70.300 MHz. But a report on the Four Meters web site by OZ2M says that 4 meter operation is not permitted within the 13 border municipalities. Also, that transmissions within 50 km of the Russian border are only permitted with the antenna's main lobe pointed away from that nation. A maximum transmission power is limited to 25 watts within 50 km of the Norwegian border will also be enforced.

But there is some good news on the 6 meter front. This as hams residing in Finnish coastal areas are now free for 50 MHz operations which were previously forbidden due to former Swedish Channel 2 television broadcasting. (OH1ZAA, via UKSMG Announcement)

**

RESTRUCTURING: NORWAY GIVES HAMS 4 METERS

And Norway has joined Finland in giving its radio amateurs limited access to 70 MHz operation. As of November 5th hams in Norway plus those on Svalbard, Bear Island, Jan Mayen, Bouvet Island, Peter I Island and in the Norwegian land areas on Antarctica can run up to 100 watts in five small subbands on the 4 meter band.

But Norway's restructuring of its hamband allocations does not end there. In addition to the new 70 MHz allocation Norwegian radio amateurs have also gained new bands at 500 kHz and 5.2 MHz as well as a

150 kHz. They have also been granted an extension to the 24 MHz band

In addition to 135.7 to 137.8 kHz and 7.1 to 7.2 MHz, Norwegian amateurs can now use 493 to 510 kHz on secondary basis at 100 watts using Morse only. Also added were allocations at 5 dot 260 to 5dot 410 MHz on secondary basis and 24 dot 740 to 24 dot 890 MHz, also on secondary basis.

The complete Norwegian Amateur Radio Regulations in Google translated English are at tinyurl.com/NorwayRadioRegs. (Southgate)

**

AWARD CONFLICT: C91VM QSL 'S FOR RECENT IOTA REJECTED

Hams planning to claim Islands on the Air credit for October 2009 contacts with C91VM are being told that these three operations will not be accepted for IOTA accreditation. This, because of the operator's current published QSL card policy.

According to G3KMA the operator of the expeditions has been notified that a policy change must be made that states that the request of 5 dollars in U-S currency is not obligatory. Also, IOTA award sponsors want a promise that cards sent direct to C91VM with sufficient return postage will be answered direct and in a timely fashion.

According to the November 7th release, a prompt amendment to this QSL policy notice as posted on QRZ.com is required if accreditation is to be reconsidered. (G3KMA)

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the South Coast Amateur Radio Club repeater serving Los Angeles from Palos Verdes California.

(5 sec pause here)

**

RESCUE RADIO: I.T. HAM SPEARHEADS RESCUE RADIO TECHNOLOGY

An interesting article in Computerworld Magazine is certain to get some in the field of Information Technology thinking seriously about amateur radio. The title is ï¿½Want to bone up on wireless tech? Try ham radio' and Jim Linton, VK3PC, has the story behind the story:

--

The article centers on John Hays K7VE, an IT Manager in Washington who devotes most of his spare time to help develop a communications system designed to integrate portable two-way radios with the global telephone

network. He hopes to create a failure-proof voice communications infrastructure that can immediately connect first responders with the outside world, even when their own mobile cell phones are put out of service during an emergency.

The article points out that being a radio amateur he has access to abundant spectrum resources in which to engage his passion for research and wireless experimentation. John K7VE attributes his ability to engage in such research would not be possible without being part of the amateur radio community.

The article quotes him saying: ï¿½For IT professionals, ham radio can foster skills that are translatable into real-world wireless and wired networking applications.'

For the Amateur Radio Newsline, I'm Jim Linton VK3PC.

--

The article includes information about ham licensing and a few sample theory test questions. A link to it can be found at http://tinyurl.com/ComputerWorldHamRadio) (WIA News)

**

RESCUE RADIO: W6FOG SOON BACK OUT TO SEA

Hams following the news about Neil Hays, W6FOG, sailing trip will be pleased to hear he has recovered and plans to be back out to sea soon.

As of November 2nd, Neil had survived very bad weather and high seas along with hypothermia. According to reports the sea was so heavy his tow line to the Coast Guard cutter broke three times during the rescue.

Late word is that once back on the water his plans are to travel along the west coast to the Panama Canal and then through it into the Caribbean. According to his home page on QRZ dot com. W6FOGF hopes to contact over 2000 gridsquares using the ham radio satellites during the voyage. He will also be on H-F at 14.280, 7.280 and 3.980 MHz, The H-F frequencies will be monitored 24 hours a day. (Southgate)

**

RADIO LAW: CONDO RESIDENTS WIN DECLATORY RULING TO KEEP TV ANTENNA

In an October 30th ruling, the FCC granted Constance and Daniel Lane of Palantine, Illinois a Declatory Ruling permitting them to put up a rooftop TV antenna. This, after the board of their homeowners association told them they could not do so. Amateur Radio Newsline's Frank Haas, KB4T, has the details:

--

Constance and Daniel Lane had installed a television antenna on the roof of their townhome. In their petition to the FCC they had sated

that they own the deeded townhome with exclusive use of their roof .

Their homeowners association does not dispute this assertion. However, the association's rules require that antennas must be installed in the attic of a townhome and any deviation from this requirement must be approved by the Board of Directors.

But an exception in this rule exists where an owner cannot get an usable signal with an antenna in the attic. The Lane's allege that they cannot get an acceptable quality air signal in their attic and that therefore they have installed a roof mounted antenna.

In their petition to the FCC the Lane's stated that the Association was imposing continuing fines with respect to this installation. Because of this they requested the Commission to prohibit the association from enforcing its rule. The homeowners association was aware that the Lanes had taken the matter to the FCC but never filed any response.

In granting the Lane's petition the FCC weighed heavily on its own Over-the-Air Reception Devices Rule. This is the 1996 law which prohibits governmental and private restrictions that impair the ability of antenna users to install, maintain, or use over-the-air reception devices. It applies to satellite antennas that are one meter or less in diameter and, as in the Lane's case, to antennas designed to receive over the air television broadcast signals.

In granting the Lane's the request the FCC noted that by declining to oppose the petition, the homeowners association has failed to carry its burden. It therefore concluded that the Lane's antenna installation on their roof is permissible under the Commission's Rule as well as the homeowners association's rules.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida.

--

At airtime its unknown if the homeowners association plans to file an appeal. (FCC)

RADIO LAW: PHILADELPHIA CELL BAN COULD IMPACT MOBILE HAMS

Operating a two-way radio mobile in Philadelphia may cost you $75 a pop beginning December 1st. This, thanks to a new cell phone law about to fully take effect in that city.

While the purpose of the law is to discourage the use of cell phones while driving there is a clause which prohibits the use of a wireless communication device for voice communication while operating a motor vehicle on any Philadelphia street. Hands free operation is permitted.

An article in the Philadelphia Inquirer quotes a 9th District Police Officer saying there are some exceptions to the new law. These are to call the 911 emergency line or while using a two-way radio to conduct official business for the city, state, or federal government. Otherwise the law says to pull over and put the car in park or neutral before making a call.

Local hams have been in touch with ARRL Volunteer Counsel to get their opinion of the bill. More information can be found in the Holmesburg Amateur Radio Club November newsletter at www dot harcnet dor org. Updates on the how this new law will affect on ham radio will be posted there as well. (WA3PZO)

**

RADIO BUSINESS: PANASONIC TO BUY SANYO

Panasonic Corp. will make formal its takeover bid for rival Sanyo Electric. This, as part of a move by Japan's largest consumer electronics company to transform itself into a green energy supplier as well.

Panasonic says that it has received sufficient assurance from regulators around the world to proceed with the $4.45 billion deal. If approved it would place Panasonic a strong position in the solar panel, fuel cell and rechargeable battery areas. All three are important to the future of both broadband and radio communications advancement. (Shoptalk)

**

HOLIDAY HAM RADIO: OH9SCL FROM SANTA CLAUS LAND

Ham radio will again be active from Santa Clause Land in the arctic Circle. This as station OH9SCL will takes to the holiday airwaves during the month of December. Plans are to have the station operational on 160 through 10 meters using CW, SSB and the digital modes. QSL's go via OH9UV. (Via e-mail)

**

HOLIDAY HAM RADIO: OPERATION SANTA CLAUS INVITE

And speaking about the upcoming ham radio holiday season, this note to those clubs and groups planning an on-the-air Operation Santa Claus. The event aimed at bringing some of the holiday joy to hospitalized youngsters.

For those not aware, Operation Santa Claus is a helping hand event begun by April Mell, WA6OPS, more than two decades ago. This, when she was an Occupational Therapist at a hospital in Orange County, California. Being an active radio amateur she came up with the idea of using ham radio to let hospitalized youngsters chat for a moment with the man with the white beard wearing the red suit. Usually that Santa is a ham somewhere on the hospital premises who has both a love of

children and that great Santa laugh.

Anyhow, it was only a few short years before her Operation Santa Claus idea was being copied by radio clubs nationwide and eventually worldwide. For some clubs, it has become an annual way for them to provide a very special service to their community.

If you or your group are planning an Operation Santa Clause event this holiday season, please let us know the date, time and the hospital that you will be serving. Also tell us who will be your Santa and whom his radio equipped helpers will be so that they can be given the recognition that they deserve. If you do this, then we will do our best to get that information out to the rest of the world-wide ham radio community. (ARNewsline(tm))

HAM HAPPENINGS" HAM RADIO UNIVERSITY 2010 IN NY ON JANUARY 10th

The eleventh annual Ham Radio University held in conjunction with the ARRL New York City/Long Island ARRL Section Convention on Sunday, January 10, 2010. The venue will be Briarcliffe College in Bethpage, New York.

For those not aware, Ham Radio University is a day to learn and experience the many aspects of amateur radio. The theme this year is Digital Communications and so far more than fifteen seminars are already scheduled. There will also be a VE session for those who would like to take an FCC exam and Special Event Station W2V set up and operational on HF.

Ham Radio University 2010 is sponsored this year by the Great South Bay Amateur Radio Club and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. More information is on-line at www.HamRadioUniversity.org (K2DO)

THE SOCIAL SCENE: FLYING TO THE HUNTSVILLE HAMFEST WILL BE EXPENSIVE IN 2010

If you are planning to fly to next summers Huntsville Hamferst, you had best start saving for the trip right now. This is because New federal statistics show Huntsville has the nation's most expensive airplane ticket to purchase from anywhere.

A report from the Bureau of Transportation Statistics shows the average domestic airfare for the north Alabama city cost $471 in the second quarter of this year. That's $68 higher than the second-place city, Grand Rapids, Mich. Atlantic City, New Jersey, had the lowest average cost for an airplane ticket, at $185.

None of the prices include extra charges like bag fees. The statistics are for one-way and round-trip tickets. (Online Travler)

WORLDBEAT: UK GETS ITS FIRST 6 TO 10 METER REPEATER

Turning to news from across the Atlantic, word that the Wessex Repeater Group in the United Kingdom has announced that telecommunications regulator Ofcom has approved for immediate operation the UK's first 6 to 10 meter cross-band repeater. GB3WX will be co-sited with the 2m voice repeater GB3JB in South Wiltshire. The system, when not being used as a repeater, will transmit a beacon signal enabling those interested in propagation to directly compare signals between 6 and 10 meters. This is because both the 10 meter and 6 meter radios will transmit with the same ERP using the same dual-band omni-directional antenna system, and enabling direct comparisons to be made. More is on-line at the group's web site: http://twxrg.web.googlepages.com/home (GB2RS)

**

WORLDBEAT: EUROPE HAS NEW PC FOR THE ELDERLY

A new desktop PC aimed at people aged over 60 who are unfamiliar with Personal Computers and the internet has been unveiled in the United Kingdom. Called Simplicity, the simplified desktop has only six buttons directing users to basic tasks such as e-mail and chat.

The Simplicity computer has no log-in screen when it starts up, contains no drop-down menus and comes pre-loaded with 17 video tutorials. The operating system is a version of Linux that can be customized by users.

So far the SimplicITy computer system is only available in the Europe. According to the BBC story introducing it, more than 6 million people in the UK over the age of 65 have never used the internet, according to British government figures. (ScienceOnLine)

HAM RADIO IN SPACE: AMSAT - NA CREATES STUDENT MEMBERSHIP CATEGORY

AMSAT North America now has a new category of membership aimed at the younger set. During the November 3rd board meeting a motion to add a student membership category was unanimously approved. The student membership will cost one half of the current membership.

The approved motion reads in part that to expand its educational outreach efforts, AMSAT-North America is establishing a student category of membership. The yearly dues will be half the standard applicable rate, and shall be available to all students in primary and secondary schools. Also, post-secondary school students enrolled in classes at least half of the time will also be eligible for a maximum of 6 post-secondary years in this membership category. Any student membership application should indicate the school being attended, the course of study and the expected graduation date. (ANS)

**

ON THE AIR: TUBE / VALVE QRP OPERATING DAY NOVEMBER 15

On the air, word that Tube or Valve Radio QRP Day takes place on Sunday November 15 from 1600 until 2359 UTC. Originated in the United Kingdom, the basic idea is to communicate using tube or valve based equipment that was popular a generation ago.

Tube or Valve Radio QRP Day limits itself to a power level of 5 watts or less, usually using separate receivers and transmitters. However planners note that vintage higher power rigs throttled back to 5 watts or below are fine.

This event is not a contest. Rather this is a celebration of ham radio in days gone by,. As such, its planners suggest that those taking part try and send some slow CW. They add that if you are a bit shaky to have the hot shot stations slow down for you.

There is one warning we want to pass along to those not familiar with tube or valve based radio gear. All of it uses voltages that can harm or even kill you if you come in contact with it. If you have never played with this type of equipment, please at least partner with someone who has and is aware of the safety precautions that must be taken.

Lastly, if you do decide to take part, please send any reports and photographs by e-mail to g3vtt at aol dot com before November 20th. More on this event is on-line at www.gqrp.com (G3VTT)

**

DX

In DX, word that DL7DF and some of his friends will operate from Phu Quoc Island through November 17th. Two stations are operational. One is concentrating on CW and SSB with the other operating RTTY, PSK31 and SSTV. QSL via DL7DF either direct or via the DL QSL Bureau.

An international team is heading to Samoa and will be operating portable 5W through November 17th. Their announced plans are to have two stations including amplifiers for all-band activity. QSL as directed on the air.

KL7JR reports that plans are underway for the activation of Jacquot Island before and during ARRL's December 11th to the 13th Ten Meter Contest. Listen out for VY1RST to concentrate on 10 meters for the contest and 14.260 for non-contest activities. QSL via KL7JR at his callbook address.

AA7JV, and HA7RY are reportedly active as TX3A from the Chesterfield Islands. They are expected to be there for at least another two weeks with priorities given to operating on 160, 80 and 40 meters. They will also try to make time the contacts on the higher bands as time permits. Updates can be found at www.tx3a.com. QSLs via the bureau or direct. E-QSL and Logbook to the World are also being accepted.

EI6DX, will be operational from Somone Senegal through November 16th. He plans to focus on the lowbands and CW. QSL via bureau or direct to RX3RC.

Lastly, T30KI and Mike,T30IW are expected to show up from Abatao Islet on the Tarawa atoll working CW and SSB on 60 through 6 meters/ This, from November 10th to the 16th. QSLs for both calls go via N1EMC.

(Above from various DX news sources)

**

ENFORCEMENT: TEXAS REALLY IS A STATE AND YOU NEED AN FCC LICENSE TO BROADCAST THERE

And finally this week an enforcement story with a novel twist. This as an unlicensed broadcaster who tried to use the United States Foreign Sovereign Immunities Act as his reason not to have an FCC license is now facing a $10,000 fine. Amateur Radio Newsline's Jim Hendershot, WA6VQP, has the details:

--

By way of background, on February 22nd 2007, the Dallas FCC Office issued a Notice of Unlicensed Operation to Raymond Frank. It warned him that the radio transmissions on 100.1 MHz from his residence were not authorized by the Commission. The letter also outlined the possible penalties for continued unlicensed operation. On March 5th 2007, the Dallas Office received a reply from Mr. Frank stating that the transmissions had ceased.

But the matter did not end there. On July 22nd 2009, in response to a complaint about an unlicensed radio station in the Austin area, FCC agents traced the signal to Frank's home. So on August 13th 2009, the Houston FCC Office issued a Notice of Apparent Liability for Forfeiture to Frank in the amount of $10,000 for the apparent willful and repeated violation of Section 301 of the Communications Act.

Raymond Frank submitted his responses to the proposed fine that seemed to be based on a law called the United States Foreign Sovereign Immunities Act. This is the code that lets foreign delegates to the United States get away with such things as double-parking and then

ignoring the ticket on their car. But it seems as if Raymond Frank was trying to invoke it in his defense whether he knew the law applied or not. Here's why:

In his response to the proposed fine, Frank claimed that the Commission had no jurisdiction over the matter. He asserted that as a citizen of the Republic of Texas, he was not subject to the laws of the United States or the Commission's Rules. Specifically, he claimed that the Commission lacks jurisdiction over his actions, because he operated a radio station solely within the boundaries of the state of Texas. He also claimed that the Commission's licensing policies violate the First Amendment of the constitution.

As you might expect, the FCC did not buy his defense. In affirming the fine the FCC noted that Section 301 of the Communications Act explicitly sets forth the Commission's jurisdiction over all radio transmissions, both interstate and intrastate. It also states that no person shall use or operate any apparatus for the transmission of energy or communications or signals by radio from one place in any state to another place in the same state, or from one place within a state to another state without a license. Thus, contrary to Raymond Frank's assertion, the Commission does indeed have full jurisdiction over the use of radio transmitting equipment within the state of Texas and it was invoking that jurisdiction in his case.

The FCC also noted that the U.S. Supreme Court has repeatedly held that there is no constitutional right to use radio facilities without a license. It said that issuing a forfeiture for operating a radio station without a license simply represents the enforcement of the Communications Act, and as such it is not some abridgment of Mr. Frank's Constitutional rights.

In summary, the FCC said that it had examined Mr. Frank's response to the proposed fine in conjunction with the Forfeiture Policy Statement. As a result of its review, the FCC said that it finds no basis for cancellation or reduction of the $10,000 fine proposed for this violation.

For the Amateur Radio Newsline. I'm Jim Hendershot, WA6VQP, in Grants Pass, Oregon.

--

The bottom line: Whether or not Raymond Frank recognizes the authority or jurisdiction of the FCC does not matter. Right now he has only 30 days from the date the order was issued to pay up or to file a further appeal. (FCC)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

- A list of News Service Providers maintained by the Big-8 Management Board:

==> + ADVOCACY: END IN SIGHT FOR "THIRD BATTLE OF BULL RUN"?

ARRL Chief Executive Officer David Sumner, K1ZZ, once termed the battle
of Broadband over Power Lines (BPL) in Manassas, Virginia as the "Third
Battle of Bull Run." While the war against harmful interference to
Amateur Radio via BPL is not yet over, the battle in Manassas might
soon be coming to an end.

In a Special Meeting on Monday, November 16 of the Manassas City
Council, the Council voted "To allow the [City of Manassas] Utility
Commission to make a recommendation to the [Manassas] City Manager as
part of the FY 2011 Budget regarding the decision to continue offering
Internet service; additionally, staff was instructed to discontinue all
marketing and advertising of Internet service." This motion passed 4-2.

At the meeting, Manassas Director of Utilities Michael Moon told the
Council that "it is not cost-effective to continue the internet service
on the Main.net BPL communication system as a stand-alone cost center"
and that the City "need[s] to make the decision for internet service in
the context of what communication system will be used for the City's
```

AMI [Advanced Metering Infrastructure]." Read more here <http://www.arrl.org/news/stories/2009/11/19/11206/?nc=1>.

==> + OPERATING: NCVEC TO RELEASE NEW TECHNICIAN QUESTION POOL IN JANUARY

The Question Pool Committee (QPC) of the National Conference of Volunteer Examiner Coordinators (NCVEC) is due to release the new Technician class (Element 2) question pool to the 14 VECs on December 1, 2009; it will be released to the public in January 2010. Each question pool for the three Amateur Radio license classes -- Technician, General and Amateur Extra -- is reviewed on a four-year rotation. This new Technician class pool will become effective on July 1, 2010. Read more here <http://www.arrl.org/news/stories/2009/11/19/11203/?nc=1>.

==> + OPERATING: SKYWARN RECOGNITION DAY SET FOR DECEMBER 5

The 11th Annual SKYWARN Recognition Day (SRD) Special Event will take place Saturday, December 5, 2009. SRD is co-sponsored by the ARRL and the National Weather Service (NWS) as a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe. According to SRD Coordinator David Floyd, N5DBZ, Amateur Radio operators can visit their local participating NWS office to contact other hams across the world throughout the 24 hour event. Read more here <http://www.arrl.org/news/stories/2009/11/17/11199/?nc=1>.

==> HINTS & KINKS : PL-259 CONNECTOR TOOL FOR COAX CABLES

Tired of using pliers to screw on the PL-259 connectors when you are preparing cables? Pliers always seem to do some damage by the amount of force this task requires. I use an inexpensive 1/2 inch PVC female to male coupler. Simply use a step drill and ream out the female end (see the arrow in the photo). This works for most half inch coaxial cables. PL-259s do vary in diameter. Be sure to measure yours before you ream out the PVC adapter. It will not take a lot of reaming for the connector to fit snugly. The outer part of the PL-259 that fits into the connector is 0.55 inch diameter. This makes a secure fit. If you wear out the adapter, purchase another, as they are inexpensive. This works for me. -- 73, Paul Marsha, K4AVU, 200 Garden Trail Ln, Lexington, SC 29072-7341

==> + ARRL RECOGNIZES: DEADLINE LOOMING FOR NOMINATIONS FOR THE BILL LEONARD PROFESSIONAL MEDIA AWARD AND ARRL INTERNATIONAL HUMANITARIAN AWARD

Did you see an article or news segment on Amateur Radio this past year in the papers, on TV, radio or a professional Web site? ARRL Media and Public Relations Manager Allen Pitts, W1AGP, reminds you that you can recognize the professional reporter's work by nominating them for the Bill Leonard Professional Media Award <http://www.arrl.org/pio/pro_media_award.html>. "Time is running out," he warns. "Nominations for this prestigious award -- which conveys an

engraved plaque and a donation of $250 to be made in their names to the charity of their choice -- must be sent in to the League no later than December 11." Find out more about the Bill Leonard Professional Media Award here <http://www.arrl.org/pio/pro_media_award.html>.

Nominations are also open for the 2009 ARRL International Humanitarian Award <http://www.arrl.org/FandES/field/awards/humanitarian.html>. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through Amateur Radio. The League established the annual prize to recognize Amateur Radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster. All nominations and supporting materials for the 2009 ARRL International Humanitarian Award must be submitted in writing no later than December 31, 2009. Read more about the ARRL International Humanitarian Award here <http://www.arrl.org/news/stories/2009/09/28/11098/?nc=1>.

==> + PUBLIC SERVICE: GAREC RETURNS TO REGION 2 FOR 2010

The 2010 Global Amateur Radio Emergency Communications Conference (GAREC <http://www.rientola.fi/oh3ag/garec/>) will take place October 11-12 on the Dutch island of Curacao in the Caribbean. The theme of the conference will be Learning through Practicing.

According to GAREC 2010 Organizing Committee Chairman Seppo Sisatto, PhD, OH1VR, GAREC's mission is two-fold: To help Amateur Radio operators be better prepared for emergency communications and to create emergency communications exercises at both the national and international levels. Exchanging information and experiences among all Amateur Radio operators and groups that are interested in emergency communications helps to promote GAREC's vision of having regular worldwide cooperation and understanding between governments and the Amateur Radio Service in the field of emergency communications.

GAREC 2010 is organized in cooperation with the Dutch Amateur Radio Emergency Service (DARES <http://www.dares.nl/>) and Club for Experimental Radio Examination Netherland Antilles (VERONA <http://www.muurkrant.nl/verona/uk/index.html>). Sisatto said that details on the upcoming conference will be announced as they become available.

==> THE 2009 ARRL SPECTRUM DEFENSE CAMPAIGN NEEDS YOUR SUPPORT

<https://www.arrl.org/forms/fdefense/> ARRL Chief Development Officer Mary Hobart, K1MMH, reports that the ARRL has raised $126,828 toward the goal $310,000 for the 2009 Spectrum Defense Fund <http://www.arrl.org/defense>. "The messages I receive from the ARRL members and hams who contribute to this much needed fund are heartening," she said, "expressing appreciation for all the work ARRL does for the Amateur Radio community to protect our frequencies. And we can all be proud of the successes that have come from the work of ARRL

leadership -- the Board and staff here at HQ. But there is always more to do." Hobart said that year after year, ARRL members tell her that the League's representation of radio operators -- both in Washington and on the international stage -- is one of, if not the most important activities that the ARRL does. "The cost of that representation at meetings in Washington, at IARU gatherings and working party meetings to prepare for world telecommunications conferences is the key to the continued success of our defense efforts," she said. "Spectrum Defense is one of those areas that is not covered completely by member dues. So we ask ARRL members to do what they can to help cover those expenses." Amateurs wishing to make a contribution may do so easily online <http://www.arrl.org/defense>, via postal mail or by calling the ARRL Development Office at (860) 594-0397.

==> NOW YOU KNOW!: IT'S ALL GREEK TO ME

Ask any high school physics student and they'll tell you that electrons govern pretty much everything we do. We call electrons in motion an electrical current, and those radio waves that we hams are so fond of are the result of high frequency electrons traveling in our antenna conductors. Think of a 40 meter wave as an accidental tourist who wants to go somewhere (somewhere nice and warm, maybe a rare DX station). But how to get there? It needs some mode of transport -- think of electrons as the transport providers.

We use our transmitters to move the electrons in our antennas to-and-fro to produce radio waves, hopefully to that rare DX destination. When the radio waves get there, they set electrons in another antenna in motion. That current -- electrons in motion -- is amplified and detected at the receiving location and a QSO is made.

But why do we call them electrons? The ancient Greeks noticed that amber attracted small objects when rubbed with fur; apart from lightning, this phenomenon is thought to be man's earliest known experience of electricity. Back in the year 1600, the English physician William Gilbert -- in his treatise De Magnete <http://rack1.ul.cs.cmu.edu/is/gilbert/> -- coined the New Latin <http://en.wikipedia.org/wiki/New_Latin> term electricus to refer to this property of attracting small objects after being rubbed. Both electric and electricity are derived from the Latin Ã□Â□lectrum, which came from the Greek word Ã□Â®Ã□Â»Ã□ÂµÃ□ÂºÃ□Â□Ã□Â□Ã□Â¿Ã□Â½ (Ã□Â□lektron) for amber. Now you know!

==> SOLAR UPDATE

Tad "Flutters in sun-beams <http://englishhistory.net/keats/poetry/shell.html>" Cook, K7RA, reports: Sunspot activity seems to be growing steadily of late: Daily sunspot numbers for November 5-18 were 15, 16, 11, 0, 14, 13, 11, 11, 0, 0, 11, 12, 0 and 29. Sunspot 1029 made its trip around the Sun and has re-emerged as sunspot 1032. A new sunspot -- number 1033 -- has

come over the eastern limb of the Sun. This steady appearance of sunspots has raised the MUF over many paths, and 15 meters is beginning to open regularly. In the southern hemisphere -- which gets more solar radiation this time of year -- you can see a pronounced effect on the f0F2 reading around mid-day <http://www.swpc.noaa.gov/ftpdir/lists/iono_day/Cocos_Is_iono.txt>. This is a measurement taken with an ionospheric sounder on Cocos-Keeling Islands in the Indian Ocean, 12.5 degrees South latitude and 96.8 degrees East longitude. The instrument sweeps a radio signal across the spectrum, beams straight up to the ionosphere overhead and measures the strength of the signal bouncing back to determine optimum frequency. You can see during mid-day f0F2 is going above 10 MHz. Another interesting tool to see varying MUF around the world updated every five minutes is here <http://www.spacew.com/www/realtime.php>. The contour lines show the MUF over that particular area. During the day recently, some areas over Africa were going above 30 MHz. Of course, this weekend is the ARRL SSB Sweepstakes Contest <http://www.arrl.org/news/stories/2009/11/12/11194/?nc=1>, and conditions are expected to be good for this domestic contest. There is a possibility of some disturbance from unsettled geomagnetic conditions, possibly peaking on Saturday. Predicted planetary A index for November 19-23 is 7, 10, 15, 9 and 6. Look for more information in the Solar Update, available on the ARRL Web site on Friday, November 19. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' On Receiving a Curious Shell, and a Copy of Verses, by the Same Ladies <http://englishhistory.net/keats/poetry/shell.html>.

==> SILENT KEYS

+ Prolific Amateur Radio and SWL Author Harry Helms, W5HLH (ex-AA6FW) (SK)

After a long bout with cancer, Harry Helms, W5HLH (ex-AA6FW), passed away Sunday, November 15. He was 57. Notorious for his witticisms and geniality, Helms was known for his many books -- such as Shortwave Listening Guidebook: The Complete Guide to Hearing the World, All About Ham Radio, How to Tune the Secret Short Wave Spectrum and Handbook of Radio Communications Servicing and Maintenance -- and his monthly column "You Should Know: Interesting Thoughts and Ideas for Enjoying the Hobby" in Popular Communications. Read more here <http://www.arrl.org/news/stories/2009/11/18/11201/?nc=1>.

QST Author George Badger, W6TC (SK)

George Badger, W6TC, of Portola Valley, California, passed away on Sunday, November 15. He was 84. Originally licensed in 1939 as W6RXW when he was 14, Badger was a member of the ARRL for 67 of his 69 year amateur career. After World War II service with the 89th Infantry Signal Company in Europe, he graduated from the University of

California with a degree in electrical engineering. Badger held seven patents on microwave tube and circuit design and was Marketing Director for EIMAC <http://www.cpii.com/division.cfm/9>, was President of Svetlana <http://www.svetlana-tubes.com/svetlana_main.swf> and consulted for CPII Econco <http://www.cpii.com/division.cfm/9>. Badger published many technical articles professionally and in the amateur press. First published in QST in 1981, Badger's most recent article, "The Pileup Buster," was published in October 2008; his next article, "Easy to Make Four-to-One Coreless Baluns," is scheduled to be published in a spring 2010 issue. Badger was a Fellow <http://radioclubofamerica.org/doc/Fellow%20Nomination%20form.pdf> in the Radio Club of America <http://www.radioclubofamerica.org/>. His Amateur Radio interests included building equipment, antennas and working DX. Badger held DXCC Top of Honor Roll (Mixed), DXCC Honor Roll (both Phone and CW), 5BDXCC (with endorsements on 160, 30, 17 and 12 meters), DXCC on all bands (160-10) and 5BWAZ. He also exceeded 2500 points on the DXCC Challenge. Contributions in memory of Badger can be made to the Stanford University Medical Center, Department of Immunology, 2700 Sand Hill Rd, Menlo Park, CA 94025. Funeral arrangements are pending.

==> THIS WEEK ON THE RADIO

<http://www.youtube.com/watch?v=WGvRnqII0j8> This week, the ARRL Sweepstakes Contest (SSB) <http://www.arrl.org/contests/rules/2009/novss.html> is November 21-23. The Feld Hell Sprint is November 21. The LZ DX Contest is November 21-22 and the NA Collegiate ARC Championship (SSB) is November 21-23. The EU PSK63 QSO Party is November 22. Next week, look for an NCCC Sprint on November 27. The CQ Worldwide DX Contest (CW) is November 28-29. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, December 27, 2009, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, January 8, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1684 - November 20 2009

The following is a closed circuit advisory and is not necessarily for air. Ladies and gentlemen Here's Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ.

--

Well, we have some good news and some not so good. The good news is that some of you responded and we are now only a month behind in paying our bills. The bad news is -- well -- that we are still a month behind in paying our bills and we need your help to get caught up to date.

With the holiday season approaching, I am going to ask you to remember to add the Amateur Radio Newsline to your gift list. The simple fact of the matter is that we can only bring you the news if we have the ongoing monies to do it. And it is you and only you that is the source of the funds that keep Amateur Radio Newsline coming your way.

Remember, Amateur Radio Newsline is a federal tax exempt 501(c)(3) not for profit corporation and your donations are tax deductible. Making a contribution is only a mouse click away if you have Pay Pal. Just go to www.arnewsline.org and click on the button at the top of the page marked "Make Donation." Or you can send in a donation to the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio Newsline will be eternally grateful.

Once again that's the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

Also, less we forget, best wishes for a Happy Thanksgiving from our home to yours.

For the Support Fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1684 with a release date of Friday, November 20th, 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC's new chairman testifies before congress on distracted driving. Is congress looking at some sort of nationwide ban? Also, BPL to disappear in Manassas Virginia, 60 meters

comes to Trinadad and Tobago, a ham in India waits 13 years to get his license and radio controlled robots to hold their own Olympic like games. Find out the details on Amateur Radio Newsline(tm) report number 1684 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: FCC CHAIRMAN TESTIFIES ON DISTRACTED DRIVING

Distracting driving has become a major issue in congress and could eventually impact on all communications to and from vehicles including ham and CB radio. Bill Pasternak, WA6ITF, is in our newsroom with more.

--

The hot button issue of distracted driving was the reason that FCC Chairman Julius Genachowski was recently summoned to Capitol Hill to testify before the Senate Committee on Commerce, Science and Transportation. This to explain where the agency he heads up could fit in if the nations legislative body eventually takes action to curb the rising tide of accidents and deaths being blamed on driving distractions such as talking on cellphones and texting while in motion.

While his October 28th testimony before the subcommittee hearing on Combating Distracted Driving never mentioned ham radio, CB or any other type of vehicular two way system, he did agree with that distracted driving endangers life and property and the current levels of injury and loss are unacceptable. He called an urgent problem that simply must be addressed.

But Genachowski said that he does not believe there is a single solution to this challenge. He said that the responsibility lies with individuals and companies in the wireless space as well as government.

He stated his belief that all individuals should take personal responsibility. Adults should drive responsibly, and families and friends should encourage each other and help each other drive responsibly. He believes that drivers of all ages should refrain from text messaging while driving. He goes so far as to say that the nation should develop a cultural norm that driving while texting is totally unacceptable.

Genachowski said that the FCC also has a role to play by helping to educate the public and supporting innovative problem-solving. He said that education is vital to any comprehensive plan addressing distracted driving.

Most important to those who operate two-way radio from their vehicles was Genachowski statement that mobile communications can be a life-saver by improving emergency response by, for example, providing stranded motorists with immediate means to reach help and by giving

first responders instant access to 21st century communications networks.

Genachowski also noted that government at all levels has a role to play in ending the distracted driving problem. On the Federal level he applaud the Department of Transportation for leading an impressive, coordinated effort to increase public awareness of the dangers of distracted driving. He also said that because the FCC licenses and regulates mobile services and approves devices for use in the consumer marketplace, the agency can potentially play a useful role in enabling technology and encouraging the development of marketplace solutions.

Obviously there is a lot more to come as Federal legislators mull over the distracted driving issue. It also means that hams and other mobile two-way radio users will need to keep an eye on Congress in the coming months.

For the Amateur Radio Newsline Im Bill Pasternak, WA6ITF, in los Angeles.

--

The National Highway Traffic Safety Administration reported in 2008 that driver distraction in general is the cause of 16% of all fatal crashes and 21% of crashes resulting in an injury. And according to AAA, nearly 50% of teens admit to texting while driving even though laws in some states forbid it. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-294326A1.txt (FCC, published reports)

**

RADIO RULES: FCC HOLDING WORKSHOP ON DISTRACTED DRIVERS

In a related development, word that the FCC is holding a holding a staff workshop on distracted driving as this newscast goes to air.

The November 20th workshop comes as the result of Chairman Julius Genachowski recent pledge to Congress that the FCC would gather data on exactly what drivers do in their vehicles. Also. To explore technology innovations and applications that may eliminate or significantly reduce the problem of distracted driving.

The commission would then be tasked with developing ways to educate the public about such dangerous behavior. The one thing that you will not see come out of this meeting is proposed rules to ban any mobile electronics that could distract drivers. Such regulation is outside of the preview of the Commission and would require congressional legislation

The workshop was to have been held at FCC's Washington headquarters and is open to the public. Its unknown if non-cellular mobile two way radio was on the agenda. (FCC)

***

THE BPL WAR: MANASSAS VA TO PULL THE PLUG ON BPL

The Manassas City Council is saying goodbye to BPL. Inside Northern Virginia reports that the council is in the process of deciding whether to abandon its broadband over power line project now, or to let it die at the end of the city's fiscal year.

BPL was Manassas' attempt to bring the Internet into the homes of every resident by providing low-cost broadband service. Subscribers were told that they could access the Internet through the regular electrical outlets, but for a number of reasons it never caught on with the public. First, the connection proved to be slower than cable or DSL. It was expensive to maintain and caused massive reception interference to those using the spectrum it shared. This included the Manassas ham radio community which was highly vocal in its opposition.

The end result was that the project only garnered about 670 subscribers while costing the city hundreds of thousands of dollars in ongoing maintenance. It also faced a strong challenge from Comcast cable which claims the potential to serve the entire city and Verizon which has rapidly been expanding its FIOS service in the Manassas area. And now like a bad dream it will shortly be fading away. (InsideNoVa.com)

**

RESTRUCTURING: 60 METER OPERATION IN TRINIDAD AND TOBAGO

Trinidad and Tobago may by now be permitting Amateur Radio operation in a 200 kHz segment of the 60 meter band. In a posting to the Digital Radio Yahoo group Julian Dedier, 9Z4FZ, notes that his license permits operation from 5.250 to 5.450 MHz with 1.5 kilowatt maximum power output. While amateur radio operation in this band would be a welcome development although as yet no reference to the allocation could be found in the frequency allocation table issued by the Telecommunications Authority of Trinidad and Tobago. (Southgate)

**

RESTRUCTURING: INDIA EXPECTED TO EXPAND 40 METER HAM BAND

Hams in India will soon have access to the spectrum from 7 point 0 to 7 point 1 MHz. This according to an e-mail being circulated by VU2JOS that says positive information coming from the official sources indicate that Indian amateur radio operators are being allocated an additional spectrum of 100 KHz on the 40 meter band.

According to the VU2JOS note, this is in line with the recommendations at WRC-2007. Since then shortwave broadcasters in India have shifted their transmitting frequencies beyond 7 point 2 KHz. In fact, in the region only 7 dot 190 MHz is still in use by the Srilanka Broadcasting Corporation.

VU2JOS says that an official notification of the 40 meter expansion is likely to be released soon. He also says that this is not the first time that hams in his nation have had access to this spectrum, He notes that Indian amateur radio operators were allowed to operate between 7 to 7 point 1 MHz, with the allowance of additional spectrum. (VU2MYH)

**

RADIO DEDICATION: VU2DWA- 13 YEARS FROM EXAM TO LICENSE

And here's the story an amateur radio applicant in India has received his license. What makes this interesting is that it only took some 13 years to reach him, Heres the story as we know it.

Back in 1996 Digvijayam Paricharla passed that nations amateur service exam. It normally would have taken a few months for him to have received his license and permit to operate, but months pass and then years but still no license.

After waiting and waiting, he finally contacted India's National Institute of Amateur Radio which in turn took up his cause. He says that through the dedication of VU2IPA, VU2RBI, VU2RDM, VU3ATK and several others, his dream of becoming a licensed radio amateur was realized, On October 28th he was finally issued the callsign VU2DWA and announced that he planned to celebrate by attending the now concluded Bangalor Hamfest.

VU2DWA sent out an e-mail telling the world that he is very grateful to everyone in the National Institute of Amateur Radio for their helping to champion his cause. And before you ask, nobody has said why it took all these years for his license to be issued. (VU Forum via W7VOA)

RADIO CRIME: RAC E-MAIL ALIAS USED IN PHISHING ATTEMPT

In the world of cyberspace the word phishing means to impersonate someone to try to illegally obtain information. Now, Radio Amateurs of Canada says that its e-mail domain of at RAC dot CA is being used in an attempt by crooks to obtain personal information from members. Norm Seeley, KI7UP, reports:

--

According to Radio Amateurs of Canada several messages have been received from users of the at rac dot ca e-mail alias system who have received e-mails purporting to be from RAC. These notes claim that maintenance was to be performed on the e-mail system and that certain information was requested to be sent to the sender of the message.

But says Radio Amateurs of Canada, these messages were not generated by anyone at that group. Rather they are a phishing expedition by someone likely involved in the crime of identity theft. It says that it would never send an e-mail that asks for such information as usernames and passwords. Radio Amateurs of Canada says to please ignore them and not to respond.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona, reporting

--

The bottom line: Anytime you get an e-mail of which you are even the least suspicious of, hit the delete key. Both you, your bank account and your computer will be glad that you did. (RAC)

**

HAM RADIO TESTING: NEW TECHNICIAN QUESTION POOL TO BE RELEASED

The Question Pool Committee of the National Conference of Volunteer Examiner Coordinators is due to release the new Technician class question pool to the 14 VECs on December 1st. It will then be released to the public in January 2010.

Each question pool for the three Amateur Radio license classes is reviewed on a four-year rotation. This new Technician class pool will become effective on July 1, 2010. (NCVEC)

**

RESCUE RADIO: COMMERCIAL FM ASKS FOR FM FRECEIVERS IN CELLPHONES

The U.S. commercial radio industry is pressing the Federal Communications Commission to persuade wireless carriers to include FM radio in cell phones. In their ex parte filing, radio executives stress the enhanced public safety benefits of including FM tuners in wireless handsets.

The industry leaders argue that technical obstacles to incorporating FM chips in mobile handsets largely have been overcome, that the chips cost about $1 or less and internal FM antennas are already included in at least 17 models of handsets in the United States. More than 30% of cell phones worldwide include FM and the battery drain is minimal from the FM radio circuitry.

The executives also noted that the cellular industry is developing an emergency warning system based on text messaging with broadcast SMS technology. But the radio leaders say this kind of system is expensive

and deployment is years away. (RW)

**

PUBLIC SERVICE: HAM VOLUNTEERS NEEDED FOT HONOLULU MARATHON

Ham Radio volunteers are needed to assist at the 2009 Honolulu Marathon. The event is slated for Sunday, December 13th starting at 5 a.m. local time.

The marathon begins and ends at Kapiolani Park with volunteer communicators required at many locations along the route. If you can assist please contact Contact Greg, NH6ZS, by e-mail him at honu1 at juno dot com. (KH6QX)

**

RADIO LAW: SAFE HARBOUR WILL CONTINUE

The FCC will continue to restrict the broadcast of material that it believes to be to risquï¿½ for children's eyes and ears. Fred Vobbe, W8HDU, has the details:

--

Audio report only. Hear it in our MP3 file downloadable at www.arnewsline.org

--

While the concept of time channeling has seen more than one direct or indirect legal challenge, so far the courts have maintained that that the concept is both constitutional and within the purview of the FCC to enforce. (RW)

**

ENFORCEMENT: SAN FRANCISCO INLICENSED STATION ISSUED $10000 NAL

The owner of an unlicensed broadcast station in the San Francisco Bay area has taken it off the air. This after being hit with a proposed $10,000 fine from the FCC in August.

The Notice of Apparent Liability was issued to Daniel Roberts, the founder of unlicensed broadcast station Pirate Cat Radio. Now, the station website says the proposed fine effectively ends Pirate Cat Radio's thirteen-year run as one of the Bay Area's most consistent voices of protest against what it calls corporate-run media monopolies.

Pirate Cat Radio will continue as an Internet-only station and says that the majority of its listeners were already tuning in online or via podcasts. No word on whether or not Roberts will appeal the proposed fine. (Radio)

**

HAM HAPPENINGS: SKYWARN RECOGNITION DAY DECEMBER 5TH

The 11th Annual SKYWARN Recognition Day will take place on Saturday, December 5th. Co-sponsored by the ARRL and the National Weather Service SKYWARN Recognition Day is a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe.

According to SKYWARN Recognition Day Coordinator David Floyd, N5DBZ, radio amateurs can visit their local participating National Weather Service office. There, working as a team thy will contact other hams around the world throughout the 24 hour event.

More information about SKYWARN Recognition Day is on line at the American Radio Relay Leagues' website at www.arrl.org. (ARRL)

**

CALL FOR PAPERS FOR THE 2010 SOUTHEASTERN VHF SOCIETY CONFERENCE

A "Call for Papers" to be presented at the 14th Annual Southeastern VHF Society Conference has gone out to the world-wide ham radio community. This 2010 conference will take place on April 23rd and 24th, at Morehead State University in Morehead, Kentucky and the sponsor is calling for the submission of papers and presentations for the to be presented at that gathering.

Papers and presentations are solicited on both the technical and operational aspects of VHF, UHF and Microwave weak signal amateur radio. Some suggested areas of interest include transmitter, receiver or transverter design, antenna design, low noise pre-amplification techniques. On the operational side topics might include DXpeditions, Rovers, EME operation, use of digital modes and exploring such items as Sporadic E propagation, Meteor Scatter and Troposphere Ducting.

In general papers and presentations on non weak signal related topics such as FM, repeaters and packet will not be accepted but exceptions may be made if the topic is related to weak signal. For example, a paper or presentation on the use of APRS to track rovers during contests would be considered.

The deadline for the submission of papers and presentations is February 5, 2010. Send all questions, comments and submissions to the program chair, Robin Midgett K4IDC. You can reach him at K4IDC (at) comcast (dot) net.

For further information about the conference please go to www dot svhfs dot org on the World Wide Web. (K4IDC)

**

NAMES IN THE NEWS: AA2EJ AWARDED NOBEL PRIZE IN PHYSICS

Some names in the news. First up is George Smith, AA2EJ, who has been awarded the Nobel Prize in Physics for the invention of an imaging

semiconductor circuit known as the CCD sensor. Smith shares the prize with two other researchers. They are Charles Kao, of Standard Telecommunication Laboratories and Willard Boyle, of Bell Laboratories. (ARRL, other published news reports)

**

NAMES IN THE NEWS: W8WDY SELECTED FOR 2009 DARA PRESIDENTIAL AWARD

And Dayton Amateur Radio Association president Steve Coy, K8UD, has named to George Potor, W8DWY, as recipient of the 2009 DARA Presidential Award. In making the announcement Coy said that Potor has contributed every year for the past several years in what we now know as Management Information Systems. He has created several computer programs including, Regis, Stubs and many others, including the program that shows the winning ticket numbers during Hamvention. Coy says that Potor's work has set the foundation for future programs, that includes Boothtracker which was first utilized for Hamvention this past year. (DARA)

**

NAMES IN THE NEWS: VK5ZAI FINALIST IN THE SENIOR AUSTRALIAN OF THE YEAR COMPETITION

An ham radio operator is a finalist in the Senior Australian of the Year competition. This as the South Australian Committee selects Tony Hutchison, VK5ZAI as one of the four South Australia finalists.

VK5ZAI was recognized for nomination based on his volunteerism as one of the satellite Earth stations for the Amateur Radio on the International Space Station program. Hutchison was also acknowledged for his work as Australian ARISS Coordinator and organizing the link ups for schools to contact the amateurs on the International Space Station, stimulating the interest of young people in science and technology.

The Australian of the Year Awards is a program of the National Australia Day Council, with state and territory selection committees selecting four finalists in each category, including the Senior Australian of the Year. The awards recognize the individual's contribution to their community.

**

CHANGING OF THE GUARD: HARRY HELMS, W5HLH - S.K.

Another sad changing of the guard in amateur radio. This as we learn of the passing of noted personal radio author Harry Helms, W5HLH, following a long fight against Cancer.

Helms, the former AA6FW, was best known for his many hobby radio related books including the Handbook of Radio Communications Servicing and Maintenance, the Handbook of Home Security Electronics, the Shortwave Listening Guidebook and The Complete Guide to Hearing the World. He was also the author of the book All About Ham Radio and had been a monthly contributor to Popular Communications magazine.

Helms was only age 57 when he succumbed to the disease at a hospice facility not far from his home in Fort Mill, South Carolina. In his last blog entry dated August 28th, he noted that he was now living just a few miles from the graves of his parents and grandparents. He continued by saying that while it might sound illogical that he found this comforting.

To quote W5HLH: " My journey began here, and it will soon end here."

Sadly for all of us, it did on Sunday, November 15th. Now everyone involved in private radio is mourning the passing of this gifted writer who contributed so much to every aspect of the personal communications hobby.

Harry Helms, W5HLH, is survived by his wife, Di. As we go to air, funeral arrangements are still pending. (NZ4O, ARRL, others)

**

CHANGING OF THE GUARD: FAMED INVENTOR LOUIS KING PASSES AWAY

Louis Arthur King, the well known founder of Kintronic Labs, passed away on Sunday morning, November 1st.

Considered to be one of the nations finest consulting engineers, Louis King started his engineering career as a professor in the electrical engineering department at Clemson College, now Clemson University. That's where he instituted the teaching of radio engineering courses. He later went on to help design the first air-cooled 50 kilowatt AM transmitter at RCA and received the patent for the bistable multi-vibrator, better known as the flip-flop circuit.

In 1949 he obtained his Professional Engineering license in Tennessee and Virginia and began a broadcast consulting business. This venture grew into what is now Kintronic Labs, which is the maker of AM broadcast antenna systems and components.

Louis King was recognized by the National Association of Broadcasters in 2007 as the recipient of the NAB Lifetime Radio Engineering

Achievement Award. Later that same year, King College honored him with an honorary Doctor of Laws Degree at their first winter commencement.

At the time of his death Louis Arthur King was 94 years of age. (CGC, RW)

**

HAM RADIO NEAR SPACE: NEXT BACAR TO LAUBCH JAN 24 2010

Turning to ham radio near space, ZS6EF will demonstrate the 2010 version of a Balloon Carrying Amateur Radio. This, on Saturday November 21st at the National Amateur Radio Center in South Africa.

The maiden flight of this latest near space ham radio equipped balloon flight will be on Sunday, January 24th 2010 from South Africa's Western Cape. Radio Amateurs from around the globe will be able to follow it on the Web. More information is at www.amsatsa.org.za (SARL)

**

WORLDBEAT: E-VOTING COMES TO THE RSGB

Electronic voting has come to Radio Society Great Britain's elections. This with word that a new electronic voting system administered by the Electoral Reform Society is now up and running for voting in the RSGB 2009 balloting.

There are four Board places to be filled and Region 9 also has an election for the Regional Representative position. RSGB members have until noon on 10 December to register their vote. Those who prefer can still send in a postal vote and an envelope is included with this month's Radio Communications magazine. (RSGB)

**

ON THE AIR: MAKE TUESDAYS 222 ACTIVITY DAY

If you own a radio capable of operation in the 222 to 225 MHz band then make Tuesday's the new 222 Activity Day. So says Todd Sprinkmann, KC9BQA, in Wisconsin who is suggesting that anyone with gear for the 1 and 1/4 meters use it to return activity to the underused band.

Todd suggests that those wanting to take part take to the air using either Morse on or near 222.100 or 223.500 on FM in the 0100 to 0400 U-T-C. He says to call CQ, swing your beams, create your own activity and invite a ham radio buddy to join in as well.

Sprinkmann also suggests that hams on 222 MHz consider using the www dot ON4KST dot com chat that thousands of other hams on other bands are already using. He notes that there are several steps in signing up and he has provided that information at his webite at www dor kc9bqa dot com.

And for those who were not around two decades ago when ham radio lost the 220 to 222 MHz portion of the band, the words true then could also be very apropos now as well: 222 - Use it or loose it. (VHF Reflector)

**

WORLDBEAT: OMAN CELEBRATION

Members of the Royal Omani Amateur Radio Society have activated special event station A43ND in celebrating Oman's "National Day". Activity will last until November 25th. Operations have been on 40 and 20 meters CW and 20/15 meters SSB, but look for activity on other bands and modes. QSL via A47RS. (ROARS)

**

DX

In DX, word that a team of Italian amateur radio operators will be active from Busua Beach Ghana through November 27th. Activity will be on all HF bands and modes, on 80 through 10 meters. The callsign 9G5TT will be used from the mainland while the callsign 9G5XX will be used from Abokwa Island. QSL via I2YSB, direct only.

F6ICX will be active as 5R8IC from Saint Marie Island through December 15th. Activity will be on 80 through 10 meters. QSL via his home callsign.

A35A reports that A35KL will be in Tonga for about 6 weeks, but he probably won't be on the air until he gets to Ha'apai on November 20th. No word on his length of stay on the island but he will be operational for the CQ World Wide CW contest.

Also during the contest listen out for Cuban station CO6LP. He will be on as a 40 meter single operator, single band low power station using only a dipole. QSL via CO6LP.

The Lufthansa Amateur Radio Club in cooperation with the Emirates Amateur Radio Society will be operating out of Dubai as A65DLH between November 23rd and the 30th. Activity is planned for 160 through 10 meters using CW, SSB and the Digital modes. Please QSL via the bureau.

IZ0EGM will be active as T70A during ARRL 10 Meter Contest between on December 12th and 13th. He will be operating both CW and SSB. His QSL information can be found on QRZ.com.

Lastly, UY5LW will be operational from Maputo, Mozambique as C91LW until December 3rd. Hes reportedly operating 80 through 10 meters using mostly CW with some RTTY and PSK. QSL as directed on the air.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE ROBOT OLYMPICS

And finally this week, China is planning to hold a 16 event robot Olympics in 2010. Spud Murphy, VK8ZWM, is down-under with more:

Yes robots will compete in familiar Olympic sports such as athletics as well as those more suited to machines such as cleaning. Entry to the competition will be restricted to robots resembling humans. They must possess two arms and legs. Wheels are banned.

Robots already have their own world cup. The 2009 competition saw entries from 400 teams that hailed from 35 separate nations. The 2010 event will be held in June in Singapore. A rival event is run by the Federation of International Robot-Soccer Associations.

The Chinese robot games will be one among an increasingly crowded calendar for robot sports and other competitive events. One event, Roboexotica, is for robots that can mix cocktails, light cigarettes and chat with bar patrons. No word that Robot-Exotica will feature Energizer "Bunnies" as hostesses.

This is Spud, VK8ZWM in Darwin.

--

The Chinese event will face competition from the RoboGames that also stages sports events for robots. The 2010 RoboGames will take in California in April. And less we forget to mention it, almost all of these robots are controlled by some form of a radio link. (WIA)

> CW Sweepstakes is my "radio high" each fall.

Same here. I'm not a serious contester, I focus on just two main efforts a year: FD and SS. Completely different contests but both are fun.

> This is a Radioman skill
> contest, not a computer operator skill contest.
> The long, complex, and
> unpredictable exchange emphasizes operator
> skill, and the crowded bands
> challenge your station design skills.

Yes, and there's more. Because you can only work another station once, and section multipliers count for so much, you have to choose band and operating style for maximum ROTI (Return On Time Investment). IOW how much time is it worth to work a weak one, when that same station may be 20 over on another band in a couple of hours? Will that rare section show up as you run stations, or should you go hunting? Etc.

A computer logger helps (I went the N3FJP route in 2007 - had to assemble a computer to do it, no big deal) but the computer won't make operating decisions for you. And you still need those Radioman skills.
>
> Thanks for the Q, Jim.

You're welcome, Hans. I think we've had an SS QSO every SS since about 1970. Field Day too.

This year I couldn't go all-out; just a couple of hours with the Southgate Type 7. Still managed a couple hundred QSOs and well over 60 sections.

Heard the really big guns handing out serial numbers in the 1500s. That means there were at least 1500 different stations on that weekend, all running CW. Since some stations are multiops, the total number of ops involved is higher.

Field Day Next!

73 de Jim, N2EY

Changes followed by "|".

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

==> ARRL HEADQUARTERS CLOSED FOR THANKSGIVING HOLIDAYS

ARRL Headquarters will be closed November 26 and 27 in observance of
Thanksgiving. There will be no W1AW bulletins or code practice
transmissions those days <http://www.arrl.org/w1aw.html#w1awsked>. This
edition of The ARRL Letter is being published a day early on Wednesday,
November 25, but there will be no ARRL Audio News
<http://www.arrl.org/arrlletter/audio/> on Thursday, November 26. ARRL
Headquarters will reopen Monday, November 30 at 8 AM Eastern Standard
Time. We wish everyone a safe and bountiful Thanksgiving holiday.

==> ARRL LEADERSHIP: NEW VICE DIRECTORS IN CENTRAL, ROANOKE DIVISIONS

On Friday, November 20, ARRL staff members started opening ballots
for the Vice Director races in the Central and Roanoke Divisions. After
all the ballots were counted, both the Central and Roanoke Divisions
gained new Vice Directors, with their three-year terms beginning at
noon on January 1, 2010.

In the Central Division, challenger Kermit Carlson, W9XA, of Batavia,
Illinois, edged out incumbent Howard S. Huntington, K9KM, of Hawthorn
Woods, Illinois; Huntington has served as the Central Division's
```

second-in-command since 1983. Carlson received 1808 votes, while Huntington received 1466 votes.

Roanoke Division Vice Director Patricia Hensley, N4ROS, decided not to seek another term. South Carolina Section Manager Jim Boehner, N2ZZ, of Aiken, and former West Virginia Section Manager Hal Turley, W8HC, of Huntington, were both nominated to succeed her. Boehner won the election with 1692 votes; Turley received 1496 votes. Read more here <http://www.arrl.org/news/stories/2009/11/20/11212/?nc=1>.

==> ARRL FIELD ORGANIZATION: INCUMBENT SECTION MANAGERS WIN NEW TERMS OF OFFICE

Three incumbent Section Managers were re-elected in races that concluded on Tuesday, November 24. In Alabama, Jay Isbell, KA4KUN, received 513 votes; challenger Les Rayburn, N1LF, received 167 votes. Isbell, of Bessemer, will begin his second term as Section Manager on January 1, 2010. In the Alaska Section Manager election, Jim Larsen, AL7FS, of Anchorage, won his second two-year term of office when he received 176 votes; challenger David Stevens, KL7EB, received 65 votes. Ron Cowan, KB0DTI, of LaCygne, Kansas, will continue as Section Manager; he received 382 votes while challenger Joseph Plankinton, WD0DMV, received 175 votes. Cowan has been the Kansas Section Manager since 2003. The following incumbent ARRL Section Managers did not face opposition and were declared elected for their next terms of office beginning January 1, 2010: Jim Latham, AF6AQ (East Bay); Frank Filipkowski, AD3M (Delaware); Dale Williams, WA8EFK (Michigan); Don Wood, W5FHA (New Mexico); Glen Clayton, W4BDB (Tennessee); Robert Griffin, K6YR (Santa Barbara), and Ed Emco, W1KT (Western Massachusetts).

==> REGULATORY: FCC LOOKS TO REVISE, CLARIFY VANITY CALL SIGN RULES

On Wednesday, November 25, the FCC issued a Notice of Proposed Rule Making (NPRM) -- WT Docket No. 09-209 -- seeking to amend the Commission's Amateur Radio Service rules to clarify certain rules and codify existing procedures governing the vanity call sign system, as well as revise certain rules applicable to club stations.

According to the FCC, almost 80,000 licensees have replaced their sequentially issued Amateur Radio call signs with a vanity call sign since the program began in 1996. When the program began, the Commission established what they called "the broad outlines" of the vanity call sign system, concluding that call signs generally should not be available for reassignment for two years following the death of a licensee, or expiration or termination of the license for that call sign. In doing so, the Commission made exceptions for former holders of the call sign, close relatives of a deceased former holder and club stations of which a deceased former holder was a member.

The Commission did not, however, specify all of the procedures governing the vanity call sign system, but indicated that the

procedures "would be set out in the Public Notices announcing 'starting gates' for the groups receiving initial priority and that the procedures would be adjusted from gate to gate as experience dictated." The procedures announced in the Public Notices announcing the gates are still in effect, but they are not set forth in the Commission's Rules. The NPRM states that the FCC "now believe[s] that certain provisions should be codified in our rules, and others added, so that the vanity call sign system will be fair, equitable and transparent to all amateur service licensees. The Commission also decided in the Vanity Report and Order [issued in 1996] to resume issuing new club station licenses. We believe that certain rule changes to the club station licensing rules may be appropriate."

The comment period for WT Docket No. 09-209 will extend for 60 days after it is published in the Federal Register. Historically, items appear in the Federal Register approximately 7-10 days after they appear on the FCC Web site. Reply comments can be made up to 75 days after publication in the Federal Register. Read more here <http://www.arrl.org/news/stories/2009/11/25/11220/?nc=1>.

==> SILENT KEY: ARRL SWEEPSTAKES MANAGER KEN ADAMS, K5KA (SK)

Ken Adams, K5KA, succumbed to cancer and passed away on Sunday, November 22. He was 64. Adams -- an ARRL Life Member -- served as the first-ever Contest Manager for the ARRL Sweepstakes, coming on board in 2005. "Ken was a 'get it done' kinda guy," recalled ARRL Contest Branch Manager Sean Kutzko, KX9X. "He took on the task of Sweepstakes Manager with great enthusiasm, rolled up his sleeves and championed the event like nobody else I've ever seen." Read more here <http://www.arrl.org/news/stories/2009/11/23/11213/?nc=1>.

==> AMATEUR RADIO AND TECHNOLOGY : ARRL, MCSNYDER SOFTWARE TEAM UP TO PROVIDE ITUNES APPS

ARRL is pleased to announce the availability of a new suite of Amateur Radio mobile software -- designed specifically for use with the Apple's iPhone and iPod Touch. The applications -- or "apps" -- are named ARRL Technician
<http://phobos.apple.com/WebObjects/MZStore.woa/wa/viewSoftware?id=304482342&mt=8>,
ARRL General
<http://phobos.apple.com/WebObjects/MZStore.woa/wa/viewSoftware?id=306443425&mt=8>
and ARRL Extra
<http://phobos.apple.com/WebObjects/MZStore.woa/wa/viewSoftware?id=306931606&mt=8>
and function as an electronic version of practice exam flash cards. Amateur Radio exam candidates can use the applications as a study companion to the ARRL license manuals <http://www.arrl.org/catalog/lm/> and classroom instruction. The apps include all the possible questions and answers that will be on each of the license tests. Users can flag questions that need more review,

segment questions for study by sub-element, or even study the questions in a random order. The ARRL apps are produced and sold by McSnyder Software who has partnered with ARRL to provide the iPhone app series. McSnyder has also produced study applications for other organizations -- including exam preparation software for standardized educational testing in Texas, as well as US Citizenship immigration testing. "We are excited to introduce Amateur Radio and ARRL into the rapidly expanding mobile and portable technology arena," said ARRL Marketing Manager Bob Inderbitzen, NQ1R. "Not only do these applications demonstrate ARRL's commitment to users of these popular devices, the software helps promote Amateur Radio outside of our traditional publication channels." The ARRL apps are available for $1.99 each on Apple's iTunes "App Store."

==> NOW YOU KNOW!: THE ARRL LAB

By ARRL News Editor S. Khrystyne Keane, K1SFA

The hams who work in the ARRL Lab -- Ed Hare, W1RFI; Mike Gruber, W1MG; Zack Lau, W1VT, and Bob Allison, WB1GCM -- receive more than 100 calls each week, requesting assistance. I know that whenever I venture into the Lab, rife with deep, dark secrets of the Amateur Radio world, one, if not all four of these guys are either on the phone or on the computer, answering questions posed to them by members.

One afternoon, I wandered down to the Lab, and asked Zack, Mike and Bob, "What is the most common question you guys receive from our members?" Zack quickly answered: "They want to know what kind of radio to buy." Now, no one here at League Headquarters can tell you which radio to buy, but Zack explained to me how he walks through a question set with the caller: What do you want to do with the radio? Do you want to get on HF, or are you interested in emergency communications or just ragchewing on your local repeater? How much room do you have to set up a station? How much money is in your budget for a new rig? Once the caller answers these questions, Zack guides them toward certain classes of radios, giving the caller a narrower field to look at. He also suggests that they take a look at the ARRL online publication, Choosing a Ham Radio <http://www.arrl.org/members-only/choosingaradio/>, as well as the Technical Information Service (TIS <http://www.arrl.org/tis/>) section on the ARRL Web site.

The next most popular questions (in order) are:

- What kind of antenna should I get?
- When are the sunspots coming back?
- Why can't I get on HF?

So, even if you're an experienced ham who has seen just about everything, or if you just got your Technician license in the mail (or, like me, you're somewhere in between), and you have a technical question that you just can't seem to figure out the answer to, try calling on the ARRL Lab -- they just might be able to help you figure

it out. Now you know!

==> SOLAR UPDATE

Tad "That its mild light creates to heal again
<http://englishhistory.net/keats/poetry/woman.htmlhttp:/englishhistory.net/keats/poetry/woman.html>"
Cook, K7RA, reports: This edition of the Solar Update will be brief. Since ARRL Headquarters is closed on Thanksgiving Day and the day after, I hope to have another bulletin out Monday morning to catch up with the sunspot, solar flux and geomagnetic data information. In last Friday's Solar Update <http://www.arrl.org/news/stories/2009/11/20/11208/?nc=1>, we reported sunspot numbers for November 12-18 as 11, 0, 0, 11, 12, 0 and 29. Since then, from November 19-24, they were 30, 31, 14, 13, 0 and 0 -- definitely nice conditions for the ARRL SSB Sweepstakes last weekend. This weekend, November 28-29, is the CQ Worldwide CW DX Contest. Although recent activity seems a good trend, we have no indications when sunspots will return. Look for more information in the Solar Update, available on the ARRL Web site on Monday, November 30. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Woman! When I Behold Thee Flippant, Vain... <http://englishhistory.net/keats/poetry/woman.html>

==> AMATEUR RADIO IN SPACE: NEW ANTENNAS INSTALLED ON ISS

<http://www.youtube.com/watch?v=TjWqN3fVQ0w> On Saturday, November 21, astronauts Mike Foreman and Randy Bresnik completed the second EVA (extra-vehicular activity) -- NASA's term for a spacewalk -- of their mission. While on the 6 hour, 8 minute EVA, Foreman installed the Amateur Radio on the International Space Station (ARISS <http://www.rac.ca/ariss/oindex.htm>) antennas for 2 meters and 70 cm on the Columbus module. NASA ISS Ham Radio Project Engineer Kenneth Ransom, N5VHO, told the ARRL that this new antenna -- along with another VHF antenna -- was developed by ARISS in cooperation with the European Space Agency (ESA <http://www.esa.int/esaCP/index.html>) to support an experiment involving the maritime Automatic Identification System (AIS <http://en.wikipedia.org/wiki/Automatic_Identification_System>). "Both antennas were installed on the Earth-facing starboard edge of the Columbus module," he explained. "The AIS antenna is forward and the ARISS antenna is aft. The ARISS team is planning to migrate some stowed Amateur Radio gear to take advantage of the new antenna." Frequencies available for transmission to and from Columbus will be 2 meters, 70 centimeters and 13 cm. To start, two radios for 2 meters and 70 cm that don't see much use on the ISS will be moved and installed in Columbus . The space shuttle Discovery is expected to return to Earth on Friday, November 27 and will bring Nicole Stott, KE5GJN, back from her stay on the ISS.

==> THIS WEEK ON THE RADIO

This week, look for an NCCC Sprint on November 27. The CQ Worldwide DX Contest (CW) is November 28-29. Next week, the ARRL 160 Meter Contest <http://www.arrl.org/contests/rules/2009/160-meters.html> is December 4-6 and the ARRL International EME Competition <http://www.arrl.org/contests/rules/2009/eme.html> is December 5-6. The TARA RTTY Melee and the Wake-Up! QRP Sprint are December 5. The TOPS Activity Contest is December 5-6, the ARS Spartan Sprint is December 8 and the NAQCC Straight Key/Bug Sprint is December 9. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, December 27, 2009, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, January 8, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1685 - November 27 2009

The following is a QST. Here is our producer Bill Pasternak, WA6ITF:

--

NEWSLINE SUPPORT FUND ADMINISTRATOR ANDY JAREMA, N6TCQ - SK

It is with deep personal sorrow that I report the sudden passing of our Newsline Support Fund Administrator and my personal friend of more than two decades, Andy Jarema, N6TCQ.

According to Andy's life companion and domestic partner Judy Hurst, late last week Andy was admitted to a local hospital for some tests. His condition deteriorated very quickly he was placed on life support. The diagnosis was multiple organ failure. Andy passed away just before noon on Tuesday, November 24th.

In a conversation with Judy just prior to writing this report I was told that no services are planned at this time. Instead a "Celebration of Andy's Life" will be held here in Los Angeles sometime in January, 2010. We will let you know an exact time, date and location as soon as plans have been completed.

Those of you wishing to send condolences to Judy and members of the Jarema family can do so by e-mail to newsline@arnewsline.org or by regular mail through me. My address is 28197 Robin Avenue, Saugus California, 91350. Either way, we will deliver anything we receive to Judy within the next few weeks.

In the meantime, there is an old saying that the show must go on. Knowing Andy as well as I did, he would want it to be that way. We will do just that and also dedicate this weeks newscast to Andy Jarema, N6TCQ, and his everlasting memory.

I'm Bill Pasternak, WA6ITF. Now, here's Frank Haas, KB4T, with this weeks report. Frank.

--

Now, Amateur Radio Newsline report number 1685 with a release date of Friday, November 27th, 2009 to follow in 5-4-3-2-1. Fear of the Swine Flu puts the North Pole Network on hold, U-K hams go on alert as flooding continues, Cuba to start supplying its ham community with electronic parts, and a U-K radio amateur starts spreading holiday cheer early. Find out the details on this good Samaritan ham radio operator on Amateur Radio Newsline(tm) report number 1685 coming your

way right now.

HELPING HAMS: H1N1 SWINE FLU SCARE HALTS THE NORTH POLE NETWORK

An annual holiday tradition in Orange County, California will be interrupted this year by a bug, and it's not the computer kind. Newsline's Joe Moell, K0OV has the story.

--

For 32 years, the voice of Santa Claus has echoed in the halls and patient rooms of Childrens Hospital in Orange County, California just before Christmas Eve. St. Nick wants to make sure that the kids have a chance to put in their holiday requests, and he has used a group of ham operators to make it happen. With their portable gear, members of the Hospital Disaster Support Communications System have gone from room to room and given each child a personal one-on-one chat with the fellow in the big red suit, who is up in his office at the North Pole getting ready for his big trip. They call it the North Pole Network.

--

Previous contact audio

--

But this year, because of the H1N1 virus, kids in hospitals will probably just have to send Santa an e-mail. North Pole Network is cancelled, says its founder, April Moell WA6OPS:

--

"For infection control, hospitals throughout Orange County have instituted new visitor policies limiting who can go into patient rooms. Most of them limit the number of people in a patient room to two, and those people typically need to be immediate family members or guardians. No outside visitors are now being allowed into the patient rooms at Childrens Hospital, and the group playrooms are being closed as well."

North Pole Network won't be active this year, but April and her crew are already planning to go to Childrens Hospital in 2010. You can read all about the North Pole Network and see photos going all the way back to 1976 on the Web at hdscs.org. That's hdscs.org, which is short for the Hospital Disaster Support Communications System. It's an ARES group that provides emergency communications for 35 hospitals in the county.

>From southern California, this is Joe Moell, K0OV, for Amateur Radio Newsline.

--

If you know of other Operation Santa Claus or North Pole Network functions that have been cancelled due to fear of spreading of that dreaded H1N1 Swine Flu, please let us know. We in turn will pass that information along in our newscast. (K0OV, NPN)

**

CHANGING TIMES: CUBA TO PROVIDE PARTS TO HAMS AND WILL MANUFACTURE 160 METER RADIO

According the Cuban news service CAN, that nations Ministry of Informatics and Communications will soon start providing ham radio operators with the components and parts for their equipment. This, from stock that had been left idle for some time.

Pedro Rodriguez, president of the Cuban Amateur Radio Federation told the press that the first 600 units are ready for delivery. He says that by using them his nations ham radio community will be able to assemble new stations or update those they already have.

But that's not all. During the recently concluded 8th Cuban Ham Radio Federation Congress, a prototype of a domestically designed transceiver was shown. With the brand name "Caiguaran," the gear was designed by several specialists and will be manufactured at one of the Ministry of Informatics factories.

Josï¿½ Tanquero is one of the hams that worked on the creation of the radio. He told the news service that it Runs 20 watts out on 160 meters which it's the legal for Cuban Third Category ham radio license holders. By adding modules both 80 and 40 meters can be covered as well.

The Cuban Amateur Radio Federation has over 5500 members many of whom are involved in both severe weather watch and emergency communications operations. (CAN)

**

RESTRUCTURING: BELGIUM GIVES HAMS A 4 METER SLIVER ALLOCATION

Radio Amateurs in Belgium now have limited access to a small allocation at 4 meters. Holders of Class A holders have access to 69.950 MHz, plus or minus 5 kHz with 10 Watts Effective Radiated Power. This, on a non-interference basis with other users of this spectrum.

Hams in Belgium that wish to use this frequency must first inform their telecommunications regulator the Belgian Institute for Postal services and Telecommunications of their plans. Although this frequency is outside the 70.0 to 70.5 MHz allocation used elsewhere in Europe it is none-the-less a very welcome first step by radio amateurs in that nation. (Southgate)

**

RESCUE RADIO: UK RAYNET ACTIVATES FOR CUMBRIA FLOODING

Flooding in parts of the United Kingdom have put one ham radio response teams on alert. In North Pennines, that area's RAYNET group was put on standby by the Cumbria Emergency Planning Office on Friday morning, 20th November. Neighboring groups from RAYNET Yorkshire Zone 2 the North-West Zone 10 were also placed an call-up alert. While they were permitted to stand down on Friday night, after a review of the situation on Saturday, and with weather conditions set to deteriorate once again overnight Saturday into Sunday, the groups were again placed into stand-by on Saturday afternoon. More on this UK rescue radio activation as soon as information is released. (Southgate)

**

RADIO LAW: FCC CHAIRMAN SPEAKS ABOUT FUTURE SPECTRIUM SHORTAGE

FCC Chairman Julius Genachowski still maintains that there is a looming spectrum crisis, but he now appears to be trying to calm the waters a bit. This, after several weeks of increasing alarm from broadcasters over FCC talks about reclaming some of their spectrum for wireless broadband services. Amateur Radio Newsline's Norm Seeley, KI7UP, has more;

--

In an interview Friday, November 20th for C-SPAN's Communicators series, FCC Chairman Julius Genachowski expressed his view there are many ideas being offered as to what the commission could do to address the need for more spectrum. He stated that his agency has not decided anything about which ideas were the best. Genachowski also repeated a point he made earlier in the week at a press conference, which is that this is a long-term planning issue for the nation to deal with..

Genachowski admitted that his agency does not operate on impulse noting that it has historically taken the FCC between 6 and 13 years to reclaim spectrum. He said the FCC would be looking at government and commercial spectrum, but that there were no easy pickings on the spectrum chart, and hard choices will have to be made.

And he did have a rather dyer warning. He stated -- and we quote:

"We know the problem is coming. It's not coming next week; it's not coming next month; it's not coming next year, but it is coming."

And added Chairman Genachowski, the FCC has to start coming up with the policies to address it now.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

While ham radio was never mentioned by the FCC chairman, the big question for the service is how much of our spectrum, especially in the microwave region might come under consideration for possible reallocation in the years to come. (B&C)

**

TELECOMMUNICATIONS LAW: FCC SAYS YES TO NET NEUTRALITY

The FCC has said yes to the concept of Internet Neutrality. This as the regulatory agency take an important step toward prohibiting broadband providers from favoring or discriminating against certain kinds of Internet traffic.

Despite the concerns of many telecommunications companies who believe that they have the right to regulate connection speed and capacity. The broadband providers insist they need flexibility, free from government intervention, to keep their networks running smoothly

But telecommunications regulators disagree. Now the Federal Communications Commission has voted to begin writing so-called "network neutrality" regulations with a vote on whether to adopt them expected to come by next summer.

Proponents say the rules would prevent phone and cable companies from abusing their control over the market for broadband access. FCC Chairman Julius Genachowski said regulations are needed to ensure that broadband subscribers can access all legal Web sites and services, including Internet calling applications and video sites that compete with the broadband companies' core businesses. (W8HDU)

**

RADIO LAW: FCC RELEASES NOI ON CHILDRENS USE OF ELECTRONIC MEDIA

The Federal Communications Commission has issued a Notice of Inquiry seeking comment on issues related to children's use of electronic media. In its press release, the regulatory agency notes that the evolving electronic media landscape presents parents with both tremendous opportunities and critical challenges.

On the one hand, electronic media technologies present many benefits for children, such as offering an almost unlimited potential for ways to educate children and provide them with the technological literacy needed to compete in a global economy. On the other, the technological developments that produce these benefits also present risks for children.

The FCC says that its goal with the Notice of Inquiry is to gather data and recommendations from experts, industry, and parents that will enable it to identify actions that all stakeholders can take to enable parents and children to navigate this promising electronic media landscape safely and successfully. As such, it seeks information on the extent to which children are using electronic media today, including television, cell phones and other mobile devices, DVD players and VCRs, video games iPods and other MP3 players, and the Internet. The Notice of Inquiry also asks about the benefits and risks these technologies bring for children and the ways in which parents, teachers, and children can help reap the benefits of electronic media while minimizing the risks.

The FCC's Notice of Inquiry is titled Empowering Parents and Protecting Children in an Evolving Media Landscape. Comments are due January 25, 2010 and reply comments are due February 22, 2010. A link to it can be found at http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-09-94A1.doc. (FCC)

ENFORCEMENT: FCC BACKS AWAY FROM KWVE FINE AFTER INDUSTRY PROTEST

The Federal Communications Commission has reversed itself in a case that raised broadcaster hackles, and rescinded a $5,000 levied on KWVE FM of San Clemente, California. Instead, the commission has now admonished the Calvary Chapel owned station for transmitting an unauthorized Required Monthly Test of the Emergency Alert System.

As previously reported, the Enforcement Bureau had been asked to reconsidered its earlier fine issued in September against the station and to set it aside because of the unique circumstances at hand. This included the voluntary and critical nature of the service provided by local primary stations in enabling statewide EAS activity.

Fifty state broadcast associations had protested the fine and asked the agency to reconsider or cancel the penalty. They feared that such a punitive measure for an accidental wrong transmission might deter other stations in the EAS chain from volunteering as Local Primaries because of fear of penalties for errors made during good faith operation. (CGC, RW)

RADIO LAW: CALIFORNIA BANS HIGH ENERGY USE TV RECEIVERS

TV sets that use excessive levels of mains power will be banned from store shelves in California. This, after state regulators voted on Wednesday, November 18th to adopt a mandate to reduce electricity demand.

On a unanimous vote, the California Energy Commission required all new televisions up to 58 inches to be more energy efficient, beginning in

2011. The requirement will be tougher in 2013, with only a quarter of all TVs currently on the market meeting that standard. TV sets larger than 58 inches, which account for no more than 3 percent of the market, would not be covered by the rule. This is viewed as a concession to independent retailers that sell high-end home-theater TV systems. However, the commission is expected to regulate them in the future.

The commission estimates that TV receivers account for about 10 percent of a home's electricity use. The concern is that the energy draw will rise by as much as 8 percent a year as consumers buy larger televisions, add more to their homes and watch them longer. Commissioners say energy efficiency standards are the cheapest and easiest way to save electricity. More than 1,050 models sold today comply with the 2011 California standards, and more than 300 comply with the 2013 standard, according to the Energy Commission. (Published reports)

NAMES IN THE NEWS: W9XA AND N2ZZ ELECTED AS NEW ARRL VICE DIRECTORS

A upset in the ARRL Central Division Vice Director's race where VUAC Chairman Kermit Carlson, W9XA, has routed longtime incumbent Vice Director Howard Huntington K9KM in his bid to retain he position he has held since 1983. When the votes were tallied Carlson had received 1808 while Huntington garnered only 1466.

Kermit Carlson is an engineering physicist with Fermi National Accelerator Lab. He was appointed to the League's VHF/UHF Advisory Committee in 2005 and served as Chairman since this past January.

Meantime in the Roanoke Division, Vice Director Patricia Hensley, N4ROS, decided not to seek another term. That left the field wide open with South Carolina Section Manager Jim Boehner, N2ZZ, and former West Virginia Section Manager Hal Turley, W8HC, both nominated to succeed her. When the votes were tallied, Boehner won the election with 1692 votes while Turley received 1496.

Boehner is a physician specializing in women's healthcare. He has served four terms as the ARRL South Carolina Section Manager.

In addition to Carlson and Boehner, seven incumbent directors and vice directors were declared elected without opposition. All will begin three-year terms of office beginning at noon on January 1, 2010. (ARRL)

THE CHANGING OF THE GUARD: REPEATER PIONEER KARL PAGEL, N6BVU - S.K.

It is with much sadness that we report the passing of on our friend and former Newsline Survey-master Karl Pagel, N6BVU. Karl had been in declining health for some time and being treated in a nursing home in Orange County, California.

Among his many achievements was his co-authoring with Kevin Karamanos, WD6DIH, of the most accurate and inclusive repeater directory covering the great American South-West. Its been said that if a repeater actually existed that it could be found in Karl's database and in the directories that he and Kevin published for more than half a decade.

Karl was also heavily involved in repeater coordination issues. While he never owned or operated a repeater it was his work with all three of Southern California's regional frequency coordination bodies that helped many a new system come on the air. His work did not go unnoticed nationally and he was appointed as the Southwestern Division representative on the ARRL's VHF Repeater Advisory Committee where he also as chairman for one term. He was also presented with the ARRL Southwestern Division's Meritorious Service Award for his dedication to repeaters and frequency coordination.

In addition to all of this, when Amateur Radio Newsline gained its original corporate status in the mid-1980's and we needed to find out who was listening, it was Karl who offered his services to us. And for about two years he dutifully tallied all of responses to the survey questions we put out.

Karl Pagel was gifted had the knowledge needed to do complex database work and gave of himself unselfishly for the betterment of the hobby. Dick McKay, K6VGP, is one of the founding fathers of the original Southern California repeater Association. In an e-mail to Newsline, McKay said that N6BVU was certainly a good man and a true friend of ham radio.

Karl Pagel, N6BVU, was age 66 when he passed away on November 10th. He is survived by his mother Mary, KA6IGG, his brother Kent and a Southern California ham radio community that truly admired his dedication and work on their behalf. (ARNewsline(tm), K0OV, K6VGP)

EMERGING TECHNOLOGY: THE NANOTOM

Turning to the Newsline science page, there's now a new, non destructive way for scientists to take a look at objects that are a part of mankind's present and its history. Fred Vobbe, W8HDU, tells us about the newly developed Nanotom.

--

Researchers at the University off Nottingham have a new weapon in their arsenal of tools to push back the boundaries of science, engineering and archeology.

Call it Nanotom. It is described as the most advanced 3-D x-ray microcomputed tomography scanner in the world. The Nanotom is expected to help researchers in a wide variety of scientific disciplines to literally see through solids.

The machine will make previously difficult investigation much easier as it allows researchers to prove inside objects without having to break them apart.

I'm Fred Vobbe, W8HDU.

--

The Nanotom is being viewed as an amazing step forward in the science of looking at the past and present as a doorway to the future of scientific advancement. (Science OnLine)

**

HAM RADIO IN SPACE: ISS GETS NEW DUAL BAND ANTENNA

Turning to space related ham radio news, word that a new dual band amateur radio antenna system has been installed on the International Space Station's Columbus Module. The antenna project was funded entirely by AMSAT-North America and the volunteers who built the antennas for both an European Space Agency experiment and for ARISS use.

The new antenna is described as very similar to the antennas already on the Russian service module. Once all antennas are in place the ARISS team will be working to bring amateur radio to the Columbus module.

Lou McFadin, W5DID is the ARISS US Hardware Manager. He says that this is an example of what can be achieved by ham radio volunteers hams working closely with a space agency. (ARISS)

**

HAM RADIO IN SPACE: AO-7 TURNS AGE 35

A happy birthday to the Amsat Oscar 7 ham radio satellite that turned 35 on November 15th. A O 7 was carried into orbit on November 15, 1974 by a Delta 2310 launcher from Vandenberg Air Force Base in California. It used a circularly polarized canted turnstile VHF and UHF antenna system and High Frequency dipole for 10 meters.

The second in the phase 2 satellite generation, A O 7 weighed 28.6 kilograms. And what is truly amazing is that after all these years it is still possible to hold an occasional QSO over that bird.

The middle of the Mode B downlink passband is 145.950 MHz, and you will find most of the activity occurring between 145.940 MHz and 145.960

MHz. Generally, you'll hear CW operators below 145.950 and SSB operators above.

A Oh 7 was a part of a multiple payload mission. That same launcher also carried the NOAA 4 weather satellite and the Spanish INTASAT into space. (ANS)

**

ON THE AIR: IRELANDS GALWAY VHF GROUP FRPM CLIFDEN

On the air, word that the final operation from Ireland's Galway VHF Group will take place from the Clifden Lifeboat Station over the weekend of the 28th and 29th of November. This all band operation will have two stations in operation at all times using the special commemorative call EI 185 RNLI. Varying types of antenna construction will be used including a Kite antenna for the Low Frequency bands. Primary modes will be SSB and digital with some operation on SSTV also possible. There will be a special QSL card for all contacts made and SWL reports will also be welcomed. A QSL route will be released shortly. (IRTS)

**

DX

In DX, word that F6AUS will operate portable FG from Les Saintes Guadaloupe until March 2010. Look for him to possibly be on 160 and 80 meters. QSL via his home callsign.

K3CT and K3TEJ will be active slash KP2 from the U S Virgin Islands through December 1st. Their activity usually has an emphasis on the 160, 30, 17 and 12 meter bands. QSL to their individual home callsigns.

And a reminder that DO7AG, is expected to be in the South Pacific with his family between November and January. He plans to be active as 5W1QX from Western Samoa and A31CE from Tonga but only on 40 and 20 meters. Complete dates of his operations have not been announced yet.

The Algarve STAR DX Team has announced that the 4W6AL QSL cards have arrived from the printer and are being readied for mailout. All 4W6AL information can be found in cyberspace at algarvedx.com

AA7JV and HA7RY will be active from the Chesterfield Islands as TX3A until December 6th. Their operation has be on all of the HF bands but with an emphasis on the lower bands. Modes used have been on CW, SSB and RTTY. QSL via HA7RY.

Lastly, IZ0EGM, will be active as from San Marino as T70A during ARRL 10 Meter Contest between December 11th and 13th, using CW and SSB. His QSL information is on QRZ.com.

Above from various DX news sources

THAT FINAL ITEM: A GIFT FROM THE HEART

And finally, in keeping with the spirit of the upcoming holiday season we have the story of benevolence from one ham to several others. It took place in the United Kingdom where Jeramy Boot, G4NJH, has the details:

--

The team of five GB2RS newsreaders in North West England have been given transceivers for 2, 4 and 6meters for use in transmitting the news. The radios have come from Graham, G1PYA, a regular listener to GB2RS.

The five newsreaders, G4GSY, G0MRL, G0NAJ, M1NTO and M0HDE would like to record their very great thanks to Graham for this valuable gift, which is so clearly in the traditional spirit of amateur radio.

Im Jerany Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

And we cannot think of a better story with which to start out the 2009 holiday season. (GB2RS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us for the moment at Amateur Radio Newsline(tm), 28197 Robin Avenue, Saugus California 91350.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Frank Haas, KB4T, saying 73, happy Thanksgiving, and we thank you for listening.

This was forwarded to me by Dave, W0NRW:

Greetings:
NWS (National Weather Service) here in Valley wishes to extend an
invitation to come out and operate the W0NWS station as part of the
Skywarn Appreciation Day.

The times are 6PM Friday Dec. 4 to Saturday 6PM Dec. 5. The address is
6707 N. 288th Street Valley Ne.

If you get lost 402-359-5166 or someone will be listening on
146.94MHz.

I believe this is year 11 for the event.
Geri Norris N5RIG

==> + ADVOCACY: ARRL CEO, GENERAL COUNSEL PRESENT ARRL'S STANCE ON BPL
TO FCC COMMISSIONERS

ARRL Chief Executive Officer David Sumner, K1ZZ, and General Counsel
Chris Imlay, W3KD, made the rounds of the five FCC Commissioners'
offices during November to acquaint them with the ARRL's position on
the regulation of interference from Broadband over Power Lines (BPL
<http://www.arrl.org/tis/info/HTML/plc/>) systems. The meetings were
conducted in accordance with the rules governing ex parte
communications in pending rulemaking proceedings, in this case the
Further Notice of Proposed Rule Making (FNPRM) in ET Docket No. 04-37.

<http://www.arrl.org/news/stories/2009/12/03/11230/?nc=1>.

==> + OPERATING: FROM ONE END OF HF TO THE OTHER: THE ARRL 160 METER
AND 10 METER CONTESTS
```

Both MF and HF offer a lot of breathing room for all interests in Amateur Radio. As the 2009-2010 Contest Season continues, two single-band events in December will highlight the magic of the opposite ends of the shortwave spectrum: the ARRL 160 Meter Contest (2200 UTC Friday, December 4 through 1559 UTC Sunday, December 6) and the ARRL 10 Meter Contest (0000 UTC Saturday, December 12 through 2359 UTC Sunday, December 13). Read more here <http://www.arrl.org/news/stories/2009/12/01/11222/?nc=1>.

==> + OPERATING: ARRL'S LOGBOOK OF THE WORLD REACHES NEW MILESTONES

To date, more than 30,000 hams have entered more than 250 million QSOs into Logbook of The World (LoTW), the ARRL's online logging program. At this time last year, 22,959 hams had made just more than 192 million QSOs, marking an upswing in both users and QSOs of about 24 percent. The LoTW system is a repository of log records submitted by amateurs from around the world. When both participants in a QSO submit matching QSO records to LoTW, the result is a QSL that can be used for ARRL award credit. While US amateurs do not need to be members of the ARRL to use LoTW, only members can use LoTW to apply for ARRL awards, such as DXCC and Worked All States (WAS). Some awards, like the Triple Play Award, only use LoTW credits instead of traditional QSL cards (foreign amateurs do not need to be ARRL members to apply for ARRL awards). Read more here <http://www.arrl.org/news/stories/2009/12/03/11229/?nc=1>.

==> + THE DOCTOR IS IN: THE FUN -- AND CHALLENGES -- OF TOPBAND

By ARRL News Editor S. Khrystyne Keane, K1SFA

I have been fascinated with the 160 meter band even before I upgraded to General back in 2007 -- it amazes me that amateurs can use radio waves that stretch out that long. I've also been working on getting my CW skills up to speed -- while I can send fairly quickly and cleanly, I know that my receiving skills need some work. The idea of combining my favorite band with a new (for me) mode of operating -- in a contest, no less -- is very titillating, to say the least. Can you tell I'm itching for the ARRL 160 Meter Contest <http://www.arrl.org/contests/rules/2009/160-meters.html> to get here now?

So the other day, the Doctor and I got to talking (his clinic is right next to my office, so we have quite a few conversations about Amateur Radio during his office hours). I asked him if he knew why the 160 meter band has what some might consider "special properties" during the North American winter. And when I get on the air this weekend for the contest, is there anything I should watch out for?

The Doctor -- who was in between patients at the time -- told me that atmospheric noise tends to increase with decreasing frequency -- since there is generally much less noise in winter, 160 meters is much more usable in the colder months. Our current position in the sunspot cycle makes the maximum usable frequency quite low on most days. The combination of these factors makes 160 a great spot -- just in time for

the upcoming contest.

The key challenge, he told me -- and perhaps the most important factor for success on topband -- is antenna design and deployment. Since horizontal antennas need to be hundreds of feet high to provide useful low angle performance, the successful 160 meter DX operator will use vertical antennas. While arrays of full size 1/4 wave (126 feet) verticals are feasible for some, most use shortened antennas, either as a single element or in multi-element arrays with reasonable success. Recent QST articles have provided a variety of designs of such elements, some almost invisible. Improved reception can be obtained using special receive antennas that reduce noise pickup faster than reducing signal reception. The resulting weak signal generally has a higher signal-to-noise ratio than that from the transmitting antenna.

Wow! If you haven't tried 160, a contest like the ARRL 160 Meter Contest provides an abundance of signals to let you know what your station can do. Do you have a question or a problem for the Doctor? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST <http://www.arrl.org/qst>, the official journal of the ARRL.

==> COMING UP IN QST : LOOK FOR THE JANUARY ISSUE OF QST TO ARRIVE SOON

<http://www.youtube.com/watch?v=KZGs12TPGws> The January issue of QST <http://www.arrl.org/qst> -- our first-ever DIY edition -- is jam-packed with all sorts of news and information that today's Amateur Radio operator needs. With a focus on "do it yourself" projects that you can build in as little as a couple of days (or even an afternoon!), the January issue also includes product reviews, experiments, public service and on-the-air activities -- something for just about everyone. Click here <http://www.arrl.org/news/stories/2009/12/02/11228/?nc=1> to discover what's in store for you in the January issue of QST, the official journal of the ARRL.

==> ARRL IN ACTION: WHAT HAVE WE BEEN UP TO LATELY?

This feature -- including convenient Web links to useful information -- is a concise monthly update of some of the things ARRL is doing on behalf of its members, such as holding elections for the two positions on the ARRL Board of Directors and 10 Section Managers, providing support for affected Sections during Tropical Storm Ida, conducting a frequency measuring test, sending out certificates and plaques for various ARRL contests and more. This installment covers the month of November. Read more here <http://www.arrl.org/news/features/2009/12/01/11225/?nc=1>.

==> + NOW YOU KNOW!: A BRIEF HISTORY OF MODERN DAY 160 METERS

By ARRL News Editor S. Khrystyne Keane, K1SFA

This year marks the 40th anniversary of the ARRL 160 Meter Contest. In 1970, the ARRL Board of Directors authorized this new event at their meeting in May. According to the announcement that appeared in the October 1970 edition of QST <http://p1k.arrl.org/cgi-bin/topdf.cgi?id=63900&pub=qst>, the ARRL Contest Advisory Committee (CAC <http://www.arrl.org/contests/cac.html>) and "numerous 'top banders'" provided the guidance for the contest; based on their recommendations, they created its initial format.

<http://www.arrl.org/news/files/LimitationsFor160_1979.pdf> Those licensed prior to May 1981 can surely remember the limitations on 160 meters due to the LORAN-A (Long Range Aid to Navigation) stations. These stations -- developed during World War II -- used signals that were transmitted on frequencies in and around our present-day 160 meter band. The LORAN-A stations were responsible for reduced Amateur Radio operations -- including frequency and power limitations -- on 160 meters in the United States.

If you look at license manuals from this time, you will find a chart (Part 97.61, Authorized Frequencies and Emissions) that dictated how much power amateurs could use on topband. This was broken up into band segments of 25 kHz, going from 1800 kHz up to 2000 kHz. In band segments of 25 kHz, it lists each US state and dictated how much power could be used during the day and during the night. For example, amateurs in Connecticut on 1844 kHz could use 100 W during the day, but had to go down to 25 W at night; Connecticut hams were not even allowed on during the day or night between 1850-1975 kHz! Conversely, Oklahoma hams had daytime topband privileges of 1000 W and could use 200 W at night on 1800-1825 kHz.

On May 21, 1981, US amateurs got some good news when the FCC lifted most of the restrictions on 1800-1900 kHz: For the first time, kilowatt powers were authorized for both daytime and nighttime use as the LORAN-A stations were being phased out. In 1979, the Coast Guard began replacing the LORAN-A stations with LORAN-C stations. These newer stations operate on 100 kHz, enabling the restrictions on 160 meters due to LORAN functions to be dropped.

Most amateur transceivers didn't even begin to include 160 meters until the influx of Japanese imports began in the 1970s. As a result of that -- as well as the elimination of the HF LORAN system -- 160 meters has grown in popularity over the past couple of decades. Now in its 40th year, the ARRL 160 Meter Contest is still growing. From the first running in 1970 with 270 logs submitted, to 2008 with 1280 logs submitted, more amateurs are becoming fascinated with all that topband has to offer. If you've never been on 160 before, try making a few contacts. If you're a topband veteran, this is the chance to strut your stuff. For more information on 160 meters, check out DXing on the Edge: The Thrill of 160 Meters <6354> by Jeff Briggs K1ZM. Now you know!

==> + ARRL RECOGNIZES: A. ROBERT PATZLAFF, W9JQT , WINS NOVEMBER QST COVER PLAQUE AWARD

The winner of the QST Cover Plaque Award for October is A. Robert Patzlaff, W9JQT , for his article "The Rockless, a VFO Controlled Low Power Transceiver." Congratulations Robert! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the December issue by Thursday, December 31.

==> + SILENT KEY: JERRY SEVICK, W2FMI (SK)

Jerry Sevick, W2FMI -- renowned for his research and publications related to short vertical antennas and transmission line transformers -- passed away on Sunday, November 29. He was 90. In 2004, Sevick, an ARRL Technical Advisor, received the ARRL Hudson Division Technical Achievement Award; in 2005, he received the Dayton Hamvention Technical Excellence Award. The Hamvention Awards Committee noted that Sevick's April 1978 QST article on short ground-radial systems "now serves as the world's standard for earth conductivity measurements." Read more here <http://www.arrl.org/news/stories/2009/12/01/11226/?nc=1>.

==> SOLAR UPDATE

Tad "The snake all winter-thin cast on sunny bank its skin <http://englishhistory.net/keats/poetry/fancy.html>" Cook, K7RA, reports: The recent sunspot activity, which ended on November 22, pushed up the moving average we've been tracking for several years. Because we have all the data for November, we now know the 3-month average of daily sunspot numbers centered on October. For 2009, the 3 month moving average (centered on January through October) was 2.19, 2.02, 1.49, 2.01, 4.23, 5.2, 4.0, 4.0, 4.64 and 7.1. The latest value is the highest since April 2008, when it was 8.89. The monthly averages of daily sunspot numbers are also rising, although not as smoothly as the three month average. The monthly averages for March through November 2009 are 0.77, 1.27, 3.97, 6.6, 5.07, 0.39, 6.6, 7.0 and 7.7. The November average is the highest since March 2008 when it was 15.87. Geophysical Institute Prague predicts quiet to unsettled conditions December 4, unsettled December 5 and quiet December 6-10. Current projections show a steady quiet planetary A index of 5 for December 3 and 4, then 8 for December 5-6 and back to 5 through the end of the month. Solar flux predictions show December 3-7 at 71, 72 on December 8-10 then 75 on December 11-23. The predicted solar flux value of 75 seems to correspond to the return of an active region that we can see emerging from the dark spot on STEREO. An area that looked promising a few days ago has moved over the horizon and not produced any sunspots. Look for more information in the Solar Update, available on the ARRL Web site on Friday, December 4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Fancy <http://englishhistory.net/keats/poetry/fancy.html>.

==> ARRL PUBLICATIONS: TWO NEW PRODUCTS -- JUST IN TIME FOR THE HOLIDAYS!

If you're still looking for that "just right" stocking stuffer for the ham in your life (or maybe you want to treat yourself), look no further than the ARRL Online Store. This holiday season, we are proud to present two new items: the ARRL holiday ornament and the Pocket Ref by Thomas Glover. Check them out here <http://www.arrl.org/news/stories/2009/11/30/11223/?nc=1>.

==> THIS WEEK ON THE RADIO

This week, the ARRL 160 Meter Contest <http://www.arrl.org/contests/rules/2009/160-meters.html> is December 4-6 and the ARRL International EME Competition <http://www.arrl.org/contests/rules/2009/eme.html> is December 5-6. The TARA RTTY Melee and the Wake-Up! QRP Sprint are December 5. The TOPS Activity Contest is December 5-6, the ARS Spartan Sprint is December 8 and the NAQCC Straight Key/Bug Sprint is December 9. Next week, the ARRL 10 Meter Contest <http://www.arrl.org/contests/rules/2009/10-meters.html> is December 12-13. The Feld Hell Sprint is December 12. The MDXA PSK DeathMatch and the International Naval Contest are December 12-13. The NA High Speed Meteor Scatter Winter Rally is December 12-16. The SKCC Weekend Sprint and the CQC Great Colorado Snowshoe Run are December 13. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, December 27, 2009, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, January 8, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1686 - December 4 2009

Amateur Radio Newsline report number 1686 with a release date of
Friday, December 4th 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC says its finally time to codify the
Vanity Callsign system, more waivers granted by the FCC for employers
to use ham employees in rescue radio drills, U-K hams stand ready if a
bridge falls and Irelands national ham radio society gets an unexpected
gift. Find out the details on Amateur Radio Newsline(tm) report number
1686 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: FCC LOOKS TO CODIFY VANITY CALLSIGN SYSTEM

The FCC has issued a Notice of Proposed Rule Making titled WT Docket
09-209 that seeks to amend the Commission's Amateur Radio Service
rules. This, to clarify certain regulations and codify existing
procedures governing the vanity call sign system. It also would
revise certain rules applicable to club stations. Bruce Tennant,
K6PZW, reports:

--

According to the FCC's November 25th release, almost 80,000 ham radio
licensees have replaced their sequentially issued call signs with a vanity
call sign since the program began in 1996. The FCC says the program began
it established what tit called "the broad outlines" of the vanity call sign
system to function under. As part of it the FCC concluded that call signs
generally should not be available for reassignment for two years following
the death of a licensee, or expiration or termination of the license for
that call sign. In doing so, the Commission made exceptions for former
holders of the call sign, close relatives of a deceased former holder and
club stations of which a deceased former holder was a member.

The Commission did not, however, specify all of the procedures governing
the vanity call sign system. Rather it indicated that the procedures would
be set out in the Public Notices announcing 'starting gates' for the groups
receiving initial priority and that the procedures would be adjusted from
gate to gate as experience dictated. The procedures announced in that 1996
Public Notices announcing those gates are still in effect, but they are not
set forth in the Commission's Rules. WT Docket 09-209 states that the FCC
now believes that certain provisions should be codified into its rules, and

others added, so that the vanity call sign system will be fair, equitable and transparent to all amateur service licensees.

Also when it released the 1996 vanity callsign Report and Order it used the opportunity to resume issuing new club station licenses. It now says that it believes that certain rule changes to the club station licensing rules may be appropriate.

For the Amateur Radio Newsline, I'm Bruce Tenant, K6PZW, in Los Angeles.

--

The comment period for WT Docket No. 09-209 will extend for 60 days after it is published in the Federal Register. Historically, items appear in the Federal Register approximately 7 to 10 days after they appear on the FCC Web site. Reply comments can be made up to 75 days after publication in the Federal Register.
You can fine out more at
www.arrl.org/news/stories/2009/11/25/11220/?nc=1. (ARRL)

**

RADIO EDUCATION: UNDERASTANDING THE VANITY CALLSIGN PROGRAM

And speaking about the Vanity Callsign System, have you ever wondered how it really works? Well the December issue of CQ Magazine truly does have all the answers. And it has them in a way that anyone can understand without having to have a copy of the Part 97 Amateur Service Rules at hand.

The article is titled The Perils and Pitfalls of Getting a Vanity Casllsign and its author is none other than, Fred Maia, W5YI, who was the founder of the nations second largest Volunteer Examiner Coordinator simply known as the W5YI VEC. And using a very simple question and answer format, Fred takes us on a trip from the dawning of the Vanity Callsign System to the present. Along the way he explains who is eligible for what type of vanity call, the reasons for this, the exceptions to the mandatory waiting time for a call to become available and much more.

If you have ever had any questions about the Vanity Callsign system and how to navigate it, this is your chance to get every detail in a clear and concise manner. Again the article is titled The Perils and Pitfalls of Getting a Vanity Casllsign by Fred Maia, W5YI. It begins on page 30 of the December 2009 issue of CQ Magazine that's on-sale right now. (CQ)

**

RESCUE RADIO: MORE PART 97:113(a) (3) WAIVERS GRANTED BY FCC

The FCC has granted several more requests by hospitals and government agencies to permit hams in their employ to take part in emergency communications preparedness drills. Covered under this latest round of waivers to Section 97.113(a)(3) of the Amateur Service Rules are the Murray County Medical Center in Slayton, Minnesota; the Center for Emergency Response to Terrorism of the Missouri Department of Health and Senior

Services in Jefferson City, Missouri; the Culver City Fire Department in Culver City, California; the Draper City Police Department of Draper, Utah and the Town of North Attleboro and its Board of Health of North Attleboro, Massachusetts.

While most of the requests were for single day events, some like the request from the Draper City Police Department and the Murray County Medical Center were for multiple drills spread across several months. Both were given permits use of on staff hams on December 2, 2009 plus January 6, February 3, March 3, April 7, May 5, and June 2 of 2010. The FCC also opened to door to granting further dates and additional hams by filing a separate waiver request.

The FCC issued its first waiver of 97.113(a)(3) back on October 27th to the Commonwealth of Kentucky for a full-scale exercise on October 28th. In granting all of these waivers the FCC stated that it was in the public's interest to do so. (FCC)

**

RADIO POLITICS: IARU SAYS TO GET READY FOR WRC-12

The next World Radiocommunications Conference takes place in January of 2012 and ham radio is making ready to face any challenges that it might bring to the service.

The International Amateur Radio Union's Secretary is Rod Stafford, W6ROD. He says that every IARU member society capable of doing so, should take the initiative to be in contact with their own telecommunications administration and let the it know what the Union's position is on those agenda items that influence the amateur radio service.

The most significant of these so far are the implementation of the radiolocation service in the range 30 to 300 MHz; the possible allocations in the range 3 to 50 MHz to the radiolocation service for oceanographic radar applications and the effect of emissions from short-range devices.

Also likely to be discussed is a ham radio allocation of about 15 kHz in parts of the band from 415 to 526.5 kHz. This, on a secondary basis and taking into account the need to protect existing services. (Southgate)

**

RESCUE RADIO: UK HAMS WILL REPLACE PHONES IF CALVA BRIDGE FALLS

Preparations have been made to use amateur radio instead of telephones for calls to the emergency services. This if the Calva bridge near the United Kingdom city Cumbria collapses due to flooding. The North Pennines RAYNET Group website says should the bridge fall that it will be called out to cover 999 calls and this will be 24 hours a day operation until other lines of communications can be re-established.

According to a Cumbria County Council news release, if a collapse of the bridge takes place telephone communications would be lost to around 3,000

homes north of the river. To maintain communications to that area it says that ham radio operators will be available at certain locations to pass on calls to the various emergency services. Telephone service to the community affected is carried by cables that span the bridge. Ehile British Telecom believes alternate lines could handle any calls, the RAYNET hams are prepared for a full scale callout if they are needed.

In other U-K flood related news, the North Pennines RAYNET group, supported by RAYNET members from Merseyside, Lancashire and Dumfries & Galloway manned a single radio link from Friday morning, November 27th. It was set up between North Workington and Carlisle to provide resilience for 999 calls following the localized failure of British Telecom's cables due the Northside bridge collapse. The requirement for this finished at 15.30 U-T-C the following day when all lines were restored. (Southgate)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N5NBI repeater serving New Orleans Louisiana.

(5 sec pause here)

**

RADIO LAW: ARRL VS MUSTANG OKLAHOMA ON TRANSMISSION BAN

Mustang, Oklahoma officials have yet to respond to a letter from ARRL Attorney Christopher D. Imlay, W3KD. This, regarding the city's attempt to keep a ham radio operators from transmitting. Bill Pasternak, WA6ITF, is in the newsroom with the details:

--

The Mustang News on-line newspaper says that back on November 6th, ARRL General Counsel Christopher D. Imlay sent a seven page letter to Mustang city officials In it he urged the city to rescind a certified letter officials sent to Mustang Heights resident John Ripley, KD5WFT on October 30th. That letter told Ripley to stop transmitting from his radio tower.

The city claimed that has jurisdiction over transmissions made by hams based on an ordinance that it enacted in 2000. That law states that any tower, or antenna, not more than 70 feet in height can be owned and operated by a federally licensed amateur radio station operator if it is used exclusively as a receive only facility.

But that law appears to be in direct conflict with the Federal Communications Commission's long standing concept of Federal preemption. That's the mandate that it and only it has jurisdiction over radio transmission.

In his letter Imlay noted that all radio and telecommunications are regulated by the Communications Act of 1934 and cited a half dozen federal cases supporting this position. One was a 1936 lawsuit titled Fisher's Blend Station vs. Tax Commission of the State of Washington. In that action the Supreme Court held that by its very nature broadcasting transcends state lines and is national in its scope and importance. This characteristics said the court brings it within the purpose and protection, and subject to the control, of the commerce clause.

In his letter Imlay wrote that if no action was taken by Mustang that the ARRL would seek a "declaratory ruling" from the Federal Communications Commission. According to the news article Imlay said that if he does not receive a response from Mustang city officials that plans to send another before filing with the FCC.

City Manager Mike Rutledge told the on-line newspaper that he had received Imlay's letter and had referred it to Mustang's attorney. He said any response to the letter is up to the city's legal counsel.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

If the ARRL decides to bring the matter before the FCC and if the agency grants such a declaratory ruling, it would likely at minimum direct the city to rescind its letter banning Ripley from transmitting. It could also go as far as warning the city that it had best keep out of matters that are preempted by Federal government mandate. (MustingNews.info)

**

RADIO LAW: KEEN EYED HAM HELPS CRAFT ANTENNA ORDENANCE

New regulations for antennas and transmission towers in Dixon, California should not affect amateur radio operators there. This, thanks to a keen eyed local ham who took notice of a proposed ordinance under consideration by the Dixon City Council and made his voice heard.

In May, during a public hearing before the Planning Commission, Dixon resident Bill Paul, KD6JUI, voiced a concern about how a proposed ordinance to set standards regarding antennas and transmission towers might affect ham radio operators in the area. He was also concerned, according to a staff report, that a zoning ordinance that limits the area an antenna or tower can cover, might affect the type or height of antennas a ham radio operator could construct.

Commissioners recommended that the City Council adopt the proposed ordinance, subject to staff working with Paul to try and address the issues. During it's last meeting, the council tentatively approved the ordinance subject to staff removing any regulations that apply to amateur radio antennas. (Vacaville Reporter)

**

RADIO LAW: UK TOWNSHIP OK'S 11 METER HIGH HAM RADIO TOWER

Meantime, some good antenna related news for a ham in Stetton In the U.K.. That's where an amateur radio tower mast which is more than 11 meters high has been given the go ahead by town planners.

Members of Stretton Parish Council had objected to the proposed tower and antenna based on visual impact when the mast was raised. There were also four objections from the ham operators neighbors who claimed it would be out of keeping with the area and could interfere with TV reception in the area.

But the committee was given expert evidence that U.K. telecommunications regulator Ofcom is the agency with jurisdiction over the antenna and that therefore it should not be a consideration. The Radio Society of Great Britain told the planners that the installation of the hams tower and antenna could be of value to the area for use in emergency situations.

After hearing that when retracted that the tower will only be about 5 meters high and weighing all the other evidence before it, the borough council's development control committee backed the plans. An 11 meter high
tower is roughly 36 feet here in the USA. (Southgate)

**

RADIO BUSINESS: ICOM CONFIRMS IC-706 PRODUCTION HAS NOT CEASED

Contrary to Internet rumors production of the popular IC 706 Mark 2 G has not ceased. The erroneous report of the radio's demise came in a Wireless Institute of Australia news report that said that the 706 was no longer being made and that Navcom Electronics that there are only 14 units currently held in stock in Australia.

While that might be the case down-under, Amateur Radio Newsline has received word from Icom America that the decision to stop selling the IC - 706 was likely a one made by Icom Australia. On this side of the Pacific Icom America says that the IC - 706 MK 2 G will continue in the Icom America product line.

The original IC-706 was introduced over a dozen years ago and quickly developed what might best be described as a cult following. The radio was not all that much bigger than a dual-band FM transceiver of that era, but it packed an amazingly sensitive all band receiver and powerful transmitter ham band transmitter into a relatively tiny package measuring only 6.56" x 2.28" x 7.88".

Over the years the IC-706 has seen many upgrades. The latest version is the Mark II G which adds many new features and capabilities not found in the previous 706 and 706Mk II versions including the UT-106 DSP module as a standard feature. Many hams called it the perfect mobile and portable station and stayed with it even after rival manufacturers brought out their own tiny all band transceivers with similar or even more advanced features. Its also a radio with one of the highest resale values on the used equipment market.

Also included in the WIA story was a claim that Icom was instituting a five year warranty on all of its products. Well that's true only if you live in
Australia. According to Icom America, That is an Icom Australia only project. No other Icom distributor is offering a 5 year warranty. (ARNewsline(tm))

**

RADIO BUSINESS: VK FIRM GENESIS TO OFFER HAM RADIO SDR TRANSCEIVER KIT

Made in Australia may be the label on the next piece of ham gear you buy. This as a company down-under called Genesis Radio announces that it will be producing a new multi-band low power Software Defined Radio transceiver kit to be available world-wide.

The Genesis G59 transceiver will cover the amateur bands from 1.8 to 54 MHz and produce up to 10 watts output when coupled with the GPA10 amplifier. A version with extended band coverage, the G59D that covers the increasingly popular pan-European 70 MHz band should be available sometime next year as well.

More information on this new Australian ham radio transceiver kit available at www.genesisradio.com.au. (Press release)

**

NAMES IN THE NEWS: THREE INCUMBENT ARRL SM'S RE-ELECTED

Three incumbent ARRL Section Managers were re-elected in races that concluded on Tuesday, November 24th. In Alabama, Jay Isbell, KA4KUN out polled challenger Les Rayburn, N1LF by a vote of 513 votes to 167.

Meantime, up in the Alaska Section Manager election, Jim Larsen, AL7FS, of Anchorage, won his second two-year term of office when he received 176 votes. His challenger David Stevens, KL7EB, received only 65.

Lastly, Ron Cowan, KB0DTI, will continue as Kansas Section Manager after he received 382 votes while challenger Joseph Plankinton, WD0DMV, received only 175.

Eight other Section Managers ran unopposed and were declared re-elected. All begin their new terms of office on January 1, 2010. (ARRL)

**

NAMES IN THE NEWS: WA2HWV VIDEO TOUR OF THE VOA TRANSMITTER SITE A

Jim Hawkins, WA2WHV, says that he has uploaded a video of my 1998 tour of Voice of America Transmitter Plant 'A' to YouTube .

Jim says that the title is "Tour of Voice of America Transmitter Plant" and is hosted by Carl Lineberger, former senior technician. In it you will see a lot of the heavy iron that brings V-O-A programming to the world. This includes the giant 500,000 watt Marconi and Continental transmitters as well as some lower power units by Technical Materials Corporation and

General Electric. In the case of the GE transmitter lower power means 250,000 watt capability.

According to WA2WHV the show runs 40 minutes and is broken into 5 parts. You can search for it using the find feature on the YouTube website by inputting the search argument "Tour of Voice of America or Transmitter Plant" or simply "Voice of America Transmitter." Jim adds that he hopes you enjoy taking the video tour. (Southgate)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: DR. JERRY SEVICK, W2FMI - S.K.

One of ham radio's most prolific writers has become a silent key. This with word that Dr. Jerry Sevick, W2FMI, passed away on Sunday, November 29th at age 90.

Jerry Sevick, was a graduate of Wayne State University and a member of its Athletic Hall of Fame. He was drafted by both the Chicago Bears and Detroit Lions, but did not play professional football. He served as a pilot in the US Army Air Corps in WWII. He later graduated from Harvard University, with a doctorate in Applied Physics. He then taught at Wayne State University and worked as the local weather forecaster at WXYZ TV in Detroit. Dr. Sevick also worked for Bell Laboratories in Murray Hill, New Jersey and retired as the Director of Technical Relations. He was also a member of the New
Providence Amateur Radio Club.

It was his interest in amateur radio that launched Dr. Sevick into experiments with short vertical antennas and broadband matching networks. He is noted for a classic series on short vertical antennas that appeared in QST magazine. His April 1978 article on short ground-radial systems now serves as the world's standard for earth conductivity measurements.

In the course of designing networks to match coaxial cable to short ground mounted vertical antennas, the transmission line transformer was looked at as a possible vehicle. He undertook the characterization and design of transformers for low impedance applications. This resulted in his book Transmission Line Transformers, first published in 1990 by the ARRL and currently available from Noble Publishing. He also presented a series on baluns in Communications Quarterly and a series on unbalanced to unbalanced transformers in CQ magazine. The latter was lead to his book titled

Building and Using Baluns and Ununs that was published by CQ in 2003.

Dr. Sevick was a Technical Advisor for the ARRL and a member of IEEE, Sigma Xi, Sigma Pi, Sigma and Phi Delta Kappa. A memorial service was scheduled for December 2nd at the Fellowship Village in Basking Ridge, New Jersey. (Information supplied by KT1B, K9AY, K2SSQ, CQ Magazine, bytemark.com, others)

**

HAM HAPPENINGS: ANNUAL VOIP CONFERENCE IN LAS VEGAS

The 2010 Voice over Internet Protocol Conference will take place on Saturday, April 10th at the Circus-Circus Conference Area in Las Vegas, Nevada.

The event is sponsored by Nevada Amateur Radio Repeaters, Inc. which began it in 2002 as the Internet Radio Linking Project or IRLP was starting to grow world wide. Nowadays the conference is open to all forms of VoIP communications, including IRLP, Echo link, D-Star, All Star Link, and various other associated applications.

The conference starts at 8:30 a.m. and runs until to 5 p.m. local Las Vegas time. Those interested in presenting a topic should let that be known as they register. Questions to w7aor(at) narri (dot) org. More information about the event along with registration forms are on-line at www.narri.org/voip_registration.html (W7AOR, others)

**

HAM RADIO IN SPACE: TIME SHARING ON SO-67

Controllers of the SO-67 SumbandilaSat ham radio transponder are looking for input on the best way to utilize the new ham radio bird. This, because it is a shared payload that cannot be in operation all of the time.

In an effort to make this as painless as possible, SO-67 controller Jan Albert, ZR1AJK, is requesting comments on the possible use of regional coordinators to schedule access to SumbandilaSat. Coordinators would be responsible for setting up agenda's in advance for their specific regions. This, while taking into account the pool of possible satellite passes, as well as the need of the bird for local events. The SO-67 Command Station would then simply load the schedules on a weekly basis.

Initial focus has on Europe, the Republic of South Africa, South and North America including Canada, Japan and Australia, and New Zealand. Now, ZR1JAK is inviting suggestions for amateur radio use of the SumbandilaSat as it flies over other regions as well.

Interested satellite operators are invited to e-mail responses to the AMSAT bulletin board, or if you prefer, to ZR1JAK's work address: jak "at" sunspace "dot" co "dot" za. (Amsat News, ZR1JAK)

**

HAM RADIO IN SPACE: SPECIAL EVENT STATION COMMEMORATES LAUNCH OF XW-1 HAMSAT

To celebrate the launch of China's first amateur satellite called XW-1, AMSAT-China has set up a special event station using the callsign BT3WX. Operations at BT3WX have already commenced and the special event station will remain active until XW-1 is launched. The station plans to operate on all High Frequency amateur bands from 10 to 160 meters and on VHF and UHF amateur satellite bands. On satellites the modes include FM, SSB, CW, RTTY and PACSAT.

A specific launch date for XW-1 has not been released as but is expected in mid-December. The satellite's communications payload will include a beacon and three cross band transponders operating in FM, linear, and digital modes.

Meantime stations completing two-way communications with BT3WX on 9 different bands and modes can apply for the BT3WX H-F Communications Award. Stations completing two-way communications with BT3WX through at least two different modes of transponders can apply for the BT3WX Satellite Communications Award. (ANS)

**

HAM RADION IN SPACE: STRAIGHT KET NIGHT ON OSCAR 2010

AMSAT is inviting hams worldwide to participate in Straight Key Night on OSCAR 2010. Taking part in this event is both fun and quite easy. Just operate CW through any OSCAR satellite between 0000 and 2400 UTC on January 1st 2010, using a straight hand key. There are no other rules, no scoring and no need to send in a log.

In keeping with the friendly nature of this event, all participants are encouraged to nominate someone they worked for "Best Fist" of those you worked. Please send your nomination to w2rs@amsat.org. A list of those nominated will appear in the Amsat News Service and will also be published in the AMSAT Journal. (W2RS, ANS)

**

DX

In D-X word that Willis Island is back on the air. David Burton reports that he has been assigned to the Bureau of Meteorology station on Willis for the next 6 months and will be operating with the call-sign VK9WBM. His station consists of a Icom IC-718 and an Alinco DX70. He will be activating the HF bands and 6 meters using a 2 element quad. QSL via VK4DMC.

K7WZB and K9WZB will be operating as K2V from the island of St. Croix from December 2nd to the 14th. They will use 160 through 6 meters and will be monitoring 6 most of the time for openings to the United States and Europe. Modes available will be SSB, RTTY, CW and PSK-31 on all bands. QSL via K9WZB, direct only. Further info at QRZ.com under the callsign K2V.

M0JAX is looking for 22 people with a full amateur radio license privileges to join a DXpedition to Bahrain in Leaving in February 2011. He is planning a two week trip based at the InterContinental hotel with eight stations on the air 24 hours a day. Operators will be working in three shifts to keep the stations on the air for the two weeks. I you are interested, send your details and why you think you would be an asset to this DXpedition to the Radio Society of Great Britain and attention RadCom Magazine. Your letters will be passed-on to M0JAX.

The S2DX team is preparing for another DXpedition to St. Martin's Island in the Bay of Bengal. The scheduled dates are February 21st to the 25th depending on the dates the licenses that they receive carry. This is the second DXpedition carried out by the group to the same location. They made over 3000 QSO's from there last January.

(Above from various DX news sources)

THAT FINAL ITEM: DISABLED HAM DONATES MOBILE TO IRTS

And finally this week, in keeping with the spirit of the upcoming season comes word that the Irish Radio Transmitting Society has received a very generous donation from one of its members. A complete mobile ready to go.

The story goes this way. For health reasons EI6IJ was been forced to cease driving. Instead of putting his car up for sale he instead gifted his 2008 Kia Rio hatchback to Irelands national ham radio society. The vehicle had already been converted for disabled use and professionally outfitted out with a Yaesu FT-857 all band transceiver.

The society says that it won't actually keep the car very long. Instead it will put it up for sale with the proceeds used to assist members who for reasons of changed circumstances such as ill health or change of accommodation are finding it difficult to practice and enjoy their hobby. The monies will also support the promotion of amateur radio in schools and other youth organizations. (IRTS)

How high is it in Europe? ;-)

About the same -- but with a different accent.

498. K0NEB Joins CQ Magazine as Contributing Editor

Well, good news and bad news -- the good news first. I want to let you know that I completed my graduate program at UNL successfully. It's been a dream of mine for nearly 4 decades to finish my doctorate. So you may now refer to me as Dr. K�AIZ. However, I prefer Art. The bad news is that I've run out of the "I'm busy with school" excuse. The six weeks of September/October I spent in California dealing with the illness and death of my mother took its toll on trying to complete the degree. So the time since her passing has consisted of 15 to 20 hour days trying to catch up on finishing a dissertation and preparing for a final defense oral exam. I hope I didn't cause too much consternation while I was distracted.

At the top of my "I really needed to" list is one of the more pleasurable things I put off. That is to recognize the dedication, talent, and insight offered by one of our own. Joe Eisenberg, K�NEB, is well known as a ham, an expert in kit building, and a photographer. He has given many presentations on kit building and the technical aspects of ham radio in venues ranging from club meetings to conventions. His enthusiasm is unmatched and the skill he brings to his endeavors is phenomenal.

CQ magazine noticed that, too. I am very pleased to acknowledge that Joe is now a contributing editor for the magazine. He is writing a column called "Kit Building" for each issue. I think you will find his columns interesting and well worth the time to read. I've been building electronics almost since Marconi twisted two wires together (or at least I feel that way sometime) and I find things to learn from Joe.

Congratulations, Joe. You are an asset to the Section, a great contributor to the hobby, and a wonderful friend to have.

I'll be playing more catch-up soon. Until then, enjoy winter, the hobby, and your family.

73,
Art K�AIZ

==> + PUBLIC SERVICE: UTAH HAMS COORDINATE RESCUE

In areas where cell phone signals just won't work, Amateur Radio
gets through. That's what Brent Yeates, KA7FAP, of North Logan, Utah,
found out just before noon on Wednesday, December 2: He came across a
dairy truck that had crashed and rolled over in the Logan River as he
drove on Route 89 through Logan Canyon. As 38,000 pounds of dairy
products were spilling into the Logan River, Yeates waded through the
cold river to help get the driver out of the truck's cab and then put
out a call on his handheld transceiver. Read more here
<http://www.arrl.org/news/stories/2009/12/07/11235/?nc=1>.

==> + SPOTLIGHT ON AMATEUR RADIO: MAJOR COMPUTER PUBLICATION DEVOTES
JANUARY 2010 ISSUE TO AMATEUR RADIO

Emergencies may get all the attention in the press, but lately, the
technological side of Amateur Radio has been showing up a lot in places
```

that are read by the people who make next year's trends. Hams indeed are technical and creative people, consummate MacGyvers. To kick off the new year, the computer magazine Linux Journal has come out with an entire issue dedicated to Amateur Radio and the creative uses of open source computer programs. This 80 page issue features Tux, the Linux mascot on its cover wearing a pair of headphones, holding a microphone -- and even sporting an Emergency Coordinator badge around his neck -- hooked up to an HF transceiver. The issue has headlines on the cover such as "Amateur Radio and Linux -- Open Source for the New Generation," and "Get Started with Amateur Radio," and includes articles like "When All Else Fails -- Amateur Radio, the Original Open-Source Project" by David Lane, KG4GIY. Read more here <http://www.arrl.org/news/features/2009/12/09/11239/?nc=1>.

==> + SCOTT ROBBINS, W4PA, TO PURCHASE VIBROPLEX

Scott Robbins, W4PA, of Knoxville, Tennessee, told the ARRL that he has signed an agreement to purchase The Vibroplex Company, Inc from present owner Felton "Mitch" Mitchell, W4OA, effective December 21, 2009. "Vibroplex represents the great tradition of CW operation in Amateur Radio going back many, many years," Robbins told the ARRL. "I'm tickled to be able to continue the more than 100 years of history that has gone into this company." Robbins -- who has been employed with Ten-Tec Inc since 1995 (he has been Product Manager for Ten-Tec's Amateur Radio equipment line since 1997) -- will leave his position in mid-December to take over full-time management and ownership of Vibroplex. "It's a great opportunity to continue the more than 100 years of tradition that the Vibroplex name represents," Robbins said. Read more here <http://www.arrl.org/news/stories/2009/12/07/11233/?nc=1>.

==> ARRL PUBLICATIONS: ARRL LICENSING STUDY GUIDES -- COMING TO AN EBOOK READER NEAR YOU

ARRL is pleased to announce that owners of Kindle <http://www.amazon.com/Kindle> -- an electronic book reader sold by Amazon.com <http://www.amazon.com/> -- can now download ARRL's Tech Q&A <http://www.amazon.com/ARRLs-Tech-Q-A-ebook/dp/B002YNSBNE/ref=sr_1_2?ie=UTF8&s=books&qid=1259944328&sr=8-2-catcorr>
directly from the online bookseller for use on their Kindle. Kindle is shaped much like a book with a paper-like screen that displays text and pictures. Those who have the Kindle application installed on their Apple <http://www.apple.com/> iPhone <http://www.apple.com/iphone/> or iPod touch <http://www.apple.com/ipodtouch/> can also download the book for use on these devices. When you download the Tech Q&A, you can gain access quickly and easily, smoothing the path to your first ham radio license. This ideal study tool -- whether you're at home, in the office, traveling or just on the go -- lets you review the questions and answers from the entire Technician question pool so you can pass the 35-question exam. Kindle versions of the General Q&A and the Amateur Extra Q&A will be available sometime in January. All three can be purchased from Amazon.com for $9.99 each.

==> + ORGANIZATIONAL: MARC TARPLEE, N4UFP, APPOINTED SOUTH CAROLINA SECTION MANAGER

Marc Tarplee, N4UFP, of Rock Hill, has been appointed the new ARRL South Carolina Section Manager. He will complete the term of Jim Boehner, N2ZZ, who was elected ARRL Roanoke Division Vice Director last month. When Boehner announced that he was stepping down from the Section Manager post he has held since January 2003, he recommended Tarplee, the South Carolina Section Technical Coordinator, for the position. Tarplee and Boehner both take on their new positions January 1, 2010. According to the Rules and Regulations of the ARRL Field Organization, when a vacancy in the office of Section Manager occurs between elections, the position is filled by appointment by the Membership and Volunteer Programs Manager in consultation with that Division's Director. MVP Manager Dave Patton, NN1N, consulted with Roanoke Division Director Dennis Bodson, W4PWF. Tarplee has been South Carolina's Technical Coordinator for almost seven years, first appointed by Boehner in January 2003. Tarplee's term of office as Section Manager will continue through December 31, 2010.

==> THE DOCTOR IS IN: FOCUSING ON 10 METERS

By ARRL News Editor S. Khrystyne Keane, K1SFA

Now with the ARRL 160 Meter Contest come and gone, it's time for me to focus on the opposite end of the HF spectrum: 10 meters. You guessed it -- I'm gearing up for the 37th running of the ARRL 10 Meter Contest. This contest has a bit of a twist to it: Operators have the choice of using CW only, SSB only or they can mix it up and use both. So as I prepare this week for the 'test, I went to ask the Doctor what is so special about 10 meters. Is there anything I need to be aware of and watch out for this weekend? Check up on what the Doctor has to say here <http://www.arrl.org/news/features/2009/12/09/11238/?nc=1>.

==> + REGULATORY: FCC DISMISSES TWO PETITIONS

On Wednesday, December 9, the Federal Communications Commission dismissed two separate Petitions for Rulemaking. The first Petition was filed by Murray Green, K3BEQ, concerning the operation of repeater stations in the Amateur Service. The other Petition, filed by Glen Zook, K9STH, requested amending Section 97.119(a) to change how often stations must identify themselves. Read more here <http://www.arrl.org/news/stories/2009/12/10/11241/?nc=1>.

==> + NOW YOU KNOW!: THE ARRL 10 METER CONTEST AND SATELLITES

By ARRL News Editor S. Khrystyne Keane, K1SFA

This weekend marks the 37th running of the ARRL 10 Meter Contest <http://www.arrl.org/contests/rules/2009/10-meters.html>. Back in November 1973 when the contest was first announced in QST <http://p1k.arrl.org/cgi-bin/topdf.cgi?id=62388&pub=qst>, the rules differed slightly from how they stand now. This event began due to the interest that radio amateurs showed in the 10 meter band, thanks to the

5-band awards offered by the ARRL. "Occupancy is an important issue of the day as is proof that there's life in the old band yet," the article stated. "At a recent convention the matter was raised and met with enthusiastic response. Rather than postpone the idea for another year, the consensus was 'let's give it a try for '73,' prompting a recommendation by the Contest Advisory Committee."

<http://www.amsat.org/amsat-new/satellites/satInfo.php?satID=29&returl=satellites/history.php>
In 1973, each completed two-way QSO was worth 2 points, except QSOs with a US Novice were worth double that. The article pointed out that certain FCC-issued Novice call signs look a little strange: "Novices in KZ5 and KG4 have strange call signs -- a Canal Zone Novice has an 'N' at the end of the call, such as KZ5AAN. A Novice in Guantanamo Bay has an 'N' after the number, such as KG4NAA. All others replace the K with a W (i.e. WL7, WH6, etc.). If you work a station once on cw you can work him again on phone. Oscar QSOs also count."

Oscar QSOs? As in the satellite? Yes! The 1973 rules stated that "Oscar 6 contacts may be counted. All cw QSOs must take place between 28.0-28.5 MHz except those made though Oscar 6." The article also advised contest participants to stay clear of 29.45-29.55 MHz, as these were the Oscar downlink frequencies. Beginning in 1973 and continuing through 1979, QSOs made via the Oscar satellites counted for credit in the ARRL 10 Meter Contest. Beginning in 1980, after 10 meters had seemingly come back to life, the CAC no longer accepted the QSOs for credit in the contest. Now you know!

==> + SILENT KEY: AMBASSADOR WILLIAM A. WILSON, K6ARO (SK)

William A. "Bill" Wilson, K6ARO -- the first US Ambassador to the Holy See (the Vatican) -- passed away from cancer early on the morning of Saturday, December 5. He was 95. First appointed as presidential envoy to Rome in 1981 by President Ronald Reagan, Wilson was appointed the first full ambassador to the Holy See in 1984, once official relations were established, serving until 1986. Read more here <http://www.arrl.org/news/stories/2009/12/07/11234/?nc=1>.

==> SOLAR UPDATE

<http://sohowww.nascom.nasa.gov/data/realtime/realtime-update.html>
Tad "When I behold, upon the night's starr'd face <http://englishhistory.net/keats/poetry/whenihavefears.html>" Cook, K7RA, reports: Finally! A sunspot appeared on Wednesday, December 9, giving us a daily sunspot number of 13 -- this followed 16 days of no sunspots. The new group is number 1034, and need we say it is a Solar Cycle 24 spot? Cycle 24 spots were news at one time, but we haven't seen a Solar Cycle 23 spot since number 1016 on April 29-30, 2009. Solar Cycle 23 peaked around 8-9 years ago. Excitement builds for this weekend's ARRL 10 Meter Contest <http://www.arrl.org/contests/rules/2009/10-meters.html>. Will sunspot activity amount to enough to enhance 10 meter propagation? The latest

prediction shows a rising solar flux, 74 and 75 on December 10-11 and 77 from December 12-16; this must correspond to the new sunspot swinging into view, instead of peeking over the horizon as it did on Wednesday. Even without sunspots, Geminids meteor showers <http://meteorshowersonline.com/geminids.html> have intensified with each passing year as Earth moves deeper into the debris stream from extinct comet 3200 Phaethon <http://en.wikipedia.org/wiki/3200_Phaethon>. The predicted peak of the meteor shower is about five hours after the end of the contest and there is a good chance that ionized comet trails could enhance 10 meter propagation this weekend. Look for more information in the Solar Update, available on the ARRL Web site on Friday, December 11. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' When I Have Fears That I May Cease to Be <http://englishhistory.net/keats/poetry/whenihavefears.html>.

==> THIS WEEK ON THE RADIO

This week, the ARRL 10 Meter Contest <http://www.arrl.org/contests/rules/2009/10-meters.html> is December 12-13. The Feld Hell Sprint is December 12. The MDXA PSK DeathMatch and the International Naval Contest are December 12-13. The NA High Speed Meteor Scatter Winter Rally is December 12-16. The SKCC Weekend Sprint and the CQC Great Colorado Snowshoe Run are December 13. Next week, the Russian 160 Meter Contest is December 18. The OK DX RTTY Contest is December 19. The Croatian CW Contest is December 19-20 and the Lighthouse Christmas Lights QSO Party Is December 19-January 3. The ARCI Holiday Spirits Homebrew Sprint is December 20, the Run for the Bacon QRP Contest is December 21 and the SKCC Sprint is December 23. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + ARRL HEADQUARTERS CLOSED FOR CHRISTMAS, NEW YEAR'S HOLIDAYS

ARRL Headquarters will be closed Friday, December 25, 2009 and Friday, January 1, 2010 in observance of Christmas and New Year's Day. There will be no W1AW bulletins <http://www.arrl.org/w1aw/> or code practice transmissions <http://www.arrl.org/w1aw.html#w1awsked> those days. There will be no ARRL Letter <http://www.arrl.org/arrlletter/> or ARRL Audio News <http://www.arrl.org/arrlletter/audio/> on Thursday, December 24 and 31. We wish everyone a safe and joyful holiday season and a prosperous 2010.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, December 27, 2009, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, January 8, 2010: Amateur Radio Emergency Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1687 - December 11 2009

Amateur Radio Newsline report number 1687 with a release date of
Friday, December 11th 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC again denies a petition aimed at
outlawing closed and private repeaters, a Utah ham is first on scene at
a rollover accident, the Wireless Institute of Australia says it will
start training V- hams in rescue radio operations and amateur radio
pays homage to a great World War 2 fighting machine of the sea. Find
out the details on Amateur Radio Newsline(tm) report number 1687 coming
your way right now.

(Billboard Cart Here)

**

RADIO LAW: FCC SAYS NO TO ANOTHER PETITION TO OUTLAW CLOSED AND
PRIVATE REPEATERS

Another petition to the FCC aimed at outlawing closed and private
repeaters has been denied by the FCC. Amateur Radio Newsline's Bill
Pasternak, WA6ITF, takes an in depth look at this story:

--

Like everyone who had tried before him, Maury Green, K3BEQ, had the best of
intentions when he filed his rules change request. A request aimed at
banning repeater owners from barring anyone from using a repeater other
than hams who would use the system to blatantly violate the FCC rules.

But good intentions are not the stuff that radio rules are made of and on
December 8th the FCC once again made it clear that it is not going to
involve itself even remotely in the political or social aspect of owning
and operating a repeater. Nor is it going to tell a repeater owner
operator whom he or she must have his system repeat.

In his petition for rule making filed several month ago Green had asked the
FCC to amend Section 97.205(e) of its Rules. This, to prohibit a repeater
station licensee or control operator from limiting the use of a repeater to
only certain user stations, unless a user blatantly violates the
Commission's Rules.

Green argued that Section 97.205(e), which permits a repeater station
licensee or control operator to limit the use of a repeater to certain user
stations, conflicts with Section 97.101(b). That rule states that no
frequency is for the exclusive use of a particular amateur station, and

each station licensees must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies.

But in what might best be described as a cookie-cutter decision not unlike responses to similar requests going back more than 30 years, the FCC flatly disagreed. As in the past, the regulatory agency once again stated that Section 97.205(e) does not establish an exclusive assignment of a frequency to a repeater. And with regard to Green's contention that a coordinated closed repeater has exclusive control of an amateur service frequency, the FCC again noted that coordination is not required as a condition of operating a repeater.

The FCC went on to note that coordination does not and cannot result in assignment or establish control of an amateur service channel, and nothing in the rules prohibits other amateur stations from using the channels for which a repeater has been coordinated when they are not being used by the repeater. Rather, Section 97.205(e) merely enables a repeater licensee or control operator to control the repeater, so that he or she can ensure the repeater is properly operated as required by Section 97.105(a). Accordingly, says the FCC there is no conflict between the rules, and no grounds for the Commission to propose to amend Section 97.105(a).

So what about operating on a repeaters input or output frequency when it is not in use. Well a quick history lesson is in order. Back in the early days of repeater rules the FCC required system owners to have lock-out receivers listening to the output frequency. These receivers would inhibit the repeater transmitter from coming on if the output frequency was in use.

When repeaters were deregulated in the mid-1970's the lock-out receivers were deemed to be unnecessary. Instead the FCC simply said that it expected hams to use common sense when using a repeater input or output for other than repeater purposes. It said that if you operate simplex on a repeater input you might be repeated whether you want to or not. It also inferred that if you operate simplex on a repeater output and got clobbered by the repeater transmitter to not complain to the FCC. Again the agency expected hams to have enough common sense to know this might happen and find other frequencies on which to operate. And that's been the unofficial rule of thumb for over three decades.

So what does this most recent decision mean to the average ham? In reality not very much. With the exception of Southern California, closed and private repeaters make up less than 1% of the nations total of machines. Also, most of the time those hams who are excluded from operating on a particular system have been asked to leave after the system owner or his control operators find that he or she is disruptive to the normal flow of repeater traffic. In other words they were ordered to leave and to date the FCC has backed every repeater owner who has asked enforcement assistance in keeping unwanted users off their machines.

Is this the end of it? Likely not. In another two or three years another well meaning ham will likely file a similar request to ban closed and private repeaters. Unless he or she cab come up with a far more compelling argument than has Maury Green, K3BEQ, and those who petitioned in the past, its likely that request will also fall on deaf FCC ears. In this area of the Part 97 rules, history does have a way of repeating itself.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

As far as we can tell, this is the 9th or 10th attempt at getting the FCC to prohibit a repeater licensee from restricting access to a repeater to those whom he or she wants to be filed the last three decades. And as in all past attempts, this one has met with failure as well. (FCC with historic background from Looking West archive.)

**

RADIO RULES: FCC SAYS NO TO MODIFYING STATION ID RULES

The FCC has also denied a rules change request filed by Glen Zook, K9STH, of Richardson, Texas. Zook had request that Section 97.119(a) of the Commission's Rules be amended to incorporate certain portions of the Commission's former station identification rule so as to assure that hams properly identified their stations at specific times.

Back in 2006, Zook filed a petition requesting that the Commission amend the Amateur service rules to incorporate certain portions of the FCC's earlier station identification rule. This would include requiring that the call sign be transmitted at the beginning of each transmission or series of transmissions.

In response, the Commission received approximately one hundred comments, generally opposing the Zook petition. And in 2007 the FCC dismissed this petition, concluding that the requested rule changes were not necessary and were not supported by the amateur radio community.

Zook filed again on April 7, 2009. After considering his latest request for some nine months the FCC concluded that his present Petition does not assert or demonstrate that circumstances have changed since 2007 with respect to the adequacy of the current station identification rule. It went on to note that his current proposal, like his previous petition, does not demonstrate that revising the station identification requirement would address the concern that many amateur radio operators do not identify their station in a timely manner or at all.

In its dismissal order the FCC says that this is really a matter better addressed by enforcement of the present rule rather than a rule change. If he desires to do so Zook has the option to file an appeal. (FCC)

**

RESCUE RADIO: HAMS ASSIST AT UTAH DAIRY TRUCK CRASH

Amateur radio was first on the scene on Wednesday, December 2nd. This, after a dairy truck crashed near Logan, Utah, and rolled into the Logan River.

According to the Logan Herald Journal, Brent Yeates, KA7FAP, happened across the accident scene and stopped to help. With cellular telephone service sparse at best Yates used a local repeater to contact Brent Carruth, AD7VF in Logan. Carruth listened to Yeates give a first-hand account of the condition of the driver and the seriousness of the crash. He then notified authorities which dispatched assistance to the scene.

The accident occurred on Utah Route 89 as it passed through Logan Canyon. The semi-trailer was filled with 38,000 pounds of dairy products much of which was leaked into the river. More is on-line http://hjnews.townnews.com/articles/2009/12/06/news/news04-12-06-09.txt (HJ News)

**

RESCUE RADIO: WIA TO DEVELOP RESCUE RADIO TRAINING COURSE

The Board of Directors of the Wireless Institute of Australia says its time for an organized effort to train VK hams in rescue radio techniques. Robert Broomhead, VK3DN, has the details from down-under:

--

During 2009 the Wireless Institute of Australia has been considering training of amateurs for activities associated with emergency communications preparedness. In the July and September issues of Amateur Radio magazine, the WIA Comment focussed on issues surrounding amateur operator emergency
communications, training and general preparedness.

From the feedback received, the Board considered that a national accredited training system was an essential element in the broad range of issues associated with emergency communications provided by amateur operators.

In association with the WIA' s Recognized Training Organization (RTO), TrainSafe, a nationally recognized training package has now been developed. The WIA Board has prepared a statement on "where it is at" in
the development of the training package and a summary of feedback and

issues.

I'm Robert, VK3DN

--

For those interested, the statement and attachments that Robert referred to can be found when you visit wia.org.au (WIA News)

**

RESTRUCTURING: INDIA GRANTS HAMS 30 METERS

Hams in India have received government permission to permanently operate on 30 meters on a secondary basis, though not all details of the new allocation are yet known.

India's hams had previously been granted experimental access to 30 meters for a one-month period between August 31st and September 30th of 2007. At that time, A1A and J3E modes with 100 watts maximum were allowed between 10.100 and 10.150 MHz.

VU2GMN has been in contact with the authorities in Delhi. He says that he is trying to clarify if SSB will be included with the permanent allocation. Australia is believed to be the only other major country allowing SSB on 10 MHz for amateur radio use in ITU Region 3. (W7VOA)

**

RADIO BUSINESS: VIBROPLEX CHANGING OWNERSHIP

A famed Morse key manufacturer is changing hands. Our CW man, Frank Haas, KB4T, has the details:

--

Vibroplex will have a new owner effective December 21st, 2009. Scott Robbins, W4PA, of Knoxville, Tennessee, has agreed to buy Amateur Radio's oldest manufacturer from present owner Mitch Mitchell of Mobile, Alabama who recently decided to retire. In a report detailed at arrl.org, Robbins says he will leave his post as Amateur Radio Product Manager at TenTec in Mid-December to take over and relocate Vibroplex. Newsline asked Robbins why he decided to buy the company:

--

Robbins: "It was my desire to own my own business. Its something I had thought about for a number of years but the right opportunity had never presented itself until now. And its something I gave a lot of thought to once it was made known that Vibroplex was available and I decided that my time had arrived and I would go ahead and give it a shot."

--

Vibroplex will move to Knoxville before the New Year. Business operations are expected to resume on January 5th, 2010. Vibroplex has been

internationally renowned for its semi-automatic keys, known by most as "bugs," for professional and amateur telegraphers since Inventor Horace Martin first created the device in 1904 as a cure for telegrapher's "glass arm," a painful condition similar to carpal tunnel syndrome. The product line expanded to include straight keys, keyer paddles and a wider variety of bugs. When asked what changes he plans for the product line, Robbins said:

--

Robbins: "No changes to the current products. The changes would be that I have every intention of offering new products under the Vibroplex name in 2010 and beyond."

--

The 800 number, web site and email contacts will remain the same. For the Amateur Radio Newsline, I'm Frank Haas KB4T in Florida.

--

The bottom line: Frank says that the change of ownership means that the Vibroplex side-swiper should be with us for a long time to come. (KB4T)

**

RADIO EDUCATION: NEW HF LEARNING AWARD FROM QCWA CHAPTER 119

In an effort to encourage newer amateur radio operators to enter into the mainstream of HF amateur radio the Chapter 119 of the Quarter Century Wireless Association has introduced the Worked All 10 U.S. Call Areas Award. According to the announcement this award provides an achievement goal for the new operator, or any operator beginning to explore the HF bands.

Because new hams with entry level licenses have limited access to the amateur radio bands on 160 through 10 meters, the award is unique in that it contains provisions to permit HF operation under the guidance of a mentor, or Elmer, who can, if necessary, act as a control operator. The sponsors say that becoming involved in HF operations will assist the new amateur operator to gain operating skills and to earn higher classes of license with his or her own increased operating privileges.

Full details and a sample of the award can be found on-line at the Chapter 119 web page. Its in cyberspace at qcwa-ch119.org. (QCWA)

**

RADIO POLITICS: IARU REGION 1 PAPERS POSTED TO THE WWW

Turning to ham radio politics, word that the interim meeting of the International Amateur Radio Union Region 1 High Frequency Committee and the VHF, UHF and Microwave Committee will take place February 19th to the 21st of 2010. This, in Vienna, Austria. The IARU Region 1 website now has the full set of HF, VHF and microwave papers for the meeting from the various

national societies. Check out www.iaru-r1.org for details. (GB2RS)

**

RADIO ON THE NET: QRZ.COM INVITES DEVELOPERS TO JOIN QRZ FLASH

The QRZ.com web team is developing an open source portable callsign database that runs on any media including USB Flash, DVD, and disk. The QRZ Flash application fits on a USB stick drive and includes an Apache server, a MySQL server, and a full Perl and PHP interpreter. All this in about 1.2 Gb of storage. Even better is that software runs right off the stick drive with no installation necessary but at the same time is easily copied to a hard drive if desired.

The project is at a point where outside volunteers are being invited to contribute to the software package. More information is on the QRZ.com website. More is on-line at http://forums.qrz.com/showthread.php?t"8560) (QRZ.com)

NAMES IN THE NEWS: G3YJO RECEIVES EUROPEAN ELECTRONICS INDUSTRY LIFETIME AWARD

A name in the news. Martin Sweeting G3YJO, has been presented European Electronics Industry Lifetime Achievement Award. This for his dedication to research in his chosen fields of interest.

With the full title of Professor Sir Martin Sweeting, G3YJO serves as the Executive Chairman of Surrey Satellite Technology and Director of the Surrey Space Center. He was presented with the award by Richard Wilson, Editor, Electronics Weekly and Paul Briggs, Publisher, Electronics Weekly at The Lancaster London on Tuesday, December 1st. Photos of the ceremony are on-line at www.elektraawards.co.uk (ANS, Southgate)

**

NEW PRODUCTS: OH THOSE BUDTRAPS

And here is a neat and cheap product that you can use to keep those very popular ear-bud type earphones from becoming a tangled mess. BudTrap International has introduced its new BudTrap new cable management device engineered to trap ear-buds and avoid headphone tangles in your Apple iPod, Microsoft Zune or maybe your HT.

BudTrap stays attached to your earphone jack and helps you secure your ear-buds the way you want quickly. The device works with either straight or curved device jacks. The small form factor offers portable users the convenience of headphone cable management, without adding bulk to the device. This makes BudTraps a natural for hams to experiment with and find new ways to use that the manufacturer likely never dreamed of.

The new Bud-Traps are available online for less than three dollars. More information is at www.budtrap.com/ (RW)

**

EMERGING TECHNOLOGY: RESEARCHERS DEVELOP SINGLE ATOM TRANSISTOR

Researchers from Helsinki University of Technology in Finland, the University of New South Wales Australia and University of Melbourne have succeeded in building a micro-sized transistor whose active region composes only of a single phosphorus atom in silicon. The working principles of the device are based on sequential tunneling of single electrons between the phosphorus atom and the source and drain leads of the transistor. The tunneling can be suppressed or allowed by controlling the voltage on a nearby metal electrode with a width of a few tens of nanometers.

In the recently developed transistor, all the electric current passes through the same single atom. This allows researchers to study the effects arising in the extreme limit of the transistor size. The results of the development of this transistor has been published in Nano Letters. That's a journal of the American Chemical Society. (Science OnLine)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: WILLIAM WILSON, K6ARO, FIRST AMBASSADOR TO THE VATICAN - S.K.

We have said it far to many times of late, but the changing of the guard in amateur radio continues. This with the sad news tat William A.Wilson, K6ARO, the first US Ambassador to the Vatican has passed away at age 95.

According to the Los Angeles Times, Wilson died in his Carmel Valley, California home from complications related to cancer on Saturday, December 5th.

William Wilson was a Los Angeles businessman who became a member of President Ronald Reagan's "kitchen cabinet" early on in Reagan's career. Wilson first met the Reagan at a dinner party in the early 1960s, when the future president was still an actor. Wilson soon became a member of the inner circle of wealthy advisers who persuaded Reagan to run for governor of California in 1966 and then helped guide his political campaigns.

Soon after Ronald Reagan was sworn in as president in 1981 he named Wilson as his personal envoy to the Vatican. The United States had not had formal diplomatic relations with the Holy See since 1867, when Congress repealed funds for the consular post, citing a need to separate church and state.

In 1984, the United States reestablished official relations with the Vatican recognizing it as a sovereign body and the pope as an international statesman. At that time Wilson was elevated from personal envoy to full ambassador but was ultimately forced to resign over what news reports termed as political missteps.

William Wilson, K6ARO is survived by two daughters, , six grandchildren and eleven great-grandchildren .
His wife of 58 years, Elizabeth died in 1996. Funeral services were planned for Friday, December 11. In lieu of flowers donations in his name can be made to the St John's Health Center or Thomas Aquinas College. (LA Times, others)

**

HAM RADIO IN SPACE: METEOR SCATTER OFF THE GEMINIDS

The annual Geminid meteor shower has been intensifying, and researchers say 2009 could be the best year yet. This year's display peaks on December 13th and 14th with meteor scatter enthusiasts certain to be out for magical contacts. QSO's that can only be made by bouncing their signals off of ionizing meteor trails as the space rocks burn up in the Earth's atmosphere.

For many years meteor scatter contacts were the domain of the most skilled of high speed CW operators. In more recent times digital modes such as JT2 and JT4 are superseding the use of Morse because of their ability to hear well into and below the spectrum noise floor.

JT2 uses 2-tone FSK modulation for synchronization and differential BPSK for the encoded user information. JT4 uses 4-tone FSK, so it can also include both a sync bit and a data bit in each symbol. JT2 and JT4 are both designed for making QSOs under extremely weak-signal conditions making them ideal for making meteor scatter contacts.

More about these modes can be found on-line at
http://physics.princeton.edu/pulsar/K1JT/JT2_JT4.TXT
(VHF Reflector)\

WORLDBEAT: DATE ANNOUNCED FOR CONSTRUCTION OF UK NATIONAL AR CENTER

RSGB General Manager Peter Kirby, G0TWW has announced the start date for building the new National Amateur Radio Center in the United Kingdom. The work will commence at Bletchley Park in London on January 11, 2010. Subject to favorable progress, the work is expected to finish in June.

The National Amateur Radio Center will house the United Kingdom's National Amateur Radio Heritage exhibition, the National Amateur Radio Library and the Archive the Radio Society of Great Britain. The Bletchley Park center will be open to both RSGB members and members of the public, hopefully in 2010. Further details of progress will be announced as work progresses. (GB2RS)

**

ON THE AIR: ACTIVATING HUNGARIAN PARKS

On the air, listen out for HA0HW, HG0NDZ, HA0IH, HA4DX and HA4XG. This, as they activate more Hungarian National Parks during the month of December. Look for them to using the call HG0WFF/P through months end. QSL to HA0HW via the bureau. (ICPO)

**

ON THE AIR: TUNISIA SPECIAL EVENT

The Radio Club Station of Tunisian Scouts station 3V8ST will commemorate their 10th anniversary by activating special event station 3V10A from the headquarters of Tunisian Scouts in Tunis Mahrajens. This operation will last until December 31st. QSL to the Amateur Radio Club of Tunis, P.O. Box 339, 1082, Tunisia. (Radio Club of Tunisia)

**

DX

In DX, word that three hams will be taking VHF, UHF and microwave equipment on a DXpedition to Norfolk Island that is slated to run from January 3rd to the 14th of 2010. The operators involved are VK3XPD, VK4UH and VK3KH. They say that digital modes will be an integral part of their operation, and they are set up to run WSJT on all bands. Other modes include CW, SSB, FSK441 and JT65A. They will also be active on the Meteor Scatter net, and will also be happy to consider skeds at other times. QSL via VK3KH.

N8OO and NP3D operating portable HR2 from Honduras should be on the air through Dsecember 20th using CW, RTTY and SSB on all bands. N8OO also plans to take part in the 10 Meter ARRL DX Contest while NP3D wants to join the OK DX RTTY Contest as HQ2S. QSL as directed by each operator.

OE2ATN, is planning to be active Island of Velidhu as 8Q7AT between May 23rd and June 4th of 2010.
Activity will be mainly SSB on 80, 40 and 20 meters using a Yaesu FT-897D into a G5RV antenna. QSL via OE2ATN.

JA8BMK, will be active as CE0Z from Juan Fernandez Island between January 19th and February 2nd of 2010. Activity will be on 160-10 meters, with a focus on the lower bands using CW, SSB and some digital modes. QSL direct to JA8BMK.

Lastly, YV5KAJ, says via the Ohio Penn DX Newsletter that he is celebrating his 25th year in amateur radio by going on a DXpedition to the Island of Tortuga between December 26th to the 29th. He will also be using the special callsign YW5EID on 40 through 12 meters using SSB and some digital modes. The operation is also dedicated to IW5EID who introduced YV5KAJ to the hobby. QSL via EA5KB

(Above from various DX news sources)

THAT FINAL ITEM: HAMS WORK TO CREATE USS INDIANAPOLIS RADIO ROOM

And finally, this past week America paused to remember the attack that took place on Pearl Harbor sixty-eight years ago. One of the Navy ships that helped bring World War Two to a close was the USS Indianapolis. She was torpedoed and sunk in 1945 after delivering Atom bomb components to Tinian Island. Those parts were later used on bombs dropped on major Japanese cities.

Now, sixty four years later a group of Indianapolis amateur radio operators have re-created an operational radio room like that aboard the USS Indianapolis. Jack Parker W8ISH has the rest of the story.

--

After months of research and nearly two years of planning the USS Indianapolis radio room is on the air. This real life display is located in the World War Memorial in downtown Indianapolis.

The radio room features 67 World War Two pieces of equipment donated from people around the county. According to Chuck Christ, W9IH, they lucked out when an appeal for used Naval radio equipment caught the eye of one internet user.

--

Chuck: "We put that list of things that we wanted on an E-Bay type thing and a guy by the name of Stan Wine calls me 12-hours later from Sequaro, NM and says I have everything you want."

--

The USS Indianapolis sank in just 12 minutes after being struck by two torpedoes. There were nearly 1200 souls on board. Only 316 survived after spending four days floating in shark infested waters of the Philippine Sea.

Historians don't know if the ship's radio men ever had a chance to send an
SOS. They were on a secret mission. Today, the re-created ship's station
shows four working positions where secret messages were sent and received as the USS Indianapolis carried out it's secret mission across the Pacific.

Barry Fairfax-KW9DX, says four months of research taught them how the radio room worked.

--

Barry Fairfax: "The radio men you see here would have been receiving coded
messages from the main land or Pearl Harbor. They would type them out, the coded messages in code, then send them to the room behind us which is the

coding room where they were decoded".

--

One of those hams working the radios and giving tours is World War Two veteran Bob Begeman, W9KVK He saw duty as a naval radio man.

--

Begeman: "I was on an attack transport, APA 27, the USS George Climer, and
we had radio equipment similar to this and I was a radio technician and took care of the equipment".

--

Begeman says amateur radio operators are welcome to come visit the display and operate CW or Side-band from one of the four operating stations.

--

Christ: "This is exactly what would have been on the ship".

The call sign is WW2IND. This truly is, living history.

Reporting from Indianapolis, this is Jack Parker, W8ISH.

--

The recreated radio room is located in the World War Memorial just four blocks north of Monument Circle in downtown Indianapolis. The actual memorial for the USS Indianapolis is about seven blocks away. Tours are Wednesday through Sunday from 9 a.m. to 5 p.m. local Indianapolis time. Amateur Radio operators are welcome to operate the equipment when an appropriately licensed ham is acting as the guide. (W8ISH)

I thought I'd give the 10M contest a try this year, single op, low power, CW only.

I did a quick look a the rules (http://www.arrl.org/contests/rules/2009/10-meters.html), got as far as

3.1.2. Low Power.
3.1.2.1. Mixed Mode (Phone and CW).
3.1.2.2. Phone only.
3.1.2.3. CW only.

and was on my way.

Didn't see anything about "assisted", so without really thinking about it, I left "Band Master" (a GUI DX cluster front end) running when I started the contest.

During one of the many lulls in the contest, I read the rest of the rules and found

3.2. Multioperator, Single Transmitter, mixed mode (only).
3.2.1. Includes single operators using packet or spotting assistance.

So, I was suddenly stuck in the Multi-op, mixed mode category.

Oh well. That's a mistake I won't make again.

Besides, the DX cluster info wasn't any sort of an "assist" for me. It was more in the line of mocking me with all the stations I couldn't even hear :-(

Ouch!

In ARRL and CQ contests you can reasonably assume a single-operator category does NOT allow for use of the Cluster. Many contests have a separate
"assisted" category -- looks like the 10M Test isn't one of them, in which case use of cluster indeed makes you a multiop entry...

> Besides, the DX cluster info wasn't any sort of an "assist" for me. It
> was more in the line of mocking me with all the stations I couldn't even

(grin)!

Saturday was pretty bad here in Tennessee. Got a LOT of reading done while calling CQ into nothingness. We did get a decent opening to W1/W2 around
10:30 CT but most folks up there had already given up & gone to bed.

It was a LOT better today. Still difficult in the morning, but around noon some South Americans started showing up (and ZM4B) and soon after,
sporadic-E popped open from here to New Mexico and Arizona. With about 90 minutes to go in the test, it also popped to Minnesota and W1/W2. Best
hour of the contest was the last hour...

I worked 42 states. Missed seven states in 7-land (WA/OR/MT/ID/NV/UT/AK). And Indiana. (?!)
349 QSOs for roughly 75,000 points, CW only, high power.

I find it interesting to look at DX Summit **after the contest** and see who spotted me...

I dropped a line to the contest folks at ARRL, suggesting that they move the bit about single-op becoming multi-op if assisted up into the single-op section, or even moving it above the single-op section.

I didn't really expect to find info about single-op down in the multi-op rules.

As far as the contest went, my experience was much like yours (although my contact count was much lower). Toward the end of the last hour, I wanted to pull a stunt like some legislatures use and throw a towel over the clock so I could keep going after midnight GMT :-)

URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely advertisements or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items, including both parts and equipment, for giveaway will be permitted on an occasional basis from casual, non-commercial owners, and at the discretion of the moderators. The items should be free except for reasonable direct costs such as shipping, must be directly amateur-radio-related, must be in serviceable condition, and be practical to ship to a distant recipient. This is intended as a common-sense exception to our ban on forsale postings, provided that it doesn't overwhelm the basic character of our discussion newsgroup with classified ads or requests to haul off scrap or junk in salvage condition.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines

for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

Because rec.radio.amateur.moderated is a Usenet newsgroup, there are | implied or derived guidelines for participation that are drawn from the | above articles about overall Usenet culture and tradition. Two of these | implied or derived guidelines are encapsulated in two basic rules that | our moderation team uses to initially determine whether an article is | appropriate for our newsgroup. They are restated explicitly here for | clarification: |

Basic Rule #1: The article must be on-topic for amateur radio. A | rule-of-thumb that our moderation team applies is whether the article | mentions amateur radio, ham radio, some synonym for amateur or ham | radio, some technique or practice of amateur or ham radio including | closely related technical topics such as antennas or portable power, or | regulatory politics that directly affect amateur radio. This | rule-of-thumb is also applied to determine if an article in a thread has | drifted too far off-topic. For example, articles that have drifted into | general rants or monologues will probably be returned with a polite | request to rewrite to include a reasonable amateur radio connection or | angle. |

Basic Rule #2: The article must not have excessive spelling, grammar, or | logical argument errors affecting readability and understandability. | The moderation team understands that clear, understandable, technical or | expository writing is a skill that can only be perfected through a | lifetime of focused training and practice. Because the moderation team | does not want to hold submitters to a standard higher than what it can | achieve itself, nor disrupt the newsgroup and discourage submitters by | playing spelling or grammar police, it will only return for rewrite any | article that cannot be reasonably understood by multiple moderators. |

If it is necessary to return any article for a rewrite because the | moderators have determined that it does not meet Basic Rule #1 or #2, | please accept this constructive feedback in the manner in which it is | intended. The moderation team offers its assistance to help rewrite any | submitted article into a form that preserves its original intent and | meaning, but is also on-topic, as well as readable and understandable by | others. |

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly advertisements or other public relations campaigns are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which

itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such

fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The

moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Due to Usenet newgroup access being eliminated at many ISP's, including MSN, AOL, RoadRunner, Time Warner, Verizon, and Comcast, we are starting to receive many article submissions asking about free or low-cost alternatives for accessing Usenet newsgroups such as ours. We initially permitted this topic in light of the significant impact to many of our readers due to this loss of access through their ISP's. However, this subject is arguably off-topic for our newsgroup, is better answered by other sources, and better discussed in other venues. Because of this, we will no longer approve submissions that request or suggest where to obtain access to Usenet newsgroups. For more information about this topic, please consult the following:

- The last approved thread of discussion about this topic on our newsgroup from October 2008:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/19770b88ec527aff/8dcee92de293f615?hl=en#8dcee92de293f615

IARU Electronic Newsletter November, 2009

In this issue:
An Introduction
Preparations for WRC-12
IARU Administrative Council Meeting
GAREC-09 - Action Needed

==> An Introduction

This is the first IARU E-Letter for some period of time. As such, I thought I would take this opportunity to introduce myself. I am Rod Stafford, W6ROD, the new IARU Secretary. I will also be responsible for publishing this E-Letter. I assumed the office of Secretary on October 1, 2009. Dave Sumner, K1ZZ has been the IARU Secretary for the last 10 years and he was also IARU Secretary for a 7-year period in the 1980's. Dave did a great job as Secretary and I hope to continue the high standard that he established. Dave will continue to work closely with the IARU Administrative Council and will be Recording Secretary at the IARU Administrative Council meetings.

I began my association with the American Radio Relay League in 1983 as a Section Manager in the ARRL Field Organization. The Section Manager is a locally elected ARRL Official. In January, 1986, I became an ARRL Director and since that time have served as a Director, First and Second Vice President, President (1995-2000) and as the International Affairs Vice President (2000-present). I have attended 16 regional conferences, numerous regional executive committee meetings and numerous Administrative Council meetings. I'm certain the international experience will assist me as I take on the challenges of being IARU Secretary. In my professional life I have just retired as a Superior Court Judge in the State of California USA. My last day as an active Judge was the day prior to assuming the duties as IARU Secretary.

As far as my amateur radio operating, I enjoy the HF bands, particularly 20 and 40 meters, when I can make time to get on the air. Since I am now retired from full-time employment I should have more time for operating. My favorite ham activity is ragchewing and getting to know the person I work on the ham bands. I also enjoy VHF-UHF operation when I am in the car.

The purpose of this newsletter will be to provide information to the IARU member-societies that can be shared with their members. Many members of IARU societies are unaware of much of what the IARU does and why it does what it does. Hopefully, this newsletter will help

disseminate that information. Member-societies are requested to forward this E-Letter to their members electronically or any other appropriate way. Another purpose of the newsletter is to keep the member-societies up to date on the preparations for the upcoming World Radiocommunication Conference in early, 2012 (WRC-12) and how the member-societies can assist in the preparations. The newsletter will also serve as a outlet for information coming from the member-societies. If there is information that is appropriate to be shared with other member-societies around the world, please send me an email with the information and it will be published in this newsletter.

==> WRC-12 Preparations Underway

WRC-12 will start in January, 2012. The year 2012 seems a long way away but it is only slightly more than two years from now. Preparations within national telecom administrations have been underway for some period of time. Regional telecom organizations have been meeting to discuss the WRC agenda items and to arrive at regional positions on each issue.

Each and every IARU member-society capable of doing so should take the initiative to contact their own administration and let the administration know what the IARU position is on those WRC agenda items that impact the amateur radio service. If your society needs some guidance or advice on how best to approach the administration or what the substance of such discussions should be then do not hesitate to contact the IARU International Secretariat for assistance.

It would be very helpful if your society could place a knowledgeable amateur radio operator on the national delegation attending the WRC. If providing the support for an amateur to attend the WRC is not possible, it would be helpful if your society could arrange to have a knowledgeable amateur radio operator attend the national administrations planning meetings or the regional preparatory meetings leading up to the WRC.

Although the preparation process started some time ago it is not too late for your society to get involved. Do it today.

==> IARU Administrative Council Meeting October, 2009

The IARU Administrative Council (AC) held its annual meeting in mid-October, 2009, in Christchurch, New Zealand. IARU President Tim Ellam, VE6SH/G4HUA, presided over his first AC meeting. Also in attendance was Ole Garpestad, LA2RR, Vice President; Rod Stafford, W6ROD, Secretary; Hans Blondeel Timmerman, PB2T, President and Dennis Green, ZS4BS, Secretary, IARU Region 1; Ramï¿½n Santoyo, XE1KK, Secretary, and Daniel Lamoureux, VE2KA, Director, IARU Region 2; and Michael J. Owen, VK3KI, Chairman, and Shizuo Endo, JE1MUI, Director, IARU Region 3. Also present was Region 3 Director Peter Lake ZL2AZ along with David Sumner, K1ZZ, as recording secretary.

One of the major topics of discussion at the AC meeting involved the upcoming WRC-12, the World Radiocommunication Conference in 2012. The AC adopted preliminary IARU positions on the WRC agenda items that relate to amateur radio or may impact the amateur radio service. The most significant agenda items are:

1. Agenda Item (AI) 1.14 - Implementation of the radiolocation service in the range 30-300 MHz;

2. AI 1.15 - Possible allocations in the range 3-50 MHz to the radiolocation service for oceanographic radar applications;

3. AI 1.19 - Software-defined radio and cognitive radio systems;

4. AI 1.22 - Effect of emissions from short-range devices; and

5. AI 1.23 - To consider an allocation of about 15 kHz in parts of the band 415-526.5 kHz to the amateur service on a secondary basis, taking into account the need to protect existing services.

IARU has a document on the IARU web site that identifies the present and anticipated future requirements for radio spectrum allocations to the Amateur and Amateur-Satellite Services. These requirements are identified so that they may be taken into account in the formulation of national policies with respect to proposed and possible future international allocations conferences. At each AC meeting, those requirements are reviewed and when circumstances change so do the requirements. If you're interested in seeing what the IARU sees as spectrum requirements for the amateur service then log onto the IARU web site at http://www.iaru.org and look for the "Spectrum Requirements" document.

The IARU 2025 Committee was established a few years ago to explore restructuring IARU to make it more effective to meet the challenges faced by amateur radio. The committee came up with a proposed new structure. However, even though the proposed new structure had a number of beneficial aspects it became obvious early on that funding of the new structure could be problematic. At its recent meeting, the committee was restructured and given a slightly different mandate. If the committee can't develop a funding method for the proposed new structure then the committee may propose a different structure. Additionally, the committee should identify changes which can be implemented in the present structure to address concerns raised by the regional organizations and some member-societies.

There has been a movement in the last several years to try to identify "centers of activity" frequencies across all three IARU regions that can be used in disaster relief operations. It has at times been difficult to arrive at a consensus on what frequencies should be used. The AC noted that all three regions have now reached consensus on three global Center of Activity (CoA) frequencies for use in the event of emergencies: 14.300, 18.160 and 21.360 MHz. When no emergency operations are being conducted, these frequencies are open for normal

amateur usage. However, GAREC-09 (more on GAREC later in this report) calls upon IARU member-societies, among others, "whenever emergency communications are being conducted on frequencies that propagate internationally, to use any available real-time communications channels, including but not limited to e-mail bulletins, web-sites, social networking and DX-clusters to draw the attention of the largest possible number of Amateur Radio operators to on-going emergency communications, in order to avoid interference with emergency traffic." It would be helpful for each member-society to develop an effective method of notifying amateurs within their own country of any such emergency traffic being handled on the CoA frequencies, or elsewhere in the amateur bands.

In 2008, the AC called for a study of the QSL Bureau System. Since the study was initiated over 51 member-societies responded to the study questionnaire. It became clear that in some societies, QSL cards are not handled the same way for members as non-members. There are a small number of societies that dispose of the cards sent through their bureaus for non-members. The AC adopted a resolution stating "that member-societies are strongly encouraged, whenever possible, to provide incoming QSL bureau service to non-members within their operating territory, if such non-members agree to pay the full cost of this service; and if they are not already doing so, to explore appropriate means and methods for delivering QSL cards to non-members."

The AC adopted a protocol to deal with member-societies that no longer exist. If for a period of not less than 5 years: (a) there is no address or other means known to either the International Secretariat or the relevant regional organization by which communication may be made with a member-society; (b) there has been no communication from any person claiming to represent that member-society; and (c) there is no other evidence of the continued existence of that member-society. If those circumstances exist, then the relevant regional organization may request that the AC thereafter publish in the Calendar a notice setting out its belief that the particular Member-Society has ceased to exist, and calling for the submission of any evidence to the contrary within 180 days of the publication of the Calendar. If no such evidence is submitted within 180 days of the publication of the Calendar, then the member-society shall be deemed to no longer exist from that date. Thereafter, any association of radio amateurs claiming to represent that country or separate territory shall be required to apply for membership in the IARU in accordance with the IARU Constitution and Bylaws.

Promoting and preserving amateur radio is the mainstay of the IARU. The AC has at its disposal a number of expert consultants and technical representatives and relies heavily on such volunteer experts and technical representatives. There is always a need for more assistance by knowledgeable amateurs to attend ITU meetings and other telecommunications meetings to represent IARU. The IARU regional organizations and member-societies can be of assistance by recommending individuals who are capable of attending meetings and effectively

promoting the IARU objectives at such meetings. Individuals who are amateurs and who have backgrounds in various technical fields such as broadband or wireless technologies, propagation, radar, satellite communications and spectrum management, just to name a few, can be of assistance. Individuals who may be retired from government work in the field of communications or telecommunication regulation are good candidates for working within the IARU to achieve IARU goals. Member-society leaders are requested to investigate whether such individuals are members of their society and to determine if those amateurs would be willing to assist the IARU. If they are willing to do so, please contact the International Secretariat with the names and contact information so inquires can be made to determine if they are willing to join the IARU team of experts.

These are some of the important matters discussed at the recent Administrative Council meeting. The complete Summary Record of the meeting can be found at http://www.iaru.org/admin-council-summaries.html.

==> GAREC-09

The Fifth Global Amateur Radio Emergency Communications Conference (GAREC-09) took place in Tokyo, Japan, 24 & 25 August 2009. GAREC-09 was hosted by Japan Amateur Radio League (JARL) and was held in conjunction with Jam Fair 2009. Representatives from IARU, the three IARU regional organizations, representatives from a number of IARU member-societies and specialized amateur radio emergency communications groups from all three IARU regions attended the conference.

GAREC-09 produced a statement calling upon IARU member-societies and specialized amateur radio emergency communications groups to:

- to establish close working relationships between the National IARU Member Society and independent specialized Amateur Radio Emergency Communications Groups in the respective countries as well as to cooperate internationally,

- to request their national regulatory authorities implement the modifications to Article 25 of the Radio Regulations adopted by the World Radiocommunication Conference 2003 (WRC-03), in particular the regulations governing third-party traffic during emergencies and during training for emergency operations,

- to provide training in emergency communications to as many amateurs as possible in their respective countries with particular emphasis on:

- personal and logistical preparedness, the psychological aspects of entering a disaster area, and familiarity with the civil protection system in their country,

- specific communications techniques of particular value in emergencies, and

- remembering that the skills developed in the amateur service can be of great benefit to disaster relief organizations in maintaining and operating their own telecommunications networks,

- whenever emergency communications are being conducted on frequencies that propagate internationally, to use any available real-time communications channels, including but not limited to e-mail bulletins, web-sites, social networking and DX-clusters to draw the attention of the largest possible number of Amateur Radio operators to on-going emergency communications, in order to avoid interference with emergency traffic,

- to use their contacts with national regulatory authorities to encourage the accession to and implementation of the Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Relief Operations,

- to support the work of the IARU on an international Emergency Communications Handbook and to provide copies of existing agreements with institutional partners in emergency response as well as copies of emergency communication guidelines, manuals, and checklists developed for national or local use as inputs to this work,

- to work towards the implementation of the Memoranda of Understanding established between the IARU and ITU, IFRC, and the United Nations by seeking cooperation with the respective national institutions and organizations in their country,

- to continuously improve their awareness of the mission, vision, and values of served agencies, and

- to represent themselves as a human and technical resource able and willing to investigate the communication requirements of served agencies, offer recommendations when asked, and facilitate emergency communications when required.

GAREC-10 is already being planned. GAREC will return to Region 2 in 2010. The Venue will be CURACAO. The dates will be October 11-12, 2010.

The Theme of the Conference will be: "Learning Through Practicing". More details about GAREC-10 will be available as the conference draws closer or on the GAREC web site at http://www.iaru.org/emergency/.

==> CONTACT INFORMATION

I can be reached by email at w6rod@iaru.org. If you have information that you believe would be of interest to the other IARU member-societies around the world then send the information to me. If you would like to see a particular subject discussed in this E-Letter, don't hesitate to contact me with the suggestion.

73,

Rod Stafford W6ROD Secretary, International Amateur Radio Union

==> + ADVOCACY: AMATEUR RADIO BILL PASSES SENATE, MOVES TO THE HOUSE

On Monday, December 14, S 1755 -- The Amateur Radio Emergency
Communications Enhancement Act of 2009 -- passed the Senate by
unanimous consent; the bill now goes to the House of Representatives
for consideration. Sponsored by Senator Joe Lieberman (ID-CT), and
Senator Susan Collins (R-ME), S 1755, if passed, would direct the
Department of Homeland Security (DHS) to undertake a study on emergency
communications. S 1755 points out that "There is a strong Federal
interest in the effective performance of Amateur Radio Service
stations, and that performance must be given -- (A) support at all
levels of government; and (B) protection against unreasonable
regulation and impediments to the provision of the valuable
communications provided by such stations." Read more here
<http://www.arrl.org/news/stories/2009/12/15/11247/?nc=1>.
```

==> + PUBLIC SERVICE: HAMS HELP OUT WITH SEA RESCUE

When Dave Nicholson, N2AWE, was stranded at sea earlier this month off the Bermuda Triangle, he had no fuel and his 47 foot sailboat had sustained severe damage in a storm. When they learned of his predicament, hams with the Maritime Mobile Service Net (MMSN) helped to coordinate with the US Coast Guard to bring fuel and a tow boat to guide Nicholson safely to port. Read more here <http://www.arrl.org/news/stories/2009/12/16/11254/?nc=1>.

==> THE 2009 ARRL SPECTRUM DEFENSE CAMPAIGN NEEDS YOUR SUPPORT

Chief Development Officer Mary Hobart, K1MMH, reports that the ARRL has raised more than $221,000 toward the goal $310,000 for the 2009 Spectrum Defense Fund <http://www.arrl.org/defense>. "The messages I receive from the ARRL members and hams who contribute to this much needed fund are heartening," she said, "expressing appreciation for all the work ARRL does for the Amateur Radio community to protect our frequencies. And we can all be proud of the successes that have come from the work of ARRL leadership -- the Board and staff here at HQ. But there is always more to do." Hobart said that year after year, ARRL members tell her that the League's representation of radio operators -- both in Washington and on the international stage -- is one of, if not the most important activities that the ARRL does. "The cost of that representation at meetings in Washington, at ITU gatherings and working party meetings to prepare for world telecommunications conferences is the key to the continued success of our defense efforts," she said. "Spectrum Defense is one of those areas that is not covered completely by member dues. So we ask ARRL members to do what they can to help cover those expenses." Amateurs wishing to make a contribution may do so easily online <http://www.arrl.org/defense>, via postal mail or by calling the ARRL Development Office at 860-594-0397.

==> + AMATEUR RADIO IN SPACE: FIRST CHINESE AMATEUR RADIO SATELLITE NOW IN SPACE

AMSAT China (CAMSAT <http://www.camsat.cn/>) reports that at around 0230 UTC on December 15, China launched its first Amateur Radio satellite -- named XW-1 <http://www.amsat.org/amsat-new/satellites/satInfo.php?satID=116&retURL=satellites/futures.php>
-- into space. The microsatellite -- a secondary payload aboard the CZ-4C rocket launched from the Taiyuan Satellite Launch Center -- was launched into a Sun-synchronous orbit with an apogee of approximately 1200 kilometers. XW-1 successfully reached orbit at 0253 UTC. Members of the XW-1 launch team reported they received a beacon from the satellite shortly after the satellite deployed. In the first few days, the XW-1 team will work on the satellite's FM and store-forward transponder mode and its linear transponder mode. Once those tests are complete, they will upload a new flight program to set up the payload schedule. The satellite's communications payload includes a beacon and three crossband transponders operating in FM, SSB/CW and digital modes. Uplink and downlink frequencies can be found on the CAMSAT Web site

<http://www.camsat.cn/index.php?option=com_content&view=article&id=56&Itemid=67>.
For the latest Keplerian elements for XW-1 and other satellites, check out the W1AW Keplerian Bulletins <http://www.arrl.org/w1aw/kep/>.

==> + AMATEUR RADIO IN SPACE: STUDENTS AND TEACHERS INVITED TO "FLY A FILE" ON ARISSAT-1

On February 3, 2006, cosmonaut Valery Ivanovich Tokarev hand-launched the Amateur Radio satellite SuitSat-1 from the International Space Station during an extra vehicular activity (EVA), NASA's term for a spacewalk. A discarded Russian ORLAN spacesuit, SuitSat-1 was equipped with an Amateur Radio transmitter that transmitted telemetry and greetings from youngsters to the youth of the world in several languages. In 2010, an Amateur Radio satellite -- ARISSat-1 -- will once again be hand-launched from the ISS. Like its predecessor, ARISSat-1 will transmit messages recorded by students, and teachers and students are invited to "fly a file" aboard this Amateur Radio satellite. Read more here <http://www.arrl.org/news/stories/2009/12/15/11251/?nc=1>.

==> + ARRL PUBLICATIONS: CHECK OUT THE JANUARY/FEBRUARY 2010 NCJ

The January/February issue of NCJ, The National Contest Journal, is filled with the latest news from the contesting world. Whether you are new to contesting or are a seasoned pro -- or somewhere in the middle -- you will find something in NCJ just for you. In addition to all of the exciting articles in this issue, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "VHF Contesting," by Jon Jones, N0JK; "RTTY Contesting," by Don Hill, AA5AU; "Propagation," by Carl Luetzelschwab, K9LA; "Contesting on a Budget," by Ralph Bellas, K9ZO, and "Contesting 101," by Kirk Pickering, K4RO. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. NCJ is what every contester needs in their shack -- subscribe today <http://www.arrl.org/ncj/>! Read more here <http://www.arrl.org/news/stories/2009/12/16/11252/?nc=1>.

==> + ARRL PUBLICATIONS: QEX : THE JANUARY/FEBRUARY 2010 ISSUE

The January/February issue of QEX is coming soon, and it is full of theoretical and practical technical articles that you won't want to miss. Would you like to write for QEX? It pays $50/printed page. Get more information and an Author's Guide <http://www.arrl.org/qex/>. If you prefer postal mail, send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494. QEX is edited by Larry Wolfgang, WR1B <lwolfgang@arrl.org>, and is published bimonthly. The subscription rate (6 issues) for ARRL members in the US is $24. For First Class US delivery, it's $37; in Canada and internationally by airmail it's $31. Nonmembers add $12 to these rates. Subscribe to QEX <http://www.arrl.org/qex> today. Read more here

<http://www.arrl.org/news/stories/2009/12/17/11253/?nc=1>.

==> + NOW YOU KNOW!: SANTA'S A HAM!

By ARRL News Editor S. Khrystyne Keane, K1SFA

For 37 years, Mickey Hicks, WO6T, played Santa Claus to hundreds of children. These children never sat on Santa's lap to tell him that they had been good boys and girls and what they wanted for Christmas. They did it in a much more simple way -- they picked up a microphone and told Santa on the air. Each year, Hicks, a ham for almost 50 years and a long-time Amateur Radio instructor, would get on the air for 10 days each December as W6S (Whiskers-6-Santa). Unfortunately, Hicks became a Silent Key earlier this year.

Hicks said that the first year he operated as W6S was a hit with the operators -- and their children. Most children, he noted, are a bit apprehensive of talking over the radio, let alone to Santa. One of the most challenging parts of operating was when he heard a parent say "This one is shy and won't talk." That was never a problem for Hicks -- after a few warm-up questions, such as "Can you say hello to Rudolph?" -- he said he could strike up a conversation that lasted a few minutes. He had even heard back from parents that they weren't able to get the microphone away from the kids afterward!

Back in 2001, Hicks told the ARRL <http://www.arrl.org/news/stories/2001/12/21/3/?nc=1> that his Santa's Workshop was a great ham radio recruiting tool. One of his most memorable experiences was when a young girl he'd once spoken with on the air as Santa came by with her ham ticket in hand to thank him in person for getting her interested in Amateur Radio. "I had tears in my eyes, of course," he said. One of the most enjoyable moments of Hicks' Santa career occurred when he was speaking with a young child and realized he had spoken with their parents and grandparents when they were youngsters!

Mark Slater, WI6J, was Hicks' QSL manager. With the blessing of Hicks' wife, son and daughter-in-law, Slater will carry on the W6S tradition for 2010 and beyond. "Mickey's shoes are so much bigger than I could ever hope to fill," he told the ARRL, "but I know Mickey would have wanted Santa to keep getting on the air and speaking with the children." Slater said you can find him most evenings, as well as the weekend of December 19-20, on 14.270 MHz, Santa's favorite frequency. Santa is a ham -- now you know!

==> ARRL STAFF VACANCY

A vacancy has developed in the position of ARRL Emergency Preparedness and Response Manager. Applications for this position will be solicited before the end of the year with the objective of filling the position early in 2010. Because this is the last scheduled ARRL Letter of 2009, if you or someone you know may be qualified for and interested in the position, please watch for the posting on the ARRL Web site

<http://www.arrl.org/announce/jobs/>.

==> SOLAR UPDATE

Tad "A friend to man, to whom thou say'st, 'Beauty is truth, truth beauty' <http://englishhistory.net/keats/poetry/odeonagrecianurn.html>" Cook, K7RA, reports: Yet another new sunspot group -- number 1035 -- emerged this week, seemingly on top of group 1034, which has been visible since December 9. This sunspot group is quite active, and we may see a rise in geomagnetic activity on Sunday, December 20 with a predicted planetary A index of 15. Look for more information in the Solar Update, available on the ARRL Web site on Friday, December 18. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. This week's "Tad Cookism" brought to you by John Keats' Ode on a Grecian Urn <http://englishhistory.net/keats/poetry/odeonagrecianurn.html>.

==> THIS WEEK ON THE RADIO

This week, the Russian 160 Meter Contest is December 18. The OK DX RTTY Contest is December 19. The Croatian CW Contest is December 19-20 and the Lighthouse Christmas Lights QSO Party is December 19-January 3. The ARCI Holiday Spirits Homebrew Sprint is December 20, the Run for the Bacon QRP Contest is December 21 and the SKCC Sprint is December 23. Next week, check out the South Dakota QSO Party and the Stew Perry Topband Challenge -- both are on December 26-27. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

==> + ARRL HEADQUARTERS CLOSED FOR CHRISTMAS, NEW YEAR'S HOLIDAYS

ARRL Headquarters will be closed Friday, December 25, 2009 and Friday, January 1, 2010 in observance of Christmas and New Year's Day. There will be no W1AW bulletins <http://www.arrl.org/w1aw/> or code practice transmissions <http://www.arrl.org/w1aw.html#w1awsked> those days. There will be no ARRL Letter <http://www.arrl.org/arrlletter/> <http://www.arrl.org/arrlletter/>or ARRL Audio News <http://www.arrl.org/arrlletter/audio/> <http://www.arrl.org/arrlletter/audio/>on Thursday, December 24 and 31. We wish everyone a safe and joyful holiday season and a prosperous 2010.

==> ARRL CONTINUING EDUCATION COURSE REGISTRATION

Registration remains open through Sunday, December 27, 2009, for these online course sessions <http://www.arrl.org/cep/student/> beginning on Friday, January 8, 2010: Amateur Radio Emergency

Communications Level 1; Antenna Modeling; Radio Frequency Interference; Antenna Design and Construction; Ham Radio (Technician) License Course; Propagation; Analog Electronics, and Digital Electronics. To learn more, visit the CEP Course Listing page <http://www.arrl.org/cep/student> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

The ARRL Letter is published Thursdays, 50 times each year. ARRL members may subscribe at no cost or unsubscribe by editing their Member Data Page as described at http://www.arrl.org/arrlletter/.

Amateur Radio Newsline(tm) Report 1688 - December 18 2009

The following is a closed circuit. With an update on Amateur Radio Newsline, here's our Producer Bill Pasternak, WA6ITF:

--

This message will last about 5 1/2 minutes. Let me start by saying thank you to all who called or e-mailed their condolences on the passing of our treasurer, and my friend of the past two and a half decades Andy Jarema, N6TCQ. I will shortly on-pass those wishes to Judy and I know she will be appreciative.

As anytime there is the sudden passing of a key member of any organization there is a true feeling of loss. It takes time to sink in that this person whom had been such an integral part of all of our lives is now gone and he will never return. That I will never again going to hear the phone ring and on the other end will be Andy just calling to say hello. Or, or more times than not, telling me that the funds are low and we need income fast. And always telling me this with his well known Cheshire cat smile and a bit of a laugh to help soften the bad news a bit.

Yes, Andy Jarema, N6TCQ, was more than our treasurer and support fund administrator. He was our friend and a better friend nobody could possibly have.

But Andy would be the first to tell you that life and the business associated with life must go on. And it has for us here at the Amateur Radio Newsline. And I want to spend a few moments bring you up to date.

First off to those who support Newsline by check, we believe that we have located and deposited all that were in Andy's possession at the time of his passing. We have also been able to transfer all Pay Pal donations. In all, there was about $1500 in donations that Andy had not had the time to process before falling ill. Those have been transferred into our bank account with $741 going to pay off back expenses associated with the Young Ham of the Year Award and other administrative costs that had been lingering the past several months. Another $182 went to our Wireless provider for two months of service and $201.01 was paid to ATT to bring our wireline phone bill up to date. So out of that $1500 we have already spent $1124 to clear past debts and leaving us with about $375 to hopefully get us through to years end. Not a lot, and that does not include the monthly $63 for our high speed Internet connection that Ill front out of pocket for the time being, but at least we are up to date for the moment.

So what does this mean to all of you? First, to those of you who contribute by Pay Pal, you can resume doing so. The link to our PayPal donation account is on our website at www.arnewsline.org

If you support us by mail, please note that the Arcadia California Post Office Box is being closed within the next week or so. Temporarily, we are using my address for all incoming mail. If you do not have it, you will hear it at the end of this bulletin or just look me -- WA6ITF -- up on QRZ.com or Buckmaster. I have been at this address since 1979 and have no plans to move.

As to the future, we are searching for a ham who like Andy was, is a Certified Public Accountant with expertise in maintaining an income database as well as the knowledge needed to file our annual federal and state tax reports. Obviously the latter kind of means we need someone who is a California resident for this post. And he or she needs to do this as a volunteer and free of charge for us as Andy did for the last two decades plus. If you know of anyone who fits that description have that person contact me by e-mail to newsline@arnewsline.org

Lastly, I do have Andy's file as to whom donated what and when. Right now I simply do not have the time to do the regular thank-you's that Andy did so eloquently over the years he served as the Support Fund Administrator, but Ill do my best to include them in upcoming newscasts. It was a tradition that Andy started and that we plan to continue in his memory.

And that brings you up to date. Yes, we do need your continued support and the methods for us to accept contributions are back in place.

Once again we thank all of you for your outpouring of support in this very hard time. I think that's what sets Newsline apart from all other groups. Whether its us here producing the newscast or you who are listening, we truly are an extended family held together all of these years through the bonds of a hobby and service known as Amateur Radio.

Thank you, and God Bless. I'm Bill Pasternak, WA6ITF, in Los Angeles.

Now to Don Carlson, KQ6FM, and this weeks newscast.

--

Thank you Bill. Now, Amateur Radio Newsline report number 1688 with a release date of Friday, December 18th 2009 to follow in 5-4-3-2-1.

The following is a QST. China launches its first multi-transponder ham radio satellite, a big sunspot finally appears on the solar disc, Bahrain gives its hams added spectrum and ARISSSAT One to carry student files into space. Find out the details on Amateur Radio Newsline(tm) report number 1688 coming your way right now.

HAM RADIO IN SPACE: CHINA LAUNCHES THE XW-1 HAMSAT

China's first ever amateur radio satellite is now in space. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

AMSAT China reports the bird known as XW-1 was launched at about around 02:30 UTC on Tuesday, December 15th. And not long after liftoff it achieved orbit and its beacon was received by a monitoring station located in Sanya.

Late word is that XW-1 is in a circular orbit with both Apogee and Perigee at 1200 kilometers above the Earth. It sits at an inclination of 105 degrees and has an orbital period of 109 minutes to circle the planet.

XW-1 carries several transponders but the one that will be of interest to most hams is Mode J. This is a VHF to UHF orbital FM Voice Repeater running 1 watt output. It has an uplink on 145.8250 MHz and requiring a Continuous Tone Code Squelch Access Tone of 67.0 Hertz. The Downlink is 435.6750 MHz.

Other transponders support low duty cycle communications such as SSB and Morse. There's also a separate digital transponder as well.

XW-1 was a secondary payload aboard a Chinese booster that went into space from Taiyuan Satellite Launch Center. It placed its cargo into a sun-synchronous orbit about 1200 kilometers high. The primary payload of this launch is the Yaogen-8 Remote Sensing Satellite.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, in Scottsdale, Arizona

**

RADIO PROPAGATION: BIG NEW SUNSPOT:

Sunspot 1035 is here and its big news. This, because its one of the largest sunspots seen in years.

On Tuesday, December 15th Spaceweather reported that sunspot 1035 was nearly as wide as seven planet Earth's and growing. It said that the fast-growing active region burst into view on December 14th with a magnetic polarity that clearly identifies it as a member of new Solar Cycle 24.

If the expansion continues apace, it could soon become the largest sunspot of the year. Check spaceweather dot com for the latest photos and updates. And lets hope that this sunspot hangs around for a while to bring hams worldwide some long awaited High Frequency DX. (Spaceweather)

**

RESTRUCTURING: BAHRAIN GRANTS NEW OPERATING PRIVILEGES

The Daily DX is reporting that radio amateurs in Bahrain can now operate 50.0 to 50.5 MHz on 6 meters on a primary and exclusive basis, and 50.05 to 52.00 MHz on a secondary basis. The report also adds that they can now operate on additional frequencies on 136 kHz, 1.8 MHz, 7 MHz, 430 MHz and higher bands.

However there is one caveat: Bahrainian amateurs cannot operate on these newly allocated frequencies until their licenses are amended. (Daily DX, OPDX, Southgate, others)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Pikes Peak FM Association and the Pikes Peak Amateur Radio Association serving the inter-mountain West from Colorado Springs, Colorado.

(5 sec pause here)

**

RADIO LAW: RSGB TO CHALLENGE OFCOM OVER BPL

The Radio Society of Great Britain has established a Spectrum Defense Fund to challenge UK telecommunications regulator Ofcom. This over the agency's interpretation of the various Acts and Directives that cover Broad over Powerline or what Europe calls PLT Internet access and the threat that it may pose to amateur radio communications.

According to an RSGB news release, this challenge may take the form of a Judicial Review, but the national society says that i ill await the advice of its lawyers on the direction to take. It also notes that the cost of a Judicial Review is likely to be in excess of ï¿½75,000 United Kingdom Pounds and that there is no guarantee of success.

If this approach sounds a bit familiar that's because it quite similar to the court case brought here in the United States against the FCC. In that one the court ruled that the ARRL was correct and ordered the FCC to reassess its BPL policy and rules. (GB2RS)

**

RADIO LAW: CB WEBSITE WARNS TRUCKERS TO STAY OUT OF 10 METERS

A CB website is warning trucker C-B'ers and Freebanders to keep out of the 10 meter ham band. The home page post on LiveCBRadio.com tells readers that mobile ham operators all over the United States are now observing and reporting truckers talking above 28 MHz. The website notes that the hams will not just report the truck and it's company to the FCC, but that they often include video and audio as evidence with their complaints.

The website goes on to note that the FCC contacts the trucking company warning them of potential fines. It says that already there have been cases where both truckers and trucking companies have been fined.

The website warns readers, especially truckers with modified export type C-B sets that what is called C-B channel 19 High is actually 28.085 MHz. When someone with one of these illegal export radios tunes to 19 High he or she is transmitting full carrier A-M in the Morse only area of 10 meters.

The website warns CB'ers and Freebanders that is best to stay within the common C-B channels from 1 to 40. It notes that trucker CB'ers using the 19 High frequency might think that they are gaining extra privacy. In reality what they are doing is drawing national attention from the United States ham radio community and through them from the FCC. (QRZ, others)

**

RESCUE RADIO: FCC AND FEMA ESTABLISH CMAS STANDARD

Two federal agencies have established a mobile communications emergency public warning technology standard. The Federal Emergency Management Agency and the Federal Communications Commission announced the adoption of design specifications for a gateway interface enabling wireless carriers to provide emergency alerts via cell phones and mobile devices.

The intended Commercial Mobile Alert System--CMAS--project, part of the Integrated Public Alert and Warning System. It will be able to provide the President of the United States a means by which to notify Americans of national emergencies. The system would also be available for Amber alerts and regional warnings in the form of 90-character text messages.

The announcement also marks the beginning of the 28-month period, mandated by the FCC in August 2008, for commercial mobile service providers who have elected to participate in the CMAS design specs to develop, test and deploy the system. They must also be in the position to deliver mobile alerts to the public by 2012.

Wireless carriers participating in the CMAS will relay authorized text-based alerts to subscribers. They will also be able to transmit vibration and audio signals for those subscribers with disabilities. (TVB)

**

RADIO HONORS: ARRL SEEKS INTERNATIONAL HUMANITARIAN AWARD NOMINEES

The ARRL is seeking nominations for one of its most prestigious honors. Jeremy Boot, G4NJH, has the details:

--

Nominations are open for the 2009 ARRL International Humanitarian Award. The award is conferred upon an amateur or amateurs who demonstrate devotion to human welfare, peace and international understanding through amateur radio.

The League established the annual prize to recognize amateur radio operators who have used ham radio to provide extraordinary service to others in times of crisis or disaster.

Nominations should include a summary of the nominee's actions that qualify the individual or individuals for this award, plus verifying statements from at least two people having first-hand knowledge of the events warranting the nomination. Nominations should include the names and addresses of all references. Details appear on the ARRL website, www.arrl.org, where you can search for humanitarian award.

I'm Jeremy Boot, G4NJH.

--

The deadline to nominate an amateur or group of amateurs for the 2009 ARRL International Humanitarian Award is December 31st. (ARRL)

**

NAMES IN THE NEWS: SPECIAL RECOGNITION FOR ZS5MU

South African Radio League Councilor Francois Botha, ZS6BUU, has presented Alastair Campbell, ZS5MU, with a special certificate. This recognizing the support he and his wife Davina, ZS5GC, have been giving the yachting fraternity for the past 30 years. The citation states that ZS5MU supported by ZS5GC has operated the South African Maritime Mobile Net serving the yachting community at sea for 30 years. (SARL)

**

NAMES IN THE NEWS: VE3CT APPOINTED TO CANADIAN AMATEUR RADIO HALL OF FAME

And congratulations go out to Croft Taylor, VE3CT, of Kanata, Ontario, Canada on his appointment to Canadian Amateur Radio Hall of Fame. Taylor was awarded this honor by the Hall's Board of Trustees who have announced that it will be presented to him at a ceremony to be held in in Ottawa in the spring of 2010. Appointments to the Canadian Amateur Radio Hall of Fame are made to recognize a radio amateur for outstanding achievement in sustained service to amateur radio in that nation or to all of amateur radio at large. (RAC)

**

THE SOCIAL SCENE: INTERNATIONAL DX CONVENTION 2010

Turning to the 2010 ham radio social scene, word that the 61st Annual International DX Convention takes place next April 16th, 17th, 18th at the Holiday Inn Hotel and Conference Center, Visalia, California.

The International DX Convention is the world's foremost gathering that attracts DX'ers and aspiring DX'ers from around the world. The show attracts the biggest of the big-guns from the African continent, from Asia, Europe, Oceania and of coarse both North and South America. Some are there to tell how they have been able to meet and beat the challenge of DXing in an ever expanding hobby. Others will tell of the challenges of operating

from places far removed from the comfort of their home stations.

The 2010 event will be sponsored by the Southern California DX Club. Pre-registration began on December 1st. More information about the show is on-line at www.dxconvention.org. (IDXC)

**

BREAK 2

Wishing each of you the best of holiday greetings, this is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WORLDBEAT: CZECH INTELLIGENCE SAYS SADDAM HUSSEIN PLANNED TO ATTACK RADIO FREE EUROPE

You may find this hard to believe, but the Iraq's former leader planned to attack and destroy Radio Free Europe. The plot was recently made public by Media Network and the Czech government. Amateur Radio Newsline's Jim Davis, W2JKD, has more:

--

According to Andy Sennitt at Media Network the late Iraqi dictator Saddam Hussein ordered his secret agents to attack the Prague headquarters of US run Radio Free Europe and Radio Liberty. This, to end broadcasting to Iraq.

Sennitt quotes Czech intelligence service spokesman Jan Subert who said that the attack was ordered by the then Iraqi leader in 2000. Also that Iraqi intelligence agents planned to use numerous weapons including rocket propelled grenades, rifles and submachine guns in the attack. Subert said that the weapons had been stockpiled for the attack after they were brought into the country in an Iraqi diplomatic car.

It was not known when the attack was due to take place but Subert said that Czech intelligence discovered the plot and the Iraqis submitted the weapons to Czech authorities in 2003. The plan was for the attack to take place from the window of a nearby flat that the Iraqis planned to rent as an office for a fake company.

I'm Jim Davis, W2JKD.

--

The report seems to indicate that good intelligence by Czech national security foiled Saddam Hussein's plot. (Media Network)

**

SCIENCE CORNER: RENEWABLE ENERGY USE CLIMBS

Americans used more solar, nuclear, bio-mass and wind energy in 2008 than they did in 2007. This, according to the most recent energy flow charts released by the Lawrence Livermore National Laboratory.

The study also found that the nation also used less coal and petroleum during the same time frame and only slightly increased its natural gas consumption. Geothermal energy use remained the same. (Science Daily)

**

EMERGING TECHNOLOGY: APPLE REFUSES WARRANTY ON SMOKERS COMPUTERS

If you smoke and own an Apple computer, the company might not fix it under warranty. This is because Apple says it may void the warranty should you need to bring a smoke exposed computer in for repair.

The Tech Blog at Yahoo notes that in at least two instances in different parts of the country, Apple has voided the warranty and refused to provide repair service on computers exposed to environments where cigarette smoke has been present. Calling cigarette smoke residue inside a computer a health risk and a biohazard, in both cases Apple customers have been denied service despite having time left on a valid warranty.

Apple is standing by the decisions, saying that repair centers have the authority to make decisions like this on their own. It cites OSHA rules that include nicotine in a list of hazardous substances that could damage the health of someone exposed to it.

Apple isn't formally commenting on the issue or responding to media requests for comment, namely regarding whether there's a threshold for cigarette smoke exposure beyond which a computer won't be serviced. No word on whether other computer vendors have the same or similar policies. More is at http://tech.yahoo.com/blogs/null/156203 (Yahoo)

**

HAM RADIO IN SPACE: ARISSAT ONE TO CARRY STUDENT FILES

School students world-wide are being invited to fly a computer file on ARISSAT One, the educational satellite that was originally called Suitsat 2.

ARISSAT One will launch sometime in 2010 and like its predecessor Suitsat One it will again transmit messages recorded by students. But in addition, teachers and their students are invited to fly a file aboard this amateur radio satellite. This on a memory flash drive to be included on the bird.

What a teacher or student wants to fly is at their own discretion, but there are some suggestions from the ARISS team. These include things the student has prepared such as a paper or a study done on a science, technology, engineering or math topic. Other possibilities include, a drawing of space craft or a schematic, a journal kept on an educational topic, a story or news article about a science subject and the like.

Dave Jordan, AA4KN, will take delivery of these files and copy them onto a flash drive memory stick, plus make them available on the web for anyone to see. He will look at all of them for content to make certain that they are appropriate to student viewing.

Files can be in any language as long as an English translation is also included. Only JPG or PDF files will be accepted. Please e-mail files to aa4kn (at) amsat (dot) org. (ON4WF)

**

HAM RADIO NEAR SPACE: ANOTHER SUCCESSFUL ARISS TRAINING CONTACT

Another highly successful simulated ARISS contact took place on Tuesday, December 8th. This. between Deer Creek Elementary School in Bailey, Colorado and astronaut Tracy Caldwell, KF5DBF at the Johnson Space Center in Houston Texas.

As in the past, this session was a terrestrial-based amateur radio contact using Amateur Radio on the International Space Station equivalent equipment. These QSO's help astronauts learn the ins and outs of operating ham radio in space without having to leave the ground. For the school it means that its kids still get a chance to talk with a real live astronaut.

Reports are that the Deer Creek school enjoyed its session so much that it plans to apply for a contact with an actual on-orbit astronaut. (ANS)

**

THE FINAL FRONTIER: VIRGIN GALACTIC SPACESHIP TWO UNVEILED

Virgin Galactic has unveiled its second sub-orbital spacecraft. The unveiling of the VSS Enterprise took place on Tuesday evening, December 8th at the Mojave Air and Space Port in California's high desert.

Attached to its mother ship, the vehicle better known as SpaceShipTwo is expected to be the first commercial spacecraft when it enters service with Virgin Galactic. Constructed by Scaled Composites under the guidance of legendary aircraft designer Burt Rutan, the carbon composite spacecraft uses the same fuselage as its mother ship, the VMS Eve.

After a year of rigorous testing, VMS Eve completed flight testing earlier this fall. Rutan didn't specify when flight testing for SpaceShipTwo would begin, though it is expected to start early next year.

Sub-orbital passenger flights could start as early as 2011 from Virgin Galactic's space port in New Mexico which is currently under construction. Tickets for the early adopters are $200,000 for a training program culminating with the ride into space. (Virgin Galactic)

**

ON THE AIR: A FERRY GOOD IDEA

On the air, listen out for special event call GB2EI standing for Great Britain to Ireland is on the air to celebrate the reintroduction of the

Swansea to Cork Ferry service. The original service commenced in 1896. A similar station, EI2GBW, will also be operating from Cork. Both special event callsigns will be operational until March 31st of 2010. QSL details are available at qrz.com. (IRTS)

**

ON THE AIR: COMMEMORATING THE 5th EAST ASIAN GAMES

Members of the Hong Kong Amateur Radio Communications Association were on the air through December 13th as VR2EAG. This, to celebrate 5th East Asian Games that were hosted there. If you made contact with VR2EAG please QSL to the Hong Kong Amateur Radio Communications Association, GPO Box 7191, Hong Kong. (HKARC)

**

ON THE AIR: GERMAN HAMS CELEBRATE THE ANTARCTIC PROGRAM

And for the final time, the German special event station DR09ANT is on the air to celebrate the Worldwide Antarctic Program. It has is operational through December 31st using all modes on all bands. QSLs will be sent via the bureau automatically. (DX News)

**

DX

In D-X, The DX World of Ham Radio web page is conducting a online survey to see which expedition warrants the title DXpedition of the Year 2009. Special engraved trophies will be awarded to the top three chosen. To participate in the survey, go to http://dx-hamspirit.com.

Also word that SM1TDE plans an operation from Gambia from through December 31st. No other information is available at airtime. QSL as directed on the air.

W4JJ has hit the airwaves as T6LC from the Afghanistan province of Paktia. He is active using CW or SSB on 20 and 40 meters usually from 1430 to 1800 UTC. His QSL cards are handled by K4MJN.

And Angolan station CT1ITZ stroke D2CQ had planned to go QRT by the end of November but his stay was extended until December 27th. He operates SSB only and his QSL manager is CT1IUA.

Lastly, an international group of operators will be active as 3W6C from Con Co Island Vietnam, from April 10th to the 18th, 2010 and there is an open spot for one more operator. If you or any members of your organization would like to be considered a candidate for this open spot on our crew, please send details about your background and DX'ing experience to Hans-Peter by e-mail to hb9bxe (at) 3w6c (dot) qrv (dot) ch. He can supply you further details about expenses, travel, and all other aspects of the operation

(Above from various DX news sources)

**

THAT FINAL ITEM: IRC'S BEING REPLACED

And finally this week, its well known that International Reply Coupons or IRC's are used by many has to help with postal costs. But IRC's do not last forever as we hear from Jason Daniels, VK2LAW:

--

IRCs - important information. Please be aware that the batch of IRCs that have been used for the last
few years will no longer be valid at the post office. 31st December 2009 is the dead line for the current style but it's best to stop using them ASAP to allow transit time. The new one has the expiry date of 31st December 2013, just above the 'UPU' logo at your right hand side.

I'm Jason Daniels, VK2LAW

--

If you have old IRC's get them exchanged before their value is gone. (WIA News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), 28197 Robin Avenue, Santa Clarita California, 91350

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Carlson,
KQ6FM, wishing you a Happy Hanukkah and a Merry Christmas from Reno, Nevada. 73 and we thank you for listening.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

511. Amateur Radio Newsline(tm) Report 1689 - December 25 2009

Newsgroup: rec.radio.amateur.moderated
Date: 2009-12-25 02:44:57 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>
Message-ID: <5.2.0.9.2.20091224172914.030c0008@popd.ix.netcom.com>
Source record: 1721
Cross-posted to: rec.radio.amateur.moderated,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.info

Amateur Radio Newsline report number 1689 with a release date of
Friday, December 25th 2009 to follow in 5-4-3-2-1.

The following is a Q-S-T. Congress may force the FCC to have engineers
as advisors to the Commissioners, the Emergency Communications
Enhancement act gets a nod from the U-S Senate, a power company is told
to turn off part of its system due to alleged interference to aircraft,
hams worldwide welcome the XW-1 ham-sat to the airwaves and a visit with
an all grown up Veronica Harrington, KC6TQR. All this and more an our
Christmas week Amateur Radio Newsline(tm) report number 1689 coming your
way right now.

(Billboard Cart Here)

**

RADIO LAW: CONGRESS TO CONSIDER PUTTING STAFF ENGINEERS BACK AT FCC

Engineers may soon be advising FCC Commissioners if the United States
Congress has its way. Amateur Radio Newsline's Bruce Tennant, K6PZW,
reports:

--

United States Senator Olympia Snowe, of Maine, has introduced a bill
that would potentially add one electrical engineer or computer scientist
to the staffs of each commissioner of the Federal Communications
Commission. Known as S. 2881, the bi-partisan measure co-sponsored by
Senator. Mark Warner of Virginia would create the new position of Staff
Engineer and would require that the person have a degree in electrical
engineering or be a computer scientist.

According to the Society of Broadcast Engineers, if eventually passed
into law the new authorization would effectively undo a loosening of
requirements for technical staff at the highest level of the FCC that
began more than 25 years ago. SBE President Vinny Lopez said the bill
will go a long way toward returning technical expertise to the FCC
commissioners' offices.

This creation of the mandatory Staff Engineer would be an additional
position. The bill does not seek to replace any of the current three
authorized staff assistants in each commissioner's office. The Society
of Broadcast Engineers says that it will seek to get a companion bill
introduced in the House.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The previous attempt to add technical expertise to the FCC commissioner's offices took place way back in 1991. That's when Representative Don Ritter introduced HR. 3501, which would have required that at least one member of the commission be skilled in the engineering sciences. It went down to defeat. (RW)

**

RADIO LAW: AR EMCOMM ENHANCEMENT ACT GETS SENATE NOD

The Amateur Radio Emergency Communications Enhancement Act of 2009 has been passed the Senate by unanimous consent and now goes to the House of Representatives.

S 1755 was cosponsored by Senators Joe Lieberman of Connecticut and Susan Collins of Maine. The measure if passed and signed into law would direct the Department of Homeland Security to undertake a study on emergency communications and the role played by radio amateurs.

S 1755 points out that there is a strong Federal interest in the effective performance of Amateur Radio Service stations. As such that performance must be given support at all levels of government; and protection against unreasonable regulation and impediments.

More on this bill is on-line at the ARRL Website at www.arrl.org/news/stories/2009/12/15/11247/?nc=1 (ARRL)

**

RESCUE RADIO: VK HAMS COMMEMORATE RECOVERY FROM BRUSHFIRE

Australia's Yarra Valley Amateur Radio Group will be setting up a field station with the call VI3KIAH at Kinglake. This in commemoration of the work done by hams at the Black Saturday bush fires. Kinglake was one of the worst affected areas in the Australian 2009 fire season. Jim Linton VK3PC picks up the story from here:

--

This commemorative operation is using a callsign that has the suffix KIAH. Thats an Australian Aboriginal word meaning 'beautiful place' or 'from a beautiful place'.

The purpose of the amateur radio activity is to acknowledge the efforts of all who fought and were involved the Black Saturday fires on the 7th of February this year, and the services provided by radio amateurs.

VI3KIAH will be at the Frank Thompson Reserve Kinglake 2pm to 8pm local time on Sunday the 7th of February.

It's first 173 contacts will qualify for a "From the Black" QSL card the significance of 173 is that number of people died in the disaster.

On the day VI3KIAH will be operating both VHF and HF from the club's new emergency communications caravan that has replaced the vehicle destroyed by fire at Healesville.

The Yarra Valley Amateur Group invites those who were involved in the Black Saturday disaster and others to visit the station at Kinglake and to look for it on air.

Well done to the group for its planning of this respectful commemorative activity to occur on a day when all Victorians are asked to pause for a minute's silence for the first anniversary of the Black Saturday bushfire disaster.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

No doubt that the world of amateur radio will be listening on February 7th for the callsign VI3KIAH. (VK3PC)

**

RESTRUCTURING: CEPT SURVEYS MEMBERS ON UNIVERSAL LICENSE EXPANSION

Meantime, across the Atlantic pond the CEPT Electronic Communications Committee Working Group RA2, which deals with Radio Amateur issues, has published the results of a questionnaire. This, on the procedure for a country joining CEPT Recommendations.

The survey sought the views of CEPT member administrations on the appropriate procedure for a country to join in using these CEPT Recommendations in relation to an acceptable universal Amateur Radio license and on a harmonized or universally accepted Amateur Radio Examination Certificate. It also sought input on the need for public consultation in case of amendment of national information in the relevant annexes to these recommendations.

For those not aware, CEPT is an acronym that stands for the European Conference of Postal and Telecommunications. The actual name comes from the French pronunciation of the group which is the Confï¿½rence europï¿½enne des administrations des postes et des tï¿½lï¿½communications.

CEPT was established on June 26, 1959 as a coordinating body for European state telecommunications and postal organizations. The results of the survey are on line at www.ero.dk. (Southgate)

RADIO LAW: OFCOM GRANTS EXTENSION TO 500 kHz UK STA

United Kingdom hams involved in 500kHz experimentation have had their license Notices of Validity extended to 2012. This to permit the continued evaluation of that band.

On Wednesday December 16th, UK telecommunications regulator Ofcom announced that following requests made by the Radio Society of Great Britain, the period of validity for all 501 to 504 kHz Notices of Validity is to be extended. This, follows negotiations with the Maritime and Coastguard Agency which lead Ofcom to extending the validity period to February 29, 2012.

The Notices of Validity, which are the UK equivalent of the FCC's granting of a Special Temporary Authority, were originally planned to expire at the end of February 2010. (RSGB)

THE BPL WAR: UK MAGAZINE VS. BPL/PLT

A United Kingdom consumer electronics magazine has taken on the Broadband over Powerline interference issue.

Author Mike Richards, G4WNC, visited the recent E-M-C U-K trade show and found that powerline telecommunications and the problems they are causing were the hot topics there. His report can be read on pages 32 through 35 of the January issue of Radio User magazine.

The article suggests that if readers think they are suffering from interference then they should complain to telecommunications regulator Ofcom. It also explains how to properly address the issue with Ofcom and refers readers to the United Kingdom radio interference website at www.ukqrm.org

(Radio User Magazine: http://www.radiouser.co.uk/) (GB2RS)

ENFORCEMENT: POWER COMPANY TOLD TO TURN OFF INTERFERENCE IN AIR BAND

Its not BPL this time, but Duke Energy, which is an electric utility serving North Carolina, has been ordered to cease operating a small portion of its power grid. This, because of its inability to remedy RFI on 111.7 MHz. that the FCC deems to be a hazard to flight safety. Frank Haas, KB4T has more in this report:

--

The story goes this way. In response to a complaint of interference, on November 25th an agent of the FCC's Norfolk Office inspected power line

facilities belonging to Duke Energy located near the Falls Lake Reservoir in Durham and Wake Counties, North Carolina. During the examination the agent observed the facilities radiating energy on frequencies including 111.7MHz. This FCC says this caused harmful interference to air navigation aids used by pilots flying into nearby Raleigh-Durham International airport.

Later the same day, the agent notified the call center for Duke Energy of the harmful interference and of the need to cease operations at the affected locations. The call center supervisor stated someone would contact the agent about the interference in a few days. So the FCC waited the few days but as of December 2nd Duke Energy has not contacted the FCC about the interference or notified it that operations had been turned off at the affected locality.

So on December 3rd the FCC got tough. It notified Duke Energy that operation of the power-line facilities was causing interference in violation of Section 15.5(b) of the Commission Rules. It directed Duke Energy to cease operations at the affected locations immediately and keep that part of the grid shut down until repairs had been made. It also told Duke that failure to comply could subject the company to additional enforcement action against it.

According to the regulatory agency violations of the Communications Act or the FCC Rules could subject the violator to substantial monetary forfeitures, or seizure of equipment. It could also lead to criminal sanctions, including imprisonment.

For the Amateur Radio Newsline, I'm Frank Haas, KB4T, in Holly Hill, Florida, reporting.

--

At airtime its not yet known if Duke Energy has complied with the FCC directive to take down its power grid in the geographic area where the interference to aviation communications has been taking place. The complete text of the Official Citation is on line at http://www.fcc.gov/eb/FieldNotices/2003/DOC-295187A1.html (FCC, CGC)

RADIO LAW: LPFM EXPANSION GETS CONGRESSIONAL BOOST

A measure to permit the FCC to create more Low Power FM broadcast stations has begun its trek through the United States Congress. By a voice vote on December 18th the House of Representatives passed a bill to drop third-adjacent channel protections for most full-power FM broadcasters in order to fit more low-power FM's on the band.

House Commerce Committee Chairman Henry Waxman, of California says that HR 1147, the Local Community Radio Act, removes a statutory barrier to the creation of potentially thousands of new low power stations. The bill now moves to the Senate, where so far no action is yet scheduled.

RADIO LAW: SENATOR FEINGOLD WANTS RADIO MARTI TO GO QRT

Senator Russ Feingold's "Spotlight on Spending" series has taken aim at Radio and TV Marti. Feingold, a member of the Senate Budget Committee calls Radio and TV Martï¿½ are a relic of Cold War attempts to broadcast radio and TV signals into Cuba that virtually no one tunes in to anymore.

According to Feingold, government studies show that Radio and TV Martï¿½ are riddled with problems, and fall short of journalistic standards. He also says that as the United States progresses toward a more modern and constructive relationship with Cuba, that Radio and TV Martï¿½ no longer have any real diplomatic or fiscal purpose.

Backing him up is a January 2009 report by the Government Accountability Office. It found that Radio and TV Martï¿½ broadcasts continue to face jamming by the Cuban government. According to the GAO, the best available research suggests that the audience for Radio and TV Martï¿½ is small, and its effectiveness uncertain. (Source: Media Network, Press Release by Senator Russ Feingold)

THE SOCIAL SCENE: DAYTON HAMVENTION TO STAY AT HARA THROUGH 2013

The Dayton Hamvention will be staying at its home at the Hara Arena at least another three years. According to planners the Hamvention Committee has inked a deal with the Hara covering 2011, 2012 and 2013 in addition to the one already in place for 2010. The planning committee has also reached an agreement with the close in Salem Mall for parking and with the local bus service for transportation to and from the mall parking site. Hamvention 2010 is slated for May 14th to the 16th which is less than 6 months away. (DARA)

NAMES IN THE NEWS: ZS2LAW TO MANAGE HERMANUS MAGNETIC OBSERVATORY

Some names in the news. Dr. Lee-Anne McKinnell, ZS2LAW, has been appointed as acting Managing Director of South Africa's Hermanus

Magnetic Observatory. This during the absence of Sandile Malinga who has been appointed by the Minister of Science and Technology to serve as caretaker Chief Executive Officer of the South African Space Agency for a period of 18 months beginning January 1st, 2010.

Dr. McKinnell is well known for her participation in the South African Radio League's Radio Technology in Action program where she has made many presentations over the past three years. Despite her busy schedule, will again be joining the program in 2010.

The Hermanus Magnetic Observatory is a South African research facility of the National Research Foundation which is an autonomous science council responsible for research and human resources development in South Africa More about it is on-line at /www.nrf.ac.za. (NZART)

NAMES IN THE NEWS: A MONEY HUNT BY AN HONORABLE HAM

And a ham radio operator working a tow vehicle driver is a big hero to one of his clientele. This as Craig Goldbeck, N9ETD, and his father Gerald recover missing money for a local business.

The two were calling on customers of their Goldbeck Towing business in Onalaska, Wisconsin, when they noticed something strange on Highway 16. That something was money.

According to the La Crosse Tribune, earlier in the day an employee of an area business had driven off with a bank bag containing $3,000 on the vehicle's hood. It broke free and scattered its contents across the landscape.

The men started picking up $20 bills, some of them in stacks of four or five. They then called police and an officer joined the money hunt. In all the trio recovered $2,860 that was returned to its rightful owner.

The Goldbecks' were rewarded for their honesty and sharp eyes. The business owner sent them a box of steaks. (lacrossetribune.com, KC9ECI)

HAM RADIO IN SPACE: TERRESTRIAL AMATEURS WELCOME THE XW-1 HAMSAT

Amateur satellite operators worldwide have reported receiving strong signals on the telemetry beacon of China's XW-1 satellite that was launched on December 15th. The satellite is currently being commissioned but all three amateur radio modes, which include an VHF to UHF FM repeater, a VHF to UHF linear transponder and a crossband AFSK packet system have been tested and appear to be operating to their design specification. Also strong is its Morse beacon on 435.7900 MHz.

During the checkout Michael Chen, BD5RV/4 reported that he managed to operate the special event station BT3WX to work several E2, BY, VR2, XX9 stations throughout on an evening pass using the FM transponder. AFSK packet operations were active over Japan with JA0CAW receiving the downlink on 435.675 MHz at 1200bps. As to the linear transponder? It was also busy with JE1CVL, JH1EKH, BD4SY, JF2CTY, JH1BCL, JA5BLZ succeeded in a QSO over Japan.

The first activation of the XW-1 linear transponder over North America took place in the early hours of December 20th and Drew Glasbrenner, KO4MA, produced a spectragram of the event showing the 50 kHz passband full of SSB signals. KO4MA says that right after XW-1 came on he called CQ and was answered by K8YSE. After moving up in the passband he worked W4DFU at the University of Florida followed by HK4MKE in Columbia.

An XW-1 CW Telemetry Decoder by Mike Rupprecht, DK3WN, can be downloaded at www.dk3wn.info/software.shtml (ANS)

**
HAM RADIO IN SPACE: XW1 NOW HO-68

And this just in. AMSAT-NA OSCAR Number Coordinator Bill Tynan, W3XO, has informed Alan Kung, BA1DU, Amateur Satellite Project Manager and Chief Executive Officer of AMSAT-China that XW-1 is now designated as Hope OSCAR 68, or HO-68. More can be found on-line on the AMSAT-China web page at www.camsat.cn. (W3XO)

**

RADIO NEAR SPACE: UK BALLOON LAUNCH

Monday December 14th saw the launch of Pegasus High Altitude Balloon from Cambridge in the UK.

Because of restrictions imposed by the UK Amateur Radio license it was not possible to use an amateur transmitter on the balloon, so instead a GSM cell-phone was fitted along with a License Exempt 434.075 MHz 10 milliwatt transmitter running 50-baud RTTY.

While the GSM phone doesn't work above about 3000 feet it is extremely reliable once the payload has landed while the License Exempt transmitter allowed the payload to be tracked throughout the flight.

Further information on the project is at www.pegasushabproject.org.uk (Pegasus Project)

**

RADIO IN SPORTS: NEW RADIO TECHNIQUE AIDS TRAINING COMPETITION SKIIERS

Tiny radio transmitters on skis are helping competitive skiers analyze their technique. These units can be attached to an athlete's skis and transmit through small antennas located to the front and the back of the skis.

Receiving stations placed alongside a slope in regular intervals pick up the signals and analyze the time a signal needs to travel from the antenna to a station, thus accurately determining an antenna's position within three centimeters. A computer attached to the receiver calculates the position of the skis every millisecond and displays their exact path on a monitor.

The Austrian firm Abatec developed the system. It says that its adaptable to just about any sport that requires a close study of athlete performance and event timing. (Science OnLine)

**

DX SURVEY: CHOOSING THE TOP DXPEDITIONS OF 2009

The 'DX World of Ham Radio' web page is conducting a online survey to see which expedition warrants the title DXpedition of the Year 2009. Special engraved trophies will be shipped to the top three. To participate in the survey, go to http://dx-hamspirit.com. (Ham Spirit)

**

DX

In DX, word that UT6UE and UT6UF are on board a ship headed to the Ukrainian Antarctic Research Centre's Vernadsky Base. They have with them a Yaesu H-F transceiver, an antenna tuner and a folded dipole for 80, 40 and 20 meters. They hope to be active on 80, 40 and 20 meters between 2200 and 0100 UTC. They have already been reported on the Packet-Clusters signing UT6UE/MM. QSL as directed on the air.

W2CG will be active as either P40C or P40CG from Aruba from the 5th to the 26th of January 2010 primarily CW and RTTY on 80 through 6 metres. Listen out for him between 1200 to 1400 and 2000 to 2400 UTC. QSL via W2CG, direct or bureau.

The Hellenic Amateur Radio Association of Australia will be active as VI2BI from Broughton Island on February 5th, 6th and 7th. The team plans to operate CW, SSB and RTTY on 160 through 6 meters. QSL direct to VK2CL.

JQ1LCW is now active from Mauritania as 5T5YL. Recent reports say she has been heard on 17 meter SSB working mainly Europe and East Coast North American stations. QSL via JQ1LCW.

Lastly, VE6LB says via the Ohio Penn DX Newsletter that he will be active portable A6 from Dubai between January 8th and February 8th. His operation will be holiday style with low power using wire antennas

mainly on 40 through 15 meters CW. QSL direct via his home callsign or Logbook to the World.

(Above from various DX news sources)

THAT FINAL ITEM: WHAT EVER HAPPENED TO VERONICA HARRINGTON, KC6TQR

And finally this week, a question. A rhetorical one that asks whatever happened to Veronica Harrington, KC6TQR? You know, the cute little 6 year old ham from Long Beach, California. The one who captivated the nation with her appearance demonstrating ham radio on the Late Night with David Letterman program back in March of 1992.

Well the truth be known, Veronica is still a ham but she is now all grown up, married and out in the business world. The Rain Report's Hap Holly, KC9RP, recently had a long chat with Veronica and she told him what has happened in her life over the past 17 years:

--

KC6TQR: "Throughout my life I have done a lot. When I was 8 I actually got my FCC Commercial License. When I was 11 I got my Parliamentarian License and I became an E.M.T. when I was 18 while out volunteering with the Sheriff's license out here in Los Angeles.

"Professionally I do investment banking.

"I like going to Disneyland.

"I really like exploring the area. I actually live in downtown Los Angeles and love all the old architecture down here. There are so many things to discover."

--

That's just a small sample of the Veronica Harrington Myers, KC6TQR, story. To hear more just tune into this weeks RAIN Report. You will find it on-line at www.therainreport.com or on your telephone at 773-358-7845. (RAIN)
